San Antonio, Tex.: San Antonio is to have another large factory in the near future. The Brown Cracker & Candy Co. is to erect a large manufacturing plant on the corner of Medina and El Paso Streets.

Jackson, Mich.: The Fenn Manufacturing Co., of this city, have purchased the Charlotte Manufacturing Co., 3 acres of land north of the Grand Trunk passenger depot, where a new factory building will be erected.

Whitesburg, Ky.: The McGlone Bros. Lumber Co., with headquarters at Morehead, Ky., are making preparations for the installation of some large lumber mills at a point near Roxana, on the Lexington & Eastern Railroad.

Evansville, Ind.: An addition to the Kelsay hame factory is being built in the rear of the part that is now used for the woodworking department. The new building will be two stores high, 75 by 128 feet, of red brick, with cement flooring.

From July 9, in the last issue of the said Manufacturers' News, I take pleasure in furnishing the House a partial list of the new business enterprises of the country.

[From the Manufacturers' News, July 9, 1914.]

NEW FACTORY BUILDINGS.

Birmingham, Ala.: The Southern Railway Co. will build a $75,000 roundhouse here.

Grand Rapids, Mich.: The Fritz Manufacturing Co. is planning an enlargement of its plant.

Lockesburg, Ark.: The Dierks Lumber & Coal Co. will, at an early date, rebuild its big mill.

Jackson, Mich.: It is planned to greatly increase the capacity of the plant of the Miller Block Machine Co.

Waukegan, Ill.: Plans for the erection of a large envelope factory have been prepared. A $100,000 building will be erected.

Nashville, Tenn.: Marbury Oil Mill Co., Marbury, Ala., was incorporated with capital stock of $25,000 to build cotton-oil mill.

Cincinnati, Ohio: The A. Jergens Co. secured a permit to erect a four-story addition to its factory on Alfred Street at a cost of $43,000.

Norfolk, Ohio: A proposition to issue $120,000 of bonds to erect a municipal electric lighting plant in this city was carried at a special election.

Pittsburgh: Julian Kennedy has been awarded the contract for the construction of the new $1,000,000 plant of the Youngstown Iron & Steel Co. at Youngstown, Ohio.

St. Joseph, Mo.: The Varner Furniture Co. on July 1 will occupy its new plant on the west side of Fourth Street. The new building was erected at a cost of $30,000.

Butte, Mont.: Galveston dispatch says construction of steel plant at Texas City by Southwestern Steel Development Co.; capital, $30,000,000, is now assured, as financial arrangements have been made in Europe, principally in Belgium.

Tampa, Fla.: Building Inspector Paul Gasser has issued to the Stone & Webster Engineering Co. a permit to build an addition to the Tampa Electric Co.'s plant at Grand Central Avenue and Parker Street, which is to cost $82,500.

Nashville, Tenn.: Industrial Power Co., Hot Springs, N. C., organized, with a capital stock of $100,000, to build hydroelectric plant, developing horsepower of 2,000 on French Broad River near Hot Springs.

Columbus, Ohio: The Columbus Die, Tool & Machine Co. will erect a new factory building at the corner of Fourth and Cleveland Avenues, to cost in the neighborhood of $25,000. The company is now located at Cleveland and Mount Vernon Avenues.

Milwaukee, Wis.: Plans have been submitted by the Milamp Realty Co. for a three-story building of reinforced concrete on the east side of Fourth, between Chestnut and Poplar. The building will cost about $55,000. Schnetzky & Don are the architects.

Los Angeles, Cal.: Apropos to the industrial development of southern California comes the report that the Southern Pacific Railroad is contemplating the carrying out of a plan of E. H. Harriman for the erection, near San Pedro, of a $10,000,000 steel mill for the manufacture of steel rails and structural steel.

Milwaukee, Wis.: The new building of the Wisconsin Machinery & Manufacturing Co. is the latest type of factory architecture. It is a steel and concrete structure, with a wide window area and sawtooth roof. The floor space is 20,000 square feet. The new factory increases the company's capacity about fivefold.

Elgin, Ill.: Announcement is made by President Leath, of the Commercial Club, that the Cracraft, Leich Electric Co. of Genoa is under written agreement to begin the erection of a $35,000 factory building in Elgin, providing the $15,000 subscribed by Elgin men to bring the factory to this city is paid up within 25 days.

Augusta, Ga.: Industrial Power Co., Hot Springs, N. C., organized with capital stock of $100,000, to build hydroelectric plant developing 2,000 horsepower on French Broad River, near Hot Springs. Atlantic Coast Line Railroad will build shops, roundhouse, turntable, planing mill, etc., at Florence, S. C., to cost $110,000. Southern Railway will build roundhouse at Birmingham, Ala., to cost $75,000.

Youngstown, Ohio: Work has been started on the plant of the Newby Process Insulator Co. The new company has taken over the Newby Manufacturing Co. and increased the capital stock from $10,000 to $500,000, $350,000 of which will be preferred stock and $150,000 common. The plant will employ about 250 people. Porcelain insulators and other porcelain products will be made by the new firm.

St. Louis: A building permit has been issued to the St. Louis Screw Co. for a one-story open shelter for the proposed new plant at 6808 Prescott Avenue. The cost will be $41,000. This is the second permit that has been issued to the company, which has just begun to improve a tract of 8 acres with a large iron-working plant, to which the company will move when the plant is completed. Several other buildings will be erected on the tract.

San Antonio, Tex.: Announcement was made last week that Greenville capitalists, owners of the Texas Refining Co., had purchased something more than 2 acres of land at the intersection of Frank and Dignowity Streets, and would erect a large cottonseed oil mill at a cost of about $125,000.

Indianapolis, Ind.: W. R. Hughes, of Pittsburgh, arrived in Indianapolis to-day to superintend the engineering work in the construction of the buildings of the new plant of the Federal Foundry Co., which is being built at Harris Avenue and Victoria Street. The plant is a new manufacturing concern in Indianapolis, and probably will employ from 200 to 300 men.

New Orleans: A million-dollar company to manufacture automobiles in New Orleans has been launched by local promoters.

I have given only a small percentage of the great and growing enterprises and manufacturing concerns which are every week being established throughout the United States; and although much abbreviated, the list is laboriously extended; but the business uplift and the prosperous outlook for the American people are so extensive and so enormous that I think it worth while to present the cold and indisputable facts, so that none who may have been inoculated by the calamity virus may escape.

This evidence might be multiplied many, many times, but I do not seek to convince any against their will; neither do I desire to preach facts to those who will not or can not understand.

The greatest field for the gambler is the stock market. This includes all kinds of stock, especially railroad and industrial stocks. There is no reason why a share of a railroad stock or a share of the stock in some great manufacturing concern should run up and down the scale of prices, frequently changing in value 50 per cent in the course of a week or month. If farm lands that are worth $60 per acre should increase within 30 days to $100 per acre and within the next 30 or 60 days go back to their original price the people of the country would be frightened at the wild speculative fever abroad in the land. Yet that is what has been occurring to stocks under the old standpat Republican régime.

Stocks have been pretty steady during the last year, and in a little while longer will be more settled.

I will quote the market price of some of the best-known industrial and railroad stocks.

	July 17, 1913.	July 17, 1914.
American Telephone & Telegraph	127½	119
Bethlehem Steel Co	29½	40½
Republic Iron & Steel Co	19½	21¼
United States Steel Co	53⅜	60½
Westinghouse Electric	59½	77⅛
American Locomotive	29⅝	29⅞
United States Rubber Co	59½	56
Pennsylvania R. R	114½	110½
New York Central R. R	97½	85
Southern Pacific R. R	92	96⅜
Northern Pacific R. R	107½	109
Chesapeake & Ohio R. R	53½	46½
Great Northern R. R	124	122½
Union Pacific R. R	83	82½

Thus it will be seen that railroad stocks for more than one year have not held their own, and there is a reason for this which is largely due to their overcapitalization, but industrial stocks, although in many instances overcapitalized, have usually shown a healthy growth.

If there is any depression or improvement due to legislation, it must and will be charged to the change in tariff rates. No other legislation has taken on a partisan character, although the Democrats are, of course, chargeable with the conduct of the administration.

I believe to-day the country is enjoying a degree of substantial and reliable prosperity such as we have never known. Everybody is tired of a condition that lets speculation run rampant and lays our body politic and industrial life open to the ravages of gamblers and public plunderers.

I do not believe that a band of high financiers can be gotten together within the United States who would attempt to defraud and plunder innocent stockholders out of a quarter of a billion of dollars, as it is shown by the report of the Interstate Commerce Commission was done in the case of the New York, New Haven & Hartford Railroad Co.

It can truly be charged that mistakes have been made in the matter of corrective legislation during the past year and a half. A square deal can not be given instantly and all wrongs can not be righted at once, any more than a sick body can be cured instantly.

An honest effort has been made to encourage all of the people in an effort to create national wealth with a hope that the same will be equitably distributed. No wealth has been or will be destroyed, but it will be more justly distributed.

To accomplish the distribution of the Nation's wealth in proportion to deserts has been the ambition, the aim, and effort of this administration.

The Advancing Tide of Business.

EXTENSION OF REMARKS

OF

HON. ALFRED G. ALLEN,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 18, 1914.

Mr. ALLEN. Mr. Speaker, under unanimous consent granted to me to extend my remarks in the RECORD I include an article from the Cincinnati Enquirer of July 15, 1914.

The article is as follows:

THE ADVANCING TIDE OF BUSINESS.

The building permits issued in the city of New York for the month of June, 1914, represented values of 25 per cent greater than those issued during June, 1913.

It is stated that sales of bonds in the United States since January 1 are greater by 18 per cent than they were in the same period of last year.

The increasing pay rolls in the Pittsburgh industrial district are evidence of better business that can not be controverted by the most obstinate of the pessimists.

The record-breaking harvest of wheat and the large and pressing foreign demand for it is a stimulus to business that will be felt in every hamlet, every village, every town, every city, every State in the Union.

The cargoes of the productions of our soil which will go to foreign countries during the next 12 months will furnish immense traffic to the various transportation lines of the United States, as well as bring to our agriculturists great sums of ready cash.

It does not take long for the intelligent American citizens to grasp and understand the psychological effect upon business throughout the Union of great crops to be sold at good prices, and that condition seems to be the fortunate one in which our country finds itself to-day.

The farmers and the planters now seem certain of large cash returns from the products of their lands, and the manufacturers and the merchants of the Union have an ideal season of profitable trade before them if the estimates of the harvests are realized.

The Enquirer has for months called attention to the small stocks of materials in the hands of manufacturers and of merchandise in the shops and stores of the merchant, wholesale and retail, and the pressing demand that will come upon both merchant and manufacturer when the retail purchasing becomes active this summer and autumn.

That well-known authority in merchandising, Marshall Field & Co., in their last week's review of trade, called attention to this existing condition of extremely low stocks on hand, and emphasized this point as to the call that would come upon the merchants and the manufacturers under the active trade that is now appearing.

With each passing week the advancing tide of business will be marked by reemployment of workers by the railways, the mines, the mills, and the factories; will be noted by the growth in value of our exports, the increase in the traffic of the transportation lines, and the greater call upon the merchants for the articles they have for sale.

Judicial Proceedings in the United States Courts.

EXTENSION OF REMARKS
OF
HON. H. GARLAND DUPRÉ,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 20, 1914.

Mr. DUPRÉ. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of this bill by incorporating in the RECORD a report which I made from the Committee on the Judiciary, which report was prepared by Mr. Everett P. Wheeler, of New York.

The SPEAKER. The gentleman from Louisiana asks unanimous consent to extend his remarks on the bill H. R. 4545. Is there objection? [After a pause.] The Chair hears none.

The report is as follows:

[House Report No. 162, part 2, Sixty-third Congress, second session.]

JUDICIAL PROCEEDINGS IN THE UNITED STATES COURTS.

Mr. DUPRÉ, from the Committee on the Judiciary, submitted the following views, to accompany H. R. 4545:

The legislation proposed by this bill (H. R. 4545), hereinafter reproduced in full, has been urged for some time by the American Bar Association. A committee of that body, headed by Mr. Everett P. Wheeler, the well-known attorney and publicist of New York, and including former Representative Paul Howland, of Ohio, appeared before the Judiciary Committee specially in support thereof. Former Representative John W. Davis, Solicitor General of the United States, by direction of the Attorney General, joined this committee in indorsing the measure.

The Judiciary Committee thereafter ordered the bill favorably reported. The report, however (No. 162), merely recommended that the bill do pass. It did not explain the measure. Being in full sympathy with the bill and desiring that the membership of the House should have at hand, when it is reached, some explanation of its objects and purposes, I requested Mr. Everett P. Wheeler to prepare a brief analysis of the bill. This he has done in a lucid and convincing manner, and adopting his views as my own, I herewith submit them:

The object of the first section of this bill is to enable the district courts of the United States to correct a mistake made by the plaintiff in describing his suit as a suit at law when his remedy should have been in equity, or in describing his suit as a suit in equity when his remedy should have been at law, without the necessity of bringing a new action. The practice thus proposed exists in most of the States in which there is no separate court of chancery. In the so-called code States the provision which was adopted by the New York Code of Procedure in 1848 has been adopted, namely, that the distinguishing forms of actions at law and suits in equity have been abolished. It is not proposed in any way to abolish the essential distinction between remedies at law and in equity, but to obviate the necessity of dismissing one suit and beginning another. This seems all the more reasonable, because in the Federal courts the same judge presides over trials at law and hearings in equity. There is the same clerk's office, and in most cases the same clerk.

The proposed act does not in any way interfere with the right of trial by jury. If the action is brought in equity and transferred to the law docket, the issues will be triable by jury as before. The practice thus proposed has already been in part adopted by the Supreme Court by equity rule 22 of 1912:

> If at any time it appear that a suit commenced in equity should have been brought as an action on the law side of the court, it shall be forthwith transferred to the law side and be there proceeded with, with only such alteration in the pleadings as shall be essential.

If the court had power to deal with proceedings at law to the same extent which it has to deal with proceedings in equity, it would undoubtedly have adopted a similar rule with reference to suits begun on the law side of the court, but this power has not been conferred upon it, and therefore the proposed act still is necessary.

The object of the second section is similar. It authorizes the defendant to interpose equitable defenses by answer or plea without the necessity of filing a bill on the equity side of the court. This enables the court in the one suit to deal with the whole controversy and obviates the expense and delay caused by a separate suit. As, for example, if the action were brought on a contract, the defendant could by answer allege that there was a mistake in reduci. g to writing the actual terms of the agreement and that on this ground he was entitled to have the contract corrected so as to conform to the real agreement of the parties.

The details of the procedure are left by the bill to be regulated by rule of court.

This proposed legislation is in strict harmony with the provisions of the new equity rule of the Supreme Court—rule 30—that abolishes the old practice of a cross bill and requires the defendant in equity suits to set up by answer "in short and simple form any counterclaim arising out of the transaction which is the subject matter of the suit," or any "counterclaim against the plaintiff which might be the subject of an independent suit in equity against him." Here again the bill proposes to extend to the court in actions at law the same power which it now has in actions in equity.

The third section of the bill was drawn to meet a difficulty which sometimes arises in practice and has caused grievous injustice. The plaintiff brings his suit and fails to allege in his pleading all the necessary jurisdictional facts. It has been held that it is necessary that the jurisdiction of the court should appear on the face of the pleadings, and actions have been dismissed after testimony has been taken and hearing has been had because of the failure to insert the proper allegations of citizenship. Indeed, there are instances in which the defendant has not made the objection until after judgment, and has then sued out a writ of error and succeeded in reversing the judgment, solely because of the failure of the pleading filed by the plaintiff to make the proper allegations of citizenship.

This bill is in strict analogy to section 921 of the Revised Statutes, which provides:

> That when causes of a like nature or relative to the same question are pending before a court of the United States or of any Territory, the court may make such orders and rules concerning proceedings therein as may be conformable to the usages of courts for avoiding unnecessary costs or delay in the administration of justice, and may consolidate said causes when it appears reasonable to do so.

The object of the bill is identical with that of the statute—to avoid unnecessary cost or delays in the administration of justice.

[H. R. 4545, Sixty-third Congress, first session.]

A bill to amend an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911.

Be it enacted, etc., That the act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, be, and the same is hereby, amended by inserting after section 274 thereof three new sections, to be numbered, respectively, 274a, 274b, and 274c, reading as follows:

"SEC. 274a. That in case any of said courts shall find that a suit at law should have been brought in equity or a suit in equity should have been brought at law, the court shall order any amendments to the pleadings which may be necessary to conform them to the proper practice. Any party to the suit shall have the right, at any stage of the cause, to amend his pleadings so as to obviate the objection that his suit was not brought on the right side of the court. The cause shall proceed and be determined upon such amended pleadings. All testimony taken before such amendment shall stand as testimony in the cause with like effect as if the pleadings had been originally in the amended form.

"SEC. 274b. That in all actions at law equitable defenses may be interposed by answer, plea, or replication without the necessity of filing a bill on the equity side of the court. The defendant shall have the same rights in such case as if he had filed a bill embodying the defense of seeking the relief prayed for in such answer or plea. Equi-

table relief respecting the subject matter of the suit may thus be obtained by answer or plea. In case affirmative relief is prayed in such answer or plea, the plaintiff shall file a replication. Review of the judgment or decree entered in such case shall be regulated by rule of court. Whether such review be sought by writ of error or by appeal, the appellate court shall have full power to render such judgment upon the records as law and justice shall require.

"SEC. 274c. That where, in any suit brought in or removed from any State court to any district court of the United States, the jurisdiction of the district court is based upon the diverse citizenship of the parties, and such diverse citizenship in fact existed at the time the suit was brought or removed, though defectively alleged, either party may amend at any stage of the proceedings and in the appellate court upon such terms as the court may impose, so as to show on the record such diverse citizenship and jurisdiction, and thereupon such suit shall be proceeded with the same as though the diverse citizenship had been fully and correctly pleaded at the inception of the suit, or, if it be a removed case, in the petition for removal."

Ex-United States Minister to Colombia James T. Du Bois on Colombia's Claims and Rights.

EXTENSION OF REMARKS
OF
HON. H. ROBERT FOWLER,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Friday, July 24, 1914.

Mr. FOWLER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I insert the following article by ex-United States Minister to Colombia James T. Du Bois:

EX-UNITED STATES MINISTER TO COLOMBIA JAMES T. DU BOIS ON COLOMBIA'S CLAIMS AND RIGHTS.

HALLSTEAD, PA., *July 1, 1914.*

I was in the Department of State in 1903 when the press announced that the mailed hand of the United States had stopped Colombian soldiers from suppressing a revolution on the Isthmus of Panama. Amazed at this enterprise, I said to those present: "*This, if true, is a shocking injustice to Colombia, and the United States must pay dearly for it in the end.*"

Three years ago, when I was asked to go to Bogota as minister, I frankly stated my sincere sympathies for Colombia, and was informed that friendly relations with that country were desired by the United States, and that my sympathies were no bar to my mission.

An impartial investigation at Bogota, running over a period of two years, confirmed my sympathies, and convinced me that instead of "blackmailers" and "bandits" the public men of Colombia compare well with the public men of other countries in intelligence and respectability, while the social life is as refined and cultured as can be found in any capital in the world. Bogota is called the "Athens of South America."

Impressed by the humiliation and sufferings that had befallen Colombia by the act of 1903, *I have worked unselfishly for the true interests of the United States in Latin America by trying to secure a settlement of our unfortunate differences on a broad and just basis, and the new treaty will accomplish the result. I deeply regret the antagonism to it displayed in certain quarters, and I deplore Col. Roosevelt's bitter and misleading attack embodied in his recent public statement.*

DIRECT BENEFICIARIES FOMENTED THE REVOLUTION.

He says: "The people of Panama were a unit in demanding the revolution." I say, and can prove it, that *a handful of men, who were to be the direct beneficiaries of the revolution, conceived it*, and not the hundredth part of the inhabitants of the Isthmus knew of the revolt until *an American officer, in the uniform of the United States Army, raised the flag of the new Republic.*

"We never fired a shot at any Colombian," says Col. Roosevelt. True, but *the execution of the orders of President Roosevelt to the American warship was an act of war;* and if the Colombian soldiers had attempted to suppress the conspiracy they would have been captured or driven into the sea or killed, because that is the way our brave marines have of doing things when they are let "loose."

Again he says his "attitude was absolutely in accordance with the principles of the highest international morality." Col. Roosevelt's useful life challenges the admiration of men, but he is not infallible. *If armed interference that prevents a friendly nation from maintaining sovereignty over her most valuable Province, which we had pledged our national honor by solemn treaty obligations to maintain, is the "highest international morality," the lowest must be amazing,* and 99 per cent of the people who know the facts will support this view.

ALLUSIONS TO FRANCE MERELY GUESSES.

"France would have seized the Isthmus" and "the canal would never have been dug if I had not acted as I did," says Mr. Roosevelt. Nothing of record proves either statement; both are guesses, and both are simply multiplying suppositions by imagination. It is a matter of record that Colombia never seriously intended to seize the French company's property, and everybody knows that Colombia wanted the canal dug and wanted the United States to dig it, and had urged it for 50 years.

Col. Roosevelt unfortunately feels that the new treaty discredits his administration in an act which he considers the most important of his life.

No self-respecting man will tolerate for a moment the thought that a single act of Col. Roosevelt's useful life was inspired by tainted motives, but no man is always right. In the Panama incident, while doing what he believed to be a great thing for mankind and in accordance with the principles of the highest international morality, he did a bad thing for Colombia. He put himself in the position of the dentist apprentice who pulled the wrong tooth—he can not put it back and he does not want his employers to realize his mistake.

Col. Roosevelt says that Acting President Marroquin was an "absolute and uncontrolled dictator." He was a helpless and hapless old man placed in the midst of a great national unrest and disorder at the close of the most disastrous civil war in the history of Colombia. He was not in accord with the Congress, and the Congress was alive with discord, and 5,000,000 of innocent and hapless people saw the true interests of their country destroyed by the selfish disputes of less than 100 men. If Theodore Roosevelt had realized the true situation in Bogota at that hour he would have reenforced his patience with sympathy for that hapless people who had been for 100 years our best friends south of the Rio Grande. But he was badly informed, and cabled to Bogota, "The treaty must not be modified or amended" (a right belonging to every nation), and then, placing the last straw on the back of Colombia pride, cabled again, "*Ratify the treaty or you will regret it.*" The Colombian Congress, amazed and indignant, adjourned without considering the treaty. Within a short time the United States was urged by Colombia to reopen negotiations, but Col. Roosevelt concluded that "it was after the fair" and immediately "took Panama," commenced digging the canal, and let Congress debate the incident at leisure. He now opposes the new treaty on the grounds that it discredits his act, and he calls it a blackmailing agreement.

MINISTER DU BOIS'S NEGOTIATIONS.

Let us see if this is true.

In my instructions, prepared by the Taft administration, the most scrupulous care was exercised not to impugn the motives of President Roosevelt in "taking" Panama. Those instructions refused to give Colombia something for nothing, as that would acknowledge that he had done wrong, so I was instructed to give Colombia $10,000,000 for the perpetual lease (amounting to a sale) of two islands, whose future value to the United States would have been inestimable, and, in addition, I was requested to secure an unlimited option to build a canal through the old Atrato route when the commerce of the world demanded it. The instructions were drawn with so much regard for Col. Roosevelt's feelings that I orally informed the department that I might as well try to fly to heaven in a battleship as to go to Bogota with those instructions and expect to succeed; and so it was. When, in a preliminary and informal conversation with President Restrepo, I suggested the Atrato concession and the perpetual lease of the islands, he said very firmly, in effect: "President Roosevelt took Panama, our richest asset, and now you are sent here to take our islands, and the only canal route we have left. Is there anything else that the northern Colossus would like to separate us from?"

Col. Roosevelt also feels that the Wilson administration has intended to discredit his "taking" of Panama. This grave difference with Colombia must be settled some time. *Owing to the tender regard for ex-President Roosevelt contained in my instructions, I failed. The Wilson administration has taken a broader and more correct view of the entire question, and has presented to the American people a treaty that ought to be heartily approved, because it is just to Colombia and will remove forever an intolerable situation.* Let us see what the treaty really means.

"CHIVALROUS EXPRESSION OF REGRET."

Article 1 contains a simple expression of regret that anything has disturbed the friendship that existed between the two

nations for a century. *While negotiating for a treaty I made the Colombian authorities understand that under no circumstances would the United States apologize to any nation for a political act—that was our unwritten law that never had been and never would be broken. In purely informal conversations and in my unofficial memorandum I suggested that a chivalrous expression of regret that our friendship had in any way been marred, such as any real gentleman would freely grant to another, might later be embodied in the treaty as a balm for the wounded feelings of a once friendly nation which had been humiliated before the world, whose credit had been destroyed in foreign countries, whose borrowing ability had been annihilated, and whose persistent appeals for arbitration had been ignored. The United States in negotiating the treaty and Colombia in ratifying it distinctly understood that no apology was embodied in article 1 and nowhere else in the agreement.*

The opposition to this feature, on the ground that it is an apology, is not just and is not in the true interests of the United States. It is an unreasonable interpretation of a chivalrous act toward a weaker nation which is in deep distress because of an incident in which we were intimately associated, a chivalrous act which is in strict accord with the principles of the highest international morality. If the Anglo-Saxons are to live in harmony with the Latins on this continent they must treat them with absolute justice, just as we shall exact justice from them.

Article 2 is essentially the same as the one President Roosevelt approved in the Root-Cortes treaty of 1909, and the fourth article is also similar to an article of the same treaty. Thus these two articles are perhaps beyond the criticism of Col. Roosevelt, as he approved both five years ago.

WHY COLOMBIA IS ENTITLED TO $25,000,000.

As the third article is the most important feature of the treaty I consider it last. This article has been placed in the "blackmailers' club" by Col. Roosevelt with some harshness. He says that we might as well give Colombia 40 millions as 25 millions, because she is not entitled to a cent. Is he right?

Under the contract of 1867 Colombia ceded the Trans-Isthmian Railroad Co. to the Panama Railroad Co. for a period of 99 years, and for this Colombia was to receive $250,000 annually during the life of the contract. *At the time of the separation of Panama there were remaining 6¼ annuities unpaid, amounting to $16,000,000.* The concession also insured to Colombia reversionary rights in the Panama Railroad at the expiration of the contract in 1967.

The physical value of the railroad shortly after the revolt was placed at $16,446,000. In addition Colombia claims that she is entitled to several millions of dollars for that part of her national debt incurred in the interests of Panama before the revolution, a claim which was recognized in the treaty of 1909, made under the Roosevelt administration. Altogether these claims total about $36,000,000. But ex-President Roosevelt insists that all of the civil rights, titles, and pecuniary interests of Colombia passed to Panama at the moment of actual separation, and therefore the third article of the treaty is a direct attempt to blackmail the United States. *The truth is the ownership and these rights were virtually recognized by the Roosevelt administration itself.* Colombia, by an agreement concluded in 1880, contracted a debt of $3,000,000 with the railway company, amortizable in 29 years by the company's $250,000 annual payments. The amortization actually proceeded and the debt would have been liquidated in 1909. After that date the company would have had to resume the payments of the $250,000 annuities until 1967, when, under the terms of the contract, the railroad, with all of its appurtenances, would have become the absolute property of the Republic of Colombia.

COLOMBIA'S RIGHT OF OWNERSHIP RECOGNIZED.

To prove that our Government virtually recognized the inalienable civil rights of Colombia to the royalities, and incidentally to the reversionary rights, it may be stated that the amortization could not have been terminated until 1909. But as the United States prevented by physical force the suppression of the insurrection on the Isthmus by Colombia six years before the debt could be entirely paid, and never attempted to exact the six missing installments of the amortization, they recognized Colombia's right of ownership. Therefore to deny the legitimate material claims of Colombia would not be in accordance with the principles of even common commercial integrity.

Under my instructions to settle our unfortunate differences with Colombia I was authorized to consider the possible arbitration of the justiciable claims of that country to reversionary rights in the Panama Railroad, the arbitral court to be limited in its scope of inquiry. It is generally believed that such a court would have given a verdict in favor of Colombian claims. I do not believe there is any doubt of it.

In the spirit of justice, therefore, the United States, now in undisputed possession of the Panama Railroad, should compensate Colombia for the annuities which she is entitled to receive, and also for the reversionary interests in the railroad. To say that these lawful interests passed to Panama at the separation is as unjust as it would be to say that we have discharged our obligations to one man by paying what he was lawfully entitled to into the hands of another man.

A MATTER OF SIMPLE JUSTICE.

These and other material claims of Colombia justify the indemnification article of the treaty, to say nothing of the tremendous territorial loss and humiliation that Colombia has sustained.

The time is not distant when Latin America will have a hundred million of people inspired by new conditions of national and commercial life. Those now living feel that the Panama incident is the only real injustice committed by the United States against the Latin-American people. *The treaty will correct that feeling and greatly change the sentiment that is now running heavily against us in all South America, and place this country and Colombia upon that friendly footing so greatly desired by the people of both nations.*

If any person believes it is pleasant for me to oppose a great leader whose fortunes I devotedly followed for 10 years, and for whom I have profound esteem, he is radically mistaken. I am a Republican and have been all my life, and I have been urged not to make this statement public, because a successful issue of the treaty will help the Wilson administration.

I do not care to live to greet that day where my love of party smothers my love of justice and halts my courage in doing what I believe is right for the true interests of my country.

JAMES T. DU BOIS.

Income Tax.

EXTENSION OF REMARKS
OF
HON. LOUIS C. CRAMTON,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 20, 1914.

Mr. CRAMTON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter by Claude P. Spriggs.

The letter is as follows:

HUGO, OKLA., *July 17, 1914.*

Hon. LOUIS C. CRAMTON, M. C.,
Washington, D. C.

HONORABLE SIR: I trust that you will pardon my presumption in writing you this letter, but having read your speech, delivered in the House there, on the administration of the income-tax law, on June 27, I desire to say to you that you are eminently correct in the position taken and a great injustice is being done by the collection of this penalty. In our State there is something like 1,000 small domestic corporations who are liable for this penalty. These corporations are non-revenue producers, and there is not one dime of profit made by them for the past 12 months and not 1 cent of dividends has been paid to their stockholders. One case in particular is that of the Hugo Building and Loan Association, a mutual organization here for the benefit of its members. It has been almost insolvent and is only holding its charter until such a time as a reorganization can be effected; in fact, the State building and loan auditor came here and took charge of its affairs, but by eliminating certain expenses and agreeing to liquidate he permitted it to continue business in so far as same extended to liquidation of its affairs.

This corporation has not made one dime of profit, as the report filed the 1st of March will show, yet the revenue collector is insisting on the payment of $50.

I could give you names after names in Oklahoma where these small corporations have been called upon to pay this penalty for failure to make return, and the records will disclose the facts already stated in this letter, that not one dime of revenue has been derived from the corporations affected; neither have they paid any dividend whatever. In behalf of the corporations of this State I desire to express to you their thanks for the position you have taken and assure you that any relief secured will be appreciated by them, and if there is any additional information that you desire or any assistance that we in far-off Oklahoma could render you it would only be a pleasure for us to do so.

Thanking you for the position taken, and wishing you success in accomplishing the passage of your resolution, I am,

Very truly, yours,

CLAUDE P. SPRIGGS.

Interest and the Reclamation Projects.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 22, 1914,

On the bill (S. 4628) extending the period of payment under reclamation projects, and for other purposes.

Mr. JOHNSON of Washington. Mr. Speaker, it is proposed in the amendment under consideration to require settlers on irrigation-project lands to pay 3 per cent interest on deferred payments due for the construction of the plants.

Mr. Speaker, 37 years ago—in 1877—Robert G. Ingersoll delivered a great address to the farmers of Illinois, in which he devoted a little time to the subject of interest. Illinois then was not so very far from the frontier, and his hearers could easily hark back to the time when they were reclaiming a wilderness.

Ingersoll found the Illinois farmers of 1877 in debt, paying not 6 per cent but a much higher rate, and his remarks will bear repeating now. He said:

> Get out of debt as soon as you possibly can. A mortgage casts a shadow on the sunniest field. There is no business under the sun that can pay 10 per cent. Interest eats night and day, and the more it eats the hungrier it grows. The farmer lying awake at night can, if he listens, hear it grow. If he owes nothing, he can hear his corn grow.

Then Ingersoll paid his particular respects to Old Ten Per Cent—told how it would eat up the farm; how it would starve the cattle; how it would send the children barefooted to school, and hungry to bed; how it would keep the wife pinched and wan; and how it would drive away both happiness and hope.

Mr. Chairman, those who heard Bob Ingersoll that day were reminded by him that it had not been such a great many years before, when in Illinois, they received 10 cents a bushel for corn; when they sold 4 bushels of potatoes for a quarter; 33 dozen eggs for a dollar; and a hundred pounds of pork for a dollar and a half. That was ended by the building of thousands and thousands of miles of railroads in Illinois. Farm lands became valuable. The sons and daughters of the Illinois pioneers, to whom Ingersoll gave his warning about interest, went West, where land was still free. They went to Kansas, to the Dakotas, and elsewhere, took up homesteads, and started as their fathers had started. And to stock and seed their farms and to build habitable homes and good barns, they did as their fathers had done—borrowed money and paid big interest—10, 12, and even 14 per cent. The best of the western lands were soon taken, and the rising generation pressed on still farther West—to Colorado, Oregon, Washington, Montana, Utah, Idaho, and to other States—where they found lots of good land and also lots of worthless, waterless, arid, alkali desert.

About this time two great movements were commenced by the Federal Government: First, it withdrew nearly all of the far western lands that were good; and, second, it started to reclaim with water a whole lot of them that were not considered worth much.

A great "back-to-the-land" movement was started. The papers were full of it. A President promoted it. Magazines put forth pictures and pipe dreams concerning reclamation. Government press agents were active; they went the limit, just as they are now doing along other lines.

Thousands went onto the irrigation projects only to find that all costs were double and even quadruple what Uncle Sam had promised. And now, when they are asking for an extension of time in which to pay for the cost of the great dams and reservoirs, they are met with a demand for interest. Already they are in the predicament that Bob Ingersoll found the farmers of Illinois 40 years ago. The people who are reclaiming these arid lands pay interest for the money they borrow to get their irrigated farms stocked, seeded, and habitable. A big, fat interest they pay, too; and, strangely enough, the cream of that interest flows right straight to the great cities—New York, Chicago, and Philadelphia—represented in Congress in part by the distinguished gentlemen who to-day have stood strongest for more interest to be paid by those who are reclaiming the desert. These gentlemen want 3 per cent to be paid. One wants 4 per cent, but would compromise at 3½ per cent.

One thing more. Strangely enough, Mr. Speaker, these and some other gentlemen from the great cities cried out, almost with one voice, last spring when the bill restricting the great stream of immigrants now pouring into this country was passing the House: "Let them come in. Let them come and drift to the millions of unpeopled acres in the far West."

Millions of acres, they declaimed. Millions! And most of the best of it locked up in forest reserves, many of them treeless, and a whole lot of the rest held under a great, miscalculated irrigation scheme, on which it is now proposed that settlers shall pay all of the costs of getting ready to irrigate, costs of the water itself, taxes, general interest, and 3 per cent to the United States, which urged them to settle there.

Outside the reclamation boundaries and outside the forest reserves there is not a great deal of public domain left, and it falls in two classes—one class so hard that you could not shoot a seed into it with a force pump, and the other kind comprised of sand with such shifting qualities that you could not anchor your seed to the ground with anything lighter than a horseshoe.

And still the immigration bill sleeps, while we talk of relieving the congested cities and while we hold out our arms to the oppressed of all the world. Let them come on. Put them on the irrigated lands to help pay for the dams that Uncle Sam built, at 3 per cent. Let them buy cows and live stock at 8 or 10 per cent. Let them pay taxes, at 5 or 6 per cent. It is even proposed to let them have 35 or 40 years in which to pay for money loaned to build the irrigation plant—35 or 40 years—at interest.

Ainsworth R. Spofford gave out a few facts about interest a few years ago. He said:

> One dollar loaned for 100 years, at 6 per cent, with the interest collected annually and added to the principal, will amount to $340.
> At 8 per cent it amounts to $2,203.
> At 10 per cent it is $13,809.
> At 12 per cent, $84,075.
> At 18 per cent, $15,145,007.

That is the way interest grows. Of course, 3 per cent does not cut any such gigantic figure, but it would be enough to either drive the irrigation farmers off of their farms or add very materially to the already high cost of living.

Reclamation Extension Bill.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 22, 1914,

On the bill (S. 4628) extending the period of payment under reclamation projects, and for other purposes.

Mr. BAILEY. Mr. Speaker, all I desire to say on the bill under discussion is this, that it is, in effect, a subsidy measure, extending a privilege to a special class, and therefore indefensible on any solid Democratic ground.

Not long ago I stood on this floor to oppose the proposition to allow free passage to coastwise shipping through the Panama Canal. I denounced the toll-exemption scheme as a thinly disguised subsidy which no Democrat could justify himself in supporting. On precisely the same fundamental principle I denounce the pending proposition. It confers a subsidy on those this measure designs to benefit.

This whole reclamation project seems to me to be a departure from the settled policy of the Government. Never before has it been proposed to lend the credit of the Government to private enterprise in this fashion. Never before has a reclamation project been saddled as a burden on the whole people, instead of assessing the cost of it on those deriving the pecuniary benefit. The submerged or swamp lands of the West have been drained, not at the cost of the Government, not by loans from the Public Treasury, but by the efforts and the enterprise of the people immediately concerned.

We shall open the doors very wide indeed, Mr. Speaker, if we shall establish this precedent, for if we lend money without interest to entrymen on these reclamation projects, with what face shall we deny similar loans to landowners in Pennsylvania, Ohio, Indiana, Illinois, and Kansas? If we shall subsidize the one class of landowners, how shall we deny a like subsidy to landowners the country over?

Achievements of the Democratic Congress and President Wilson.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 23, 1914.

Mr. CLINE. Mr. Speaker, what did the electorate of the United States mean when it sent Woodrow Wilson to the Presidency in 1912 and the Democratic Party to power in all branches of the Government service? The answer to that question is an easy one. It preferred the theory of government on great economic problems advocated by the Democratic Party to the theory of government on the same economic questions advocated and practiced by the Republican Party, that is all. It had tried the Republican Party in all branches of the Government for 14 years, knew what that party was committed to, and knew what it would do if intrusted with further power; knew under what influence it operated, and it refused to permit it to control the Government any longer. It is proper very briefly to inquire what the Republican Party has been guilty of that it should be so completely repudiated by the people, that it was able to count in the electoral college but 8 votes for its candidate for the Presidency, Mr. Taft, out of a possible 531. Four of those votes were cast by the tariff pap-sucking State of Vermont and the other 4 by the State of Utah, the only one in the Union where the public and private morals of a part of the people made it necessary to regulate them by Federal statute.

The two great dominant political parties in this country are the Democratic Party and the Republican Party. The only means by which governments can be maintained is through taxation. The taxing power is the absolute power of the Government. Out of the exercise of that power arises all the blessings or evils that come to the people. The attitude of the two parties is easily contrasted. The Democratic Party believes that the only constitutional power the Government possesses to levy taxes is to collect a sufficient amount to discharge the expenses of the Government incurred through an economical administration. The Republican Party believes the Government has the constitutional power, and ought to exercise it, to impose and collect taxes upon all the people for the benefit of a small class of the people. It believes in governmental paternalism. It has infiltrated that doctrine into the body politic for 50 years under the guise that such a system was a wise, equitable, and just fiscal policy. To put it in plainer terms, the Democratic Party believes that only such a rate of duty should be levied at the customhouses as shall create sufficient revenue to pay the expenses of the Government. The Republican Party believes that it is its duty when in power to lay a rate of taxation so high at the customhouses that such rate of duty will destroy all competition and corner the American market for the sole benefit of the American producers. It believes that such a statute, like the Payne-Aldrich-Smoot bill, is a just and equitable system of taxation, and that collecting money for the discharge of the necessary expenses of government is a mere incident to the right to tax the people.

In other words, it believes in creating favorites in taxation, and that the class of citizens who reap the benefits of legislative favors are entitled to the benefits to no greater extent than they can be relied upon to keep in power the party that created the favors. The Democratic Party has fought that malicious doctrine for years. We spend more than a thousand millions a year to maintain this Government. Somebody must pay the taxes that go to make up this immense amount. The Democratic Party is in favor of wiping out favoritism and levying the bulk of that tax equitably and fairly upon those best able to pay. The usual jabber about free trade by the man and party that wants to tax the people for special favors will always be heard. There is no free-trade party in this country and never will be. The customhouse is here to stay. The Democratic Party, neither in its platform nor anywhere else, ever advocated free trade. Absolute free trade is an impossibility, and no man knows it so well as the Republican who attempts to discredit the Democratic Party through misrepresentation and prejudice. But what reasons had the people for repudiating the Republican Party in 1912? What great issues were before the country for solution that all parties had spoken on in their platforms and on which the people had a right to have action by the party in power? There were three paramount issues—the tariff, the currency, and antitrust legislation. On every one of these issues the Republican Party has violated its pledge to the people.

TRUST MONOPOLIES.

A protective tariff is the chief tenet in the theory of civil government as advocated by the Republican Party. Its solution for economic problems lies in its belief in the power to tax and tax to the utmost. What is its so-called political principle on this subject? It is that certain classes of citizens engaged in business may be the recipients of special legislation that gives them advantage and not only enables them to destroy all competition, but compels every citizen where that competition is destroyed to purchase in a market wholly controlled by the special favorites of legislation. As the Apostle Paul once said, "It is known of all men" that during the 14 years the Republican Party remained in power its financial support came from these favorite classes. No Republican denies that immense combinations in restraint of trade grew and prospered under Republican rule. Every great line of industry was financed by great wealth moved upon a common plane in a single line with one single ultimate purpose, and under the command and generalship usually of one head, like that of the Steel Corporation under Gary, or the house of Morgan, that controlled the money and credit of the whole people of the Republic. And these combinations extended to coal, iron, water power, manufactures, and railroads. The chief purpose in every line of industry was to completely occupy the entire field of production, transportation, and distribution. These mighty combinations had one common ground on which they assembled in the commercial world, namely, that of controlling productions and fixing prices. To do this they interlocked their directorates so that the entire economic forces of society were involved in their power and shaped and fashioned at their will.

The failure and inability of the Republican Party to meet these problems that grew out of a protective tariff, to construct a comprehensive currency system, its failure to invade the field of special privilege with supplementary antitrust legislation, convinced the people that their only hope of preserving their liberties was to commit the country to the charge of the Democratic Party.

UNDERWOOD TARIFF LAW.

The platform of the Democratic Party in 1912 provided as a fundamental principle of the Democratic Party that the Federal Government under the Constitution had no right or power to impose and collect tariff duties except for the purposes of revenue, and we demanded that the collection of such taxes shall be limited to the necessities of the Government honestly and economically administered. The Democratic Congress elected in 1912 was called into extra session in April, 1913, and the Underwood bill became a law in August of that year. We sought to do two things by that bill: First, to destroy the legal refuge that sheltered the trusts and combinations that were exploiting the American market, and, second, to establish a fair competition in trade, beneficial alike to the producer and ultimate consumer. We are the greatest distributing Nation in the world. We are now and always must be a great export Nation.

If we do not exchange goods with the foreigners, we shall not be able to sell him our surplus agricultural products, steel, cotton, and woolen productions. We must take from them those things they have to sell that we do not make and sell them what they need for their comfort. We ought to give the commerce of this country its largest possible range of freedom from artificial restraint. The Underwood bill very largely increases the free list. During its consideration the tariff grabbers made the bitterest attack upon the agricultural items. They declared the wheat industry would be ruined by importation from Canada; Argentine beef and corn would destroy those American industries; Australian wool would undersell American wool and put the sheep growers out of business; free sugar would close the beet-sugar mills of the country. The bitter anguish exhibited by the stand-pat Republican, as he wept for the agriculture interests that the Democrats were about to ruin, has no parallel. What has been the effect of the Underwood bill on prices? At my request the Department of Commerce prepared a comparison of prices of 13 leading farm products for 10 years on the 1st day of March, beginning March 1, 1905.

FARM PRODUCE PRICES AT CHICAGO, ILL.

Quotations for first week in March for 10 years ending with 1914.

[Compiled by the United States Department of Labor and from the Chicago Inter-Ocean price current.]

Commodity.	1905	1906	1907	1908	1909	1910	1911	1912	1913	1914
Wheat, No. 2, red	$1.16	$0.83½	$0.76	$1.00	$1.25	$1.25	$0.88½	$1.02	$1.08	$0.97½
Corn, No. 3, mixed	.45	.39½	.43½	.57½	.64	.62½	.43½	.65½	.50	.64½
Hay, timothy, first	12.00	11.00	17.00	15.50	12.00	18.00	17.00	21.00	14.00	15.50
Oats	.30½	.31½	.43	.52½	.53	.46	.30½	.34½	.34½	.40
Potatoes	.35	.48	.46	.73	.93	.40	.43	1.10	.48	.70
Hogs, best fat	5.12½	6.42½	7.00	4.70	6.55	9.90	7.20	6.52½	8.55	8.75
Cattle, best fat	5.60	6.40	6.60	6.00	7.10	8.10	6.95	8.90	9.00	9.75
Sheep, best fat	5.90	6.25	6.15	5.65	5.70	7.90	4.75	5.00	6.95	6.25
Lambs, best	7.75	7.10	7.50	6.90	7.85	9.25	6.00	7.00	8.75	7.85
Horses, draft, extra good	200.00	185.00	285.00	200.00	200.00	225.00	190.00	285.00	275.00	225.00
Butter, creamery	.32	.27	.33	.32	.28	.30	.26	.28	.35½	.34
Eggs, fresh, first	.27	.13¼	.21	.20	.21	.22½	.17	.27	.19¼	.27
Wool, Boston, Shropshire, unwashed	.28	.32	.30	.25	.30	.36	.27	.28	.26	.26

Read it and make your own comparison. Nine of these products were higher March 1, 1914, than they were in 1905 under the McKinley tariff law, and the remaining four were but slightly lower. Some of these prices under this so-called free-trade bill were higher on the 1st day of March, 1914, than for any period in 10 years. Under the Payne bill you sold your wool for 17 cents a pound, with a specific tariff of 11 cents a pound. Under the Underwood bill, with the tariff off, your wool went to 25 or 27 cents a pound, as much at your door as the Boston market is after it gets into the hands of the speculators. If the tariff makes the price, why did it not keep it up for you under the Payne bill? Hams and shoulders were 4 cents under the Payne bill. In 1907, during the last Republican panic, you sold your hogs for less than the tariff on hams and shoulders. You did not get the money, either. Your hogs, cattle, butter, and eggs are bringing more in this July market than in any other July market in years. Every intelligent farmer knows by experience that a tariff on his commodity benefits no one except those who can corner his production and raise prices.

THE NEW CURRENCY LAW.

The Republican panic of 1907 brought home to the American people another reminder of the unwillingness and incompetency of that party to protect the interests of the people with a safe and elastic system of currency for the promotion of their commercial interests. The rigidity of the old system, unyielding to emergency, left the great agricultural sections of the country helpless when immense crops were to be moved. Instead of distributing sufficient funds to populous cities south and west for the movement of crops, Republican Secretaries of the Treasury took the Government funds to its pet banks on Wall Street, deposited them without interest, and put the country banks of the South and West at the mercy of the stock gamblers and money jobbers for cash accommodations to move the great agricultural products. I appeal to every man if I do not state the fact when I say that every period of crop movement brought a temporary money stringency throughout the country. Banks were compelled to curtail credit; business lost confidence in the system. Yet during these times Wall Street was speculating upon the surplus funds of the Government. Contrast the conduct of Republican Secretaries of the Treasury with that of Secretary McAdoo. Instead of sending fifty millions to Wall Street last fall, he sent it to the great agricultural trade centers of the South and West. What was the result? Not half the fifty millions was used. The country banker found the Democratic Party was in power and the Government had been broken away from the Wall Street system. Because the new currency law is not in active operation the Secretary has inaugurated the same plan for the movement of the present crop. Because of the confidence in the new currency bill there is not the slightest indication of uneasiness with the banks; money is plentiful and rates of interest low for the financing of every legitimate business. We recognize that "banks exist for the accommodation of the public and not for the control of business."

No measure ever received greater indorsement from the interests directly affected than did the new currency law. In less than 30 days after its passage 98 per cent of the national banks of the country made application to become a part of the new system. What does this new system do for us. It makes us independent, not dependent upon the banks of Wall Street; it decentralizes the currency of the country and places the surplus in 12 regional reserve banks where the business demands it; it invests the system with such expansion of credit as may be necessary for the transaction of legitimate business; it makes the American dollar, or its representative, equal to gold in any path of commerce it may find its way; and last, but not least, it so distributes the funds of the country that no man or set of men can control credit. It has been said that 12 men own and control sixteen hundred millions in Wall Street and Chicago, and that through interlocking directorates they control sixteen hundred millions more. That means that the money they own and can control is equal to all the circulating cash in this Government. Does that kind of a system that permits such a congestion of cash appeal to you? In February, this year, the banks of New York and Chicago had on deposit from banks and trust companies throughout the country $1,000,000,000. Less than one hundred million was loaned back to depositing banks and trust companies. The other nine hundred millions that belonged in the legitimate avenues of trade in the country were locked up for stock-gambling speculation. No banker or business man can be found who criticizes the administration for this splendid piece of legislation.

ANTITRUST LEGISLATION.

The third step in the administration's program was to supplement the Sherman antitrust law so as to make definite what its violations should consist of, so that business might know its own limitations. The Sherman law was enacted 24 years ago. Our marvelous development in that period, changed economic conditions, make this legislation necessary. The Republican Party, owned and controlled by the unruly "big business" of the country—and I mean by that business that has no regard for the rights of its associates—refused to permit that party, though in absolute control for 14 years, to enact any legislation. If the Democratic Party has one tenet that it holds to more than another it is that of equality of opportunity. The Government wants small business to have a chance in commerce and in trade. It is as much the function of the Government to protect the weak against the strong commercially as to protect the weak against the strong physically. The Democratic Party is the friend of honest "big business," no matter how big it is. It is the enemy of "big business" that smashes and ruins small competitors. The antitrust legislation consists of three bills—(1) the interstate trade commission bill; (2) the Clayton bill, limiting and defining the power of corporations; (3) supervision of the issue of railroad stocks and bonds. The interstate trade commission bill gives the Interstate Commerce Commission power to investigate as it may deem advisable the organization, business, financial conditions, conduct and practices, and management of any corporation engaged in commerce and report its findings to Congress. The Government ought to know what the relation of corporations is to each other. This bill passed the House without a dissenting vote. For years the courts have been called upon to construe the Sherman Antitrust Act of 1890. Its provisions are uncertain. Business men were not sure whether their activities might not be a violation of the law. The country demanded that the uncertainty be removed by describing as nearly as might be what acts constituted a combination in restraint of trade, so that there need be no further excuse that the law was indefinite and it could not be known what a violation consisted of. This bill proposes to give the small-business man, as far as possible, an equal opportunity with the big-business man and to punish with imprisonment any combination that proposes to destroy that opportunity.

The third bill lodges the authority to decide when a railroad may issue stocks and bonds in the Interstate Commerce Commission. The report on the investigation of the New Haven Railroad shows what the possibilities are and the necessity for such legislation as shall safeguard the general public. Every man who is familiar with railroad manipulation for the last decade knows that railroads have been stocked and bonded for many times their original cost, a large portion of which represents no actual investment. Such management has been used

to cover the most glaring and iniquitous frauds that were possible. I quote a line from the report of the Interstate Commerce Commission:

In 10 years, from 1903 to 1913, the capitalization of the New Haven increased from ninety-three million to four hundred and seventeen million. Of the increase, only one hundred and twenty million was spent on the road itself. The other two hundred and four million was spent in operations outside of the railroad's sphere.

I quote again:

The difficulty under which the railroad systems have labored in the past are internal and wholly due to its own mismanagement. Its troubles have not arisen because of regulation by governmental authority. Its greatest losses and most costly blunders were made in attempting to circumvent governmental regulation and extend its dominion beyond the limits fixed by law.

The closing sentence taken from the report of the commission expresses the full truth of the matter and the necessity for this legislation. It is as follows:

The revelations of this record make it essential for the welfare of the Nation that the reckless and profligate financiering which has blighted this great railroad system be ended, and that until this is fully done there will be no assurance that the story of the New Haven will not be told again with the stockholders of some other road as its victim.

More than sixty millions was worse than squandered by the Morgan-Rockefeller syndicat , which involved the earnings of thousands of trusted and innocent investors because there was no governmental regulation to forbid it.

THE MEXICAN POLICY.

No feature of the administration is more satisfactory than the President's Mexican policy. We inherited the Mexican problem from the incompetent Taft administration. Against the high and patriotic purposes of the President the yellow journals, the subsidized press, and men and corporations who had exploited Mexican resources set up every possible sort of embarrassment. Those interests wanted intervention for the sole purpose of forcing the United States with its money and the blood of its sons to underwrite and make valuable their interests. No more patriotic words ever fell from the lips of a man at the head of a powerful nation than those uttered by Mr. Wilson when he said:

We are the friends of Mexico and want to help her. I am opposed to the acquisition of another foot of soil on this hemisphere by conquest.

We do not want Mexico. We want that Government, older than our own, to solve its own problems. Mexican poverty, race antagonism, so alien to us in spirit, blood, and religion, must be settled among themselves. We shall not enter upon the task of assimilating 15,000,000 of people so foreign in every respect to us as the inhabitants of Mexico are. We have no business in Mexico. We want her friendship, not her antagonism. We want her trade, because through it we will get her confidence and that of all the Republics that lie south of us. We could not afford to barter the confidence of a hemisphere of Republics for forced intervention in Mexico. We have exhibited a nobility of spirit, a respect for justice and humanity that stands unparalleled in the world's history. Forceful intervention is not in conformity with our national ideas practiced for a hundred years. It ought to be our purpose to establish an empire of national conscience and bring into our relationships in that empire the feeble Republics of the South that they might early learn that peace, happiness, and prosperity came through the orderly processes of obedience to law. That is the predestined mission of this Republic.

But the benefits of Democratic legislation have not been confined to what I have discussed.

CIVIL WAR VETERANS.

The veterans of the Civil War should remember that it was the Democratic Party that passed the Sherwood law on May 11, 1912, and after the Republicans in the preceding Congress had defeated the dollar-a-day Sulloway bill. The Republicans had 14 years of continuous power to redeem their promises to the soldier and failed to do it.

SPANISH-AMERICAN WIDOWS.

We passed a bill authorizing the Government to pension at $12 the widows of Spanish-American and Philippine soldiers, regardless of the cause of the soldier's death. The Democratic Party has always been the most faithful friend the soldier has had.

PARCEL POST.

We gave the country a parcel-post law. It saves the people many millions a year that formerly went into the coffers of the express companies.

TWO CONSTITUTIONAL AMENDMENTS.

We passed the income-tax law that this year relieved the great masses of people of seventy-five millions in taxes and placed the burden where the Democratic Party has always claimed it should be placed, namely, on the pockets of those most able to pay.

By constitutional amendment United States Senators are now elected by a direct vote of the people. This is bringing the Government back to the people and making its representatives directly responsible to them. This progressive Democratic movement was fought by the Republican Party in its national convention as late as 1908.

LABOR LEGISLATION.

It has been our purpose to recognize the rights of the men who toil. We have restricted the authority of Federal judges to issue injunctions and restraining orders; given the defendant, when charged with indirect contempt, the right of a trial by jury; and exempted labor organizations and farmers' associations from the operation of the Sherman Antitrust Act.

The House of Representatives consists of 290 Democrats and 150 Republicans. What support did these important measures receive from the Republican Party? It must be admitted that these measures are party-platform measures; if they did not have real merit, they would have been opposed by the united opposition. What is the record?

Seven Republicans (and Progressives) voted for the Underwood tariff bill.

Thirty-eight Republicans voted for the currency bill.

Forty-seven Republicans voted for the antitrust (Clayton) bill.

Only 12 Republicans voted against the stock-and-bond bill.

No Republican voted against the trade commission bill.

Republicans ought to stop criticizing the Democratic administration or stop voting for its measures. There are some Republicans who profess to believe that there is a chance to return to power in the November election. I want to submit a few interrogatories to that class of Republicans who place the welfare of the country above party:

Do you want to return the Republican Party to power and reinstate Cannonism? You know that will happen if the Republicans elect the next House.

Do you want to repeal the Underwood tariff bill and substitute the Payne-Aldrich law?

Do you want to repeal the new currency system and turn your fiscal affairs back to Wall Street to manage for you again?

Do you think the antitrust legislation ought to be repealed and the Morgan-Rockefeller combination once more given a free hand?

Are you dissatisfied with the income-tax law that saves you a hundred millions a year in your taxes?

Do you not believe that the United States Senators ought to be elected by the people?

Are you anxious to repeal the parcel-post law and go back to the express companies that robbed you for years with excessive charges?

Is the old soldier satisfied with the Sherwood pension law?

Does he want to trust the Republican Party to legislate for him that disappointed him for 14 years?

Does the Spanish-American soldier have any complaint of a Democratic Congress that provided a pension for his wife and minor children if he should be taken from his family?

Is union labor willing to repudiate the party that protected him with legislation and return to power that party that turned a deaf ear to his appeal? If you are satisfied with this progressive legislation, why should you take the chance of a change?

Building Up Our Merchant Marine.

EXTENSION OF REMARKS

OF

HON. SAMUEL W. BEAKES,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 3, 1914.

Mr. BEAKES. Mr. Speaker, while this bill permitting American individuals or American corporations to purchase foreign ships and take an American register so that they may fly the American flag and be entitled to its protection is only an emergency measure and will not alone restore us to our old-time supremacy in transporting our imports and exports across the ocean, I look upon it as a step in the right direction. Once America was the proud commercial mistress of the seas. Our flag was found in every port. Now the American flag is

rarely seen on vessels entering European ports. We have given over the transportation of even our own products to foreign hands. The emergency now upon us should force home with overwhelming force the folly of our marine policy and the extreme danger to our people in allowing this condition to remain. At last even the people in the interior of America should be able to see that their own pockets are directly affected. With practically all Europe embarked in a destructive war, how are we to get our wheat, our corn, our cotton, our agricultural and manufactured products over the ocean? What good will our bountiful crops do if we can not sell them to people who need them now even more than ever, when soldier reserves have all been called into action and the farm and factory in Europe is illy manned? We can not ship these in vessels of the warring powers subject to capture and confiscation. We can not ship them in our own vessels, because we do not have the vessels. We have allowed the American fleet to be driven from the seas. Hence the emergency. Hence the need for quick action. If our farmers are to sell the products of their farms some means must be devised to transport them to the markets. If our factories are to run overtime to supply Europe with what she needs when her own factories are idle, we must have some means of transporting the manufactured goods abroad.

In the first speech I made after my election to Congress I called attention to the great need of building up the American merchant marine. I know many others have felt the same along this line, but in the great constructive work in which we have been engaged the devising of the needed measures has been put off too long. They can not be devised hastily. It needs much hard study and work, much deep thought. This Sixty-third Congress has already put more constructive legislation on the statute books than any Congress within the recollection of the present generation, but there is one further task that we must undertake, undertake it earnestly and at once, and that is to so revise our marine policy that once more American ships shall sail the seas, American products in American bottoms enter every port, and over all the ocean once more shall wave the American flag.

The present emergency calls with more force upon us than can any mere words to take back the trade that once was ours. The first step we took when we passed the Underwood tariff law, and there was no provision of that law that I took as much delight in voting for as that provision which rebated 5 per cent of the duty on goods imported in American bottoms. Foreign countries made it profitable for their people to ship in vessels not American. We should make it profitable to ship in American vessels. In passing this measure we returned to the principle put into law by the first Congress in 1789 and which did much to encourage American shipping. But, unfortunately, our untrained diplomats had been overreached in our commercial treaties, and we find ourselves with our hands partially tied. We allow other nations to favor their ships at the expense of ours, but it is claimed that our treaties will not allow us to favor our ships in return. It should be the settled policy of the Nation to put in force this discriminatory duty as found in the Underwood tariff law. But this is only one step. I am sure that now that the need of action is so imperatively pointed out this constructive Congress will complete and pass a bill which will aid in keeping up the American marine.

Just a momentary glance to show how our shipping grew and how it declined. In 1789 there was carried in American ships 23.6 per cent of our imports and exports. By 1795, largely under the influence of a provision similar to that placed in the Underwood bill, American ships carried 90 per cent of our imports and exports, and our imports and exports had in the meantime very largely increased. This increase kept up until 1807, when we were carrying 92 per cent of our imports and exports. Then our trade was preyed upon by other nations. Our seamen were impressed by Great Britain. The War of 1812 followed, and by 1814 our foreign commerce had dropped to less than one-twelfth of what it had been in 1807, and our vessels were only carrying 54.5 per cent of that. After the war we gradually got back our share of the carrying trade, but it was not until 1825 that we had reached 92.3 per cent of it. After the day of wooden vessels we lost part of our supremacy owing to the fact that England was able to build iron vessels much cheaper than we were, but still we grew in our shipping, losing only in the proportion of our foreign commerce which we carried until in 1860, with a foreign commerce of $687,192,176, we were carrying in American bottoms 66.5 per cent of it. Then came our great and destructive war, and in 1864 we were carrying only 27.5 per cent of a very much reduced commerce. Our proportion of the trade picked up slowly with advancing commerce, and in 1870 we were carrying 35.6 per cent of our commerce. Then followed a rapid decline until in 1890 we were carrying only 12.8 per cent of our commerce and only 9 per cent of the goods we sent abroad. In 1896 we still had 12 per cent of the carrying trade, but even that has gradually fallen off until in 1912 we only carried 1.7 per cent of our exports in our own vessels, while over 51 per cent was carried in British vessels and over 17 per cent in German vessels. The following nations carried more of our exports than we did: Great Britain, Germany, France, Holland, Italy, Belgium, and Denmark. Austria carried practically as much as we did.

In 1913, as Mr. UNDERWOOD has pointed out, 80 American vessels cleared from American ports for Europe, while 4,636 foreign vessels cleared. To our shame be it said that there are only 6 American trans-Atlantic steamers. While British passenger ships made 478 voyages from the United States to Europe, German ships made 302, French ships 158, and Italian 73, American ships made only 23 out of the 1,300 voyages that were made in 1913. Our present shipping could not carry the wheat alone that we export to Europe, if it carried nothing else. Hence, the need for this emergency bill, and hence the resolve that we should make to so build up our shipping that we may never again be caught as at present. With our flag practically banished from foreign ports, as it would be practically banished from our own ports were it not for our coastwise trade, we should set about restoring it to the seas. Great Britain took away the bulk of our carrying trade during the Civil War. Now comes our own opportunity to get back what we lost then, but if we keep it we must have other and better regulations in the future.

We must aim for the markets of the world as all nations have been aiming. The quickest method to increase our exports is by the establishment of American shipping lines. Our trade will follow the flag; our American vessels will increase our market. Let us not stop with an emergency measure, but let us wisely set to work to build an enduring merchant marine, and once more show our starry banner in every port in the world.

Industrial Conditions in Indiana.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 8, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, just prior to the commencement of the great war in Europe I was furnished with a review of the industrial conditions in the State of Indiana. This information furnished me was gathered from many sources. I will first insert a general summary and then add a more detailed statement from the different counties.

I am glad to insert this information in the RECORD, as the State of Indiana has no Republican representative in either House of Congress. The general summary is as follows:

GENERAL SUMMARY.

INDIANAPOLIS, IND., *July 29.*

In spite of the desperate efforts that have been made by the Democratic newspapers of Indiana loyal to the Wilson administration to make it appear that commercial conditions throughout the State are highly satisfactory from the standpoint of the manufacturers, large and small, all sections of the State report a volume of business far below that usually had at this time of the year. In the larger cities of the State a number of important manufacturing concerns have suspended operations completely, and other manufacturers, having sharpened their wits, have reduced their working forces from one-fourth to one-half compared with the same month a year ago, and in a number of instances the working time per week has been reduced from 50 per cent to 75 per cent compared with normal. In no industrial center in the State of Indiana at this time are commercial conditions as satisfactory as they were before the Democratic tariff bill went into effect.

The prospect for immediate improvement is not bright. A feeling of unrest and uncertainty seems to be general. There is an impression that the current volume of business would be much less at this time than it is but for the momentum that has been acquired during 16 years' workings of a Republican tariff law, and the impression prevails that as soon as this momentum is completely spent conditions, in spite of large crops, will show a further startling decrease in volume.

In the city of Vincennes the Central Foundry Co., one of the important manufacturing concerns, is running but half time and

half force, as is the National Rolling Mill, and the Indian Creek Mining Co. is running but two days a week.

In Lawrence County several of the large stone mills have closed down, throwing hundreds of men out of employment. The stone mills that are running are running but half their force.

In Anderson, the county seat of Madison County, a number of the most important factories are working but 50 hours a week, and some even less than this. There is considerable complaint regarding the lack of work, and a feeling of uneasiness is noted among the merchants, and the farmers are dissatisfied with the current prices of their products.

In Marion 90 per cent of the factories are not running according to their normal schedule.

In the city of Peru, another one of the important industrial and railroad centers, conditions are about 30 per cent of normal. A condition of widespread dissatisfaction with county, State, and national affairs is reported by careful observers.

In Crawfordsville a furniture factory, employing 50 men, has closed down indefinitely, as has also a glove factory, employing 70 people.

In Parke County the Bloomingdale Clay Works has shut down, throwing 50 men out of work.

In Tell City, out of 30 factories several are running half time and others are running five days a week. Most of them are operating reduced forces. There are more idle men in Tell City than at any time since the last Democratic administration was in power. Some of the larger factories have reduced their forces 75 per cent.

In South Bend it is estimated that 5,000 men have been thrown out of work during the last eight months. Among the larger concerns that have been forced to reduce the number of their employees are the Oliver Chilled Steel Plow Co., the Studebaker Co., the South Bend Woolen Co., the Stephenson Underwear Mills, and the Singer Manufacturing Co.

In Sullivan County, in the heart of the Indiana coal fields, not more than half a dozen of the county's 40 mines are working, and those are only working half time or less. Between 2,000 and 3,000 miners are idle in this county.

In Lafayette the Monon Railway shops have not been running full time for more than a year. The managers of the large manufacturing concerns state that they have been for months running on short time and with comparatively short forces.

In Tipton a number of men have been laid off by the Lake Erie & Western Railroad Co. and a number of the factories have reduced their working force and working time.

At Shoals, in Martin County, about 50 men and boys have been thrown out of employment because of the closing down of the button factories. The Carnahan Manufacturing Co., at Loogootee, reports that business has fallen off 50 per cent, compared with the same month a year ago, and that it is now running on small local orders which they would never take in the past.

The Bimel Spoke & Auto Wheel Co., located at Portland, reports that the volume of its business is about one-fourth of what it was under the Republican tariff law. The Portland Body Works reports orders hard to get, and the Creamery Package Manufacturing Co., makers of butter tubs, reports business unusually slow. Business men say collections are the slowest since the Cleveland administration.

The coal mines of Greene County are running on about one-third time. A large number of miners are living on charity. The Jones Dugger Chair Factory has closed down indefinitely, throwing 100 men out of employment.

A furniture factory in Paoli, in Orange County, that has been working for years without a shutdown, has suspended operations, throwing 65 men out of employment. The Wells Sawmill, at Paoli, is shut down, and another large sawmill is working about half time. In Orleans one furniture plant, employing from 40 to 50 men, has closed down.

The managers of the furniture factories, veneer works, and foundries in Goshen are complaining of great loss of orders. The railroad shops in Elkhart have felt the effect of the general business depression, and as a result a large number of employees are now out of work.

One of the largest factories in the city of Lebanon is closed down entirely and others are running on a 50 per cent basis. General business conditions are worse than they have been in 18 years.

The Stout Furniture Co., at Salem, is now employing but half as many men as a year ago, and they are working but five days a week.

The Adams Lumber Co., at Decatur, has only run two weeks this year. The Smith & Bell Co. are now employing but one-half dozen men where 2 years ago they employed 20. The Decatur hoop plant is idle and the S. H. Adams heading plant is working but half time. The Ward Fence Co. is working but half time and the Decatur Foundry, Furnace & Machine Co. is running but 9 hours a day.

The Emerson-Brantingham-Reeves Co., at Columbus, has cut its working force in one year from 800 to 200, with reduced wages and 75 per cent of full time. The Orinoco Furniture Co. has reduced in the last year its working force of 150 to 100 men, and is now working on samples. The working time per week has been cut 75 per cent. The Lincoln Chair Co., practically without orders, is working but three-fourths time. The Glanton Furniture Factory is doing about half the business of a year ago. The shirt factory has cut its number of employees during the last year from 500 to 250.

Reduced orders have caused the Boss Mitten Factory at Clinton to discharge 100 girls and women from its employ. The MacDougal Kitchen Cabinet Co. has reduced its working force about one-half and the working time has been cut about 50 per cent. The management of the National Handle Factory has announced it will close indefinitely as soon as the timber in the yards has been used up.

Joseph Taylor Sons, at Logansport, are buying leather goods in Canada for the first time in the history of the company. The Ash & Hadley Furniture Factory has cut down its working force from 35 to 16 men and is working but four days a week. Among the other concerns in this city that have been hard hit by the Democratic tariff bill are Shirkin-Nelson Cabinet Factory, the Hagenbuck-Parker Co., the Radiator Works, the Voorhees Lumber Co., the Western Motor Car Co., Bligh Lumber Co., and the W. L. Fernald Lumber Co.

The stone business in Crawford County is demoralized. The Marengo Stone Co. is not running and 75 men are out of work.

The manufacturing concerns of Muncie are running about 65 per cent of their capacity and working force. The Republic Iron & Steel Co. has been forced to dispense with the services of a number of its employees.

The iron industries in New Albany are in bad shape. None of the foundries during the past month have been working full force. Some have closed down and others are only working part time.

There are probably 2,000 factory men in the city of Marion out of employment. Nearly all of the manufacturing concerns are running a part of their force.

The Keller Wagon Co., of Corydon, during recent months have reduced their working force from 125 men to 53, and their present employees are working on short time.

The Erie railroad shops at Huntington are operating with a much smaller force than a year ago.

The three veneer factories at Franklin are running on half time, and the Starch Works, one of the leading industries of the town, has closed down.

REPORT FROM DIFFERENT COUNTIES.

BLACKFORD (HARTFORD CITY).

Chief industry glass and steel casting. Outlook for glass business not good. Steel casting mills in operation, but not full time. Bad times very much in the air.

BROWN (NASHVILLE).

Farming community. Farmers very hard up; money tight; merchants complain; collections almost impossible. Business bad and people dissatisfied.

BENTON (FOWLER).

Farming entirely. Farmers dissatisfied over corn prices.

BARTHOLOMEW (COLUMBUS).

Mooney Tannery Co. very few orders.

Emerson-Brantingham-Reeves Co. have cut force in one year from 800 to 200, with reduced wages and 75 per cent of full time.

Orinoco Furniture Co. reduced in a year from 150 men to 100 men; practically no orders; working on samples for Grand Rapids furniture show; working three-fourths time.

Lincoln Chair Co. practically no orders, working three-fourths time.

Glanton Furniture Factory doing about half of last year's business.

Hedge & Co., builders, about one-half time; 30 to 40 men.

Shirt factory cut down in a year from 500 to 250.

Contractors have about half their normal work.

Business men generally complain.

CLINTON (FRANKFORT).

Boss Mitten Factory, employing 100 girls and women, out of business.

MacDougall Kitchen Cabinet Factory reduced its force; working about half force and half time.

National Handle Factory announces it will close as soon as timber in yard is used up.
All lines of business feeling the pressure.

CASS.

Joseph Taylor Sons, buying leather goods in Canada first time in history.
Ash & Hadley Furniture Factory, Logansport, cut down from 35 men to 16, working four days a week.
Shirkin-Nelson Cabinet Factory closed.
Hagenbuck-Parker Co. closed.
Radiator Works, closed.
Voorhees Co., lumber, nothing to do.
Western Motor Co., begging for orders.
Bligh Lumber Co., begging for orders.
W. L. Fernald Lumber Co. shipped one carload this May against 70 last May.

CRAWFORD.

Stone business dull, crushers working one-half time.
Marengo Stone Co. not running—75 men out of work.

DEARBORN (LAWRENCEBURG).

Farming community very much incensed over the Argentine corn.

ELKHART (GOSHEN).

In Goshen the furniture factories, veneer works, and foundries are complaining of great loss of orders. They are having hard times.
In Elkhart conditions worse.
Railroad shops are especially suffering.
Farmers complain of prices.

BOONE (LEBANON).

Manufacturing business running rather slow. Largest factory closed down entirely; will be another factory closed down in a few days. Others running on the 50 per cent basis.
Merchants report business generally dull. Conditions in worse shape than in the past 16 years.

NOBLE (ALBION).

Merchants complain that business is very bad, giving the cause as the Democratic administration.
Farmers complaining about the prices.

WASHINGTON.

Industrial conditions very dull.
Stout Furniture Co., Salem, Ind., about one-half as many men, and running only five days a week.
Stout-Mehornay-Duckwall Co., Salem, shut down for several weeks.

ADAMS (DECATUR).

The Adams County Lumber Co. run only two weeks in the year.
Smith & Bell Co. employ five and six men, where in Republican times they employed 20 men.
The Decatur Hoop Plant idle.
S. H. Adams Heading Plant working half time.
Ward Fence Co. working half time.
Decatur Foundry, Furnace & Machine Co. working nine hours, and business is very bad.

DELAWARE (MUNCIE).

Factories running about 65 per cent of capacity and force.
Republic Iron & Steel Co. have shut down, throwing from five to six hundred people out of work.

FLOYD (NEW ALBANY).

Iron industries in bad shape, some closed down and others working part time.
Lumber and veneer works going, but the outlook for continuance is bad.
Farmers are not satisfied.
Lot of unemployed men.

FRANKLIN.

Agricultural county. Grain raisers and dairy men uneasy over outlook.
Strong Democratic county, but the feeling against the administration is in evidence.

HENRY (NEW CASTLE).

Principal industries: Maxwell Automobile, Jesse French & Sons Piano Factory, Hoosier Kitchen Cabinet Factory, and the Shovel and Bridge Factory.
Automobile factory doing well; employs about 1,000 men.
Piano factory conditions fair; force fairly regular.
Hoosier Kitchen Cabinet factory has no competition and is doing well.
The smaller factories are not running as regularly as a couple of years ago.
All retail men complaining; two business failures within the last six weeks and one now closing out business.

MARTIN.

Button factories at Shoals shut down; 50 men and boys out of employment.
The Carnahan Manufacturing Co., at Loogootee, large planing mill, claims business has fallen 50 per cent; running on small local orders, which they have never taken before.
Farmers are dissatisfied over the prices.

JAY (PORTLAND).

Bimel Spoke & Auto Wheel Co., wheel department; one-fourth of the business which they had at this time last year. In the buggy and wagon spoke departments, no business that amounts to anything.
Portland Body Works: Orders hard to get and seriously needing same.
Creamery Package Manufacturing Co., manufactures butter tubs; business very slow for this time of the year.
Journey Manufacturing Co., making wagons and wagon parts; business very dull.
Portland Foundry & Machine Co.: Business very bad.
Business men say collections are the slowest since Grover Cleveland's administration.
Farmers complaining about taxes and prices.

GREENE (LINTON).

General industry: Coal mining.
Mines running about one-third time. Any number of coal miners living on charity.
Real estate is a drug on the market.
Jones Dugger Chair Factory at Bloomfield closed down indefinitely; 100 men out of employment.
Farmers are dissatisfied; wheat the lowest it has been for 15 years.

PORTER (VALPARAISO).

No large manufacturing industries. One small factory shut down.
Farmers dissatisfied.

ORANGE (PAOLI).

Industrial conditions very bad. One furinture factory in Paoli that has been working for years without a shutdown is now shut down completely, throwing 65 men out of employment.
Wells Sawmill, Paoli, shut down.
One sawmill working about one-half time.
In Orleans one furniture plant, employing from 40 to 50 men, closed, and lumber business also bad.
These conditions with drought of 1912 have made conditions deplorable.

GRANT (MARION).

Nearly all factories running short force. There are probably 2,000 factory men out of employment in Marion. Prospects are that more will be out.

HAMILTON (NOBLESVILLE).

Banks loaned to limit.
Farmers complaining some.

HARRISON (CORYDON).

Keller Wagon Co. laid off 53 men out of 125. The rest are working short time.
Farmers are complaining of grain prices. Many farmers going West to seek employment.
Democratic farmers complaining as well as Republicans.

HENDRICKS (DANVILLE).

Farming country. Farmers are not satisfied with administration.

HOWARD.

Factories not running full time.

HUNTINGTON.

Erie Railroad shops have cut force.

JASPER.

Farmers are able to employ plenty of labor where they could not before.

JENNINGS.

Manufacturing interests have noticed scarcity of orders.

JOHNSTON.

Three veneer factories one-half time.
Starch works shut down.

KNOX (VINCENNES).

Central Foundry Co. running half time and half force.
National Rolling Mill running half time and half force.
Indian Creek Mining Co. running only two days a week.

KOSCIUSKO (WARSAW).

Some building building at present. After that is completed the outlook for laboring man is gloomy.
Farmers not pleased.
Portland Cement Co. running full time, but reduced force.
Lumber mills complaining.

LAGRANGE.

Farming community. Not many men out of work.

LAWRENCE (BEDFORD).

Several stone mills closed down.
Those that are running are employing half force.

MADISON (ANDERSON).

Important factories are working only 50 hours a week and some less.
Laboring classes are grumbling at conditions and lack of work.
Many people asking for work.
Merchants complaining.

MARION.

Ninety per cent of the factories not running according to schedule.

MIAMI (PERU).

Industrial conditions 30 per cent normal.
Never has been such universal discontent and dissatisfaction with county, State, and national affairs.

MONTGOMERY (CRAWFORDSVILLE).

Furniture factory employing 50 men closed down.
Glove factory employing 70 people closed.

NEWTON.

Farming country. Farmers very much disturbed over prices.

OHIO.

Some discontent among farmers.

PARKE (ROCKVILLE).

Bloomingdale Clay Works shut down; 50 men out of work.

PERRY (TELL CITY).

Out of 30 factories several are running half time and several only five days a week. Most of them have reduced forces.
More idle men in Tell City than any time since last Democratic administration. Some of the largest factories have reduced their forces three-fourths.

POSEY.

Scarcity of orders in manufacturing businesses.
One Democratic manufacturer complaining a great deal.

PULASKI.

Farmers are against drop in wheat prices.

RANDOLPH.

Quite a number of idle men.

STEUBEN.

Farmers complaining about low prices, and cutting out every possible expense, which affects the merchants.

ST. JOSEPH (SOUTH BEND).

Oliver Chilled Steel Plow Co., 2,500 men out of work.
Studebaker Co., 1,800 men out of work.
South Bend Woolen Co., 500 men out of work.
Stephenson Underwear Mills, 300 men out of work.
Singer Manufacturing Co., 1,000 men out of work.
Altogether about 6,000 or 7,000 out of work in eight months.

SULLIVAN.

Not more than half a dozen of the county's 40 mines working, and those only half time or less. Between two and three thousand miners idle.
Farmers are expecting a sharp break in prices of wheat when Canadian wheat comes in.

TIPPECANOE (LA FAYETTE).

Monon shops have been closed, and have not been running full time for a year.
Other factories admit that they have not been running full time or with full force.

TIPTON (TIPTON).

Lake Erie & Western Railroad laid off a good many men.
Farmers not pleased with prices.

WHITE.

Farmers not spending, and affecting merchants accordingly.
Farmers complain of prices.
Land buying dropped considerably.
Independent voters and liberal Democrats against administration.

Mr. Speaker, many years ago, when I was a student in Wabash College, at Crawfordsville, Ind., there was at the same time a student in that institution by the name of Howard Maxwell. Mr. Maxwell has become one of the leading lawyers and orators of the State of Indiana, and I take pleasure in inserting a speech that he delivered at Indianapolis on April 22, 1914, upon the political situation in that State.

The speech is as follows:

SPEECH OF HON. HOWARD MAXWELL.

[Delivered at Indianapolis, Ind., April 22, 1914.]

It is now five years since the Democrats came into power in this State upon a platform pledging retrenchment and economy in the management of State affairs and containing this language:

We are opposed to the creating by the Republican legislature of enormous, useless offices, boards, and commissions, with large salaries, and we propose to abolish all such offices, boards, and commissions when in power.

Gov. MARSHALL, in the campaign of 1908, again and again in public address declared that we had too much government, and that there were a great number of unnecessary boards, commissions, and officials, and that the Democratic policy would be to root out, lop off, and abolish these boards and commissions, reduce the number of persons in the public service, and thus minimize the cost of government. What is the record?

The facts are that under Democratic administration the number of boards, commissions, and offices have persistently increased. There is not a single department of state with offices at the statehouse, in which increased salary has not been given to the chief officer or some one or more of his deputies. At the statehouse alone at least 50 additional positions have been created since the close of Republican administration, and if you consider appointees under various recently created boards not drawing their pay direct from the State treasury, the number of such increases runs into the hundreds. This increase of salary to former officers and deputies, added to salary paid new officers and deputies, all officing at the statehouse, aggregates the total sum annually of $138,450. New boards have been established. The legislature of 1911 created four commissions. That of 1913 three commissions. In 1908, the last year of Republican administration, the total annual expense of all the boards and commissions then existing was $317,098.67, while in 1913 the total annual expense of the boards and commissions now existing was $533,430.18, an increase of $216,331.51, or 68 per cent. If, in 1908, we had, according to Gov. MARSHALL, too much government, we are certainly boiling over with government now. The Democratic Party has signally failed to keep its promise to the people of Indiana.

But how about their pledges to economically administer State affairs? Take the reports of the auditor of state for the years 1908 and 1913. The year 1908 marks the close of Republican administration, while the year 1913 marks the beginning of the present Democratic administration. What do the records show as to the conduct of the three old established departments of State government?

In 1908 the expense of the office of secretary of state was $14,293.89. In 1913 this expense was $38,247.64, an increase of $23,953.75, or 167 per cent, and, compared with the legislative year 1907, an increase of 44 per cent.

In 1908 the expense of the office of auditor of state was $58,941.44. In 1913 this expense was $72,602.32, an increase of $13,660.88, or 23 per cent.

In 1908 the expense of the office of treasurer of state was $12,176.24. In 1913 this expense was $13,492.70, an increase of $1,316.46, or 10 per cent.

Let us go further. In 1908 the expense of the bureau of printing was $77,037.26; last year, $118,352.44, an increase of $41,315.18, or about 54 per cent; and, compared with the legislative year 1907, an increase of 23 per cent.

In 1908 the expense of the board of education and the office of superintendent of public instruction was $20,808.74; last year, $29,802.62, an increase of $8,993.88, or 43 per cent. In 1908 the library and library commission expended $25,299; in 1913, $35,088.93, an increase of $9,789.93, or 38 per cent. In 1908 the expense of the board of health was $42,886.06; last year, $62,393.39, an increase of $19,507.33, or 45 per cent. In 1908 the expense of the board of charities was $16,343.63; last year, $27,703.67, an increase of $11,360.04, or 70 per cent.

In 1913 the expense of the board of accounts was $63,550.01. This is the amount paid directly out of the State treasury, and does not include the thousands upon thousands of dollars paid by the municipalities, counties, and townships for so-called investigations by this board, many of these reports covering the conduct of ex-officers so far back that the statute of limitations barred any recovery against the officer or his bondsmen, and these reports being without any practical profit or utility to anyone.

In 1908 the expense of the railroad commission was $30,861.96. In 1913 the expense of this commission and the public-service commission, which had been added to it, was $59,251.68, an increase of $28,389.72, or 92 per cent.

In 1908 the aggregate expense of the then three separate departments, known as the labor commission, the department of inspection, and inspector of mines, was $29,467.66. Under Democratic rule these three were consolidated under one, known as the department of inspection. One would ordinarily suppose that such consolidation would result in reduced expenditure, but, on the contrary, the facts are that this one department in 1913 expended $50,196.36, an increase over the three departments in 1908 of $20,728.70, or 70 per cent.

Then there is the office of gas inspector. We had been under the impression that they no longer had natural gas. In 1908 the expense of this office was $4,273.92, and in 1913 $8,656.18, an increase of $4,382.26, or 102 per cent. Under these figures natural gas ought to be increasing in the State of Indiana.

Take the office of State entomologist. In 1908 the expense of this office was $3,247.02. In 1913 $14,970.98, an increase of $11,723.96, or 361 per cent. The last regular legislative session under Republican rule, that of 1907, cost $130,024.87. That of 1913 $162,507.67, an increase of $32,482.80, or 25 per cent.

A glance at the conduct of the State's institutions reveals the same general condition. In 1908 the expense of all the institutions of the State, including the penal, correctional, charitable institutions, all schools, and soldiers' monument, amounted to $1,852,663.56. In 1913 this expense was $2,775,092.28, an increase of $922,428.72, or 50 per cent. In view of these enormous increases some one may say that there exists something peculiar and extraordinary about these years 1908 and 1913. It may be possible that in some particular instance peculiar and unusual conditions prevailed that would make that particular comparison an unfair one. So that there can not be a shadow of doubt in the matter, let us compare the annual average cost of government for the entire four years of Republican rule under Gov. Hanly with the average annual cost of government for the entire five years of Democratic rule, under Govs. Marshall and Ralston.

There can be no successful contention that this basis of comparison is not entirely fair. When the State buys grounds, makes permanent repairs, and erects new buildings, or makes payment upon the State debt, it has, after the expenses are incurred, something to show for them. Payment upon the debt relieves us of that much debt, and while the money is gone with which the grounds were bought and buildings erected, the equivalent, the grounds and buildings, remain actual, visible, tangible property. Expenses, such as salaries, maintenance of institutions—in short, all other expenses—are intangible; that is, after they are incurred the State has no actual property or thing of value to show as their equivalent, and these expenses, in the truest and strictest sense, constitute the actual cost of government. Excluding, then, the items of payment upon the State debt and cost of grounds, permanent repairs, and new buildings, so as to arrive at the actual cost of government, there was expended for all other purposes during the four years of Republican administration under Gov. Hanly an annual average of $2,805,163.29; during the four years of Gov. Marshall's administration, an annual average of $3,673,812.03, an average increase each year of $868,648.74, or of about 31 per cent; and during the one year of Gov. Ralston's administration, $4,453,879.70, an increase of $1,648,716.41, or more than 58 per cent.

I might abuse your patience with further reference to these reports. These facts abundantly established the proposition that in the great majority of all the important departments of Indiana's State government enormous increase of expenditure has occurred, until economy has become a mere Democratic catchword, to be used only in the platform and then dropped from their political dictionary. The Democratic Party has signally failed to keep its promise to the people of economical government.

The history of the State debt tells the same story. The administration of Gov. Durbin is noteworthy for the amount of public debt paid. At his incumbency it was $4,704,615.12, and at the close of his administration it had been reduced to $1,902,615.12. The same policy was continued under Gov. Hanly, so that in 1906, the second year of his administration, all had been paid on the foreign debt that could be paid, the balance not maturing until 1915, and the bondholders refusing payment prior to 1910, when payment was optional with the State. At the incumbency of Gov. Marshall the debt was $1,510,163.12.

The Democratic Party could not deny this truly remarkable achievement, but they formerly contended that it was due to the tax law, which they claimed as a Democratic measure, and that this tax law in a sort of automatic way paid the debt. During the administration of Gov. Marshall the debt was reduced $250,000, so that when the present administration came into power the debt was $1,260,163.12. The valuation of taxable property in the State, which in 1908 was $1,723,311,564, in 1913 was $1,938,207,235, an increase of more than $200,000,000. The levy, which in the last year of Republican administration was 33.35 cents on the $100, was by the legislature of last year, fixed at 40.10 cents on the $100, an increase of 6.75 cents, or about 20 per cent. Not only has the State rate been thus elevated, but recent Democratic legislatures have been prodigal in creating a number of minor additional county officers and increasing salaries of old county officers. In Marion County alone salaries of county officers have thus been increased more than $40,000 annually. Never in the history of Indiana in times of peace has every section and community been so oppressed with the burden of taxation as at this very hour. The last legislature also created several forms of special taxes yielding large revenues, notable among which are the automobile license fees and the inheritance tax. Now, with this immensely increased valuation, with the higher rate, with these special taxes, and with the same old tax law, we find that the State debt, including floating or temporary debt, was at the close of the fiscal year 1913 $1,470,163.12, an increase of $210,000.

The citizenship of the State is humiliated by the fact that the State institutions are kept open and the State government is now being run on money borrowed of Chicago bankers, and that more money must be borrowed and more loans negotiated in order to keep these institutions open, the government running, and to prevent the State from failing to pay its obligations, like a common bankrupt. This enormous increase in the cost of government, this contracting of additional debt, have all occurred under Democratic rule, under normal conditions, when no war, famine, or pestilence vexed the State's borders. Fiscal mismanagement, combined with legislative extravagance, have placed the State's finances in an intolerable condition. In fine, Democratic administration may be characterized as a time when all of the financial dreamers and incompetents, out of jobs and hungry for public provender, and the money derelicts gather together around the State treasury to hold high carnival.

Before the recent Democratic State convention Gov. Ralston made a lengthy speech in attempted defense of the record of his party. It is an able speech by an able man in a hard cause, a speech replete with explanation, extenuation, and special pleading. When the speech is analyzed the governor's defense for the present conditions is largely based upon two propositions, the first of which is that the Democratic Party ought to be excused for the increased cost of running the State's institutions because of high prices. No one disputes the fact that prices have advanced since 1908, but if care is taken to analyze the figures, this increased cost of our institutions is explained only in minor degree by high prices. The cost of maintenance of inmates has only reasonably increased, about which there can be no fair criticism. In other words, the Democratic Party has not been lavish in clothing and feeding these unfortunate members of society.

But the increased expenditure is mainly attributed to administrative charges; that is, for salaries and expenses of a large number of added officials and employees. This whole defense, however, is one that by the rule of political ethics Gov. Ralston should be estopped from making. The Democratic promise was: Put us in power and we will reduce the tariff and lower prices to a reasonable level. Well, they have tinkered with the tariff, put thousands out of employment, and, according to Gov. Ralston, affected prices not at all. What they need is more tariff and less taxes in the State of Indiana. The governor's other proposition of defense is that, while many new laws have been enacted and new offices created, entailing an increased expenditure, the people demanded them because the legislature passed them. The fallacy of this argument is easily shown. The Democratic legislative majority is not the people of Indiana and does not represent the majority of the people, but, as we all know, is only representative of a minority. It is a far cry, indeed, that because the legislature made the laws the people demanded them. The voice of the people is the voice of God. If, according to Gov. Ralston, a Democratic majority in the legislature, elected by a minority, is the voice of the people, then such Democratic legislative majority is the voice of God, a logical calamity, which God forbid.

I submit that they can no longer afford to make their statehouse an experimental station for all the fads, fancies, and follies of the Democratic Party.

The difference between the parties in the administration of State affairs can be summed up in this: The Republican Party in the State of Indiana is a debt-paying party; the Democratic Party a debt-making party.

And so with these conditions we naturally find the political prophets forecasting that Indiana will again be Republican in 1916.

The American Navy.

EXTENSION OF REMARKS
OF
HON. H. ROBERT FOWLER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 13, 1914.

Mr. FOWLER. Mr. Speaker, it is axiomatic that the existence of imminent danger justifies the employment of force. It is equally axiomatic that the greater the danger the more powerful should be the weapons of defense. Danger and force are coordinate terms, but without the existence of the one extravagant preparations for the other can not be justified. The laws of economics and of expediency demand that the extent of naval programs should be measured by the extent of real danger, or danger to be reasonably anticipated, from foreign foes. Should such danger be great and imminent, then the preparations to overcome and conquer should be elaborate and efficient, so that victory may be certain and national prestige and national honor may be preserved unsullied. But if little or no danger should exist and the international relations are such that none can be reasonably foreseen, a lavish expenditure of vast sums of money for the construction and maintenance of mighty engines of death in a mad race to excel in size and strength of menacing fleets is an unjustifiable waste of wealth, no less criminal than if such means should be appropriated and used to increase private bank accounts.

SELF-PRESERVATION IS THE WATCHWORD OF CREATION.

The law of self-defense is as old as human society. Its origin dates back to the beginning of creation and springs from the necessity of preserving animal life, the responsibility of which is cast upon the individual, who is made by nature the keeper and guardian of his own physical welfare. All animals are armed with weapons for this purpose by the God of creation. The canine and feline species have the heavy jaw and sharp teeth; the bovine species are armed with the stout horn and thick hide; the antelope and reindeer speed away unharmed by aid of the fleet foot; the oyster and tortoise rest secure in the thick shell; the cuttlefish carries a pouch, well filled with inky fluid, with which to darken the waters so that he may escape unobserved; on the approach of danger the mud turtle, by instinct, dives to the bottom and stirs up the mud in order to conceal his miserable form; the insect has its poisonous sting, the reptile its deadly fangs, and the swordfish can sink a ship at will. All nature teems with specific preparation for defensive warfare, arming all animal life with weapons of self-defense. She has issued a perpetual injunction against invasion for conquest and sounded a propitious warning of punishment to all transgressors. The same responsibility which nature has imposed upon the individual for self-preservation rests upon the State by virtue of the social compact, and it is the duty of the State to prepare such means of defensive warfare as may be reasonably necessary to protect the life and property of the citizen.

DO WE NEED A BIG NAVY?

What nature has done for the individual in a small way, she has done for America on a large scale. She has supplied us with natural weapons for national defense far more powerful and enduring than can be forged by human hands. On the east she has separated us from all of the great powers of Europe by an insurmountable wall of tempestuous waters 3,000 miles wide and 3,000 feet deep, beset with dangerous reefs, huge icebergs, stormy billows, and breakers mountain high. On the west she has stretched between us and the "yellow peril" another impregnable wall of waters 10,000 miles wide. These walls never have been successfully scaled in the past by any invading army and never will be in the future. Great Britain tried the experiment in 1776, when our population numbered less than 3,000,000 souls, but she failed. She tried it again in 1812, but we literally ate her up on land and sea and made her more anxious for peace than she ever had been for war. That peace has existed for a hundred years and is likely to continue undisturbed for centuries to come.

If the greatest military power in the world could not whip us on our own soil during our infancy, what have we to fear now? What nation or combination of nations would be foolish enough to try it now? There are not enough vessels in the world and there never will be enough with sufficient capacity to transport an army to our shores big enough to whip us. All the munitions of war, such as guns, cannons, powder, shells, and all that is necessary to equip and discipline an army, including horses and mules, supplies for the same, and food and clothing for the soldiers, must be transported from abroad. This can not be done. The base of supply is too far away. All the nations of the world combined could not bring an army over here big enough and maintain it long enough to capture even one small section of our territory, and it is idle to talk about danger by invasion from foreign shores. Some advocates of a big army and a big navy have become alarmed because of our long line of seacoast, and seem to live in mortal dread of the capture of some of our coast cities. Well, suppose some nation should do that, what good would it do? We would soon recapture it, and either capture their entire army or drive their shattered forces back home in disgrace. We now have a population of 100,000,000 of the bravest and most patriotic people in the world. Great Britain has a population of 45,369,000; Germany, 40,165,219; France, 39,601,509; Russia, 167,003,400; and Japan, 52,200,679. We have a wealth of $130,000,000,000; England, $80,000,000,000; France, $65,000,000,000; Germany, $60,000,000,000; and Japan much less than any of the others. With this advantage in wealth, population, and bravery of our people, aided by our splendid isolation, war on our own soil with other countries is impossible. We never have been whipped and never will be as long as we stay at home and attend to our own business, but if we should go away from home and get to meddling with the business of other nations we might get whipped, and we ought to get whipped and be taught a lesson for being so foolish.

During the last 30 years our population has increased 85 per cent, our wealth 185 per cent, and our expenditures 400 per cent. The greatest increase in expenditures has been made for war and on account of wars, as will be revealed by the following figures:

For a period of 15 years prior to the Spanish-American War our annual appropriations for the Navy ranged from $14,000,000 to $30,000,000, and for the Army less than $25,000,000, averaging for both of these great departments less than $50,000,000. But since the close of this war the appropriations for these departments have increased so rapidly as to astonish the entire world. In 1883 our appropriation for the Navy was $14,903,559; in 1893 it was $23,543,267; and in 1899 it jumped up to $56,098,969. During the last six years it has averaged $130,212,290 a year, and for the fiscal year ending June 30, 1915, it will probably reach $150,000,000. The increase for the Army is no less astonishing. The appropriations for 1915 are more than $100,000,000, making a grand total for the Army and Navy for 1915 about $250,000,000.

Wonderful increase of the Navy.

1883	$14,903,559
1893	23,543,267
1894	22,104,061
1898	33,003,234
1899	56,098,783
1900	48,099,969
1903	78,856,363
1908	98,958,507
1909	122,662,485
1910	136,935,199
1911	131,410,568
1912	126,405,509
1913	123,151,538
1914	140,718,434

Mr. Speaker, I have had access to the figures, dating back many years, which show the expenditures for war and on account of wars for Great Britain, Germany, France, and Japan, and have carefully compared them with our expenditures. Our total revenue, exclusive of postal receipts, for the year 1908 was $574,000,000; our expenditures for war and on account of wars, $384,801,059. When reduced to percentage, it shows that we expended for war and on account of wars 67.5 per cent of our entire revenue, not including postal receipts. For the year 1906 Great Britain expended 42.5 per cent of her revenue for war and on account of wars, Germany 42.9 per cent, and France 32.2 per cent. We had an Army at that time of 52,000 men and a Navy of 42,000, while England had an army of 204,200 men and a navy of 129,000 men; France had an army of 550,000 men and a navy of 56,285 men; Germany had an army of 600,000 men and a navy of 62,000 men.

During the year 1912 our entire revenue, not including postal receipts, amounted to $702,000,000. Of this we expended $654,000,000 to defray the entire cost of the Government; $444,000,000 was paid out for war and on account of wars, or 67.88 per cent, showing an increase of .38 per cent since 1908. I have had the figures compiled for the year 1914, showing the total revenue receipts and the expenditures for war and on account of wars for the United States, Great Britain, Germany, France, and Japan which I will place in the RECORD; but for the present I

desire to make the comparison in round numbers, so that the increase of expenditures for war and on account of wars can be more readily understood:

Entire revenue for the fiscal year ending June 30, 1914.

Postal receipts not included (estimated)	$700,000,000
Expenditures for war and on account of wars	476,541,785
Great Britain's revenue for 1913 and 1914	965,443,419
Great Britain's expenditures for war and on account of wars	365,440,027
Germany's revenue for 1913 and 1914	760,760,956
Germany's expenditures for war and on account of wars	424,981,769
France's revenue for 1913 and 1914	933,148,123
France's expenditures for war and on account of wars	327,311,168
Japan's revenue for 1913 and 1914	293,403,799
Japan's expenditures for war and on account of wars	132,792,822

Expenditures for war and on account of wars reduced to percentage.

United States:	
1914	68.07
1908	67.5
Great Britain:	
1913 and 1914	37.85
1906	42.5
Germany:	
1913 and 1914	55.86
1906	42.9
France:	
1913 and 1914	35.07
1906	32.2
Japan, 1913 and 1914	45

The full complement of the standing army and navy of these countries is as follows:

Great Britain, 1913 and 1914, army, 254,500 men; navy, 137,500 men.

Germany, 1913 and 1914, army, 870,000 men; navy, 66,783 men.

France, 1913 and 1914, army, 720,000 men; navy, 60,621 men.

Japan, 1913 and 1914, army, 250,000 men; navy, 51,054 men; with a reserve naval force, 114,000 men.

United States, 1914, army, 91,416 men; navy, 52,757 men.

Russia has a standing army of 1,200,000 men; navy, 52,463 men.

Mr. Speaker, on close examination of these figures we will find the revenue of Great Britain to be greater than ours by nearly $300,000,000, but that our expenses for war and on account of wars is more than $100,000,000 greater than hers. We will also find that the aggregate of her army and navy is nearly four times as great as ours. Germany's revenue exceeds ours by $60,000,000, but our expenditures for war and on account of wars exceeds hers by more than $50,000,000, yet her army is more than nine times as large as ours, and her navy exceeds ours by 14,000 men. The revenue of France is more than $233,000,000 greater than ours, but our expenses for war and on account of wars is nearly $150,000,000 more than hers, notwithstanding her army is eight times as large as ours and her navy excels ours by 10,000 men. Although our revenue is nearly two and one-half times that of Japan, yet her army is nearly three times as large as ours, with a naval force nearly four times the size of ours, yet our expenses for war and on account of wars is more than three and one-half times that of hers.

During the last 10 years we have expended for the Army and Navy alone more than $2,000,000,000—a sum sufficient to dig the Panama Canal, pay off the national debt, and have enough left to defray for one whole year the entire expenses of all the churches, including foreign missions, all the free schools, colleges, and universities in America. Yet we find that instead of curtailing these enormous expenses, Congress seems to have surrendered to the "big Navy" policy. In 1906, and again in 1912 and 1913, Congress settled upon a policy of one battleship a year; but, in spite of efforts to cut down expenses, the majority of the Committee on Naval Affairs and the Secretary of the Navy recommended two battleships for 1915. The Naval Construction Board recommended four. The House passed the bill providing for two, but the Senate added an amendment providing for the sale of the *Idaho* and *Mississippi* with authority to construct another battleship with the proceeds, making three battleships for 1915.

There are two forces behind the "big Navy" policy in America, one of which is inspired by greed for big profits through the sale of construction material, armor, and armament, while the other is prompted by a false ambition to place on the high seas the largest navy in the world. Neither of these blind leaders should be followed into the ditch of national bankruptcy. Navies should be constructed and maintained for the same reasons that walls were built around cities in ancient times—to keep out the enemy. They can not be justified on the ground that they are necessary in order to satisfy the ambition of individuals or on account of national pride to compete with other nations, and excel in the size, strength, and number of fighting units. The maxim, "Never buy what you do not want because it is cheap," is based upon a sound economic principle, and Congress may profit by standing upon the broad principle that our country should not be compelled to buy what we do not want—a big navy—because other nations are buying what we do not want—a big navy. In the South they used to say they raised cotton to sell to get money to buy "niggers" to raise cotton to sell to get money to buy "niggers" to raise cotton to sell to get money to buy "niggers," and the friends of the big Navy say we build battleships because other nations build battleships. But now, I presume, they will have another reason, since the proposition to sell two of our battleships has been suggested—agreed upon by way of a Senate amendment—which will run something like this, "We are in favor of building battleships to sell to get money to build battleships to sell to get money to build battleships to sell to get money to build battleships, and the last reason, meaningless as it appears, is more sensible than the first.

WE ARE TOO BUSY FOR WAR.

Mr. Speaker, we should remember that we have more than 400,000,000 acres of unimproved farm lands to rescue from the wilderness and the plains and place under the magic influence of skill and culture before we can expect a bounteous yield therefrom for the relief of our rapidly increasing population. We have 75,000,000 acres of swamp land to reclaim from a watery grave, land the richest in the world, and anxious for ages to exchange the music of the frog and the hiss of the serpent for happy firesides of song and prayer and rich fields of golden grain as a reward to the industrious farmer. We have the greatest rivers in the world to improve with locks and dams, so as to insure water navigation the year around. We have more than 2,000,000 miles of unimproved roads in America to level and harden for the benefit of commerce and many new roads to lay out and prepare for easy and rapid transit. We have railroads to build, canals to cut, new furnaces to build, new factories to erect, old walls to tear down, old machinery to remove, new and better buildings to erect, modern machinery to install, new inventions to study out, so that more labor can be saved, and new improvements made in every avenue of business and commerce. We have 100,000,000 people to be fed, clothed, schooled, and churched, all of which will require great activity, the employment of an ever-increasing army of labor, the use of vast capital, and the application of much mental skill and labor.

Every man and every dollar abstracted from this wonderful work retards our progress and lessens our hope of success and at the same time adds an additional burden upon those engaged therein. The soldiers and sailors must be fed and clothed by others. Their arms must be forged by others. Money for their salaries must be earned by others. Warships, dry docks, armorplate, armament, machinery, and all that is necessary to equip an effective Navy and Army must be furnished by the skill and labor of others, and the vast sums required for their construction, equipment, and maintenance must be paid for by the industrious workman. A navy and an army are burdens on the backs of the industrious, and the larger the greater the burdens. This being true, we should practice the greatest economy, based upon our actual wants.

THE VOLUNTEER SOLDIER IS THE BEST WARRIOR.

In a republic like ours the security, power, and prestige of the Nation does not depend upon the size of standing armies and permanent navies. The volunteer soldier has been our greatest wall of defense in times of distress, and I have no doubt but what he always will be the strongest fighting unit in future wars, should we have any. It was his valor that forced the mailed hand of imperial power to slacken its grip upon the government of the colonies. It was his victory which witnessed the surrender of King George's army at Yorktown and his hands into which Cornwallis delivered the King's sword. It was his bravery and courage which drove Packingham's shattered forces from the shores of the American continent and the British warships off the high seas, that commerce on the ocean might be free. It was his brave hand that planted the Stars and Stripes upon the ramparts of the Montezumas and forced Mexico to acknowledge our territorial rights. It was he, more than 2,000,000 strong, from the North, who met his brother, legions strong, from the South, on a thousand bloody battle fields during the Civil War, where the steel of the North clashed with the steel of the South in deadly conflict, such as mortal struggle had never witnessed before, and painted the land red with the mingled blood of dying soldiers from both sides from Bull Run to Appomattox. It was his valor which rescued bleeding Cuba from the foul clutches of tyranny and transformed her into a living republic.

Such men have left as a heritage to the American people an imperishable record of the greatest courage and bravery, of the most lofty type of patriotism and love for country—a record of

eternal fame and glory such as has never been equaled by the deeds of mortal men before or since. Upon the wisdom and courage of such men—the common people—this Nation will always depend for the enforcement of its policies, both domestic and foreign, rather than upon standing armies and permanent Naval Establishments. In their patriotic hands our liberty and peace at home will always be secure and our prestige abroad will ever be maintained. Our strength as a Nation will always depend upon the development of our internal resources, the intelligence and industrial activities of our people, our adherence to the sound principles of a free government as marked out by our forefathers, our fairness in dealing with international questions affecting the rights and liberties of other people, our patriotism and devotion to the lofty teachings of nature and nature's God, and not upon the size of our standing army or the strength of our Navy. Upon this rock the hope of a mighty Republic can ever rest securely, with every assurance of the love, respect, and admiration of all the nations of the world.

OUR POLICY OF PEACE CHANGED TO A POLICY OF WAR—WHY?

Mr. Speaker, for more than a century our Navy consisted of a few hundred men, and our standing army was less than 25,000 soldiers; but now the full complement of our Navy is 51,757 and our standing army is 91,416. Under a policy of peace we have developed into the richest and greatest Nation in the world; but now we are told that we are in great danger and must have a big army and a big navy to protect ourselves. What has caused this sudden change from a policy of peace and progress to a policy of blood and bluster? Why this wild clamor? Why this idiotic rush? Why this unwarranted expenditure of the people's money, bordering on criminality? Why this madness to place on the high seas the greatest Navy in the world? Is it the outburst of patriotism in response to the country's call in defense of liberty, or is it a conspiracy, in whole or in part, against the Treasury, prompted by greed? Let us see. During the Spanish-American War certain corporations and trusts got a taste of big profits, and they seem to be wedded to a useless waste of public funds, but they are shrewd enough to keep in the background and let their agents manage their cause. The Navy League, with handsome headquarters in the Southern Building, in Washington, D. C., officered by rich men, closely connected by blood or marriage and closely allied in business, as I am informed, with some of the biggest trusts and most notorious money pirates in the country, is the active agent of this reckless policy. It publishes and circulates a periodical called The Navy, for the purpose of working up public opinion in favor of a big Navy. Royal banquets are spread at its expense for the entertainment of Members of Congress and officers high up in military and naval affairs. All of this trouble and enormous expense is borne by this league for some definite purpose, which is open to serious question in the minds of certain Members of Congress.

Here are the names of some of them:

NAVY LEAGUE.

The Navy League seems to be dominated by millionaires and their friends. The following gentlemen are intimately connected with this league: J. Pierpont Morgan was a director at the time of his death. His son, J. Pierpont Morgan, is the treasurer of the league, as I understand. Mr. Herbert L. Satterlee is general counsel for the league. He is a brother-in-law of J. Pierpont Morgan. Robert L. Thompson is chairman of the executive committee of the league. He is president of the New York Metal Exchange and chairman of the board of the International Nickel Co. and a close friend to the Morgans. Gen. Horace Porter is president of the league. For many years he was identified with the Pullman Co., a Morgan corporation. Charles C. Glover, president of the Riggs National Bank of this city, which is closely identified with Wall Street, is the treasurer of the league. J. Frederick Pams is a director of the league, a member of Morgan's yacht club and a New York society yachtsman. Ex-Postmaster General George von L. Meyer is a director of the league, and was Secretary of the Navy under the Taft administration.

In his testimony before the Committee on Naval Affairs on the 28th day of January, 1914 (naval hearings, p. 588), Rear Admiral C. E. Vreeland, a member of the General Naval Construction Board, was asked by Congressman FARR, of Pennsylvania, this question: "What is the object of the Navy League?" To which Admiral Vreeland replied, "It is purely patriotic." Yet the admiral and the naval board of which he is a member has recommended the building of four battleships a year for the last eight years, for reasons, I presume, "purely patriotic." The present plan of this board is to build an effective fleet of 48 battleships, with a supply of auxiliary torpedo and submarine destroyers. The Naval League is in complete harmony with this policy, and for reasons, I presume, "purely patriotic." It scatters its literature abroad and sets its banquets in stately halls, at its own expense, for the purpose of making the people believe that unless we put on the high seas the greatest navy in the world Japan or some other nation will jump on us, capture our country, take our homes away from us, and establish over us, without our consent, an imperial form of government, with a real tyrant at the head as our supreme ruler.

Table showing total revenues for various nations and the amounts used for war and on account of wars.

[Compiled by FOWLER.]

Nations.	Total revenue 1913 and 1914.	Total effective revenue for Army 1913 and 1914.	Total non-effective revenue for Army 1913 and 1914.	Total revenue for Army 1913 and 1914.	Total effective revenue for Navy 1913 and 1914.	Total non-effective revenue for Navy 1913 and 1914.	Total revenue for Navy for 1913 and 1914.	Total revenue for Army and Navy for war and on account of wars, 1913 and 1914.	Per cent of revenue used for war and on account of wars, 1913 and 1914.	Estimated standing Army 1913 and 1914.	Estimated standing Navy 1913 and 1914.
Great Britain	$965,443,410	$118,248,470	[1] $2,482,336 19,182,930	$139,913,736	$211,028,788	$14,497,503	$225,526,291	$365,440,027	37.85	254,500	137,500
France	933,148,123			191,431,580	[2] 43,621,944		92,257,645	327,311,168	35.07	720,000	60,000
Germany	760,760,956			216,095,635	[2] 94,380,450		114,505,683	424,981,769	55.86	870,000	66,783
United States	700,000,000	105,095,466	[3] 5,951,000	[2] 210,877,285 111,046,466	144,280,433	[2] 10,329,600	265,664,499	476,541,785	68.07	91,416	52,757
Japan	293,403,794			48,968,038	[2] 35,283,881		48,540,903	132,792,822	45.00	250,000	[4] 114,000 51,054

[1] Provided in civil service and revenue department estimate. [2] Total as a result of wars. [3] Miscellaneous. [4] Reserve naval force.

This reminds me of the statement said to have been made by Andrew Carnegie at a Republican club meeting in New York on the 7th day of January, 1911, reported in the Washington Post January 8, 1911, in which he claimed to have received a cablegram from Secretary Tracy, of the Navy, while coaching in Scotland, to the effect that the President believed it to be his duty to come home and engage in the manufacture of armor plate, so that the Government would not be delayed in the building of warships on account of a lack of armor plate; that he immediately returned and built a plant. In commenting on the cablegram, he said, "If the President thinks it is my duty to do anything or go anywhere for my country, I consider it the voice of God." Yet in his first contract, November 20, 1890, to furnish armor plate for the *Indiana*, and so forth, he made a secret deal with Secretary Tracy for 6,054 tons without advertising for bids, in violation of the law, whereby he received from the Government on an average more than $600 a ton, and, in addition, 2 cents a pound for all armor furnished as a guaranty against all royalties he might be required to pay on account of a French patent for nickel steel used in making armor plate, which cost the Government $130,000. I suppose this was in answer to the "voice of God" and prompted by motives "purely patriotic." In 1897 Congress fixed the price of armor plate at $300 a ton, but his company—Carnegie, Phipps & Co.—and the Bethlehem Iron Co. were then the only plants in America making armor plate, but they refused to put in bids and forced the Government to pay them $425 a ton. In 1899 Congress again fixed the price at $300 a ton, but both of these companies again refused to put in bids, for reasons, I presume, "purely patriotic" and in answer to the "voice of God," although the Bethlehem Co. in 1894 had contracted to furnish, and did furnish, Russia 1,500 tons of the same kind of armor plate for $249 a ton.

On the 22d of May, 1894, the House passed a resolution authorizing the Committee on Naval Affairs to investigate the charges of fraud filed against the Carnegie Steel Co., then

Carnegie, Phipps & Co. The investigation was made by a subcommittee consisting of Messrs. Cummings, Money, Talbott, Dolliver, and Wadsworth. The evidence was large and convincing. Here is some of the evidence bearing directly upon the question of fraud in the manufacture of armor plate by this God-fearing man.

Charles M. Schwab was then superintendent of the company, but now president of the Bethlehem Steel Co. He testified that the armor plate did not "receive uniform treatment"; that they did not make any armor plate that did not "have blowholes"; that the "blowholes" were secretly "plugged" and kept "concealed" from the Government inspectors; that he knew of this fraudulent work.

The superintendent of the works, W. A. Cline, testified that he almost invariably changed the figures so that false reports of the treatment of the plates were systematically made to the Government inspectors; that he discharged some of the workmen because they told the truth about this fraudulent work.

William E. Cory, a superintendent, testified that the tensile strength of each plate was stretched so as to increase their apparent tensile strength without the knowledge of the inspectors of the Government; that he knew false specimens were substituted for the plates selected by the Government inspectors, but he considered it "a matter of small importance"; that plates selected by the Government inspectors for physical and ballistic tests were re-treated before the tests were made and without the knowledge of the Government inspectors. This fraud led the inspectors to believe all the armor was as good as the specially treated plates secretly made after they had been selected for making tests.

Mr. T. F. Van Kirk, a workman in this company's works, testified that on April 11 and 12, 1892, a plate, x–9, 13 inches, was—

plugged and hammered up. Forty holes in top and bottom of plate. This plate was afterwards finished, stamped x–8, 13 inches, April 23 and 24, 1892. Holes in top of plate run in wire 4 feet or more. The material in this plate was very bad, and in trying to plug the plugs would fall in, but we finally doctored it up and it passed inspection.

In an affidavit Samuel Sheriff says:

The plugging and doctoring of plates was generally done at night, when no inspectors were about, but I seen one fixed one day at noon.

Mr. T. F. Farley, another workman, testified in an affidavit that—

the plates were frequently imperfect, were full of deep holes and defects; frequently taken off the planer in the daytime and hidden or covered up until night, so as not to be seen by the inspectors, and then worked upon in the nighttime. I have seen these defective plates passed, inspected, and shipped from the works to their destination.

Mr. G. W. Kountz says in his affidavit:

I have known of heavy plates being plugged of holes from 4 to 6 inches, unknown to the Government inspectors. This fraud has been practiced upon the Government since long before November, 1892, and since September, 1893.

Mr. T. F. Farley says in his testimony:

When I first went there they were plugged by taking cuttings from the same plates, * * * hammering them in with a punch, and placing more and more in the hole until it was level, until it could stand no more plugging. I have run wires in to the depth of 18 inches into these plates, and I know that plates that I run a wire in 18 inches passed and is now somewhere.

Samuel Sheriff testified that two or three barbette plates of the *Indiana* were plugged and passed; that he knew a patch put on one of these plates to fill a hole 2 or 3 inches square.

All of this was done, I presume, in answer to the "voice of God" and prompted by motives "purely patriotic," as it was "a matter of small importance." But he was found guilty, and damages were assessed against his company in the sum amounting, in round numbers, to $600,000, but he compromised the matter for $140,000. The committee, after reviewing the evidence, said in its report:

Such are specimens of the testimony regarding the plugging of plates. In the opinion of your committee, they bear out Commodore Sampson's allegations that "the concealing of the blowholes was a fraud upon the Government."

But what did this nighthawk of commerce care for the lives of the men who stood as a wall of defense to his ill-gotten gains? What did he care for the efficiency of our Navy? What else did he care for save huge profits and large dividends?

In his address to the working girls of New York on February 10, 1911, reported in the Washington Post February 11, 1911, he said:

I have made 42 or 43 millionaires in my time, but I want to say that the only right a man has to wealth lies in his acquiring it by his own labor.

Here is his measure for the amount of wealth a laboring man is entitled to accumulate—that and that only which he can earn by his own labor. This is the "voice of God" to be followed by labor, but it is not the same voice followed by him in his dealings with his Government in a matter of vital importance to the security of life in our Navy and the honor of our country. It is not the rule followed by him in accumulating his millions. I heard him in answer to a question while on the witness stand before the Stanley investigating committee in 1912, propounded by Congressman BEALL of Texas, as to whether he consulted his attorney to learn the law so as to operate his business according to law, to which he replied: "I never bothered my head about the law," pointing to his head with his index finger. What did he care for the laws of his country? What does he care for the laws of God? The only voice he ever heard which can be denominated the "voice of God" is the voice of the god of mammon; and he has consistently followed that voice to victory—from a standpoint of millions.

In 1896 Congress authorized Hon. H. A. Herbert, Secretary or the Navy, to investigate the cost of the production of a ton of armor plate and the cost of an armor factory, and he requested, by letter, information from the Carnegie and Bethlehem Cos. on this subject, but they refused, saying:

It is very unusual for Congress to inquire into the business of private corporations.

Congress had already inquired into the conduct of the Carnegie Co. and had fined it more than $600,000, and was making arrangements to inquire into other irregularities. Secretary of the Navy B. F. Tracy, at the urgent request of William M. Folger, on June 20, 1891, by letter, requested special action by the Patent Office on an application for a patent filed by Howard A. Harvey for supercarburizing armor plate, Folger having prompted Harvey to apply. The patent was issued September 29, 1891, and in the summer of 1892 a contract was entered into with Harvey for the use of his patent, and in the contracts for armor plate in 1893 with the Bethlehem and Carnegie Cos. they were required to use the Harvey process and were paid from $50 to $100 a ton more than the regular price formerly paid.

Harvey had taken out a patent June 20, 1888, for hardening steel. William M. Folger, then inspector of ordnance at the Washington Navy Yard, procured the sale of steel thus treated to the Navy. It was undoubtedly through the influence of Folger, for he became Chief of the Bureau of Ordnance in February, 1890, and as such chief negotiated a contract with Secretary Tracy for the use of the Harvey process at one-tenth of 1 cent per pound for the finished product. Folger received $20,000 worth of the stock in the Harvey Steel Co. and employment in that company at a salary of $5,000 a year. This stock paid 20 per cent dividends from sales to United States. He knocked out Lieut. Seabury's device for a breech-closing machine and promoted an invention of a similar kind and had Lieut. Dashiell take out a patent, on which he received $125 for each gun. He also defeated Maxim's invention and gave it to Mr. Fletcher, saying in his testimony in a suit, Seabury against Dashiell:

I look upon the production of that officer—

Meaning Dashiell—

with more sympathetic consideration than I do upon the production of an outsider and free lance, who comes in for the pelf alone.

There was also some cloud hanging over William E. Corey, of the Carnegie Co., concerning his patent for carburizing or reforging armor, as well as the French patent by Creusot for nickel steel.

Secretary Tracy had become the attorney for the Harvey Steel Co. to defend its patents. The special interest which he had taken in one of these patents before its issue and while he was Secretary of the Navy was revived and created much criticism. Gen. William Crozier had been appointed Chief of the Bureau of Ordnance in the Army, and the sale of his patent for a disappearing gun carriage to the Bethlehem Iron and Steel Co. for $10,000, with the understanding that he should receive royalties until his income had reached $50,000, was also revived; and it was recalled that it was the Bethlehem people who first suggested to him to take out a patent on this device. Whether these naval and military officers had been prompted by motives "purely patriotic" in their actions relating to patents affecting materials to be used in the construction of our Navy, or whether they had "come in for pelf alone," was then giving Congress much concern, and when Secretary Herbert requested the Carnegie and Bethlehem Cos. to furnish him with certain information concerning the cost of producing armor plate and the cost of the construction of an armor-plate factory, they readily reminded him that "it is very unusual for Congress to inquire into the business of private corporations."

I am reminded of Æsop's fable of the lion who sought to get his food without chasing down his prey. He pretended to be sick and issued a proclamation to that effect and invited all of the beasts of the forests to come to see him. Some time after his proclamation was razed, he chanced to meet the fox, and demanded to know why he had remained away, upon which the

fox replied, "Oftentimes I was moved to visit his majesty and minister unto his wants, but on each occasion on approaching the door of his lair I discovered the tracks of many beasts going in, but none coming out. I was therefore so frightened I did not dare venture in."

What snake-charm spell has come over these men with motives "purely patriotic"? What wizard dope has been administered to them, the effect of which leads them directly into the camps of recklessness and extravagance? Why have they not detected and exposed the frauds perpetrated by the Armor Plate Trust? They are paid to do it. Why do they oppose investigations, and why do they defend the enemies of the Treasury and try to cover up their unlawful methods by saying they are "prompted by motives purely patriotic"?

In his annual report for the year 1913 Secretary of the Navy Josephus Daniels says, on page 41, that the "Russian Government claims to be able to produce armor at a saving of about $200 a ton over the price asked by the private manufacturers, and the French Government estimates that an equal saving has already been made on their plate," but Rear Admiral Joseph Strauss, Chief of the Bureau of Ordnance of the Navy, in his testimony before the Committee on Naval Affairs, on January 26, 1914 (naval hearings, p. 511), in referring to the manufacture of armor plate by the Russian and French Government plants says: "Whether the result of the establishment of these factories has been to reduce the price charged by private contractors is open to question." Yet I presume he was prompted to make this statement from motives "purely patriotic," although its effect was to discourage the establishment of an armor-plate factory in America. One peculiar feature about all of these statements made by these "patriotic" men and "patriotic" organizations is that they point directly to the interests of the Armor Plate Trust.

THE ARMOR PLATE TRUST.

We have only three armor-plate factories in America—the Bethlehem Iron & Steel Co., located at Bethlehem, Pa., established in 1887; the Carnegie Steel Co., at Homestead, Pa., erected in 1893; and the Midvale Steel Co., of Philadelphia, Pa., erected in 1903. The first contract for American armor plate—6,891 tons—was let on the 1st day of June, 1887, to the Bethlehem Iron & Steel Co. at $604.85 per ton, and the second contract was made, without advertising for bids, with Carnegie, Phipps & Co., on the 20th day of November, 1890, for 6,054 tons, at the same price per ton with a bonus of 2 cents a pound. The reasons offered by Secretary of the Navy, Hon. B. F. Tracy, was to promote the construction of another armor-plate factory, so as to secure competition and have a better chance to get our armor plate at home at better prices. But let us see what happened. In his report (H. Doc., vol. 58, p. 22, 54th Cong.) Secretary of the Navy, Hon. H. A. Herbert, in commenting on the question of a trust says:

> I am informed upon authority which I believe to be good that about, or perhaps before, the time of the last contract of the Bethlehem company with Russia there was a meeting in Paris of the representatives of the principal, if not all, of the armor manufacturers of Europe and America.

This was in 1894; and commenting upon the prices charged in Europe and America, he says, on the same page:

> These facts seem to lead to the conclusion that there is at least a friendly understanding or agreement among the principal manufacturers of the world that prices shall be maintained at about the same level.

Here we find evidence 20 years old of a world-wide Armor Plate Trust.

Mr. Speaker, in the naval hearings for 1914, page 621, the present Secretary of the Navy, Josephus Daniels, used the following language in referring to an advertisement for bids for armor plate for the dreadnought *Pennsylvania:*

> When we came to the armor we rejected all the bids, and were then absolutely in a situation from which it appeared there was no relief. Though you can not establish it in black and white, there is no doubt of an Armor Plate Trust all over the world. That is to say, the people abroad who make armor plate will not come here and submit bids, because they know if they do our manufacturers will go abroad and submit bids. They have divided the world, like Gaul, into three parts.

Further on, on the same page, in speaking of this contract, he says:

> In other words, they held us up.

Mr. Speaker, again we find evidence, coming from a high source, of a world-wide Armor Plate Trust, the American end of which is holding up the executive department of our Government. What kind of men engage in holding people up? Is it the law-abiding and God-fearing? No; they are criminals, such as train robbers and night sluggers, men usually apprehended, convicted, and sent to the penitentiary. Even the wayfaring tramp who, under the pressure of hunger, happens to thrust his hand through a broken window and takes out a loaf of bread or a roll of sausage to relieve the pangs of hunger is hurried off to begin a long term of prison life, while multimillionaires who systematically rob the Treasury of millions annually are hailed as great benefactors or peacemakers, because they cunningly donate a small portion of their ill-gotten gains to a library, school, or church or to some deceptive peace foundation. The commercial trusts are now engaged in a holdup game with the business of the country in an effort to force Congress to adjourn without enacting further trust legislation. The subsidized press of the country is their loudest mouthpiece, and the corrupt and unscrupulous politician is their strongest advocate. For 20 years this trust has blossomed like a rose and flourished like a green bay tree right under the eyes of the Attorney General. With all the proof compiled by Congress necessary to a conviction, why this inactivity? Wake up, wake up! A new political star is shining. Wake up, wake up! The dawn of a new day is breaking, the light of which will shine in on every administrative avenue of government and reveal all irregularities and secret combinations which may exist between the trust and the official. Government must be free from the influence of the invisible hand which has written contracts for the Government, laws for the Federal statute, and decisions for the Federal court. Criminals must be prosecuted and the Treasury must be protected. Men in office with chocolate backbones must retire and give place to men of courage, honesty, and activity.

Mr. Speaker, from 1893 to 1903, a period of 10 years, the Carnegie Steel Co. and the Bethlehem Steel Co. have put in practically the same bids for all the armor plate manufactured in this country. The Midvale Steel Co. came on the market in 1903 with a bid averaging $396.99; the Carnegie and Bethlehem companies protested against giving her any part of the contract, but the Secretary of the Navy divided the order, nearly 18,000 tons, about equally among the three; but notwithstanding the price submitted by the Bethlehem and Carnegie companies was about $20 a ton above the Midvale price, yet the Midvale was compelled to accept her part of the order at her bid, $396.99 on an average, while the other two companies were given their part of the order at their bids, averaging about $416.

In 1905 an order of 8,000 tons was offered, and the Midvale Co. bid from $385 to $398 per ton, but the other two companies put in bids at exactly the same figures—$400 to $420 per ton—yet the Midvale received only 1,041 tons at the price bid by her, and the remainder was given to the Carnegie and Bethlehem at their figures, $400 to $420. In July, 1906, between 7,000 and 8,000 tons were offered. The Midvale put in a bid averaging $345.90, and the other two companies put in the same bids, averaging $370 per ton. The order was divided equally among the three at the lowest bid. This was the first time all bidders were required to accept the price of the lowest bidder, and instead of giving all the contract to the lowest bidder the order was divided up, so that each received one-third of the order. This was the beginning of the destruction of competition. To refuse to give the entire order to the lowest bidder, and then, after the bids were in, divide it up among them in equal parts, was equal to establishing a rule like this: The lowest bidder will get no more than the highest bidder, therefore it is advisable for all to get together and fix the price and all put in the same bid, and that is just what they did, for they have put in exactly the same bids in all the orders since that time and increased the price annually until last year, 1913, it reached $454 a ton. This is the logical result of dividing the order among all. But by giving it to the lowest bidder it might have kept up the competition between the Midvale on the one side and the other two companies on the other. Who is to blame for destroying the competition, the companies or the Navy Department? If the Navy Department, what could have been its motive? Was it prompted by motives "purely patriotic," or did it "go in for pelf alone"?

Let us see what the companies have to say when interrogated as to the cause. On the 12th day of April, 1913, the Secretary of the Navy, Hon. Josephus Daniels, addressed a letter to the Bethlehem and Midvale Cos., requesting their reasons for putting in identical bids, to which the Midvale replied on the 6th day of May, 1913, as follows:

> We wish to assure the department that when equal prices for Government material have been quoted by competing concerns, such uniformity is entirely due to the Navy Department's long-established policy. * * * This policy that no one company would receive all the work, but that orders would be divided at the lowest price bid, has resulted in establishing for many years past uniform prices for ordnance material.

On the 19th day of April, 1913, the Bethlehem made the following reply:

> Instead of awarding a contract for the whole of an order to the lowest bidder, the department, in most cases of the kind, divided the order between two or more of the competing firms upon the highest bidders agreeing to reduce their price to the price named by the lowest

bidder. In view of that practice it has become to be understood by every manufacturer that the naming of a low figure by him would merely lower the price that he and each one of his competitors would receive for a part of the order. * * * It is in this way alone that we can explain the fact that the Midvale Co. has named the same price for nickel-steel forgings that have been named by this company.

In Congressman BARCLAY'S district in Kentucky, an old itinerant school-teacher flourished in former days. He was noted for the long list of rules used by him to govern his schools. Rule No. 49 read as follows:

No swearing while climbing trees.

When paraphrased for the Navy it would read this way: "No cutting prices while bidding against brother members of a trust. It will not be permitted by the Navy Department."

Listen: "In other words, they held us up." These are the words of the Secretary of the Navy, crying like a drowning man for help. Do you hear him, my dear colleagues; will you go with me to his rescue? We have the power to save. Do you hear him, my dear Attorney General; will you go to his relief? You have the power to save the Treasury from the hands of the unlawful who seek to hold up its guardians.

A GOVERNMENT ARMOR-PLATE PLANT IS A PERFECT CURE FOR THE ARMOR-PLATE TRUST. SHALL WE BUILD IT?

Mr. Speaker, in 1896 and 1897 Secretary Herbert of the Navy, under authority from Congress, made one of the most exhaustive investigations concerning the cost of the labor and materials to make a ton of armor plate, and of the cost of constructing an armor-plate factory. He appointed to assist him what was known as the Roher Board, consisting of Karl Roher, Kossuth Neiles, and A. A. Ackerman, all experts of many years' experience in making armor. This board made an exhaustive investigation, and they reported the cost of a ton of harveyized nickel-steel armor plate, including labor and all materials except the nickel, to be $167.30. Lieut. Commander Rodgers, inspector at the Bethlehem Works, was requested to make an estimate, and he placed the cost of materials and labor at $178.59. Ensign C. B. McVay, inspector of ordnance at the Carnegie Steel Plant, was also requested to make an estimate, and he fixed the price of labor and materials at $161.54. The Secretary secured the assistance of Capt. W. T. Sampson, Chief of the Bureau of Ordnance for the Navy, and afterwards one of the heroes at the naval battle at Santiago in 1908; also the services of Philip Hichborn, Chief of the Bureau of Construction and Repair, in this great work. He took the average of the three sets of figures and added thereto 10 per cent for loss by defects, and reported the cost of a ton of single-forged armor at $185.38 and a ton of reforged armor at $197.78.

In 1894 the Bethlehem Steel Co. contracted to furnish, and did furnish, to Russia enough armor plate for three warships, at $249 per ton. It is to be supposed that a profit was made on this order. Corporations do not usually make bad and losing bargains. In 1897 the Illinois Steel Co. proposed to furnish our armor plate for $240 per ton, provided we would furnish her with contracts annually for a period of 20 years for not less than 6,000 tons and not more than 12,000 tons, but the Government declined to accept the offer. Since that time we have used 174,043 tons; by the expiration of the 20 years we will have used more than 200,000 tons, at an average cost of not less than $440 a ton. This would have saved $200 a ton, which would have amounted to $40,000,000. If the Illinois Steel Co. could have made a profit at that price, as I have no doubt but what it could, then the $40,000,000 represents the wonderful graft which has been taken out of the Treasury unlawfully. It is high time that we should make an honest effort to save the Treasury from such raids in the future, and I think we can do it more successfully by building a Government armor plant big enough to supply ourselves with all the armor we will need. While I think a 10,000-ton plant will be big enough, yet that matter can take care of itself by making additions should occasion require.

In his investigations in 1896 and 1897 Secretary Herbert made his estimates for a 4,000-ton plant. He had hearings on the subject in America and secured estimates from England and France. He had applied to the Bethlehem and Carnegie companies for estimates, but they declined at first. Finally, Carnegie estimated his plant at $3,000,000, and the Bethlehem estimated its plant at $4,000,000. But after an extensive investigation the Secretary estimated that a 4,000-ton plant could be built for $1,590,000 complete. England estimated that such a plant could be built in England for about $1,000,000, and France estimated that she could build such a plant for $700,000. I have frequently talked with experts, and they assure me that a 20,000-ton plant can be built for $4,000,000. Many estimates have since been made, and in each instance I find the price increasing in some instances enormously. On page 510 of the naval hearings for 1914 Admiral Joseph Strauss estimates for three different capacity plants—20,000-ton plant will cost, according to his estimate, $11,288,431; a 10,000-ton plant, $8,466,000; and a 5,000-ton plant, $6,300,000. And he figures the cost of the best armor plate manufactured in these plants at $269 a ton in a 20,000-ton plant, $349 a ton in a 10,000-ton plant, and $400 a ton in a 5,000-ton plant. On page 511 of the same hearings he says, in speaking of the Government plants in Russia and France:

Whether the result of the establishment of these factories is to reduce the price charged by private contractors is open to question.

Although Secretary Daniels says his information is that Russia and France are saving $200 a ton by manufacturing their own armor plate in Government plants.

Since the investigation of Secretary Herbert I have seen none of the officers high up in naval authority advocating a Government plant, except Secretary Daniels. Ice water from all sides is dashed into the face of the proposition notwithstanding we have Government plants for manufacturing our powder and munitions of war, and it has been conclusively shown that we can make powder at a cost not to exceed 38 cents a pound, whereas we used to pay Du Pont Powder Co. 85 cents a pound, and we have forced down the price to 53 cents for what we buy of his plant and forced down the price of armor-piercing shells for 12-inch guns from $320.72 each in 1892 to $165 each in 1914. Like reductions have been made in the price of our cannons. We can manufacture 14-inch cannon for about $60,000 each, but on an order for 10 such cannon the Bethlehem and Midvale Cos. bid $79,000 each, while the Army plant is now making them for $61,000. Do these gentlemen connected high up in the Navy and the other gentlemen connected with naval affairs oppose Government armor plants for purposes "purely patriotic" or do they "come in for pelf alone"? June 7, 1900, Congress appropriated $4,000,000 to build an armor-plate factory by the Government, but by some trick it was not used.

If we should assemble a large number of different kinds of animals for observation and we should find that some of them, such as the cow, sheep, goat, deer, antelope, moose, and elk, grazed in the daytime and when at rest masticated their food. Then if we should make an examination of the mouth of each of these animals and find that they have no upper front teeth we would be in possession of two important facts. Now, if we should chance to find on the plains the skull of an unknown animal and on examination we should find that it had no front upper teeth we would at once class it with the cud chewers.

Now, if the people should find on investigation that we have an Armor Plate Trust, defrauding us in the price and quality of the armor plate furnished for a period of 20 years, and if the people should further find that all the principal naval officers whose duty it is to guard the Navy and the materials out of which it is made, and the price paid for the same, so as to get the best results at a minimum cost, are closely connected with the agents of the trust, accepting invitations to royal banquets served in stately halls, and never detecting any of the many frauds, although warned of the same every session of Congress, but always defending them and their agents, saying that they are prompted in their fraudulent conduct by motives "purely patriotic," and should the people further find Members of Congress in charge specially of the supplies for the Navy and all that is connected therewith, and such men should never make any movement to check such frauds, and always be found defending the methods and tricks of the trust and never missing an opportunity to discourage investigations of fraud and all efforts to secure relief by prosecution or taking over the business by the Government in its own plants, would the people not be forced to the conclusion that we have cud chewers connected with the Navy and cud chewers in Congress? If so, who are the real cud chewers of trust benefits and trust profits?

Mr. Speaker, from what I can learn about the cost of producing armor plate we can save enough on the three battleships now ordered for 1915 to pay for the construction of an armor plant. We will need at least 20,000 tons, but we will not be ready for it for about two years. If an appropriation had been made during this session of Congress for the construction of an armor factory instead of fooling away at least one year with a commission detailed from the Committee on Naval Affairs to inquire into the cost of a site for a plant and the cost of the factory, we would have done something for the people. We could have manufactured the 20,000 tons in our own plant, but as it stands we will have a report, perhaps, from this commission some time in the future, which will give no one any information. Under all probabilities it will be a burden instead of an asset, and we will be further away from the beginning of a Government factory than ever. This is the history of such reports in the past. What we want is a separation of Congress

from the influence of the Armor Plate Trust, so that Congress will be free to discharge its duties for the support and maintenance of a constitutional form of government according to the intent of our forefathers, on the principles of economy and progress. An armor-plate factory, owned and operated by the Government, is demanded for many reasons, among which is economy, the most important of all to the Government except our honor. I am told by experts that much of the armor plate furnished for our Navy is worth no more than steel rails. If this be true, we are being sadly imposed upon, and this furnishes one of the best reasons for a Government plant, for all the materials used in the construction of our warships should be of the very best. In a Government plant there would be no incentive to work off defective materials on the Navy, but our highest ambition would be to construct and maintain an efficient Navy, able and enduring, so that should the occasion arise to use it we will not be disappointed nor disgraced. Another and one of the most important is the preservation of naval secrets. If we should develop a superior quality in any of our materials, such as structural materials, armor plate, guns, projectiles, or powder, or anything used in the construction or equipment of our war vessels, we will be able to preserve it for our own use. We will have no speculators in patents and naval secrets to peddle out to other nations. All connected with our Navy will be surrounded with influences "purely patriotic," and none will have an opportunity to come in "for pelf alone."

Mr. Speaker, there is another splendid reason for Government plants in which to manufacture all of the most important parts of our warships and the munitions of war. Cæsar is said to have been the greatest general in Europe, if not in the world. He certainly was one of the most successful. Every soldier in his army was an artisan, self-supporting when not engaged in battle. They could make their own weapons and repair them. This was done during wars as well as in time of peace. We are sadly in need of employment for our standing Army and our permanent Navy. If we had factories of our own in which all of our materials for the Army and Navy could be made, our soldiers and sailors could find employment as skilled workmen, at decent wages, in time of peace. Under such conditions they would always be employed and be deeply interested in their work, instead of becoming indifferent under long years of nothing to do. In addition, they would be able to earn some money. Government plants should be built with a view of being accessible to the Navy and Army, without interfering with their military duties. I would not make such work compulsory nor continuous, but offer it to volunteers, permitting them to work during certain hours or certain days.

AN EFFICIENT NAVY IS A WALL OF NATIONAL DEFENSE.

Mr. Speaker, while I am not in favor of big navies and large standing armies, yet if we must have a big navy, it will not cost any more to build an efficient one than to build an inefficient one, and whatever money we appropriate for this purpose should be used for all that it is worth. We have often been told that we can not build our war vessels in America as cheap as can be done in Europe, and I have no doubt of the truth of this contention. On the 13th day of December, 1911, before the First National Business Congress of the National Business League of America, in Congress Hotel, Chicago, Ill., Robert Dollar, president of the Robert Dollar Co., Oriental Steamship Lines, San Francisco, delivered an address on the subject "The American merchant marine in our foreign trade," read by Mr. James W. Nye, from which I quote the following paragraph:

> First. In the building of ships, or first cost, our politicians and others who do not know, or those who willfully distort the truth, all tell us that it only costs 25 per cent or 30 per cent more to build ships in an American yard than in a British yard. What are the facts? I have just built a steamer in Scotland, 423 feet long, 54 feet beam, with engine, 2,500 horsepower, and of 8,880 tons dead-weight capacity. The price, ready for sea, was $250,000. Inquiry from American yards brought out the information that it could not be built for less than $600,000. Now, to build this vessel in an American yard, and to permit her to meet the keen competition in the foreign trade, Congress must pay the builders a subsidy of $350,000. I need not ask you, Will they do it? The answer is plain on the face of it. They will not do it.

If this is to be taken as evidence of the difference of the cost in building our war vessels in America and the building of warships for other nations, it is clear that if we try to build and maintain as large a navy as other great powers we will need twice as much money as they do in order to keep up with them, and our burdens will be twice as heavy as theirs, with no better navy. Our duty is clear. We must weed out extravagance.

Mr. Speaker, an efficient navy must be up to date in at least five essentials, to wit, the strength of the materials used, the model of her fighting units, the speed of each, her armament, and her projectiles. I understand that much of the materials used in the building of our present fleet in inferior, such as armor plate, structural materials, and a portion of the armament.

If this is true it is not because of a lack of adequate prices paid. It comes from another source. Here is room for much-needed improvement, if I am properly informed. The production in our own plants will do much to relieve this defect. Our armor plate should be the very best, as it is said to determine the life of a ship in battle to a great measure. I have seen many photographs of armor used for experiment, and one or two shots by an armor-piercing shell played havoc with it, while other samples have not been much injured by many shots. From the best information I can get there is no armor strong enough and thick enough to withstand the force of the torpedo shell. If this is true, then we must change the plan of a single plate hull model to a double or tripple plate hull. I understand that Great Britain and Japan are building double-plate vessels and Germany is building tripple-plate ships. The reason for double or tripple plate vessels is this: A torpedo shell will break only one plate if a space is left between the plates to act as a cushion—12 inches is left between the plates by Great Britain and Germany, as I am informed. So that if one plate should be broken the vessel will still be good until an accident shot should strike in the same place and break the inner plate. The invention of the torpedo shell has made it necessary to change the plan of construction, and if we should continue our obsolete models and plans all the money used in the building of new battleships will avail us nothing. All of our new vessels should have double or tripple plate protection, with high speed. The invention of the torpedo shell has not only revolutionized the models for new navies, but it has revolutionized the distance at which naval engagements will take place in the future. As the speed of a fleet is no greater than the speed of its slowest vessel it becomes necessary that all new fleets should be made up of vessels of about the same speed, otherwise all slow vessels would either hold back the entire fleet to its detriment or would force the fast vessels to abandon them and leave them to the mercy of the enemy.

THE SLOW AND PONDEROUS DREADNOUGHT IS A BURDEN TO AN EFFICIENT NAVY.

I have been informed that Great Britain has changed from ponderous dreadnoughts to smaller vessels with greater speed. Her naval program for 1913 called for five new battleships of the *New Elizabeth* class, which is 640 feet long with a displacement of 28,000 tons and equipped with Parsons turbines, capable of developing 50,000 horsepower, and giving her a speed, under ordinary conditions, of 25 knots. The *Queen Mary* is 660 feet long with a displacement of 27,000 tons, and said to have a speed of 35 knots. These vessels are said to be the most remarkable war vessels in the world. They combine the speed of the cruiser with the strength of the battleship with the most powerful guns. The *Queen Elizabeth* is to carry eight 15-inch guns, mounted in four 2-gun turrets. This is a most wonderful improvement over the slow, ponderous dreadnought, and, in my opinion, is worth a dozen of the *Idaho* and *Mississippi*, whose sale we provided for in the bill just passed and signed by the President, whose speed is 14 or 18 knots. They are good coast-defense ships, and will no doubt serve the purpose desired by their purchaser, Greece.

NATURE'S PLANS ARE THE BEST.

Mr. Speaker, in the caves and strata of the earth we find evidence of extinct ponderous animal life of a long time ago. According to estimates, some of these animals weighed many tons. It is said that the brontosaurus was 70 feet long, stood 30 feet in the air on its hind feet, and weighed 30 tons, making a track a yard wide. It is also said by our scientists that in the earlier stages of the earth the vegetation was much more luxuriant than now, so that nature could better afford to feed these monster masters then. As nature's plan seems to be a systematic progress from a lower and sluggish type of animal life to a higher and more active life, all animals not able to keep pace with nature's plans suffer. What she can not use she throws on the scrap pile, so nature has thrown most all mighty masters of a low type of animal life on the scrap pile for economic reasons—they were too expensive to support. If we will only get in touch with nature's plans and follow her example in the future construction of battleships, we will improve the efficiency of our Navy. Here we can find a few mammoths, mastodons, dinosaurus, and brontosaurus for the scrap pile. By selling the *Idaho* and *Mississippi* we make room for higher life and greater speed. If those in authority will catch the drift of the progress of the times, we will repiace them with better ships. Shall we follow nature's plan or will we follow an obsolete plan? Everybody connected with this important work should be prompted by motives "purely patriotic," and none should "come in for pelf alone."

Mr. Speaker, military genius now, as in the past, is in a death struggle with itself for supremacy in defensive and offensive warfare. In olden times the wall around the city claimed a victory for defensive warfare as long as contests were waged with the fist, club, bow and arrow, knife, sword, and lance, but as science advanced in favor of offensive warfare and invented the battering-ram, the wall hesitated and gave way in weak places; and as further advances were made by the invention of the cannon, the wall tumbled and fell, and now lies in ruins as evidence of a victory of offensive warfare over defensive warfare. The same struggle is going on now, and military genius is taxed to the limit on the one hand to construct a warship that can not be destroyed by a projectile; while on the other hand military genius is equally taxed in its efforts to produce a projectile with sufficient power to destroy the most powerful dreadnought afloat. If the torpedo shell is as powerful as is claimed by its friends, we may conclude that offensive warfare is about ready to announce another victory over defensive warfare.

THE TORPEDO SHELL IS MASTER ON THE HIGH SEAS.

Mr. Speaker, it is well known by all naval experts that armor-piercing shells have but little force beyond 7,000 to 10,000 yards. The Naval Manual, edited by Viscount Hyde, places the distance at from 8,000 to 11,000 yards, depending upon the thickness of the armor plate. The theory on which the effectiveness of this shell is based contemplates the piercing of the armor of the enemy's vessel, followed by an explosion of the shell, hoping thereby to disorganize the vessel on the inside. It is well known that it is a matter of impossibility to penetrate the armor of a vessel below the water line with this shell. It is also well known by experience that in order to get the greatest effect from a shot of this kind it must strike the enemy's vessel point-blank. Such a shot is highly improbable at a long range, for two reasons:

In naval engagements the vessels usually face each other with bow afront, and a point-blank sho tis difficult under such circumstances. Again, in order to throw a shell from 7,000 to 10,000 yards it must be elevated, which gives it a curved course in the air, with the point of the shell ranging downawrd on approaching the vessel, which makes a point-blank hit impossible. For this reason the armor-piercing shell requires a close range of battle in order to produce its greatest effect.

On page 124 of the Naval Manual above referred to, Viscount Hyde, in speaking of the use of armor-piercing shells in the Battle of Tsushima in 1905, says:

> From the results of that war it has been estimated that 100 hits from the 12-inch and other guns then in use are required to put a ship of the line out of action.

That is to say, that if our Navy were engaged in battle with the enemy it would require 100 hits from our guns before silencing the guns on a vessel of our enemy.

Mr. Speaker, what would be the results of an engagement between our Navy, armed with armor-piercing shells, and the Navy of France, Germany, Japan, or Great Britain, armed with high-explosive shells? This question can be more correctly answered by referring to what has actually taken place by the use of these two types of shells. In 1911 the Department of the Navy selected the *Puritan* and *Texas* for target practice in order to test the effect of the torpedo shell as compared with the armor-piercing shell. One torpedo shell of 200 pounds was sufficient to sink the *Puritan* within a few minutes after it exploded, while it is said a constant fire was kept up on the *Texas* with armor-piercing shells for two days before she sank. The press report at that time claimed that she was not sunk by the shots, but that she was scuttled before she went down.

In November, 1913, Great Britain selected the battleship *Empress of India* for target practice at a range of more than 16,000 yards. The account of this practice is reported in the United States Naval Institute Proceedings for January and February, 1914, No. 149, page 255, as follows:

> The target-practice experiment against the old battleship *Empress of India* took place on November 3, 1913, some 30 miles from Portland, in the vicinity of West Bay, out of sight of land. The first Lord of the Admiralty and his colleagues witnessed the firing * * *. The small ships with their light-caliber guns were to open the firing, followed by the battleships and battle cruisers firing at ranges between 8 and 9 sea miles. How much was attained as the result of carrying out the experiment can not be learned. The first onslaughts were made by individual ships which severely peppered the target with their smaller weapons. The 12-inch guns were used, and finally the 13.5-inch guns were fired at a range of over 8 miles. When the squadron firing by the second battle squadron took place the *Empress of India* showed signs of doom. Flames burst out, and a pause was made in the bombardment while tugs pumped water into the burning ship.

Here is what was done to the ship in the language of this report:

> Holes like lock gates were made in the side of the ship, and as each shell struck her she heeled over to a considerable angle.

In the naval engagement on the 27th and 28th days of May, 1905, known as the Battle of Tsushima, between the Russian and Japanese fleets, Russia had 8 battleships and Japan had 4; Russia had 3 coast-defense ships and 3 armored cruisers, Japan had 8 armored cruisers; Russia had 38 ships and Japan had much less; Russia had the advantage in 9 and 12-inch guns, while Japan had the advantage in 8-inch and smaller guns. Japan's ships had an average of 2 knots the advantage in speed, but her greatest advantage proved to be in her torpedo shells, which was unknown to Russia. The Russian fleet was essentially an American fleet supplied with armor-piercing shells, because we had built one of her vessels in our own yards, and had furnished her the larger portion of her armor, her guns, and shells; while the Japanese fleet was poorly armed with guns, being mostly smoothbore, rifling worn out, but her great advantage came in the speed of her vessels and her torpedo shells. Capt. Semenoff was on board the Russian flagship *Suvaroff* during the battle and took notes from which he wrote a book entitled "The Battle of Tsushima," wherein he describes the battle in vivid terms. Here is what he says:

> The difference between our main force and that of the Japanese was very material. The oldest of Togo's 12 ships, the *Fuji*, was two years younger than the *Sissoy*, which among our 12 best came 6 in seniority. Their speed was one and one-half times as great as ours, but their chief superiority lay in their new shells, of which we had no inkling. It seemed as if these were mines, not shells, which were striking the ship's side and falling on the deck. They burst as soon as they touched anything, the moment they encountered the least resistance in their flight. Such havoc would never be caused by the simple impact of a shell, still less by splinters. It could only be caused by the force of the explosion.

In speaking of the effect of these shots on the *Oslyabya*, he quotes the following language of the officer of that ship:

> Three shells, one after another, in the same identical spot! Imagine it! All of them in the same place. All on the water line under the forward turret. Not a hole, but a regular gateway. She almost keeled over at once and then settled under the water.

Further on he says:

> The 4.75 millimeter guns had been torn off their mountings, and in vain I looked for marks. None could be seen. The havoc had clearly been caused by the force of the explosion and not by the impact of the shell. How was this? Neither mines nor pyroxylene were stored in the battery, so the enemy's shells must have exploded with the force of mines.

Of the 38 vessels in the Russian fleet, 22 were sunk outright and only 2 escaped; the remainder were captured. While Japan lost only 3 torpedo boats, and none of her ships were incapacitated for future service. Capt. Semenoff attributes the success of the Japanese fleet to the use of torpedo shells, which has never been denied by Japan. Mr. Speaker, had the American fleet been substituted for the Russian fleet in that battle, would the results have been different?

In other words, can any fleet, however large, supplied with armor-piercing shells, whip a smaller fleet of greater speed when armed with torpedo shells? If not, then we must concede that as naval science now stands there are two points of superiority to be considered in building warships—speed and high-explosive shells.

In the Battle of Tsushima it was demonstrated that the torpedo shell is destructive no matter how it gets to the enemy's vessel. The cannon on the Japanese fleet is described as being much worn and smooth without rifling, and the shells thrown therefrom tumbled over and over in the air much like a boy in turning handsprings, but their deadly effect soon destroyed the Russian fleet.

Now that we have seen the *Empress of India* go down under the deadly effect of this shell at a distance of more than 16,000 yards, with holes in her sides like great lock gates; that we have seen the *Puritan* sink within a few minutes from the explosion of one shell; that we have seen the Russian fleet disappear forever from the thunderbolt shock from this wonderful projectile, what else do we need to convince us of its superiority and the necessity of supplying the American Navy with it? What doubting Thomas in Congress or in the Navy will wait until he is permitted to place his finger in the rent in the side of our defeated Navy? If we wait for this proof, we will probably discover ghastly partings in the sides of our ships "like great lock gates," through which a mighty army might pass, instead of a small hole for the hesitating finger of Congress or

the Department of the Navy. Many patriotic Members of Congress have worked hard for the addition of this powerful projectile to the armament of our Navy, but whenever we have pointed to its wonderful destructive results the Naval League yells, "Dangerous." The Bureau of Ordnance takes up the cry and yells "Dangerous," through its chief, Admiral Strauss. The Naval Construction Board yells "Dangerous," and a majority of the Committee on Naval Affairs yells "Dangerous," through its chairman and the gentleman from Massachusetts [Mr. ROBERTS]. And then when we point to its use at the Battle of Tsushima Admiral Strauss and Congressman ROBERTS yell "Shimose powder."

Mr. Speaker, whether it was Shimose powder or torpedo shells, such as the Isham, Gathman, or English types of approved shells, it acted much like the brand of whisky which Gen. Grant was accused of drinking during the Civil War and which Lincoln readily approved and expressed an anxiety to furnish to his whole army if it had anything to do with Grant's glorious victories.

If I am properly informed, we need a change in the model of our ships from single plate to double or triple plate so as to avoid the deadly effect of a single shot from a torpedo shell. We need to improve the speed of all our new vessels so that other navies will not have the advantage of us in choosing the range of naval engagements. Our 12 to 18 knot ships would have no chance in selecting the range of battle now were we called to meet Germany's 20 to 25 knot ships or Great Britain's 25 to 35 knot vessels. We need torpedo shells on our ships to prevent our fleet from meeting the fate of the Russian fleet at the Battle of Tsushima. We can not excuse ourselves from this solemn duty by folding our hands in doubt while the Steel Trust, through the Navy League and its other agents, shouts "Danger," "Shimose powder." Let me tell you, our greatest danger lies in putting off till to-morrow what we ought to do to-day.

The money which we are putting in slow ships of the dreadnought type is a waste of money for unwieldy sea junk. Give us faster vessels, combining the battleship with the armored cruiser, protected by the best armor and supplied with the most improved armament. Then if we should be so unfortunate as to be called to meet a foreign fleet in battle we will not lose our fleet nor lose our reputation. Let us act wisely, so that our brave seamen will have no cause for doubt, but will ever act under the inspiration of our naval motto, "Don't give up the ship," and never have cause to report the results of any future naval engagement in any other words than in the language of our other naval motto, "We have met the enemy, and they are ours."

At a test on July 11, 1914, one torpedo shell sank a target representing the *Pennsylvania*.

Mr. Speaker, this speech was prepared while the naval appropriation bill was under consideration in the House, but as I failed to get time sufficient to deliver it I have obtained permission to insert it in the RECORD.

As the war in the East has broken out since the writing of this speech, it is my best judgment that it will be wise for the Department of the Navy to await developments before beginning the construction of any of our new battleships. I expect to see naval engagements between the contending forces before the war is over, and the results of such may furnish a splendid reason for changing our plans of building ponderous, slow dreadnoughts. It has been my opinion for some time that such ships are not practical and are unable to compete with ships combining the elements of the battleship and the armored cruiser, with a high rate of speed, such as the *Queen Mary*, of the British Navy. My prediction is that if a naval engagement should take place between any of the first-class vessels in the East it will reveal that the fast ships armed with torpedo shells will have a decided advantage over the slow ship of the dreadnought type, armed with armor-piercing shells.

Mr. Speaker, it is well known that Germany, England, France, Russia, and Japan have been actively engaged for many years in placing on the high seas the most powerful war vessels possible to construct, and never before has there been constructed such masterful fleets as now float on the waters. The reason offered as a justification for a big navy is that it will insure peace. The present outbreak of hostilities bursting upon us like a thunderbolt out of the clear sky has exploded this theory, and instead of adhering to the policy of "The greatest preparation for war is the greatest guaranty for peace" we should adopt a common-sense policy which will mean something. Really the greatest guaranty of peace is the least preparation for war. Such a policy will not only preserve peace, but it will insure progress, happiness, and prosperity. The constant agitation for a high state of preparation for war diverts the public mind from peaceful pursuits to an ambitious rivalry to excel in the constructions of instrumentalities of blood and death. Imaginations of evil intent on the part of would-be rivals will be conjured up as an excuse to bring on engagements to give a chance to try the strength of new instruments of war. Let us not deceive ourselves by being led away from the plain path of duty into the camps of those who feast on the fruits of misfortune, but let us be satisfied with the teachings of our Savior, "On earth, peace, good will toward men." Let us hope and let us pray for a speedy return of peace to our sister nations across the waters. Let us lead the way for universal peace, and beckon on the nations of the world to follow, with the abiding faith that brotherly love will prevail, and that perpetual peace and prosperity will hover over the nations of the earth and continue to bless mankind throughout the ceaseless ages to come.

I submit the following tables of statistics, which show the vast amount of the people's earnings which are annually expended for war and on account of wars.

UNITED STATES.

Appropriations made at the third session Sixty-second Congress, for the fiscal year 1914 on account of preparation for wars.

Army appropriation act	$94,266,145.51	
Army deficiencies, 1914 (63d Cong., 2d sess.)	6,418,932.24	
Military Academy appropriation act	1,099,302.87	
Armories and arsenals (sundry civil act)	643,000.00	
Military posts (sundry civil act)	$805,428.00	
War Department (legislative, etc., act)	1,862,658.00	
		$105,095,466.62
Permanent appropriations for Army and militia, fiscal year 1914:		
Arming and equipping militia	4,000,000.00	
Soldiers' Home, District of Columbia, interest fund	100,000.00	
Soldiers' Home, District of Columbia, permanent fund	400,000.00	
Reimbursement to States and Territories, War with Spain	50,000.00	
Extra pay to Volunteers, War with Spain	5,000.00	
Miscellaneous funds	15,000.00	
Ordnance materials	75,000.00	
Powder and projectiles	6,000.00	
Pay of Army, deposit fund	1,300,000.00	
		5,951,000.00
Naval appropriation act	140,800,643.53	
Navy deficiencies, 1914 (63d Cong., 2d sess.)	697,953.68	
Navy Department (legislative, etc., act)	875,365.00	
Navy Department, deficiencies (63d Cong., 2d sess.)	19,901.90	
Permanent appropriations for Navy:		
Naval home, Philadelphia	82,209.00	
Miscellaneous funds	4,360.00	
Ordnance material	50,000.00	
Naval hospital fund	700,000.00	
Clothing and small stores fund	50,000.00	
Navy fines and forfeitures	500,000.00	
Pay of Navy, deposit fund	500,000.00	
		144,280,433.11
Fortification appropriation act		5,218,250.00
Panama Canal fortifications (sundry civil act)		4,870,000.00
Panama Canal fortifications (deficiency act, 63d Cong., 2d sess.)		249,350.00
Total, preparation for war, fiscal year 1914		265,664,499.73
Percentage of estimated revenues		37.95

Appropriations made at the third session Sixty-second Congress for the fiscal year 1914 as result of wars.

Pension appropriation act	$180,300,000.00
Pension Office (legislative, etc., act)	2,067,450.00
Artificial limbs, appliances for soldiers, trusses (sundry civil act)	91,000.00
National Home for Disabled Volunteer Soldiers (sundry civil act)	3,981,265.00
National Home for Disabled Volunteer Soldiers (deficiency, 2d sess. 63d Cong.)	19,950.72
State and Territorial soldiers' homes, aid to (sundry civil act)	1,200,000.00
Back pay and bounty claims (sundry civil act)	30,000.00
Back pay and bounty claims (deficiency, 2d sess. 63d Cong.)	35,000.00
National cemeteries (sundry civil act)	292,620.00
Interest on public debt	22,860,000.00
Total, as result of wars, fiscal year 1914	210,877,285.72
Percentage of estimated revenues	30.12
Estimated revenues, fiscal year 1914	700,000,000.00
Total preparation for war	265,664,499.73
Total results of wars	210,877,285.72
Total amount for preparation for war and on account of past wars	476,541,785.45
Percentage of estimated revenues	68.07

The total revenues, exclusive of postal, as shown by the Treasury Daily Statement, for the first 11 months of the current fiscal year amount to $609,962,933.62; making due allowance for what will be realized out of the income tax and from all other sources during June, the last month of the year, the total ordinary revenues of the Government will probably reach $700,000,000 for the entire year.

GREAT BRITAIN.

Estimates on account of preparation for war and on account of past wars.

ARMY ESTIMATES, 1913–14.

I am indebted to Mr. James C. Courts, clerk of the House Appropriation Committee, for the estimates for the United States and to Mr. A. T. C. Griffin, assistant librarian of the Congressional Library, for the estimates for the foreign countries.

Post Office Appropriation Bill.

SPEECH

OF

HON. H. ROBERT FOWLER.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 16, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. FOWLER. Mr. Chairman, I regard the Post Office Committee as being one of the greatest in Congress. The members of that committee began the study of its work early in this session. In fact, much of the work was done during the extra session. The extent to which that work has been carried on by the committee has been revealed by the wonderful speech made by the chairman of the committee, showing his familiarity with every detail and his great interest in and devotion to this service. Mr. Chairman, the importance of this committee and the Postal Service can be arrived at only by considering the vast service which it is now giving to the people of the country. It not only reaches the large cities of the land but it penetrates the country, reaching even the hovels on the frontier. It gives to the poor man in the country an equal service to-day with that which is given to the rich man in the city. It spreads out its beneficent wings and hovers over hill and dale alike, and showers its blessings upon all people alike by conveying to them the newsy intelligence of the day. What our forefathers were contented with in the beginning of this Government would not be tolerated to-day. In 1790 the appropriations were only $32,000, an average of less than 1 cent per capita to the population of the country. To-day it is more than $305,000,000 for the year 1915, averaging nearly $3 per capita. This wonderful growth in the expense reveals the wonderful growth in the service, and, in my opinion, Mr. Chairman, we have not yet reached the limit by any means in the cost and efficiency of the Postal Service.

Mr. Chairman, this reveals, in my opinion, what we may expect in the near future as to what will be the results from the Parcel Post Service. It is difficult to tell what the future will bring forth, but I may say that it may be fairly well understood that the income henceforth will exceed the expenditures, thereby furnishing a surplus which may be used in extending and perfecting the Postal Service. We are improving our instrumentalities. We are taking advantage of new devices and inventions, thereby cheapening the cost of the service. We are driving better bargains for the transmission of our mails. And, in my opinion, Mr. Chairman, the time will soon come when the post-office system will arrive at that degree of perfection which will give a maximum service at a minimum cost.

Mr. Chairman, we have already instituted some of those economic methods; for instance, the blue-tag system has been applied to our periodicals and magazines by giving them fast freight transportation instead of carrying them in our regular mail cars. Similar improvements, in my opinion, can be made by extending this service to the parcels which do not need rapid transit, but which can wait for the fast freight, thereby lessening the cost to the consumer and also giving him as good service as he could receive from the transportation in our regular mail cars.

As the volume of business increases, we ought to be able to introduce economic methods along that line, because a certain force is required to do the work in the various divisions of this great service, and as the volume of business increases we may be able to hold down the cost by having that increased volume of work done by the same force and by the same instrumentalities without a corresponding increase in the cost.

But, Mr. Chairman, in considering this question, we must consider efficiency along with cost. They are twin brothers in this service, and it would not do to lessen the efficiency of the service in order to lessen the cost of the same. We must first try to arrive at the greatest degree of efficiency at the lowest cost, sacrificing efficiency at no time in order that we may lessen the cost.

PARCEL POST.

Mr. Chairman, there has been added to this service another department, which has come to stay, in my opinion. The parcel post has long been agitated in America. The parcel express has been established in other countries, and we have, within the last few months, established a system of parcel post. It is one of the greatest additions to this service which could possibly have been made. In my opinion, Mr. Chairman, it is the harbinger of a new day, the dawn of a new intelligence, giving the people rapid transit from the farm, factory, and mine to the consumer, thereby lessening the cost of living and at the same time giving the people a convenience that can be had in no other way.

I know that we have had in the past some objections to extending this service, and I know that there are still men in the country who object to it. When it was first established it was contemplated that 300,000,000 parcels would be carried in the mails during the first year. But by experiment it has been found, from data collected, that 300,000,000 parcels were carried in the first six months, and it is fair to predict that the service will be doubled by the end of this year, and that not only 300,000,000 parcels, but more than 600,000,000 parcels will be carried. In my opinion, Mr. Chairman, by the end of the second year of this experiment—if it can be called an experiment—the number of parcels will reach a billion, and at an average of 10 cents per package that will add to our postal revenue an income of $100,000,000.

Indeed, Mr. Chairman, I believe that the parcel post is not only going to be a great blessing to the people in the country in the way of giving them cheapness and convenience, but that it will prove to be a wonderful source of revenue. I think I can see in the near future the establishment of a system of parcel post that will carry a package of from 50 to 100 pounds from the farm, from the factory, or from the mine, to the consumer.

It has been estimated by Mr. Yoakum that in 1910 the farms produced $9,000,000,000 worth of property. He estimated that the farmer consumed $3,000,000,000 worth for seed and for home consumption, and sold $6,000,000,000 worth to the other consumers in the country. That the cost of transportation and the middleman's profit was $7,000,000,000, making $1,000,000,000 more for cost of transportation and middleman's profits than the farmer received for raising the entire crop of 1910.

Mr. Chairman, I do not believe that we have yet contemplated the great importance of the parcel post of this country. In Europe they are shipping fish by postal express from the seashore to the consumer in the country and in the cities. They are shipping from the farms 100-pound packages of farm products to the consumers in the cities and towns. They are shipping from stores and factories like packages, which are lessening the cost of transportation and lessening the cost of living. There they eliminate to a large extent the middleman, and the producer deals direct with the consumer largely, benefiting both.

Mr. GOULDEN. Will my friend from Illinois pardon an interruption?

Mr. FOWLER. Yes.

Mr. GOULDEN. The gentleman seems to be familiar with the parcel post in Europe, and I want to ask him, is there any limitation as to the goods or commodities carried there?

Mr. FOWLER. There are some limitations, but the tendency is to carry everything by postal express that can possibly be carried from the place of production to the consumer, and I trust that will be the ultimate end of the parcel post in America.

Mr. Chairman, the people of this country have suffered because of a want of such cheap transportation. The express companies have been robbers. I say that advisedly, because I have a concrete example which occurred only a few months ago in this city. My wife is here with me. Down in Illinois she has learned to love a certain variety of Winesap apples, and she sent an order for four barrels to be shipped here by freight. When they were taken to the local railroad station for shipment in Illinois the freight agent and the American express agent were one and the same man, and I am informed that he told the teamster who carried the apples to the railroad station that the apples would freeze in transit or rot before they could get to Washington if shipped by freight, and that the only safe way to ship them was by express. So when the apples came to Washington they were delivered at my house with a bill of $5.50 a barrel as express charges. When I saw it my wits were staggered and my sense of justice was outraged. Apples were selling here at that time from $2 to $2.50 per barrel. The rate charged by the express company was equal to a complete confiscation of my property from the time it took charge of the barrels until they were sold by the express company. It was an outrageous robbery, intolerable and indefensible.

Mr. RUSSELL. Did you pay the bill?

Mr. FOWLER. No; I did not pay the bill; and that is not all. They took my wife's apples and sold them for $2 a barrel, over my protest and without notice to us.

Mr. Chairman, those apples ought to have come here by freight at a much less rate than that, because the express company would have paid the railroad company 47½ per cent of that $5.50 a barrel if I had paid the bill, and would have retained 52½ per cent for the company. Mr. Chairman, if an outraged people, as intelligent as the American people, are represented in Congress by men who have no more nerve and love for their constituents than to allow such robbery as this to continue, then they are practically without representation. I mean no reflection whatever on any man in this good Congress, but my recent experience teaches me that our express system in America is a system of robbery, and sooner or later must give way to decency and fair dealing. The people have it marked for slaughter, and justly so. We have started in the right direction by instituting the parcel post. We are marching steadily onward. The Postmaster General has recently increased the weight of the package which can be shipped by parcel post, until now in some of the zones 50 pounds may be carried, and in the near future I have no doubt but that 100 pounds will be carried, and instead of paying $5.50 freight upon a barrel of apples we will get a hundred-pound barrel of apples shipped and placed at our doors at a minimum cost. That is what parcel post means to the American people.

Mr. GOULDEN. Mr. Chairman, will the gentleman yield again?

Mr. FOWLER. Yes.

Mr. GOULDEN. If those apples had been in bags of sufficient weight to be carried by parcel post, what would it have cost to ship them?

Mr. FOWLER. It is a thousand miles away, and I have not figured out the cost.

Mr. GOULDEN. Will the gentleman estimate it approximately?

Mr. FOWLER. They could not have been shipped in that way because of the zone system, unless they were put up in 20-pound packages.

Mr. GOULDEN. That is what I mean, in 20-pound packages.

Mr. FOWLER. In 20-pound packages they would probably have cost as much or more as by express, on account of the zone system. I have not figured it out. I will do that and print it in my remarks.

Mr. GOULDEN. I wish you would do that, because it would be an interesting thing, in view of what you say about the charges made by the express company.

Mr. FOWLER. Yes; I will do that. Express charges on 100 pounds from St. Louis, Mo., to Washington, D. C., is $2.45, and by parcel post the rate on 100 pounds is $6.02. The high parcel-post rate is caused by the zone system, which is not only a burden but must be either materially modified or done away with entirely. The people will not tolerate it, because such rates are unreasonable.

Mr. Chairman, there is another important saving that we may make in the Postal Service, and that is in the way of contracts for transportation of mails. We are now paying on an average 9 cents per ton-mile for this transportation, and the railroads are charging only 7 mills per ton-mile for freight, and they are only getting 5.7 cents per ton-mile for carrying the express of this country. Mr. Chairman, if we deal with the railroads as they have voluntarily agreed to deal with the express companies, we certainly ought to be able to lessen the price of the carriage of the mails by the railroads, and I am in favor of it.

Mr. Chairman, the bill provides for an experiment. The railroads own all the cars now used for transporting mail, but our committee has incorporated a provision in the bill appropriating $200,000 for the purchase of United States mail cars, to be owned by the United States and to be used for mail purposes. While I am not altogether in favor of such experiments, because of conditions surrounding the handling both the cars and the mail, yet I trust that some good may result from this experiment.

If you have a horse and hire his keep, feed, and stalling, it will not be very long until you will have no horse. I apprehend the same rule will apply to the railroad post-office cars owned by the Government.

Mr. WILLIAMS. Will the gentleman yield?

Mr. FOWLER. I will.

Mr. WILLIAMS. Is it not true in the transportation of mails that the railroads have to be differently equipped, with better facilities, than for the transportation of ordinary freight?

Mr. FOWLER. I can not say that that is true.

Mr. WILLIAMS. Assuming that it is true, has the gentleman figured out what would be the difference in transportation of the mails and the transportation of freight?

Mr. FOWLER. It is true that ordinary freight can be carried over a much rougher road than our mails should be transported.

Mr. WILLIAMS. Is it not true that there is an exorbitant charge for carrying the mails by the railroads?

Mr. FOWLER. I think that is so, and I think that opinion is shared by a majority of the committee. However, I can not speak for all of them.

Mr. GOULDEN. Will the gentleman yield?

Mr. FOWLER. I will yield to the gentleman.

Mr. GOULDEN. The distinguished chairman of the committee yesterday made the statement that there would be a saving in 15 years of $50,000 on each car, allowing for the upkeep and care. I find in 15 years that would amount to $60,000,000 in money. Now, if that is true, we want to save that money to the people of the country.

Mr. FOWLER. I heard the statement made by the honorable chairman of the committee, in whose opinion I have great confidence. But, Mr. Chairman, I have applied economic rules to the handling and keeping up of property owned by one man when it is required to be kept in the possession and under the care of another. If these economic principles are as true when applied to the United States railway post-office cars as it is in the case of the horse, of which I have just given an illustration, then I am inclined to believe that at the end of the 15 years, instead of any great saving that our good chairman has pictured out to us, we will fall short and will be compelled to return to the present system of transportation of the mails, because they must be carried by contract. The care and keep of the cars owned by the United States must be by contract, and the railroads will hold both ends of the string to that bag and have the right to draw it as they see proper.

Mr. GOULDEN. Will the gentleman yield again?

Mr. FOWLER. I will.

Mr. GOULDEN. The chairman also, I think, allowed 20 per cent for the upkeep. If that is high enough, and I am inclined to think it is, I believe the saving that he has predicted will occur, and I believe that we should realize it.

Mr. FOWLER. The destruction of such cars would undoubtedly be the loss of the United States, and these cars are just as liable to be injured or destroyed in transit the same as other cars.

Mr. MOON. Will the gentleman yield?

Mr. FOWLER. With pleasure.

Mr. MOON. The proposition in the bill is not to purchase all railroad post-office cars. It is an experimental proposition, and so thoroughly experimental is it that it is left entirely in the discretion of the Postmaster General.

Mr. FOWLER. Absolutely so, with the limitation of $200,000 at his command.

Mr. MOON. While under the law the arrangement must be contractual and not statutory, still the discretion which is given to the Postmaster General is so wide that if he finds there is no advantage to the Government in this purchase and operation of the cars, he is not compelled to do it. It is merely a matter of experiment.

Mr. FOWLER. And for that reason I consented to join the committee in making this provision.

Mr. WILLIAMS. Will the gentleman consent to another interruption?

Mr. FOWLER. Certainly.

Mr. WILLIAMS. Will the gentleman state the reason why these zones were established, and why larger packages are permitted to be carried in the near-by zones and not in those farther off?

Mr. FOWLER. The provision for establishing zones was placed in the bill by an amendment in the Senate. The extension of the weight of the package is in the discretion of the Postmaster General.

Mr. WILLIAMS. Is there any good reason why a package of a given weight once started on its journey should not be carried a farther distance, with an increase in the amount paid?

Mr. FOWLER. Perhaps not.

Mr. WILLIAMS. Is there any good reason why the zones should not be abolished and a rate established according to distance?

Mr. FOWLER. That was my original idea. However, there is such a large per cent of short hauls over the long hauls. From 50 to 200 miles takes in a very large per cent of our parcels.

Mr. WILLIAMS. I understand, but let the charge be according to the distance.

Mr. FOWLER. And for that reason the zone system was adopted by the Senate.

Mr. WILLIAMS. Would the cost of carrying parcels by mail increase very much by the distance? Would not the handling at the two ends be the same?

Mr. FOWLER. The handling at the two ends would certainly be the same.

Mr. WILLIAMS. Thereby it would be nearly as profitable to carry it a great distance as a short distance?

Mr. FOWLER. Yes; in a sense. However, there must be some exceptions reserved to that statement. My own idea was originally that we should get as near a flat rate as possible, and I think that was the idea of the chairman of the committee.

Mr. MOON. As possible; yes.

Mr. FOWLER. I have not changed my mind. I believe the greatest practical distance that we can have with a flat rate will bring a greater good to the people than the present zone system. Long hauls of 1,000 miles and more afford some reasons for the zone system, but we find that the cost of handling parcels is the same on short hauls as on long hauls, and for this reason the argument for zones loses much of its force. By all means, a flat rate should be established on all parcels with a transit less than 1,000 miles. Then the express companies will either come to time or get out of business.

EXPERIMENTAL FREE DELIVERY.

Mr. Chairman, if I may be permitted to advert to one other subject in this discussion, I would like to do so, and that is our free-delivery system. Our people are paying for this Postal Service. We have free delivery in a large number of cities, something over 1,500. This bill carries $200,000 for experimental free delivery, which is to extend such service to second and third class post offices where free delivery has not yet been established. I think in every instance where this experiment has been tried the people are clamoring for its continuance. I favor the extension of this service, because I believe free delivery will ultimately result in placing the mail of every American citizen at his door daily, and that we will not be satisfied short of that. We have an extension of free delivery to the country, and justly so, and two great objects were accomplished by that, and perhaps three. One is that it gives to the people of the country that degree of quick mail service which we get in the large cities. It also will act as a great incentive to the construction of good roads in this country. Good roads! Ah, there is a question that invites the keenest attention of the American people, and, in my opinion, it is the greatest work that awaits Congress in the future, and when we can cope with the old countries in good roads we will then compete with them in the cost of transportation and in the cost of living. The average cost per ton-mile of taking the farmer's products from the farm to the nearest market is 25 cents. That is unreasonable. It ought not to be so, and our people ought to get about this great work at once, because it will give to the people of the country as a whole a greater degree of relief than any other one thing I can think of. Not only that, but it will be the greatest factor in lessening the cost of living and making the people of the country satisfied with the farm. It will do more in that respect than any other improvement that can be inaugurated in America. [Applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MOON. Mr. Chairman, I yield 10 minutes more to the gentleman from Illinois.

RURAL FREE DELIVERY.

Mr. FOWLER. Mr. Chairman, I thank the chairman of the committee for his kindness. The Rural Free Delivery Service is one of the most important parts of the Postal Service. It brings the people of the country in close touch with the daily transactions of the great centers of the world, thereby giving the public ample opportunity to become generally informed upon the public questions of the day, questions which are vitally necessary in the daily transactions of our busy life. The vast importance of this work can not be properly appreciated until we take into consideration that one-half of our population has been deprived of these great advantages until the establishment of rural free delivery. The great wonder is that such an important piece of work should have been delayed so long; but its rapid growth would seem in a measure to make up for the delay. It is less than 15 years old, and yet it constitutes one of the greatest divisions of the Postal Service.

It was first suggested by Postmaster General John Wanamaker in his annual report for the year 1891. The first bill authorizing such delivery was introduced by Hon. James O'Donnell, of Michigan, in 1892, and the first appropriation made for this purpose was enacted March 3, 1893, and provided

for $10,000 for experimental rural delivery. Again, on July 16, 1894, $20,000 was appropriated for this purpose; but as both of these sums were too small for practical use, it was not until July 9, 1896, that a sufficient sum was appropriated to inaugurate this great work, and it was not until October 1, 1896, that experiments in this service began. Three places in West Virginia, to wit, one route at Charles Town, one at Uvilla, and one at Halltown, began at the same time, and within nine months thereafter this service had increased to 83 routes emanating from 43 post offices in 29 different States. The rapidity of its growth indicates its universal approval by public opinion and the pressing need for such service. At the close of the fiscal year 1913 it had reached the enormous magnitude of 42,562 carriers, covering 1,020,615 miles at a cost of $45,655,593; and on the 1st day of last May the number of rural free-delivery carriers had increased to 43,262, covering 1,050,615 miles, at an annual cost of nearly $50,000,000.

No part of our postal system has enjoyed such a wonderful growth and received such unanimous approval of public sentiment as the Rural Delivery Service. When we consider that it began about fifteen years ago with 3 carriers covering 1,843 miles at a cost of only $14,840, and that it now comprises a service with 43,262 carriers covering 1,050,615 miles at an annual cost of about $50,000,000, it sounds like a fairy tale, but nevertheless it is true. The present bill provides for an appropriation of $53,000,000 for this service during the fiscal year ending June 30, 1915.

The first complete Rural Free Delivery Service was established December 26, 1899, in Carroll County, Md. From that date to the present time this service has rapidly developed until it now covers more than 947 counties, extending to every State in the Union. About 25,000 fourth-class post offices have been discontinued on account of this service, thereby saving to the country $8,194,006. Many star-route services have been superseded by the Free Delivery Service, thereby saving nearly $10,000,000. This indicates the superiority of the Rural Free Delivery Service over the star-route and fourth-class post-office service. Indeed, its growth is marvelous, but its benefit to the public is more useful than marvelous. Its importance must not be underestimated, and its progress should not be checked in any wise, for in my opinion it will not stop until it pours out at the door of every family the glad tidings of the daily intelligence of the world. Why should not the people in the country have their mail delivered at their own homes? This is being done now in all the cities of any importance, and experimental free delvery is now going on in villages in many places of the country. The country people are just as much entitled to this service as the city, and, in my opinion, the Members of Congress representing country districts will not be satisfied until this service has been extended to every dwelling in the land.

Congress has not been unmindful of the importance of this service, as is revealed by the rapid increase in the salary of the rural carrier. A very small salary was paid at the beginning, but it has rapidly increased, until now the carrier on a full route of 25 miles receives $1,200 per annum. The changes which have taken place are indicated by the following table:

Aug. 1, 1897	$300
July 1, 1898	400
July 1, 1900	500
Mar. 1, 1902	600
July 1, 1904	720
July 1, 1907	900
Mar. 9, 1914	1,200
Sept. 30, 1912	1,100
July 1, 1911	1,000

As a member of the Post Office and Post Roads Committee, I have been one of the strongest advocates of such increase, because I think the conditions of the service amply justify the increase. The burdens of this work have been increased largely by the addition of the parcel post, and the salary should be increased to meet the extra expenses occasioned thereby. During the fiscal year of 1913 this service carried 500,000,000 parcel post packages, aking a total of 3,093,000,000 pieces. This was an increase of many million packages over that of 1912, and I have no doubt but what the number of packages during the next fiscal year will reach 4,000,000,000. The importance of this work carries with it great responsibilities, and as its burdens are rapidly increasing annually it would be unjust to the carriers if Congress should refuse to increase their salary in proportion to the increased burden. While I have always been a strong advocate of economy in the public service, yet I am strongly wedded to the doctrine that the laborer is worthy of his hire.

ASSISTANT POSTMASTERS.

There is another feature of this bill to which I desire to address myself, and that is the feature which affects the service in the post office. I believe that the man who is responsible, who has resting upon his shoulders the responsibility in any department of the governmental service, ought to have a right to control that business and subordinate those who are under him to his will and wishes. For that reason this bill carries a provision for the purpose of eliminating assistant postmasters from the civil-service rules and regulations. I know that there is some opposition to this feature of the bill. I have had letters from various quarters of the country asking me to oppose it. In each instance I have replied that I am in favor of it because I believe the postmaster ought to have the right to control the post office over which he presides, and to cause those who are under him to conform to his will and wishes in its management. There must be a head to every business; and wherever you find a business without a head, you find a business on the road to ruin. I had an example of that given to me a few days ago by one of the Members of this House. He said that after the appointment of a new postmaster in one of his towns the assistant postmaster came up short $4.80. The postmaster called on the Congressman to know what to do. The Congressman advised him to call upon his assistant postmaster to go down in his pocket for the $4.80 to make up the shortage. When he did so, the assistant refused at first, but finally went down in his pocket after the $4.80, but excused himself a short time afterwards, and, on returning, said he had sold a postoffice order for $4.80 and had failed to collect for it.

If it had not been for that iron hand that the postmaster held over him, the postmaster would have lost $4.80. Mr. Chairman, I am opposed to life tenure in office. I have always been opposed to it. I wish that every postmaster in this broad land could be elected by the patrons of the office for a definite number of years, say, four years, as it is now the case for first, second, and third-class offices.

Why? Because the people of this country have a vested interest in every position of the public service, and they ought to be consulted before servants are placed over them in those important positions; and when inefficient servants, either because of mental disqualification or moral turpitude, are put in over them, they ought to have the right to recall them at the end of their term, if not sooner.

Now, Mr. Chairman, I listened to the remarks of some of the gentlemen on the other side opposing this provision of the bill, but I think it is wise; I think it is economical; I think it is for the best interest of the service; and every postmaster who has placed upon his shoulders the great responsibility of efficient service and the economic handling of the funds of the office ought to have that character of subordinates and assistants who will conform to a strict observance of wise rules to bring about the best results.

Mr. Chairman, I feel quite sure that if all the postmasters in this country were elected by the people that we would have less trouble in this country in selecting good men; and I am not complaining of the qualifications of our present postmasters, but I am complaining of the political graft, if I should use the word, which is given to Members of Congress, enabling them to establish a political bossism in their districts, regardless of the will of the people. I do not believe that the post offices belong to any Member of Congress and should not be used as a means of paying political debts. We are servants of the people and have no right to play the rôle of masters by organizing postmasters into political rings to defeat the will of the people at the polls. Election of postmasters by the patrons of the various offices is democratic and the most rational method of selecting these public servants.

Mr. SLOAN. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Illinois yield?

Mr. FOWLER. For a question.

Mr. SLOAN. There are a number of elections held in our State this year for postmasters. Some question has arisen about who should be the voters—whether they should be legal voters or patrons or voters of the prevailing political party. What is the gentleman's view upon that? I ask the question in absolute good faith.

Mr. FOWLER. Mr. Chairman, under the Constitution our postmasters are appointed by the executive department. That method must stand until it is changed. All good citizens ought to conform to it, and I am trying to do that as best I can; and if the gentleman wants to get advice from the patrons of the office by holding an election, I congratulate him on his Democracy, and extend to him an invitation to come over on this side of the House. [Applause.]

Effect of Underwood Tariff on Pay Checks.

EXTENSION OF REMARKS
OF
HON. FRANK W. MONDELL,
OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 20, 1914.

Mr. MONDELL. Mr. Speaker, on Saturday, July 11, the gentleman from Indiana [Mr. CLINE], under leave to extend remarks, inserted in the RECORD a letter from Samuel L. Foster, president of the German-American National Bank of Fort Wayne, Ind., to Wilbur F. Wakeman, treasurer and general secretary of the American Protective Tariff League, in answer to a letter from Mr. Wakeman seeking information as to the total amount of pay-roll checks in President Foster's bank for the week ending June 21, 1913, and also for the corresponding week ending June 20, 1914.

Mr. Wakeman's letter to President Foster was identical with similar letters sent to bankers throughout the country with a view of ascertaining the wage payments of the industries of the country for the week of 1913 referred to as compared with the corresponding week in 1914. In his remarks in the RECORD, to which I have referred, the gentleman from Indiana referred to this inquiry which the American Protective Tariff League was making as a "system" "employed by unscrupulous organizations who want to accomplish under cover of secrecy what they do not have the courage to do in the open—to discredit the present Democratic administration."

The absurd and illogical character of this statement of the gentleman from Indiana may be fully appreciated when one takes into consideration the fact that these letters of inquiry as to business conditions, as evidenced by wage payments, were sent to bankers in industrial centers generally, with the statement that the results were to be published for general information. I understand they will be published in the very near future in the Economist.

Our Democratic friends are very tender when it comes to the statement of actual facts with regard to industrial conditions. Facts were what Mr. Wakeman sought, and it is facts that the Economist proposes to publish, facts having a direct bearing on actual industrial conditions—the most important facts relative to industrial conditions, those that relate to the wages of the men engaged in the industries of the country. If conditions are so prosperous and altogether satisfactory, as Mr. CLINE and other gentlemen on the Democratic side claim, what have they to fear from a publication of the facts sought and obtained through Mr. Wakeman's letter? Their agitation over the proposed publication of these important facts is in itself proof that they realize how unfortunate are industrial conditions, and would, if possible, suppress the important facts as to these conditions.

The following article from the American Economist of July 10 explains fully the reasons for seeking this information through those best qualified to furnish it:

LET THE FACTS BE MADE KNOWN.

It would seem that bankers more than any other class of business men are in a position to judge accurately of general business conditions. If business is flourishing, that fact is apparent in bank transactions; in loans and discounts; in bank clearings; in deposits; and, above all, in checks drawn to meet pay rolls. Merchants and manufacturers are the best customers of the banks. They are the largest borrowers. In recognition of the accuracy of the bank barometer as a true index to business, the American Protective Tariff League recently sent out to the leading banks of the country the following letter of inquiry:

[Confidential inquiry.]

THE AMERICAN PROTECTIVE TARIFF LEAGUE,
339 Broadway, New York, June 26, 1914.

DEAR SIR: Our president, Col. Francis L. Leland, who is well known to you as a banker, believes that one of the best barometers of industrial conditions is the weekly pay-roll checks of merchants and manufacturers, and at his suggestion we have the honor to ask:

First. What was the total amount of the pay-roll checks in your bank for the week ending June 21, 1913?

Second. What was the total amount of the pay-roll checks for the corresponding week ending June 20, 1914?

We will under no circumstances divulge the name of a bank giving us this information, but wish to publish a statement giving the comparative pay-roll checks in bulk for the weeks named.

We earnestly ask your cooperation in this inquiry.

Sincerely, yours,

W. F. WAKEMAN,
Treasurer and General Secretary.

The importance of this inquiry is very generally recognized. Several of the leading newspapers have asked the privilege of printing the results when they shall have been obtained and tabulated. Many replies have already been received. A full statement of returns will appear in the American Economist of July 31, 1914.

The only expression of dissent thus far received in response to the "confidential inquiry" above quoted is the following:

THE GERMAN-AMERICAN NATIONAL BANK,
Fort Wayne, Ind., June 29, 1914.

DEAR SIR: Replying to your "confidential inquiry" of the 26th instant, in which you ask for data which you propose to use for the purpose of instituting a comparison between the pay rolls of this year with those of the same time a year ago, I beg to say:

It would be more creditable to your organization if it would use its funds along lines that would tend to decrease any tendency toward business depression that may exist rather than along lines that have a strong influence toward increasing this tendency.

The purpose of your inquiry is so clearly political and the intent to discredit the present administration and recent legislation so apparent that this bank declines to have anything to do with it, and feels justified in giving expression to its lack of sympathy with your efforts. It is such movements by such organizations as yours that justify the charge that there is being made a systematic and disloyal effort to create a condition of mind in the people of the country that will bring about and intensify a spirit of commercial depression.

No more descreditable and dishonorable thing could be attempted by men claiming to be loyal citizens of the Republic. As you very well know, to spread broadcast over the country any evidence or argument tending to show the existence of business depression only tends to produce and heighten this depression. That this is your intention and purpose is revealed in your letter, though not explicitly stated.

Very truly, yours,

SAM'L M. FOSTER, *President.*

The writer's inference that the effort to obtain reliable facts concerning business conditions is "clearly political" would seem to warrant the inference that his refusal to supply such information is also "clearly political." It reveals him as a thick-and-thin supporter of the present free-trade administration. Obviously he concludes that the disclosure of bad business conditions would be hurtful to that free-trade administration. Wherefore he declines to aid in such disclosure. But if business was booming, if pay-roll checks were larger than ever before instead of being smaller, and if the showing was in the highest degree creditable and helpful to the free-trade party and administration, would this gentleman then refuse to furnish the information sought? And if he did furnish it, would not that, too, be "clearly political"?

Does Mr. Foster believe that the truth should not be made known concerning business conditions? Would he suppress facts of vital consequence? Would he, for example, if he had the power, prevent the publication of the $34,000,000 Claflin failure? Several important New York newspapers were asked to join in suppressing any mention of that big business crash. They declined to comply, feeling that the public had a right to know the facts. Suppression of facts, as Mr. Foster should know, is not the way to inspire the largest degree of public confidence in financial and commercial institutions.

The business men who comprise the membership of the American Protective Tariff League are not likely to sanction any policy or procedure that tends to hurt business. They claim to be "loyal citizens of the Republic." Many of them are fully as eminent in the world of business and finance as is the president of the German-American National Bank of Fort Wayne, Ind. Their judgment in matters of business and finance would weigh at least as much as his. These gentlemen see nothing discreditable or dishonorable in getting and publishing the truth regarding business conditions. Apparently they think that the American people have a right to know the truth and the whole truth.

"Clearly political" the confidential inquiry set on foot by the Tariff League may be, especially in the sense that present business and trade conditions are largely due to political policies, and can only be remedied and made better by a reversal, through political action, of those destructive policies. The country wants to know what ails business. When the country finds that out it will know what to do next. And what the country does next will be "clearly political."

We observe with some surprise that President Foster has been the first to violate the obligation imposed by the "confidential inquiry" of date of June 26, quoted above. In the Fort Wayne Journal of July 1 appears a double-column facsimile of the "confidential" letter of inquiry from the secretary of the Tariff League, and below it the full text of President Foster's reply, also given above. It is, we believe, unusual for confidential letters to be exploited in the newspapers by reputable business men.

A Speech Delivered By Hon. S. M. Ralston, Governor of Indiana, at New Harmony, at the Centennial on Indiana Day, June 10, 1914.

EXTENSION OF REMARKS
OF
HON. CHARLES LIEB,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 25, 1914.

Mr. LIEB. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered by Hon. S. M. Ralston, governor of Indiana, at New Harmony at the Centennial on Indiana Day.

The speech is as follows:

[Address by Hon. Samuel M. Ralston, on occasion of Indiana Day at New Harmony centennial celebration, June 10, 1914.]

Ladies and gentlemen, this occasion is one of reminiscences, and you will therefore pardon me for recalling at the outset of my remarks the fact that Posey County gave to the State one of my distinguished predecessors, Gov. Alvin P. Hovey. Gov. Hovey was born in Posey County. That fact seems to have had much to do in giving him a broad view of life. A Posey County

man, especially one born within the influence of New Harmony, who is narrow-minded after he reaches manhood, is a freak of nature. Here Gov. Hovey grew into young manhood and took up his chosen profession, the practice of law. From here he enlisted in the services of his country and distinguished himself as a soldier in the Civil War. From here he went to the governor's office, which he filled with signal ability. Numerous acts of public service are to his credit, not the least among them being the construction of the Maclure will by the supreme court, giving 146 free libraries to 89 of the 93 counties in Indiana. Men of his type and caliber always adorn public office and make more conspicuous the honor done those who follow in their official footsteps.

You have doubtless been told many times that this is a very unusual event, and it is. It is of such sweeping significance that its importance does not have to be impressed upon you. New Harmony is known throughout the world because of the facts out of which this event has come.

I am not here to-day to criticize or to condemn. Those whom we are assembled to honor have lived their lives and promulgated their philosophy. As pioneers in thought it would be strange indeed if they did not have their faults and their philosophy its defects. Whatever they said or did to usher in a better day for humanity, to that we should cling and for that we should revere their memories. The man who stands on the mountain top of his day signaling the truth to those resting on the slopes is a real servant—both of God and man.

IDEALS OF FATHER RAPP.

Who ever flung in the face of this old world a finer bit of philosophy or a more inspiring creed than did Father Rapp in his teaching of humility, neighborly love, industry, prayer, self-examination, and the abandoning of all self-interest, except as that interest will conserve the welfare of the whole community? While adhering to this conception of man's relation to his fellow man and to his God, the Rappites soon after coming to this site made such progress in agriculture and manufactures that their little community was characterized by a critical stranger as a republic and commended for the great good it has done.

While their theory of government was founded on high ideals, and for a short period their socialistic scheme succeeded along material lines, yet when we delve beneath the crust of their movement it is apparent that the success they achieved was due to the individual initiative of George Rapp and Frederick Rapp. They are the leaders of their community. They planned, experimented, and wrought for their socialistic family with care, thought, and diligence as do men who are citizens of a Republic.

They were the directors of the movement at the head of which they stood. George Rapp held the place of greatest authority, but Frederick carried its spirit to the outside world; and from the outside world he learned lessons in citizenship and statecraft that must of necessity have tended to weaken his faith in the communistic schemes he was advocating. It is hardly conceivable that he could have participated in framing the first constitution of Indiana without having his faith weakened in communism. At any rate, after 10 years of communistic endeavor in this productive section of country and after the accumulation of great wealth the Rappists negotiated a sale of their lands and other possessions located here to the wonderful Robert Owen and quietly withdrew from these peaceful surroundings.

I understand you have designated this day as Indiana Day in your celebration. I deem it very appropriate to inquire if as a State we have to any extent shaped our course by any of the teachings of Robert Owen. He tells us he came to this country to introduce a new and enlightened state of society. We have his word for it that he was anxious to eliminate ignorance and selfishness—a most laudable ambition, we will admit, but one that calls for the changing of human nature as certainly as would the consummation of his desire to remove all cause for contest between individuals. But I am not to criticize.

I prefer on Indiana day to find something to commend in the teachings of this worshipper at the shrine of truth, this apostle of equality, liberty, and fraternity. And here is something he has said that the citizen of a free Government, where the voice of the people is all powerful, should take to heart if he wants to see man's condition improved:

"The religion of truth teaches the science of the influence of circumstances over human nature; and that good and rational circumstances will produce good and rational men and women, while inferior or bad circumstances as certainly produce inferior, bad, and irrational men and women."

Indiana has recognized the soundness of this principle in the enactment of her housing law by the last legislature. When she passed this law she did not look to the comfort only of the occupants of the tenements, she had in mind also the development of their morals and the building of their characters. She believed that the water they drank, the air they breathed, the home and social comforts they enjoyed bore directly upon the citizenship they developed. And when Indiana observes before long public health or "clean-up" day, as she is planning to do, she can with propriety pay respect to the memory of Robert Owen. Thomas Jefferson wanted to be remembered as the author of the Declaration of Independence, as the author of the Statutes of Virginia, and as the father of the University of Virginia. Every board of health is a recognition of Robert Owen as a public benefactor. His doctrine of environment alone makes his fame forever secure.

OWEN'S NAME ENDURING.

But you may toss to the winds everything Robert Owen ever taught as faulty and hurtful to society and still he will retain a warm place in the hearts of Indiana people, even unto the latest generation. His four brilliant and public-spirited sons will keep his memory fresh in this State. No man ever made a greater contribution to Indiana society than did Robert Owen through his four sons. Their superior talents and ceaseless labors placed them in the front ranks of its citizenship. As geologist and educator; as educator and soldier; as editor and financier; and as a politician, statesman, and philosopher, they have enriched Indiana history and made her name synonymous with vigor of thought, rational progress, and strength of character.

HIS FACE TOWARD CAPITOL.

On the capitol grounds at Indianapolis there are statues of three widely famed Indianians. They represent the great war governor, Oliver P. Morton; the polished statesman and former Vice President, Thomas A. Hendricks; and last, but not least, the world-renowned Robert Dale Owen. Morton and Hendicks are looking outward and away from the capitol, as though they are seeking information to enable them to serve their constituents more acceptably. But the face of Owen is toward the capitol, where public servants are at work and the laws are interpreted and justice administered, as though he were keeping watch over the conduct of those charged with the performance of public duties. His position is a characteristic one for him. He was a believer in work and efficiency. There was a directness and courage in what he did that challenged attention and admiration. Duty to society and to the State meant more to him than did loyalty to party. With him patriotism came before partisanism and the public welfare before the pride of opinion. This is why he was willing to abandon theories and surrender policies and stand with Lincoln, with whom he was not in sympathy politically, for the preservation of the Union. His letter appealing to the overburdened President for the liberation of the negro affected the latter as no other plea had done. It was thought by those who were in a position to know that the most potent personal influence moving the President to issue the emancipation proclamation was Owen's masterly argument in support of such a course.

The founders of Harmony and New Harmony have served society to a great purpose, and so are you, their successors, in recalling their virtues by this celebration.

Trade Conditions and the Achievements of the Present Administration.

EXTENSION OF REMARKS

OF

HON. WM. ELZA WILLIAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 27, 1914.

Mr. WILLIAMS. Mr. Speaker, we are approaching an important general election, at which the policies of the present administration are to be submitted to the great American jury, the body of the public, for ratification and approval. For this reason gentlemen on the Republican side of the Chamber, who are lonesome because of the fewness of their number, work overtime portraying business depression, predicting panic, and creating business alarm, with the hope of gaining some party advantage at the expense of the country's happiness and prosperity. They know too well that if we go to the country in the coming election on facts and conditions as they are, with a splendid record of party achievement, that the people will ratify the present administration by the return of a Democratic majority to both branches of Congress. They realize that their

only hope lies in creating either a panic in fact or the appearance of one, and they do not care which, providing it has the desired effect on the mind of the public and restores the standpatters and reactionaries to power.

Mr. Speaker, this is a serious charge to prefer against men who are commissioned to represent the people in the great American Congress, but however serious and alarming the charge may be, I regret to say it is true. The relic of the Republican Party on that side of the House, who have led the Republican procession in its headlong flight toward its doom, who have championed the cause and been the servile tools and effective instruments in the hands of monopoly to advance big business and aid it to exploit the public, and who have profited politically by the association, have become desperate in their attempts to revive the putrid corpse and put new life into their party organization. Politics with these men is a business. Party success with them means financial and political gain. They are partisan to the core. They hate Democrats because the Democratic Party stands the one barrier between them and their schemes of exploitation and party aggrandizement. These men are so partisan, so narrow, and so mean, so unpatriotic in their instincts and their motives and so treasonable in their utterances, so permeated and imbued with party expediency and the desire for political prestige, so intense and absorbed in their pursuit of power that they would willingly see the country precipitated into the throes of business ruin and financial panic, want and hunger stalk at the door of the poor, and women and children cry for bread if thereby they could discount and discredit the Democratic Party and pave the way for Republican success in the coming election. That is all that this insistent talk of hard times means. The gentlemen know that every utterance along these lines is without foundation, that there is nothing the matter with business, that money is plenty, labor employed, and wages remunerative; that nature is smiling and blessing mankind with bountiful harvests, and that a hundred million mouths are fed by the hand of plenty. Business, however, is as sensitive as a barometer, and these gentlemen hope by their constant, incessent, and chronic prating and croaking about business conditions to keep business alarmed and backward about investment and speculative enterprises until after the election, in order to make it appear that there is a stagnation and depression in the business world, and to afford them some kind of an argument or pretext for the repudiation of the Democratic Party and the restoration of the party of pelf and privilege to power.

Mr. Speaker, what is the issue before the people? Shall Democratic supremacy and progressive ideas in legislation be continued and prevail, or shall we return to the evil days when standpatism and monopoly were in the saddle, hand in hand, plunging headlong toward national ruin, disgrace, and dishonor, and which was so happily arrested and averted by the practical annihilation of the Republican Party at the last presidential election? Shall we continue the reforms which have been effected with such success and unanimity on the part of the present Congress, or shall we retrace our steps, turn back the hands of time, surrender the fight, and admit that we are powerless in the hands of monopoly? Shall we concede that the people are incapable of self-government and that big business shall henceforth and forever write party platforms, dominate public policies, and dictate national legislation? Have we come to this that we must surrender and crawl on our bellies in the presence of organized wealth, and submit to its exorbitant, extortionate, and intolerant demands, for fear that if we dare sneeze business depression will follow and a panic ensue? Shall the beneficent, remedial legislation which has been enacted by the present Congress be repealed because big business sulks and refuses to be comforted? Let us not underestimate the issue before us and what Republican ascendency at this time means. Of what do they complain? They condemn the new tariff law. Is it to be repealed and the business world treated to another era of delay and uncertainty by further tariff legislation? There is no mistaking the issue; that is just what it means. Why else do the tariff barons and the monopolists, who have profited by protection, demand a change? Is it proposed to repeal the new currency act and place Wall Street again in control of the entire financial system of the country to make and break panics at will? If not, why do the magnates of Wall Street, the Morgans, the Rockefellers, and the Carnegies, demand a change? Do they intend to repeal the income-tax law, by means of which wealth is required to contribute toward the expense of government, and to again place the whole burden of taxation on the consumers and the producers of the land?

If they do not propose this, then why is organized wealth arrayed against the Democratic Party, protesting against its just share of taxation and demanding a change? Is it proposed to repeal the parcel-post law and to compel the public to again bow at the shrine of monopoly and submit to the intolerant extortion of the express companies? If not, why are the great express companies of the country, which have heretofore pillaged the public and exacted the pound of flesh to the last pennyweight, vociferating against the Democratic Party, and urging the restoration of the Republican Party to power? Is the constitutional amendment for the popular election of Untied States Senators, by means of which the Senate has been popularized and made responsive to the public will, to be repealed or nullified? And is it proposed to return to the dark days when the United States Senate was a millionaires' club, when reform was mocked and remedial legislation scoffed at? If not, why are the Lorimers and the Aldriches and the Guggenheims so bitterly opposed to the Democratic Party and so hostile to the Senate as now constituted? What do gentlemen on the other side of the Chamber want—peace or war? Is it to repudiate the administration's Mexican policy, by means of which war has been avoided, Huerta forced into exile, and peace vouchsafed in troubled Mexico? Do you want to substitute for the President's peace policy the emblem of the God Mars and revel in war with all its fearful consequences for the sake of vain glory? Would you for mere partisan advantage force your country into a war and sacrifice thousands of precious lives and millions of treasure? If not, why do you condemn the President's policy and declare it a failure? Shall the antitrust laws, which have passed the House and are pending in the Senate and which will receive the signature of the President and become laws before the coming of the autumn, be repealed or rendered nugatory by lax enforcement, and the big trusts, which have heretofore dominated the business of the country, be again installed into power, with license to forage upon and exploit the public as in days of old? If not, why all this clamor and protest against antitrust legislation? Why the organized propaganda to force the adjournment of Congress without legislating upon this vital question?

Why this concerted action on the part of monopoly everywhere of withholding money from legitimate business, proclaiming hard times, and creating the appearance of business depression? Why such a determined attempt to force the hand of the administration and prevent amendment to the Sherman antitrust law? Would you repeal that provision in the Clayton bill, passed by the House and approved in the Senate, exempting labor organizations and agricultural associations from the penalties and operations of the antitrust law, and other legislation favorable to labor which has been enacted by the present and the preceding Congress? These provisions were opposed by the leaders on the Republican side of the House, and the minority leader, Mr. MANN, went so far as to trifle with this most vital, serious, and important question, and declared on the floor of this House that whether he would vote for or against the provision exempting labor organizations would depend upon the question as to whether he could make more trouble for the Democratic Party by voting one way or the other. In other words, the minority leader is so partisan and so indifferent to the demands of labor and the rights of laboring people that he would make a political toy of legislation needed for the amelioration of mankind, and play for party advantage at the expense and sacrifice of labor. I assume that the party for which Mr. MANN speaks, and which has so consistently and continually opposed legislation sought by organized labor, will lose no time, if restored to power, in its efforts to repeal these most essential laws.

The success of the Republican Party means nothing more and nothing less than the repeal of all these laws which are the product and the fruits of the spirit of reform which has been sweeping over the country and the world in the last few years. Mr. Speaker, I can not believe that it will occur; that the people will ever submit to the repeal of these laws and to the substitution of the rule of monopoly. That is the issue, and that is the question presented to the American people for solution and settlement at the coming election.

Upon the debate on the Underwood tariff bill during the summer of 1913 the principal argument advanced by those Republicans who opposed the bill—and they consisted of the standpat element of the party—was that the proposed tariff schedules would adversely affect trade conditions, close American factories, and open the floodgates to the cheap manufactures of Europe; that the fires would be banked in the furnaces, the whir of machinery stilled; that devastation and want would follow and famine stalk throughout the length and breadth of the land. The new tariff law has been in operation 10 months, and what are the conditions? I will not become sacrilegious and appropriate the bounty of nature and claim credit to the Democratic Party for the sunshine and the rain, as our Republican friends have done in so many campaigns, but I do believe that Providence in its wisdom has justly pronounced its bless-

ing upon the head of the present administration and the Democratic Party and rewarded the labor of man with a bountiful harvest in recognition and approval of a just administration and wise laws. We are told that we were striking a fatal blow at the farmer by reducing the tariff on the products of the farm or by placing them on the free list, and that our pains would be rewarded with the destruction of the farming interests and the flooding of the country with the cheap farm products of other countries. Another season has gone, and what do we witness? A bumper crop and flattering prospects, which under ordinary conditions would tend to lower the price of farm products; and yet the fact remains that the price of the principal products of the American farm are higher to-day than they were one year ago under the old tariff law. The advocates of the new tariff law answered that the new schedule would not only maintain the present prices of farm products, because there is no country on earth that can produce in competition with American ingenuity, American machinery, and American labor, but further answered that the reduction of the tariff on the manufactured or finished product would tend to cheapen not only the cost of production, but the price of the finished product to the consumer, and I am here to say that this remarkable effect has been produced.

On the 24th day of July, 1913, under the old tariff law, corn was selling on the Chicago market at 61 to 62 cents per bushel; on the 24th day of July, last Friday, under the new tariff law, corn was selling on the same market at 68 to 73 cents per bushel, an average increase of 10 cents per bushel, and this in the face of the most promising outlook for corn throughout the entire corn belt which ever appeared at this season of the year. Seventy cents is a good price for corn, and it has rarely been maintained at that price for so long a period of time as it has during the present season. It is not a sufficient answer to reply that this is because of a shortage of the corn crop last year. There was a local drought in a portion of Indiana, Illinois, and Missouri, but the crop generally throughout the corn belt was good, and the total yield but a little below normal.

We hear very little nowadays about Argentine corn. That scare was worked overtime, and seems to have reacted. About 10,000,000 bushels of Argentine corn have come through our ports within the last year. One carload of this corn reached the State of Illinois. The busy ones, who seemed to have nothing to do but write scare-head lines and manufacture campaign material, multiplied that carload many fold, and created the impression that a carload had reached its destination at every important railroad station in the State. Like the man who wanted to go somewhere, and started 15 directions at the same time, they had this carload of corn going everywhere, and held it up as a bugaboo to stampede the farmer. It worked well for a time, and I am told that in certain portions of Illinois resolutions were introduced at farmers' institutes condemning the Democratic Party for its sacrifice of agricultural interests and the destruction of the corn industry. The fact is that more corn can be produced in any one of a dozen counties in the State of Illinois, and is annually produced, than was brought from abroad to our ports since the new tariff law went into effect. The annual production of corn in the United States is over 3,000,000,000 bushels.

The entire importation of Argentine corn for the year is but a mere drop in the bucket, as 1 to 300, and had as much effect on the market as an extra yield of one-thirtieth part of 1 bushel to the acre in the corn belt or as an extra bushel would have in the Chicago market for the day. It has been openly charged, with much semblance of truth, that the Argentine corn was brought here or induced to be shipped in for political effect; but however this may be, it is certain that except for the extraordinary high price here no Argentine corn would reach our ports. If it came merely as an experiment, through legitimate trade channels, it was brought because the shipper believed there would be some profit in it. The fact that so little has come, and that the importation is falling off from month to month, makes it evident that there is nothing to be feared from this source, and that under no conditions will there be enough of Argentine corn brought in to appreciably affect our supply or the market price of domestic corn.

Wheat is about 5 cents per bushel lower than it was a year ago, which is due to the exceptional crop produced this year, and not to the tariff. The tariff law is not changed and will not become effective as to wheat except by reciprocal agreement with countries which admit our products free of duty.

Oats have been, until the present crop was placed on the market, higher by 10 cents per bushel this year than last. The Chicago market reports of last Friday, July 24, and that of one year ago on the same date show the price of oats almost identical, although oats have been placed on the free list, and a relatively small quantity has been received from Canada.

Rye on the 24th of July was 3 to 4 cents per bushel higher than a year ago.

Hay on the same date—July 24, this year—was $2 per ton higher in the Chicago market than a year ago.

The market price of hogs this year and last on corresponding dates is about the same, and ranges from $9 to $9.50.

Cattle have increased in value on an average of about $1 per hundred, and this notwithstanding dressed meats are admitted free of duty.

Sheep, including ewes, wethers, and lambs, average about $1 per head higher than a year ago, and we hear no more about the destruction of the sheep industry by placing wool on the free list. In 1913 the market price of wool was 21 cents; in 1914, 25 to 26 cents per pound. Oh, shades of MANN, MONDELL, and others, who predicted with such great assurance that we would ruin the sheep industry in the United States and deprive the farmer of his profits from this enterprise.

Corn, wheat, oats, and rye, hogs, cattle, sheep, and wool are the principal products of my State and my section of the country, and I speak by authority when I say that the farmers of Illinois and the Middle West are entirely satisfied with conditions, and are not taking alarm or becoming frightened by all this political claptrap emanating from the sources indicated. Farming with me is a side line. My earnings from the legal profession, what I have not spent in politics, have been invested in Illinois farm lands. My boyhood days until I attained my majority were spent on a farm, and I have never lost interest in agricultural pursuits. I for one am gratified with conditions, so far as agricultural interests are concerned, and I believe that my convictions are shared in common by the great mass of farmers in my State and throughout the Middle West.

Mr. Speaker, I stated at the beginning of my remarks that the price of farm products have been maintained, and that the producer has received as great profits under the new tariff as he received under the old. This fact, I submit, is conclusively demonstrated by the figures and the market reports which I have given. I further stated that the finished product is cheaper to the consumer and the cost of living not so great as last year. A reference to the market prices of the principal staple products will demonstrate the truth of my statement. Take flour, for instance, it was on the 24th day of July, last week, 80 to 90 cents per hundredweight cheaper than it was a year ago, yet the price per bushel of wheat is but 5 cents less than it was the same date last year. There is no material change as to the price of hog products, although the general average is a trifle lower.

Beef products, however, are much reduced in price, notwithstanding the fact that beef cattle are a dollar per hundred higher than last year. Extra mess beef is quoted, July 24, 1913, at $17.25 to $17.50, while on the corresponding date 1914, the same meat is quoted at $15.75 to $16. Plate beef is reduced from $20, July 24, 1913, to $16, July 24, 1914. This is easily accounted for by the fact that dressed meats have been placed on the free list, and there has been some importation of Argentine chilled meats, and the Beef Trusts have not had an exclusive market. The consumer gets the benefit of this reduction in the price, while the profit of the Beef Trust is curtailed and the price of the beef cattle produced on American farms and ranches is not adversely affected. Coffee is cheaper by 50 cents per hundred than a year ago, and sugar is cheaper by a dollar per hundred, which means a saving of approximately $50,000,000 to the consumer, and a corresponding reduction in the profits of the Sugar Trust. It is nonsense to contend that the consumer does not get the benefit of the reduction of prices occasioned by reducing tariff duties. The figures that I have given show clearly where the profit goes.

The most interesting effect of the tariff is found in the price of the raw material and in the finished product of cotton and woolen goods. There is no question but that these goods are cheaper on the market than they were under the old tariff law. Both cotton and woolen goods and cotton and woolen manufactures of all kinds are cheaper to-day on the counters of the retail merchant than they were a year ago. Because of different varieties, and varying quality with which the ordinary purchaser is not familiar, it is difficult to fully appreciate and determine, except that your merchant knows the fact and will tell you that it is true, and that he does supply the market cheaper and his goods are marked down a very substantial per cent less than they were a year ago. And he will tell you more, that his trade is good and the demand as great as it was this season last year.

I could multiply these figures indefinitely and show by market reports and retail prices that the cost of staple products which enter into every man's living is materially cheaper under the present than it was under the old tariff, but I assume that this is not necessary, as it is a fact that everyone can ascertain for himself by very little effort. Flour, beef, pork, sugar, coffee, woolen and cotton goods are the most staple and the most

essential necessities of life. These, as I have clearly shown and demonstrated, are cheaper now than then, and I reaffirm, Mr. Speaker, that what I said is true, that the profits of the producer of the raw material and the products of the farm are greater to-day than formerly, and that the price to the consumer of the products of these various staples is cheaper, and the cost of living is materially reduced as a direct result of the Underwood tariff law.

Not only have the new tariff schedules benefited the producer and the consumer alike, but business conditions throughout my section of the country seem to be all that could be desired. Since April 4, 1914, 27 new State banks have commenced business in Illinois, according to a statement issued on the 21st day of this month by the State auditor. The total resources of the 748 State banks in Illinois on July 1 were $910,845,522, an increase of $9,609,737 in three months. The increase during the same period of the capital, surplus, contingent fund, and undivided profits was $845,095, and the total deposits during that period were increased $13,097,787. The savings deposits, subject to notice, aggregated $310,828,833, an increase of savings deposits of $5,347,288 for the period of three months subsequent to April 4. I have long understood that the condition of laboring people was more clearly manifested by the condition of savings deposits in a community than by any other means or indication, and to me it is gratifying to know that the savings deposits in the State banks alone, which do not include national banks and trust companies, was increased in the period of three months by the enormous amount of over five millions of dollars. Certainly labor is not unemployed, and certainly the price of wage is not unremunerative. Let gentlemen who croak about hard times and bewail the condition of laboring men while voting against their interests and who shed crocodile tears at the bier of labor while opposing legislation for its benefit pause in the face of these figures and seriously consider whether they are fooling labor or whether they are fooling themselves; whether they are deceiving the country and misleading their constituents or whether they themselves are misguided by party hatred and partisan zeal.

Mr. Speaker, the Democratic Party has now been in control of the Government less than 17 months. During that time Congress has enacted more laws in the interest of the people than any Congress ever assembled. The Democratic Party came into power with a party platform and a declaration of faith which commended it to the sober thought of the world. These platform pledges were not platform fulminations for mere expediency and party advantage; they were made in good faith, to be kept sacredly, and not as "molasses to catch flies." Every promise has been kept and every pledge has been redeemed. We have fought a good fight; we have kept the faith.

I am gratified that I have had some part in these achievements. I have represented the State of Illinois in the capacity of Congressman at Large during the present term of Congress and have consistently stood by the President and supported the policies of his administration in all things, and I am standing for reelection and asking of the voters of the Democratic Party of Illinois an indorsement and a ratification of Democratic policies at the coming primary election. No party and no administration within the history of the Government has accomplished so much of remedial legislation for the ultimate good of mankind as has the Democratic Party during the brief time it has been in power since March 4, 1913. In the very nature of things we can not hope to enjoy the full fruition and the present benefits of this legislation in a day, although we already begin to feel the effect and enjoy the benefits of the wholesome laws enacted, notwithstanding the wail of the calamity howlers, who preach hard times for political effect and who prefer party ascendency to the welfare of the country.

Tariff revision, which maintains the price of natural products to the producer and at the same time tends to lower the cost of production and the cost of the finished product to the consumer; the income tax, which in a measure relieves the burden of taxation and imposes it on those who have excessive incomes and are most able to pay; the establishment of a new financial system, which deprives Wall Street of the control of the money market and maintains an equitable distribution of money in all sections of the country in proportion to the demand and provides a currency sufficiently elastic to meet the requirements of trade and commerce at all seasons; the antitrust bills, which are about to be enacted and will be in force before this session of Congress adjourns, by means of which the rapacity and greed of monopoly will be restrained and big business controlled and regulated; bills for the amelioration of labor, including the eight-hour bill, the Children's Bureau bill, the bill creating the Department of Labor, a bill creating a Commission on Industrial Relations, have already been enacted into law, and the anti-injunction bill, contempt bill, a bill creating a bureau of labor safety, a bill for the exemption of labor organizations from the penalties and operations of the antitrust law, and a bill prohibiting the interstate shipment of convict-made goods have passed the House and are pending in the Senate, with excellent prospects of enactment; the direct election of United States Senators, which has popularized the United States Senate and made it responsive to the public will; the parcel post, which has increased the mailing facilities and cheapened the cost of transportation of the necessities of life to the people; the ousting of Huerta and the establishing of peace in troubled Mexico without the sacrifice of men and money are the principal achievements of the Democratic Party and of the present administration and furnish a record unequaled in legislative annals. Upon this record I congratulate the country and am willing to abide in the coming election, confident that the policies of this administration and the high aims and purposes of our distinguished President will be ratified at the polls.

Business Conditions in Calumet District.

SPEECH

OF

HON. JOHN B. PETERSON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 27, 1914.

Mr. PETERSON. Mr. Speaker, of late Members of this House and others have asked me frequently about business conditions in the Calumet district, which is a part of the district which I have the honor to represent. In view of these questions I have made diligent efforts by personal investigation to ascertain the true situation.

In this region are located the cities of Gary, Hammond, East Chicago, Indiana Harbor, and Whiting, all manufacturing centers.

I find business and industrial conditions throughout the tenth congressional district of Indiana are satisfactory. Bank balances show larger deposits for the time of year than have existed in 10 years. There is more building and general improvement going on all over the district than at any recent period. Of course, it goes without saying that the farmers are prosperous. Crops generally were never better.

Railroads are taking on men and making general improvements everywhere. At La Fayette the Monon Railway shops are running full force and employing more men each week. The Pennsylvania Co. has a large force of men treble-tracking its road between Chicago and Logansport. The Lake Shore & Michigan Southern is building a $40,000 station at Chesterton.

In the manufacturing portion of the district optimistic feelings prevail. At East Chicago the Republic Iron & Steel Co., the chief industry, is running with nearly full force. During this month a permanent addition to its mill costing more than $25,000 was completed. Conditions at Gary are rapidly improving. There are now in operation at the Gary works of the Indiana Steel Co. 27 open-hearth furnaces out of a total of 42, while 6 of the 8 blast furnaces are in operation. The number of open-hearth furnaces in operation represents an increase of 8 since May 15, when there were only 19 open hearths in operation. This was the information given out at the general offices of the Gary works, coupled with the general information that the working capacity of the plants were being gradually increased, and that the prospects for further increases are considered good. From other reliable sources it is learned that some big rail orders have been received, and that the billet mills, the merchant mills, and axle mills are gradually increasing their output and running well up toward capacity. The open-hearth furnaces are never all in operation at the same time because of the necessity of periodical repairs.

Most important, however, of all recent additions to the capacity of Gary mills is the completion of the great slab mill, costing more than $2,000,000, that went into operation only last week. One hundred and fifty men are employed as a full-day shift on this new enterprise. An immense Corliss steam engine, generating 12,000 horsepower, is required to operate this mill.

The Standard Steel Car Co., at Hammond, has increased its working force more than 300 men within the last month, is tak-

ing on more men, and in some departments is working overtime. It has recently completed a very large addition to its plant.

The Simplex Co., at Hammond, is increasing its force, and soon will be running to its normal capacity.

The Inland Steel Co., at Indiana Harbor, the largest independent mill in the United States, reports very satisfactory conditions. It is reliably stated that the directors of this company will declare a 25 per cent stock dividend, and recommend that the authorized capitalization of $10,000,000 be increased at the annual meeting of the stockholders to be held at Chicago July 28.

So far as workingmen are concerned, conditions are exceptionally good. Labor scales are higher than usual. A prominent labor-union man from the Calumet district was in my office to-day and said the scale for puddlers is 25 cents per ton higher than it has ever been in the history of organized labor. Every union mill from Maine to California is working, and has signed up new wage scales at advanced rates.

Indiana Day.

An address delivered by Mr. LIEB at the one hundredth anniversary of the founding of the city of New Harmony, Ind., June 10, 1914.

EXTENSION OF REMARKS
OF
HON. LINCOLN DIXON,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 25, 1914.

Mr. DIXON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address delivered by Mr. LIEB at the one hundredth anniversary of the founding of the city of New Harmony, Ind., together with a letter from the President read on that occasion.

The address and letter are as follows:

[Address by Hon. CHARLES LIEB, of Indiana, on occasion of Indiana day, at New Harmony (Ind.) centennial celebration, June 10, 1914.]

BRINGS MESSAGE FROM WILSON.

Mr. Chairman and members of the New Harmony Centennial Commission, it is not my desire to take up much of the time allotted this afternoon to other speakers on the program.

In connection, however, with an errand I have been asked to perform by the President of the United States, I can not resist the tempation to voice the sentiments which I entertain as I am brought amidst the men and women celebrating a great event.

When great minds of almost a century ago were shaping the destinies of a Nation, laying a foundation for fundamental achievements which to-day make the United States a Nation among nations, New Harmony was a center of uplift greater in many respects than the National Capital itself.

It is not necessary to repeat the things of which history tells us New Harmony formed a vital part. The State of Indiana must admit that her greatness, with all the brilliant men she has produced, would be less marked to-day but for one of your illustrious sons, Robert Dale Owen. His greatest single service to Indiana, perhaps, was the reputation he helped to give the State for its advanced educational facilities. His activity in Indiana legislation led to generous provisions for free schools. Not long after this new era took hold the London Times said: "Indiana has attained the highest civilization of any State in the Nation." Who denies the statement that this is true to-day?

LIFE OF OWEN.

I can not help but dwell upon the life of Robert Dale Owen, as his achievements but serve to illustrate the achievements of many others of early New Harmony.

It was due to Robert Dale Owen's perseverence and initiative as a Member of the Twenty-ninth Congress that the great Smithsonian Institution was established. Eight years had transpired since the United States Government had obtained the funds for building the institution when Mr. Owen took up the cause. He was a ripe scholar, had traveled much, and was familiar with the best institutions of Europe. He was fond of architecture and was one of the most active members of the Board of Regents in forming the plans for the building. He was chosen by his people to hold many high positions, being several times a member of the House and Senate of Indiana, member of the constitutional convention that formed the present constitution of the State; he also served as minister to Naples, and his service in Congress will always be a monument to science.

As the world has gained much from New Harmony people of the past, so it may gain a great deal from the efforts of your commission to fittingly celebrate the centennial. Fifty years from now a future generation may point back to this event as having furnished some incentive or inspiration for a man or men whose names will go down in history as have the names of George Rapp, Robert Owen, William Maclure, and many others. Destinies are made and unmade in a minute. A man inspired by something he reads, hears, or sees may, on the spur of a moment, reach out into the unknown and confer a blessing on all mankind that will live forever.

Robert Dale Owen was born a genius, but without his father's inspiring example much of the incentive would have been lacking. Had Robert Dale Owen faltered a moment in his purpose, we might not have to-day a Smithsonian Institution. Without a Smithsonian Institution the world to-day would be denied many scientific advantages.

MUST ENDURE RIDICULE.

Some must even endure ridicule in their efforts to enlighten humanity. One of the fruits of the Smithsonian Institution was the successful efforts of its secretary, Mr. Langley, to invent a flying machine. Only recently the Langley model was successfully propelled, showing that the world erred in criticizing the great invention.

Too much praise can not be bestowed upon the New Harmony Centennial committee having the program in charge. You have done a great and lasting service to the entire world, and as I have endeavored to point out, no one can conceive the vast good you may do for future generations.

I wish to express my appreciation for being invited to attend your celebration and upon being permitted to appear before this intelligent audience. I have a warm spot in my heart for New Harmony and I feel as one of you.

Before leaving Washington I had the distinct pleasure of talking with President Wilson about your celebration. You have all heard he is a student, but you would have been surprised at his intimate knowledge of the affairs of New Harmony. He spoke in high praise of your enterprise and expressed his most sincere regrets that he would be unable to make a long trip to take part in the celebration. Mr. Chairman, may I have the honor to present to you the message from President Wilson, which he asked me to personally deliver.

PRESIDENT WILSON'S GREETING TO NEW HARMONY.

THE WHITE HOUSE,
Washington, June 2, 1914.

Mr. GEORGE C. TAYLOR,
Secretary New Harmony Centennial Celebration,
New Harmony, Ind.

MY DEAR MR. TAYLOR: It is with deep and genuine regret that I find myself prevented by public duties here from attending the celebration of the centennial of New Harmony. Everything that I know about that interesting and remarkable community and its unusual history of progress and enlightenment has made me desirous of taking part in a celebration which will illustrate so many of the most interesting features of American life. The history of New Harmony is in a way a type of what America has afforded men of high ideals and steadfast purpose an opportunity to do. The people she has bred, the men she has sent out from her public service, all attest ideals and achievements which I would fain believe to be peculiarly characteristic of the great country we love when seen at its best.

Cordially and sincerely, yours,

WOODROW WILSON.

Effect of the Democratic Tariff.

EXTENSION OF REMARKS
OF
HON. FRANK W. MONDELL,
OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 28, 1914.

Under leave to extend his remarks on the subject of the effect of the tariff, Mr. MONDELL submitted the following:

Mr. MONDELL. A few days since I placed in the RECORD a statement relative to an inquiry which was being made by the officers of the American Protective League with a view of ascertaining the extent to which wage payments had decreased during the third week in June, 1914, as compared with the third week in June, 1913. The startling result of that inquiry is

very clearly set forth in an article which appeared in the American Economist of July 24, 1914, which is as follows:

DIMINISHED PAY-ROLL CHECKS AN ACCURATE BAROMETER OF BUSINESS CONDITIONS.

A startling decrease in the income and purchasing power of American wage earners in this period of industrial and business depression, following the enactment of the Underwood free-trade tariff law, is shown as the result of careful inquiry by the American Protective Tariff League. The decrease in pay-roll checks passing through the banks in the chief centers of industry and business is the surest possible proof of the serious blight that free trade has inflicted upon the earning and spending capacity of American labor.

This shrinkage in wage payments, as reported by 64 banks, amounted to $866,908.01 in the third week in June, 1914, as compared with the third week in June, 1913, when the Payne protective tariff was in operation. If the same rate of decrease should apply for the whole year from the 64 banks reporting, it would show a decrease of wages paid amounting to $45,079,216.52. If applied to all the banks of the country for a full year, the shrinkage would mount up into hundreds of millions of dollars. It is a shrinkage that is felt in every line of business. When a free-trade tariff thus reduces the number and contents of American pay envelopes, the calamity becomes Nation-wide.

Replies have been received from 88 banks in response to the confidential inquiry sent out June 26 by the American Protective Tariff League asking for information on the following points:

First. What was the total amount of the pay-roll checks in your bank for the week ending June 21, 1913?

Second. What was the total amount of the pay-roll checks for the corresponding week ending June 20, 1914?

We will under no circumstances divulge the name of a bank giving us this information, but wish to publish a statement giving the comparative pay-roll checks in bulk for the weeks named.

The fact that in response to 404 letters of inquiry 88 banks responded is in the highest degree creditable to the banks, as it shows a disposition to make public facts of high importance relative to existing industrial conditions as disclosed by the volume of pay-roll checks. The 88 banks responding to the letter of inquiry are located in the following-named cities:

Connecticut: Bristol, Danbury, Derby, Hartford, Meriden, and Rockville.
Delaware: Wilmington.
Illinois: Aurora, Chicago, Danville, Pekin, and Peoria.
Indiana: South Bend and Terre Haute.
New Jersey: Carlton Hill, Jersey City, Newark, New Brunswick, Passaic, and Trenton.
New York: Albany, Binghamton, Buffalo, Johnstown, and New York.
Ohio: Cincinnati, Cleveland, Zanesville, and Youngstown.
Maine: Portland.
Maryland: Baltimore.
Massachusetts: Holyoke, Lynn, New Bedford, and Springfield.
Michigan: Lansing
Missouri: St. Louis.
Pennsylvania: Beaver Falls, Bristol, Harrisburg, Hazleton, Philadelphia, and Pittsburgh.
Rhode Island: Centreville.

Twenty-four of the 88 banks responding stated that their books were not kept in such a way as to give reliable comparative statements, but 64 banks returned answers to the questions propounded. It is shown in the official reports received that 43 banks had a decrease in their pay-roll checks for the third week in June, 1914, and 21 banks report an increase.

In harmony with the last paragraph of the letter of inquiry we can not divulge the names of the banks reporting, but the tabulated returns indicate that the 64 banks referred to above cashed pay-roll checks as follows for the weeks ending June 21, 1913, and June 20, 1914:

Pay-roll checks cashed week ending June 21, 1913	$9,926,905.17
Pay-roll checks cashed week ending June 20, 1914	9,059,997.16
Decrease	866,908.01

This falling off of $866,908.01 in a single week in wage payments through 64 banks in 44 cities of the United States is an index of conditions which no free trader can challenge and no theorist can explain away. It stands out as a big, bold fact of marked significance. It tells, in part, the fearful price which American labor and industry are paying for the rash and reckless policies of a "free-trade" Congress and administration. It tells of closed mills and factories, of idle workmen, of decreased business by merchants and tradesmen, of commercial failures larger in number and amount of liabilities than at any time since the last free-trade paralysis of 1893–1897. The pay envelope is by far the greatest single factor in American prosperity. When free trade comes, the pay envelope shrinks. Then all business shrinks. Then prosperity is changed to adversity. That is what has happened now. That is what is disclosed in the reduced volume of pay-roll checks as reported by the banks. (From the American Economist, July 24, 1914.)

River and Harbor Appropriation Bill.

SPEECH

OF

HON. ALFRED G. ALLEN,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 24, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 13811) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. ALLEN. Mr. Chairman, I rise to oppose the motion of the gentleman from Wisconsin [Mr. FREAR], which is to strike out the following paragraph:

Improving Ohio River: Continuing improvement by the construction of locks and dams with a view to securing a navigable depth of 9 feet, $2,000,000: *Provided*, That the Secretary of War may enter into a contract or contracts for such materials and work as may be necessary to prosecute the said project, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate $3,000,000, exclusive of the amounts herein and heretofore appropriated.

The difficulty with the gentleman from Wisconsin is that he is not familiar with the facts pertaining to the Ohio Valley; that it is the great workshop of America; that the Ohio is one of the great rivers of the world susceptible of improvement by a system of locks and dams which will provide a depth of 9 feet from Pittsburgh to Cairo, a distance of almost 1,000 miles.

Congress, in March, 1905, authorized the Secretary of War to make an investigation of this project by the following enactment:

The Secretary of War is hereby authorized and directed to appoint a board of engineers to examine the Ohio River and report at the earliest date by which a thorough examination can be made the necessary data with reference to the canalization of the river and the approximate location and number of locks and dams in such river, with a view both to a depth of 6 feet and 9 feet; and in said report shall include the probable cost of such improvement with each of the depths named, the probable cost of maintenance, and the present and prospective commerce of said river, upstream as well as downstream, having regard to both local and through traffic. They shall also report whether, in their opinion, such improvement should be made and whether other plans of improvement could be devised under which the probable demands of traffic, present and prospective, could be provided for without additional locks and dams, or with a less number than is described in surveys heretofore made, giving general details relating to all of said plans and the approximate cost of completion thereof. They shall also examine the said river from the mouth of the Green River to Cairo, with a view to determining whether an increased depth can be maintained by use of dredges.

I hold in my hand House Document No. 492, Sixtieth Congress, first session, which is the report, and a most interesting and voluminous one, upon this Ohio River improvement.

The board of engineers provided for was appointed and organized on May 12, 1905. This board made a thorough inspection of the river and conducted a hydrographic survey and collected data and statistics from all available sources. It gave an exhaustive consideration to the question of present and future commerce, both upstream and down. It found the commerce of the river at that time to be over 9,000,000 tons per annum and increasing.

The report finally concludes with the recommendation that the 9-foot project, involving 54 locks and dams at an estimated cost of $63,731,488, should be adopted. I quote from pages 2 and 3 of the report:

Having in view the fact that a canalized river offers an upstream navigation lower in cost and quicker in transit than an open-river project, the board, arguing from the known natural resources of the section and its population, concludes that a river improved by this method will afford facilities for the cheap exchange of mineral, agricultural, and manufactured commodities which, from their low value and bulk, can not be exchanged unless such cheap facilities are offered, and that there is every probability that the improvement of the Ohio River by canalization, as proposed, would induce a very large future commerce, which does not now exist, in addition to retaining and greatly facilitating and cheapening the commerce which the river now bears. * * *

The board finds that the probable demands of traffic, present and prospective, can not be provided for by any other plan of improvement not having locks and dams, or having a less number of locks and dams than those proposed in the report.

The report deals with a number of interesting matters, which time permits me to mention but briefly. We learn that there are but 79 days in the year when boats drawing 8½ feet can leave Pittsburgh, and but 97 days in the year when such boats can pass Louisville. Yet the present commerce is found to be over 9,000,000 tons annually, and that if the river were navigable

all the year round to a depth of 9 feet this commerce would be enormously increased.

Attention is called to the fact that within the 30 miles next below Pittsburgh, where a 9-foot navigable depth is completed, practically every site suitable for a large manufacturing plant has been acquired. All the heavy tonnage from around Pittsburgh—steel, iron, and coal—will, on account of cheaper freight rates, resort to transportation by river and seek a market South and Southwest in this country and on the Pacific coast and the Orient when the Panama Canal is completed.

But the report also points out that all the conditions favorable to a large increase in local commerce are present, and compares the results to be achieved with what has been accomplished by the improvement of the Rhine in Germany and the Volga in Russia.

While actual statistics are not obtainable for all our waterways, it is generally conceded that water transportation costs only about one-sixth as much as the average cost by rail.

The report makes the astonishing statement that—

The steamer *Sprague* tows to market from Louisville to New Orleans sometimes as much as 60,000 tons of freight on a single trip. The *Kaiserin Augusta Victoria*, one of the largest ocean ships afloat, has a freight tonnage of 25,000 tons. The horsepower of the *Sprague* is 2,175, while that of the *Kaiserin Augusta Victoria* is 17,200, and that of sufficient railroad locomotives to haul the *Sprague's* cargo on an average-grade road 24,000.

I might add here that prior to this time there had been a survey of the river from Pittsburgh to the mouth of the Big Miami River and the improvement to a 6-foot stage contemplated by the construction of 37 locks and dams.

President Taft in his message to Congress in December, 1909, included a recommendation that Congress provide said sum of $64,000,000 necessary to complete said improvement a distance of 1,000 miles.

The Mississippi River has already been improved to a 9-foot stage from Cairo to New Orleans, a distance of another 1,000 miles. Of the tributaries flowing into the Ohio from the south, the Monongahela, Kanawha, Big Sandy, Kentucky, and Green Rivers have been improved to a 6-foot stage; and the Cumberland and Tennessee Rivers are now being improved to the same extent. The Muskingum is improved to a point above Zanesville, and the Allegheny has been made navigable to a point 25 miles above Pittsburgh, and the improvement is being extended.

Congress determined to proceed with this great enterprise, appropriating $5,500,000 in 1911, $5,600,000 in 1912, $5,000,000 in 1913, and this bill carries $5,000,000 to prosecute the work.

Lock and Dam No. 37, known as the Fernbank Dam, to which the gentleman refers, is located about 10 miles below the city of Cincinnati, and was completed about two years ago. It has created a 9-foot stage of water in front of the city of Cincinnati and as far up as Coney Island, 10 miles above, which enables commerce to move in the harbor the year around. Great quantities of coal are transferred from the coal harbor above to the elevators in front of the city, and we now have the assurance of sufficient water to enable boats to constantly move up and down the harbor in the transfer of freight. But in addition to this is a feature of passenger traffic to which I desire to direct your attention.

There is a pleasure resort some 10 miles above the city, known as Coney Island, and between this resort and the city steamboats ply hourly during the summer. Not only is it a place of recreation for our populace generally, but a breathing spot for the children of our congested districts. There is not much that is inspiring in brick walls and stone pavements or tin roofs and chimney pots, and to these who never beheld the glories of a sunrise nor the beauties of a sunset the little diversion of a ride on the river and a few hours in the open air is wholesome in their growth and the development of their characters. I have seen these children fairly hug the cool grass as they rolled in it and experienced the delight of the change from the hot, dusty city.

In former years it was not an unusual thing for these boats to be tied up for many days in July and August on account of low water, just at the time when they could be most useful. But since the completion of the Fernbank Dam they are able to make their trips regularly.

Under the present bill the $3,000,000 for the Ohio River is a part of the $5,000,000 required to be furnished annually under a declaration in the rivers and harbors bill passed in 1910 of an intention to complete the improvement in 12 years; that is, the amount necessary to complete the project shall be appropriated within that period.

I will incorporate as part of my remarks a statement containing information respecting these locks and dams, showing their location, those in operation, those under construction, and the date set for their completion, which is as follows:

Ohio River improvement, 1911.

No. of dam.	Miles below Pittsburgh.	Information.	In operation.	Under construction.	Date for operation.
1	4.7	Davis Island Dam, Bellevue, Pa.	About 15 years.	.....	.....
2	9	Neville Island Dam, Glenfield, Pa.	About 10 years.	.....	.....
3	10.8	Glenosborne, Pa.	....do.....	.....	.....
4	18.5	Legionville, Pa.	....do.....	.....	.....

47	771.3	Newburg, Ind. No work started.		No.	
48	804.1	Below Henderson, Ky. Dam for Henderson, Evansville, and mouth of Green River. Contract awarded Ohio River Contract Co., Evansville, Ind., October, 1911.		Yes	1917
49	830.5	Uniontown, Ky. No work started.		No.	
50	859.6	Caseyville, Ky. No work started.		No.	
51	876.9	Elizabethtown, Ill. No work started.		No.	
52	912.4	Above Paducah, Ky., near Smithland, Ky. No work started.		No.	
53	947.3	About 10 miles above Mound City, Ill. No work started.		No.	
54	962.0	Near Cairo, Ill. No work started.		No.	

Requires 54 locks and dams to complete system.

According to light list of the fourteenth lighthouse district, corrected to October, 1906, measured according to channel, the distance from Pittsburgh, Pa., to the larger cities is as follows:

	Miles.
Wheeling, W. Va	90
Parkersburg, W. Va	183½
Point Pleasant, W. Va	263½
Huntington, W. Va	306½
Portsmouth, Ohio	353½
Cincinnati, Ohio	466¼
Louisville, Ky	598
Evansville, Ind	783
Paducah, Ky	920
Cairo, Ill	965

SUMMARY.

	Projects.
In operation during the year 1913	12
Under construction and which should be completed, according to contract:	
During 1914	3
During 1915	5
During 1916	3
During 1917	1
During 1918	8
No work started on	22
Total	54

Until the improvement is completed river traffic will be uncertain. As it is now a great deal of the traffic is held at the place where it originates until there is a rise in the river, whereupon it comes down on the crest of the rise. Even under these conditions the tonnage last year amounted to over $75,000,000 in value. When the river can be used 12 months in the year it will readily be seen what an immense traffic there will be, for then freight can move upstream as well as downstream. A complete transportation system by water will be set in the midst of the Ohio Valley and so devised as to serve all sections. It will mean a general lowering of freight rates from Pittsburgh to Kansas City and from the Lakes to the Gulf. Uninterrupted navigation to hundreds of towns and cities will mean an increase of business along all lines. The cheap transportation of raw materials will stimulate manufacturing enterprises, and this great valley will become a beehive of industry.

Brief on Control by Congress of Water Power in Navigable Waters of the United States, by Edward B. Burling.

EXTENSION OF REMARKS

OF

HON. SWAGAR SHERLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 28, 1914.

Mr. SHERLEY, under leave to extend his remarks, submits the following brief on control by Congress of water power developed in navigable waters of the United States, by Edward B. Burling.

The brief is as follows:

CONTROL BY CONGRESS OF WATER POWER DEVELOPED IN NAVIGABLE WATERS OF THE UNITED STATES.

CHICAGO, *November 10, 1909.*

CHARLES W. ELIOT, Esq.,
President National Conservation Association.

DEAR SIR: I shall endeavor to give as briefly as may be the grounds for my belief that Congress, in granting permission to construct a dam across or to divert water for water-power purposes from navigable waters of the United States, may, without exceeding its constitutional powers, exact compensation of the licensee or may require him to submit to a regulation of the rates to be charged for the use of the water power. The question divides itself into two branches, one concerning the extent of the power of Congress to forbid or to permit such dams or such diversion of water; the other, assuming a case where there is full power either to forbid or to permit, concerning the conditions which can be attached in case permission is granted. For convenience I shall consider these two questions in inverse order.

I.

Assuming for the present that the proposed dam or proposed diversion is lawful with and unlawful without a permit from Congress and that the consent of the State is not required, may Congress require the grantee to pay money or to submit to a regulation of rates? In my opinion it may do either of these things. If it be assumed that in a given case Congress may, in its discretion, refuse or grant permission, then it seems to me to follow as a necessary legal consequence that it may impose as a condition to a grant any terms whatever not in themselves unlawful.

Those who deny this power must do so, I suppose, on the theory that the sole concern of Congress in the premises is the protection of navigation; that all its power over navigable waters being derived from the power to regulate commerce between the States and with foreign nations, it can decide whether or not the proposed dam or diversion is consistent with the interests of commerce and navigation, but has no jurisdiction to legislate on the subject of rates to be charged for the use of water power or to exact compensation therefor. Those who take this position must, it seems to me, deny the power of Congress to impose any condition unrelated to navigation, for I do not see what valid distinction can be drawn between a condition exacting compensation and any other condition unrelated to navigation. If their reasoning be sound, it would follow that Congress could not impose any of the conditions suggested in the following illustrations:

(a) Congress, in granting a permit to build a bridge across navigable waters, requires:

1. That the grantee shall not charge more than a certain price for the carriage of munitions of war, United States mails, or troops.
2. That it shall admit a joint occupancy by other railroads upon certain terms.

Are these conditions valid? They have no more to do with protecting navigation than a condition exacting compensation. The case supposed is not hypothetical. Congress did in fact impose just these terms as a condition to the permit to build a bridge over the Arthur Kill, lying between New Jersey

and Staten Island. The act, after granting permission, provided as follows:

SECTION 1. That all railway companies desiring to use the said bridge shall have and be entitled to equal rights and privileges in the passage over the same, etc.

SEC. 3. No higher charge shall be made for the transmission over the same of the mails, troops, and the munitions of war of the United States than the rate per mile paid for their transportation over the railroads or public highways leading to said bridge; and the United States shall have the right of way for postal telegraph purposes across said bridge.

In Stockton *v.* Baltimore Co. (32 Fed., 9), on grounds which do not concern us here, the constitutionality of this act was in question. The special conditions above set out were not referred to, but the act as a whole was held valid, and apparently no one thought of questioning the power of Congress to impose them.

Congress, in authorizing a bridge across the Mississippi River at Clinton, Iowa, enacted that the bridge—

shall be a lawful structure, and shall be recognized and known as a post route, upon which also no higher charge shall be made for the transmission over the same of the mails, the troops, and the munitions of war of the United States than the rate per mile paid for their transportation over the railroads or public highways leading to the said bridge.

Mr. Justice Miller held, in The Clinton Bridge (1 Wool., 150), that the act of Congress was valid and that an injunction against the bridge should not be granted. The above section was not referred to by the court. This decision was affirmed in Tenth Wallace, 454.

Congress passed an act authorizing the erection of a bridge over the Niagara River between the United States and Canada, the grant containing this condition:

All railway companies desiring to use the said bridge shall have and be entitled to equal rights and privileges in the passage of the same * * * under and upon such terms and conditions as shall be prescribed by the district court of United States, northern division, New York.

In Canada Southern Railway Co. *v.* International Bridge Co. (8 Fed., 190) this act was carefully considered by Judge Wallace. The precise point decided was that Congress did not mean to give power to determine the compensation to be exacted from the railroads by the bridge company. But the language of the court shows clearly that the only question in his mind was one of construction—to determine what conditions Congress intended to impose. He assumes that there is full power on the part of Congress to fix the conditions. He said:

While the opinion originally expressed has been confirmed in all that relates to the constitutional right of Congress to confer jurisdiction upon the court to decide what compensation the bridge company may charge the railroad companies for the use of the bridge, the reconsideration has led to the conviction that the act was not intended to and does not confer such jurisdiction. Assuming that Congress intended to confer upon this court authority to prescribe the compensation which the bridge company might charge for the use of their property, no doubt is entertained of the constitutionality of the act. It was an inherent condition to the complete enjoyment of the grant conferred by the State of New York and the Dominion of Canada upon the corporation that Congress should sanction the undertaking proposed, as Congress was a necessary party to any compact which involved the cession of the sovereignty of the United States over that part of the Niagara River lying within the boundaries of the State of New York. The river is a public navigable water, and under the power to regulate commerce Congress undoubtedly had the right to prohibit obstructions to its navigation; to declare any obstruction a public nuisance; to declare what degree or description of obstruction should be a public nuisance; to direct the mode of proceeding in the courts of the United States to remove it; and to punish anyone who might erect or maintain it. (Taney *v.* Wheeling Bridge Co., 13 How., 579.) The franchises granted by the State of New York and the Dominion of Canada were accepted by the bridge company, subject to the right of Congress to intervene whenever its power to regulate commerce should be invoked, and to determine what should be the character and extent of its intervention. (Gilman *v.* Philadelphia, 3 Wall., 725; the Clinton Bridge, 10 Wall., 454; County of Mobile *v.* Kimball, 102 U. S., 691.)

It can not, therefore, be maintained that the act of Congress is a disturbance of any vested rights of the bridge company under the charters which it had obtained, even had it not been passed before the company commenced to build the bridge. But it was passed before anything had been done by the bridge company toward the construction of the bridge, and it was undoubtedly passed when it was in order that the company might know in advance what terms Congress would require as the condition of its sanction to the undertaking.

How is it possible to distinguish between the conditions contained in the grants considered in the foregoing cases and a condition requiring compensation? A distinction may be attempted by claiming that these conditions relate to interstate commerce. But this can not be maintained. Ordinarily the price the Government will pay for the transportation of troops, munitions of war, or mails is fixed by agreement, and not by an act of Congress. In no sense would that be a regulation of commerce. Nor can the Government obtain a free right of way for a postal telegraph route by mere act of Congress. It is evident that these are conditions arbitrarily imposed as the price of a privilege granted. A public benefit, viz, the cheap transport of munitions of war, or a free right of way for a postal telegraph line, is secured in exchange for a grant, which grant Congress can withhold. How would it be different if the grantee was required to pay money which Congress could use for the same purpose—to reduce the cost of transporting munitions of war or to purchase a right of way for a telegraph line?

Let us consider other illustrations of conditions which do not concern navigation.

(b) Suppose the erection of a dam without fishways will destroy a valuable variety of fish. Congress has no power to legislate, for the protection of fish and fishways will not affect navigation or commerce. Is it then beyond the power of Congress to put a condition in a grant of permission to build a dam requiring the grantee to maintain fishways? If Congress does impose this condition, what is the effect of the grant? Can the grantee erect the dam and leave out the fishways? It may be said that this condition can be imposed because it directly affects the character of the dam to be built. This is not true, because the fishway might be a separate construction.

Practically every recent act of Congress authorizing the erection of a dam has required fishways to be maintained. And Congress has recognized that this has nothing to do with navigation; for, while the features affecting navigation are to be approved by the Secretary of War, the fishways are to be such "as the Secretary of Commerce and Labor shall prescribe." See act of Congress of June 21, 1906 (34 Stat., 386); act of Congress of April 23, 1906 (34 Stat., 130).

(c) Suppose the proposed dam would affect, favorably or unfavorably, adjacent lands, either by overflowing them or by draining them. Congress has no independent power to legislate on these subjects. Nevertheless, could it not put a condition in a grant of permission to build a dam requiring the grantee to drain these lands or to take measures against overflowing them?

There is a decision which seems to indicate that Congress may legislate in regard to a navigable river with the purpose of indirectly protecting adjacent lands. An act of Congress regulating the deposit in navigable rivers of débris caused by hydraulic mining was under consideration in United States *v.* North Bloomfield Gravel Mining Co. (81 Fed., 243). The court, in speaking of the conditions which had led to the passage of the act, said:

Long-continued mining by this process had resulted in depositing * * * upon much of the adjacent lands vast quantities of débris * * * rendering valueless large quantities of otherwise fertile lands.

And the act of Congress provided that the mining might continue "provided the same can be accomplished without injury to the navigability of said rivers or the lands adjacent thereto." And the court go on to say that it is the intent to permit mining where it can be done without injury to "the navigability of the said river systems or to the lands adjacent thereto." The case was affirmed in the circuit court of appeals (32 C. C. A., 84).

Congress has required a grantee of a permit to build a dam for water-power purposes, to furnish to the Government land and power (act of June 21, 1906, 34 Stat., 386); and to furnish "electric current * * * to move the gates and operate the locks in connection with said dam, and to light the United States buildings and grounds free of cost" (act Mar. 4, 1907, 34 Stat., 1288; act Apr. 26, 1904, 33 Stat., 309; act June 29, 1906, 34 Stat., 628). Congress has required a licensee to waive certain claims he held against the Government. (Act Mar. 2, 1907, 34 Stat., 1103.) I do not see that any distinction can be made between the conditions contained in these acts of Congress and any other condition.

Many other illustrations suggest themselves. For instance, could Congress impose a condition requiring the grantee to see that no stagnant water is permitted to affect the health of the community? Or, if the dam is for the purpose of reclaiming overflowed land belonging to the grantee, could there be a condition requiring the grantee to dedicate portions of it for public uses? If the dam will create a reservoir of water available for irrigation, may a condition be imposed in the grant requiring an equitable distribution of the water to be made? Can Congress legally impose in a grant of permission to erect a dam for the purpose of creating a reservoir to supply drinking water conditions requiring the grantee to take proper precautions to protect the water from pollution? Or if valuable minerals were discovered in the bed of a navigable river, which could be extracted profitably only by structures erected in the river bed, hindering navigation, then if Congress granted a permit to erect the structures, could it impose a condition requiring the grantee to pay over for Government uses a percentage of the minerals recovered? None of the conditions suggested in this paragraph concerns navigation or commerce. Independently, Congress could not legislate in regard to any of these subjects, and if it be true that Congress can impose no conditions except those which relate to a subject over which it has jurisdiction, then none of these conditions could be imposed.

To be sure, the illustrations prove nothing, for it may be that neither a condition requiring compensation nor any of the conditions suggested in this paragraph may legally be imposed by Congress. They may be all bad. Nevertheless, it is well before deciding hastily that compensation can not be exacted as a condition to a grant to consider the logical consequences of such a conclusion. In my opinion, Congress may legally impose any of these conditions or any other condition which is not in itself unlawful. And I say this notwithstanding that thereby Congress may control a subject quite outside its delegated powers. I think it will be shown that there is ample authority for this general doctrine. It can be shown that where any legislative body has absolute authority to grant or to refuse permission it may use this power for the purpose of controlling indirectly a subject it could not deal with independently.

Illustrations of the general doctrine may be found in the law upon the subject of street railroad grants. The cases upon this subject may depend to some extent on the phraseology of the legislation of the several States upon the subject. But in general it may be said that where a municipality has power to grant or refuse a permit to construct a street railway line in a street it may impose such conditions as it pleases. See Chicago Gen. Ry. Co. *v.* Chicago (176 Ill., 253), People *v.* Suburban R. R. Co. (178 Ill., 594), City of Allegheny *v.* Millroh (159 Pa. St., 411), Street Railway Co. *v.* Covington (9 Bush., 127). In the first Illinois case cited an ordinance was considered which contained a condition requiring the payment of a mileage tax of $500 per mile. After accepting the ordinance the grantee attempted to repudiate the condition on the ground that it was one the municipality had no power to impose. The court held that the condition was valid, saying:

* * * Even though it might be held that the condition upon which the permit or license was granted to the defendant railway company was ultra vires, the city not having the power to impose it, nevertheless, the ordinance having been accepted by the company with the condition attached, agreeing thereby to perform it, it became a valid contract between it and the city, the validity of which the defendant is now estopped to deny.

On first impression one would be apt to say that the cases cited are not parallel with the one we are discussing. But the more one reflects upon the subject the more difficult it is to point out any distinction. It may be said that the city owns the streets, but that is not true. The fee of many of the streets of Chicago is owned by the owners of the abutting property, and the power of the municipality there is the same as in those streets where the fee is in the public. It may be said that the city has police authority over streets, but I do not see how this affects the question, since the city may impose conditions which have no relation whatever to police authority; and, further, I do not think it can be safely asserted that Congress could not exercise police authority over the navigable waters of the United States if it deemed it expedient to do so as a regulation of interstate commerce. The exaction of compensation as the condition of a grant by a municipality bears no relation to traffic upon the street. The situation we are considering is very like that existing where a railroad must get from a municipality permission to cross a street. The railroad is not obliged to cross the street, but if it wants to do so it must get permission. The municipality is under no obligation to grant permission, and if it does it may attach its own conditions—conditions quite unrelated to the highway crossing. It seems to me that the exaction of compensation by a municipality in these cases, when made without specific charter authority, rests upon nothing except the general power that it has to grant or refuse a permit in its discretion. It is, I believe, simply another illustration of the proposition that the necessity of obtaining consent implies the right to impose conditions to the giving of it.

The neatest illustration of the doctrine is found in the cases involving the right of a State to impose conditions upon its grant of permission to a foreign corporation wishing to do business therein. A foreign corporation (except in so far as engaged in interstate commerce), having no absolute right to recognition in a State other than that of its creation, must accept such terms as the State may impose. As was said in Monroe Savings Bank *v.* Rochester (37 N. Y., 365):

If the grantee accepts the boon, it must bear the burden.

In the leading case of Paul *v.* Virginia (8 Wall., 168, p. 181), the court said:

Having no absolute right of recognition in other States, but depending for such recognition and the enforcement of its contracts upon their assent, it follows, as a matter of course, that such assent may be granted upon such terms and conditions as those States may think proper to impose. They may exclude the foreign corporation entirely; they may restrict its business to particular localities, or they may exact such security for the performance of its contracts with their citizens as in their judgment will best promote the public interest. The whole matter rests in their discretion.

To the same effect are Home Insurance Co. *v.* New York (134 U. S., 594) and Horn Silver Mining Co. *v.* New York (143 U. S. 305).

These cases are cited for the general proposition that where there is power to forbid any terms may be imposed as a condition of giving permission. There are other cases which show that, by virtue of this power to grant or withhold consent, a State may secure control over a subject which as a matter of independent legislation it could not deal with at all. The State of Wisconsin passed a law requiring as a condition to admission that foreign corporations should agree not to remove cases to the Federal courts. An insurance company consented to this condition and was admitted to the State. Subsequently, in violation of its agreement, it attempted to remove a case. The Supreme Court held that it had the right to remove the case; that its agreement not to do so was not binding upon it, since it tended to deprive the Federal courts of jurisdiction. (See Insurance Co. *v.* Morse, 87 U. S., 445.) Thereupon the secretary of state for Wisconsin being about to cancel the license to do business because of the violation of this condition, the company filed a bill to restrain the cancellation. The Supreme Court of the United States held that the cancellation of the permit could not be restrained; that the State, having the power to grant or withhold a license, could revoke it for any reason it pleased. (Doyle *v.* Insurance Co., 94 U. S., 535.) In making this decision the court used language which is singularly applicable to the present case. They said:

If the State has the power to do an act, its intention or the reason by which it is influenced in doing it can not be inquired into.

* * * * * * * *

The argument that the revocation in question is made for an unconstitutional reason can not be sustained. The suggestion confounds an act with an emotion or a mental proceeding which is not the subject of inquiry in determining the validity of a statute. An unconstitutional reason or intention is an impracticable suggestion, which can not be applied to the affairs of life. If the act done by the State is legal, is not in violation of the Constitution or laws of the United States, it is quite out of the power of any court to inquire what was the intention of those who enacted the law.

* * * * * * * *

The statute of Wisconsin declares that if a foreign insurance company shall remove any case from its State court into the Federal courts, contrary to the provisions of the act of 1870, it shall be the duty of the secretary of state immediately to cancel its license to do business within the State. If the State has the power to cancel the license, it has the power to judge of the cases in which the cancellation shall be made. It has the power to determine for what causes and in what manner the revocation shall be made.

* * * * * * * *

It is said that we thus indirectly sanction what we condemn when presented directly, to wit, that we enable the State of Wisconsin to enforce an agreement to abstain from the Federal courts. This is an "inexact statement." The effect of our decision in this respect is that the State may compel the foreign company to abstain from the Federal courts or to cease to do business in the State. It gives the company the option. This is justifiable, because the complainant has no constitutional right to do business in that State; that State has authority at any time to declare that it shall not transact business there. This is the whole point of the case, and, without reference to the injustice, the prejudice, or the wrong that is alleged to exist, must determine the question. No right of the complainant under the laws or Constitution of the United States by its exclusion from the State is infringed, and this is what the State now accomplishes. There is nothing, therefore, that will justify the interference of this court.

I have endeavored by the cases cited and the illustrations used to emphasize what I believe to be the correct doctrine, and that is, where there is power to grant consent or to withhold it, there must be absolute discretion to impose conditions (not in themselves unlawful) of any sort whatever. Indeed this would seem to be true as a matter of logic, if not of law. How can power to grant or to withhold permission be defined except as including power to permit upon conditions? The greater, necessarily it seems to me, includes the less. Any action on the part of another which I have the legal right to forbid absolutely, I can permit upon such terms as I please, however capricious or unreasonable I may be. Those who challenge this proposition as applied to the power of Congress to prohibit or permit dams over navigable rivers must, it seems to me, be driven to say that Congress can not impose as a condition anything it could not require of the licensee as a matter of independent legislation. I do not see how there can be any middle ground. If it be admitted that Congress can impose any condition which it could not secure as a matter of independent legislation, where is the line to be drawn? It may be answered that Congress can impose a condition which it could not impose as a matter of independent legislation if that condition concerns a subject matter over which Congress has jurisdiction. But a little reflection will show that no such distinction can be made. If legislation is beyond the power of Congress it is just as much unconstitutional although relating to a subject matter over which Congress has jurisdiction as it would be if it bore no relationship whatever to any subject within the domain of Congress. For instance, Congress has jurisdiction over mails

but has no jurisdiction to regulate the height of buildings. Nevertheless I submit that an independent act of Congress requiring a bridge company to carry mails without compensation would be just as unconstitutional and to the same extent as an act of Congress regulating the height of buildings. And the point I am here seeking to make is that in a grant by Congress to obstruct navigable waters, no distinction can be drawn between a condition requiring the licensee to carry mails free and a condition limiting the height of his buildings on shore, or requiring him to pay compensation. It can not even be said that in the one case there is an invasion of the domain of the State while in the other there is not. For if it is an invasion of a State's rights for Congress to exact compensation from a licensee (I do not myself see how it is) then it is equally an invasion for Congress to require him to carry mails gratuitously. In each case Congress is using one of its admitted powers (to grant or to withhold permission) to secure something which it could not independently accomplish, and it can make no difference whether the result secured relates to a subject within the jurisdiction of Congress or whether it is totally unrelated. And therefore I return to the proposition which I stated earlier, that, as I see it, there can be only two logical theories. One is that, assuming that Congress has the absolute power either to grant or to withhold permission, it can impose any conditions it pleases not unlawful in themselves; the other theory is that it can impose no condition which it could not secure by independent legislation.

There may be some lurking feeling that this is a dangerous doctrine; that, if sound, it will enable the General Government to invade the domain of the States and to control subject matter not delegated to it by the framers of the Constitution. But a little consideration will show that whenever the States or the General Government have absolute power in a given case, it is inevitable that this power should be capable of being used to accomplish indirectly some unrelated end. And when that end is a beneficent one for the protection of public rights I fail to see what objection can be raised to it. Possibly the apprehensions of those who are jealous for the prerogatives of the States would be allayed if the condition in the grant was simply that the grantee should charge such rates as should from time to time be fixed by proper State officials. This, to my mind, presents no different legal theory, but while preserving the authority of the State, it would protect the public against private exploitation of public rights. At all events, there is no doubt whatever that this sort of thing is permissible. For instance, the State of Illinois has no power directly to prescribe factory regulations for application outside the State. But suppose it should declare that no foreign corporation shall be allowed to do business in Illinois except upon the condition that it first discontinues the use of child labor in its factories, no matter where situated. In this way the State of Illinois would be indirectly legislating in regard to child labor in a foreign State. But certainly an act of that sort would be constitutional and it would have to be observed by any foreign corporation wishing to enjoy the privileges granted. The Wisconsin legislation in regard to foreign corporations discussed in the cases cited above is an example of the same sort. The State of Wisconsin has no power to legislate about the jurisdiction of the Federal courts. Nevertheless it did succeed in controlling their jurisdiction. And the Supreme Court of the United States upheld this legislation.

Authority for this doctrine is found in a very celebrated case. I refer to Veazie Bank *v.* Fenno (8 Wall., 533). In that case there was called in question the validity of an act of Congress which imposed a tax of 10 per cent upon notes issued by State banks. It was, of course, apparent that the legislation was not for revenue purposes. No revenue at all would be produced since the tax was so heavy as to destroy the objects upon which it was levied. And that was the real purpose of the tax—to suppress these notes in the interest of the Federal currency. Congress thus used a power of one sort for the purpose of affecting an unrelated object—and one which it could not have legislated about directly.

My conclusion upon this branch of the case is that whenever Congress has absolute power to grant or to refuse permission, its motives in granting permission—which is another way of saying the benefit secured by the conditions—can not be called in question by anyone.

II.

Up to this point the discussion has proceeded upon the assumption that Congress has the discretion to grant or withhold permission for the proposed dam or the proposed diversion of water. I come now to consider in what cases Congress has this absolute discretion. The cases on this subject are reviewed in Union Bridge *v.* United States (204 U. S., 364). Certainly Congress may control or prohibit any action in any way affecting the navigability of the navigable waters of the United States. And its authority is paramount. It can authorize a bridge even over the protest of a State. (Penn. Ry. Co. *v.* Baltimore & N. Y. Ry. Co., 37 Fed., 129; Stockton *v.* Baltimore, etc., R. Co., 32 Fed., 9; Decker *v.* Baltimore & N. Y. R. Co., 30 Fed., 723.) And the power of Congress is not limited to actions directly affecting the navigability of a navigable stream. It may control actions on land or on nonnavigable portions of a stream. (See U. S. *v.* North Bloomfield Gravel Mining Co., 81 Fed., 243; U. S. *v.* Rio Grande Irrigation Co., 174 U. S., 690.)

Newport & Cincinnati Bridge Co. *v.* The United States (105 U. S. 470) is a very interesting case. The States of Kentucky and Ohio had authorized a bridge across the Ohio River. Then Congress passed an act consenting to the construction but reserved the right to withdraw the assent. After the bridge was well under way, Congress passed a new act requiring it to be made higher, but providing that the bridge company should have the right to file a bill to determine whether any compensation was due it from the United States because of the change. A majority of the court denied the right to compensation, saying:

> The paramount power of regulating bridges that effect the navigation of navigable waters of the United States is in Congress. It comes from the power to regulate commerce with foreign nations and among the States.
>
> The bridge company asked of Congress permission to erect its bridge. In response to this request permission was given, but only on condition that it might be revoked at any time if the bridge was found to be detrimental to navigation. This condition was an essential element of the grant. * * * What the company got from Congress was the grant of a franchise expressly made defeasible at will. * * * It was optional with the company to accept or not what was granted, but having accepted it must submit to the control which Congress in the legitimate exercise of the power that was reserved may deem it necessary for the common good to insist upon.

It is not necessary to spend time on this, for I think it will be conceded that if the proposed action of erecting a dam or diverting water does affect the navigability of a navigable stream, Congress has complete power either to permit it or to forbid it, no matter at what point that action is proposed to be done. It is more difficult to say just what things do affect such navigability. About a great many things there is no difficulty. Any structure placed in water which is itself navigable of course is subject to the control of Congress. There are many other actions which only indirectly affect navigation, about which there can be no question. But beyond this there must, it seems to me, always be a borderland as to which no legal definition can be attempted. But in any case, if an action does affect the navigability of navigable waters, Congress may prohibit it. And primarily the power to decide what classes of actions do have this effect must be in Congress. And if Congress undertook to prohibit any class of actions on the ground that these actions indirectly affected navigation, then the Supreme Court, it seems to me, would hesitate to hold the act unconstitutional. And I should think there would be very few classes of actions in any way directly or indirectly affecting a navigable stream as to which the Supreme Court would be willing to set up their opinion contrary to that of Congress. Further, if the Supreme Court conceded the validity of the general prohibition, then I do not believe they would permit an inquiry as to whether a particular action, if it came within the general class of prohibited actions, did, in fact, affect navigation. Some such rule as this, it seems to me, would have to be made as a matter of convenience. Otherwise there would be an endless amount of litigation and every exercise of this power by Congress would be challenged. What I have said implies a power on the part of Congress more extensive than that body has ever exercised. But admittedly Congress has greater powers in this respect than it has ever exercised.

Legislation by Congress requiring everyone engaged in hydraulic mining to secure a permit before depositing any débris in any of the source streams of a navigable river was upheld even after a judicial finding that in the particular case the impounding works "prevented the escape of any débris from its mine into the navigable waters * * * that would tend to impair or injure their navigability"; and even though on the pleadings it was admitted that the only débris escaping "consist solely of light flocculent matter of about the same specific gravity as water and so finely comminuted as to readily float in and be moved by the slightest movement of the water in which it is suspended"; and that "no part thereof does injure or threatens to injure, either by itself or in connection with débris from any other mine, any of the navigable waters, etc." Here it will be seen that it is implied that Congress can prevent the putting into a stream of even "light flocculent matter" which is carried out to sea. (See United States *v.* North Bloomfield Gravel Mining Co., 81 Fed., 243; affirmed by the

Circuit Court of Appeals in 32 C. C. A., 34.) The court said "the fact is that the question as to whether the acts committed by appellant are injurious to the free navigation of the river is settled by the terms of the act itself." This goes to the extent of saying that Congress can prohibit any acts whatever relating to the navigable waters of the United States and that, if a given act is included within the terms of the prohibition, it is not open to anyone to say in a legal proceeding that the act will not in fact injure navigation. The court said, further, on this point:

It is too late now for anyone to question the power on the part of Congress to declare that débris of any character or any other thing constitutes an obstruction to the navigable waters within its control and to prohibit the use of such waters by any such débris or any other thing. The power to absolutely prevent the use of such waters for the objectionable purposes necessarily includes the power to prescribe the terms and conditions upon which they may be so used.

In a way, this whole second part of the argument, viz, the attempt to determine just when a dam or a diversion of water will affect navigation so as to justify a prohibition by Congress, is really foreign to our problem, since if such dam or such diversion can not be prohibited, then no grant or permit from Congress at all is required. The admission that a Federal license is required is an admission that to some extent—make it as slight as you will—the proposed action of erecting a dam or diverting water will affect navigation; and our whole discussion concerns the conditions Congress can put into a grant or permit, not those it can impose when no grant or permit is needed. At all events, the question suggested above, viz, the determination of the outside boundaries of this power of Congress beyond which it can not go, we need not attempt to answer. It will be more useful to consider whether in specific instances Congress has the power in its discretion to grant or refuse permission.

(a) PERMISSION TO A RIPARIAN OWNER TO DIVERT WATER WHERE THE WATER POWER IS MADE AVAILABLE BY GOVERNMENT WORKS.

Where a water power has been incidentally created by Government works for the improvement of navigation, it seems to be generally conceded that Congress may prohibit the use of that water power except upon terms fixed by itself. In numerous cases of this sort Congress has assumed the right to control the water power. In regard to a dam across the Coosa River, Congress gave the Secretary of War authority "to prescribe regulations to govern the use of said water power." (Act June 4, 1906, 34 Stat., 211.)

In another case the Secretary of War having been authorized to dispose of the water power was required to advertise "stating specifically the right or privilege proposed to be leased or conveyed with its exact limitations, inviting bids for the same." (Act June 28, 1902, 32 Stat., 408.) In providing for investigations of the feasibility of works proposed for improving navigation Congress has assumed that the surplus water power may be disposed of by the Government. (Act June 25, 1906, 34 Stat., 456.) Where the Government already had a dam in the river the grantee of a permit to build another dam was required to pay such sums as the "Secretary of War may impose * * * for the use of the flowage rights of the United States." (Act May 1, 1906, 34 Stat., 155.)

That Congress may in such cases prohibit the use of water except upon its own terms seems to have been implied in the decision in Green Bay Canal Co. *v.* Patten Paper Co. (172 U. S., 58). The Green Bay Co. was the successor of a company which had built a dam across the Fox River in Wisconsin. The Green Bay Co. had sold the dam and other improvement works to the Government, but had reserved the water power, the Government, pursuant to act of Congress, confirming the company's ownership of the water power. The question in the case was whether the company had the exclusive right to the use of the water power as against other riparian owners. The Supreme Court of Wisconsin had denied the right to the exclusive use, holding that the other riparian owners upon the stream were entitled to a portion of the use. The case was then taken by writ of error to the Supreme Court of the United States, where the decision was reversed, that court holding that the Green Bay Co. had the exclusive right to the water power. The court said:

Whether the water power, incidentally created by the erection and maintenance of the dam and canal for the purpose of navigation in Fox River, is subject to the control and appropriation by the United States, owning and operating those public works, or by the State of Wisconsin, within whose limits Fox River lies, is the decisive question in this case.

On page 79 the court said:

The legal effect and import of the sale and conveyance by the canal company were to vest absolute ownership in the improvement and appurtenances in the United States, which proprietary rights thereby became added to the jurisdiction and control that the United States possessed over the Fox River as a navigable water. By the findings of the arbitrators the sum of $325,000 was payable to the canal company, but, by agreement and under the act of Congress of June 10, 1872, the United States consented to the retention by the canal company of certain personal property and of the water powers, with the lots appurtenant thereto, in part payment of the sum at which the entire plant had been appraised; and accordingly, in its deed of conveyance, the company reserved to itself such personal property and the water powers and appurtenances, and the United States paid the remaining sum of $145,000.

The substantial meaning of the transaction was that the United States granted to the canal company the right to continue in the possession and enjoyment of the water powers and the lots appurtenant thereto, subject to the rights and control of the United States as owning and operating the public works, and that the United States were credited with the appraised value of the water powers and appurtenances and the articles of personal property. The method by which this arrangement was effected, namely, by a reservation in the deed, was an apt one, and quite as efficacious as if the entire property had been conveyed to the United States by one deed, and the reserved properties had been reconveyed to the canal company by another.

So far, therefore, as the water powers and appurtenant lots are regarded as property, it is plain that the title of the Canal Co. thereto can not be controverted, and we think it is equally plain that the mode and extent of the use and enjoyment of such property by the Canal Co. falls within the sole control of the United States. At what points in the dam and canal the water for power may be withdrawn, and the quantity which can be treated as surplus with due regard to navigation, must be determined by the authority which owns and controls that navigation. In such matters there can be no divided empire.

On page 82 the court, giving its conclusion, said:

Our conclusion, then, is that, as by the judgment of the Supreme Court of Wisconsin there was drawn into question the validity of an authority exercised under the United States, to wit, the granting of the said water powers and easement, and the decision was against the validity of such authority, thereby depriving the plaintiff in error of property without due process of law, the judgment of that court must be, and is hereby, reversed and the case remanded to the Supreme Court of Wisconsin for further proceedings not inconsistent with this opinion.

If the court had based the company's exclusive right to the water power distinctly upon the grant from the United States at the time the Government purchased the dam, the case would be clear authority for the proposition that where the Government owns the dam it can grant an exclusive use to one and prohibit the use by all others. And this does not depend upon the use of any Government property; for the other riparian owners were attempting to use the water power by works on their own land. But the opinion leaves one in doubt as to the principles controlling the decision. The court referred to the history of the dam, showing that by earlier grants from the State of Wisconsin the water power had been granted to the predecessor of the Green Bay Co. But I do not see that these facts could have affected the decision, since the Supreme Court of Wisconsin had decided against any claim of exclusive right based upon these legislative acts (90 Wis., 370; 93 Wis., 283). And the Supreme Court of the United States took jurisdiction of the case on the sole ground that there was drawn in question the validity of an authority exercised under the United States, to wit, the claim of an exclusive right based upon the grant of the water power at the time the dam was purchased by the Government. But the power of the Government to grant at that time an exclusive use must have been predicated on its governmental control over navigation and not upon its ownership of the dam, for, as owner of the dam simply, it could not have enlarged the rights which the vendor already had and which it reserved. The Supreme Court of Wisconsin had held that, so far as the mere reservation of rights was concerned, no exclusive use could be claimed, so that the Supreme Court of the United States must have construed the act of Congress as enlarging the rights which the company had possessed as owner of the dam. This, it seems to me, necessarily involves the assertion that when the Government owns the dam, its authority in relation to water power is greater than that of a private owner; that it depends upon its private ownership plus its governmental authority to control navigable waters, and that the sum of these two powers gives it the right to prohibit all use of the water power except on such terms as it may dictate.

If it should be held that the Government can exact compensation where it owns the dam, but that its power is confined to such a case, then the decision in the Green Bay case might afford a means of bringing nearly every instance within the power of Congress.

It will be noted that the Government did not build the dam, but purchased it from the constructor. As consideration therefor the vendor received (a) a sum of money and (b) a grant of the water power from the Government. It would be very easy to throw every grant of permission to dam a navigable stream into this form. It could be provided in every case that the dam should be the property of the Government; that the licensee should build it as the contractor of the Government, receiving as his compensation not money but a certain portion of the water power. The balance of the water power would belong to the Government as the owner of the dam. This balance of water power the Government could then sell either to the licensee or to any other applicant. In this way Congress se-

cured the ownership of the Hales Bar dam in the Tennessee River. Congress there authorized the Secretary of War to grant a permit to build the lock and dam, but required the grantee to deed the land and to "give said lock and dam to the United States, completed, free of cost." In consideration the Government granted "such rights as it possesses to use the water power * * * for a period of 99 years." Act Apr. 26, 1904, 33 Stat., 309.) An act containing the same provisions was passed for a dam across the White River, Ark. (Act June 29, 1906, 34 Stat., 628.)

However, I do not think it is in the least necessary to resort to any device placing the title to the dam in the Government, for I think it will conclusively appear that the Government's right to exact compensation for the use of water power does not depend upon the technical ownership of the dam, and that the right to exact compensation in such case is no greater than in any other case.

(B) GRANT OF PERMISSION TO BUILD A DAM ACROSS A NAVIGABLE PORTION OF A RIVER.

There is no doubt that Congress can prohibit the construction of a dam across the navigable portion of a navigable river which is a direct obstruction to navigation. It is not necessary to cite cases on this point. On the other hand, I think there is no doubt that Congress can permit such a dam to be built. There might be two arms of a navigable river and Congress might permit the building of a dam across one arm, considering the other arm to be sufficient for the purposes of navigation; or I suppose Congress might permit a dam to be built which destroyed the navigability of the river at that point, for no other reason than it believed that the general public benefits to be secured by the dam were greater than the benefits from the navigability of the stream.

One of the early cases is Wilson *v.* Blackbird Creek Co. (2 Peters, 245). A dam had been built under State authority completely obstructing a navigable arm of the sea, for the purpose apparently of improving the health of the neighborhood and of enhancing the value of real estate. It was held that the dam was a lawful structure. To be sure, there was in that case no express permission from Congress. But the theory of the decision is that Congress had, by implication, permitted the dam, because it had not prohibited it. The court would certainly have sustained an act of Congress expressly legalizing the dam. This case was followed in Gilman *v.* Philadelphia (3 Wall., 713), Willamette Iron Bridge Co. *v.* Hatch (125 U. S., 1), Pound *v.* Turck (95 U. S., 459), Miller *v.* New York (13 Blatch., 469, and 109 U. S., 385), Manigault *v.* Springs (199 U. S., 473).

A very good statement of the law is found in Frost *v.* R. R. Co. (96 Me., 76). A railroad company had built a trestle over an arm of the sea, destroying navigation into a cove and rendering valueless a wharf of the plaintiff. Then Congress passed an act declaring it to be a lawful structure. The court held that the act of Congress was conclusive, saying:

> When, therefore, Congress acts and so far as it acts in the premises, the jurisdiction of the State government, judicial as well as legislative, recedes. If Congress declares a bridge or other structure over or on navigable waters to be an unlawful structure, the State legislature can not make it lawful nor can the State court declare it to be lawful. So, if Congress declares the structure to be lawful, neither the State legislature nor the State court can, even upon the most plenary proof, declare it unlawful as interfering with navigation.
>
> The sovereign had the absolute control of it and could regulate, enlarge, limit, or even destroy it, as he might deem best for the whole public, and this without making or providing for any compensation to such individuals as might be inconvenienced or damaged thereby. The sovereign can not take private property for public uses without providing for just compensation to its owner, but this constitutional provision does not limit the power of the sovereign over public rights. If, in the evolution of life and commerce, the sovereign comes to believe that the public good will be increased by the creation of some new or additional means of communication and commerce at the expense or even sacrifice of some older one enjoyed merely as a public right, the sovereign can so ordain, even to the detriment of individuals. If, in the judgment of the sovereign, a railroad across a navigable channel of water and completely obstructing its navigation is of more benefit to the public than the navigation of the channel, he has the unrestricted power to thus close the channel to navigation, without making compensation to those who had been wont to use it.

I think it must be the law that Congress can weigh the relative advantages to the public of keeping the stream in its navigable condition against the benefits to be derived—either to health, or value of real estate, or reclamation of useless land, for example—from works which have the effect of destroying the public right of navigation. Congress having the power to legislate upon the subject, has the exclusive decision whether it will forbid such a dam to be built or will permit it.

When the matter is examined more closely what distinction can be made between this class of cases and the preceding—that is, the use of water power created by works owned by the Government? The rights in this latter case do not depend on the use of any of the Government's property. Admittedly the Government has no greater power of control over an improved navigable stream than over one in its natural condition. And to what extent does the doctrine go? How great would the improvement to the water power have to be to bring it within the class? No water power is created by artificial works. It may be improved thereby and rendered more available, but a water power must depend upon the stream in its natural condition plus the artificial controlling works. Now, how great must the element of governmental improvement be in order to justify the charging of compensation? Must the use of the water power be in the immediate vicinity of the dam? That would seem a poor test, because a Government dam in one case might have only a slight effect upon a water power in the immediate vicinity and in another case it might be a large element in a water power many miles distant. So, again, relatively inexpensive Government works may render available a water power of enormous value, while costly Government works may increase but slightly the value of the water power. Must the court consider all these elements in determining the validity of an act of Congress requiring compensation? If it is said that it is payment for facilities furnished, then an inquiry would have to be made as to the amount of benefit conferred by the works in the particular case.

Is there not a confusion of ideas here? Has not this case been hastily likened to a charge for the use of public property? But it is not a case of charging for public property. Aside from the lands and works actually owned by the Government a navigable river in its improved condition is no more public property than one in its unimproved condition. And except for the power to regulate navigable waters, Congress could not charge compensation for the use of water power, even although that water power were created by Government works. Is it not apparent that the right to charge compensation where the Government has improved the water power is dependent upon precisely the same thing as where it has not, namely, the right to grant or refuse permission to use it? If it could not prohibit the use it could not charge compensation.

Government works in a navigable stream may have the effect of draining adjoining wet land to the great enrichment of the owner thereof. He may get just as great a pecuniary benefit through the increased availability of his land due to the Government work, as the riparian proprietor gets through the increased availability of his water power due to the same works. There is the same proprietorship on the part of the Government in each case. That it can charge compensation in the latter case and not in the former is due to its political authority to prohibit in the one case and not in the other. But there is the same political authority to prohibit the use of a water power where the Government owns no improvement works.

If the distinction between a case where there are Government works and a case where there are none is to be supported at all, the courts surely would not inquire into the extent of the Government contribution to the value of the water power. They would have to say that wherever the Government has made any substantial contribution then it may charge compensation. In this form the doctrine might be made to cover the whole subject, for the courts could not reasonably confine the power of Congress to cases where the contribution by the Government was in the shape of a dam. Any Government work increasing or rendering water power available would come within the doctrine. Thus any work upon the source streams of a river conserving the water supply or rendering the flow more regular would increase the value of the water power throughout the entire length of the stream, and Congress might require one using the water power lower down to contribute his share toward defraying the expense of the Government work which had rendered that water power more valuable or more available.

But I do not think this distinction attempted to be drawn between the use of a water power where there are Government works and a use where there are none is valid. Possibly it might affect the equity of the charge, but as a legal proposition the exaction is dependent in each case upon nothing but the political power of the Government to grant or refuse a permit in its discretion. The fact that the owner of an existing or potential water power would derive great benefit from Government expenditures on the stream which clearly increased the amount and value of his water power simply emphasizes the importance and the wisdom of using the full legal powers of Congress to compel such an owner to contribute to the cost of the improvements.

(C) PERMISSION TO ERECT A DAM ACROSS NONNAVIGABLE PORTION LYING BETWEEN TWO NAVIGABLE PORTIONS OF A NAVIGABLE RIVER.

Is this different? It is, of course, different if Congress has no power to prohibit such a dam. Can Congress prohibit it?

I have no doubt whatever that it can. Congress has power to prohibit any action affecting the navigability of a navigable river, and if it should pass an act prohibiting the erection of all dams across either the navigable portions or any nonnavigable portion, lying between two navigable portions, I am sure such an act would be constitutional.

The reason is plain. The power of Congress is not limited to prohibiting things which directly obstruct navigation. Any act affecting navigation is within its power to control. No court can say that a dam across a nonnavigable portion lying between two navigable portions will not in any respect affect navigation. One does not need a technical education to understand that it may seriously affect the navigation upon the navigable portions. To be sure, such a dam will not prevent the passage of boats at that point. But this is unimportant. The dam might make impossible the passage at some other point; and Congress has jurisdiction over a navigable river as a whole, no matter if navigation be obstructed by shoals or rapids.

In *The Montello* (20 Wall., 430) it was held that the Fox River, in Wisconsin, in its natural state was a navigable water of the United States, even although there were obstructions to the navigation by rapids and falls. The test is whether it is a highway for commerce. To the same effect is Spooner *v.* McConnell (1 McLean, 337).

In St. Anthony Water Power Co. *v.* Water Commissioners (168 U. S., 349) the court said:

> Primarily, it may be said that the Mississippi River is a navigable stream. In order to be navigable it is not necessary that it should be deep enough to admit passage of boats at all portions of the stream.

In United States *v.* Mississippi, etc., Boom Co. (1 McCrary, 601, district of Minnesota, 1880) there was a bill by the United States to enjoin the floating of logs over an apron which had been constructed by the Government on the Falls of St. Anthony to prevent their washing away. The defense was that the apron was in fact constructed in aid of a private water power and was a hindrance and not an aid to navigation. The court held that Congress had authority to make improvements in navigable rivers and no inquiry could be made as to whether the particular work was judicious.

As a practical matter, it is probable that a nonnavigable point lying between two navigable points would be the very place at which Congress would be asked to authorize a dam. Generally speaking, it is at falls or rapids that water power can be developed. In fact, most of the acts of Congress granting permits, so far as one may judge from the acts themselves, have applied to such places. Thus dams have been authorized "at Porter Shoals" (act Feb. 5, 1907, 34 Stat., 878), at "the Des Moines Rapids" (act Feb. 8, 1901, 31 Stat., 764; act Feb. 9, 1906, 33 Stat., 712), at "Coon Rapids" (act Apr. 12, 1900, 31 Stat., 75), at "Rock Island Rapids" (act Apr. 5, 1904, 33 Stat., 158), at "Sauk Rapids" (act Feb. 26, 1904, 33 Stat., 52), at "Methaline Falls" (act June 1, 1906, 34 Stat., 205), at "St. Croix Falls" (act Feb. 7, 1903, 32 Stat., 802), at "Gregg Shoals" (Act Feb. 5, 1907, 34 Stat., 876), at "Hattons Ford" (act Mar. 2, 1907, 34 Stat., 1240), at "McDaniel Shoals" (act Mar. 2, 1909, 34 Stat., 1238), and at "Muscle Shoals" (act Mar. 6, 1906, 34 Stat., 52).

The above are only a few of the instances where Congress has undertaken to sanction the building of a dam across a nonnavigable portion of a navigable river. Evidently in all these cases the parties assumed that the dam would be unlawful without the consent of Congress, implying that Congress could grant or could withhold permission to build it. If that is true, permission to build a dam at such a point is precisely the same as a permit in either of the two cases previously considered, viz, a permit to divert water where the Government owns the dam or a permit to build a dam at a navigable point of a navigable river.

But it is said that the permission to build a dam at a nonnavigable point lying between two navigable portions must be considered as a decision that such a dam is not an obstruction to navigation. Why? Admittedly, the power of Congress in permitting structures is not confined to those which will not, directly or indirectly, affect navigation. It may expressly authorize dams which are conceded to be obstructions to navigation. The cases involving the Wheeling Bridge illustrate this. The bridge had been judicially decreed a nuisance as an obstruction to navigation. (See 13 Howard, 518.) Thereafter Congress passed an act legalizing the bridge, and this act was held to be constitutional in Penn. *v.* Wheeling Bridge (18 Howard, 421). (See also Frost *v.* Ry., supra.)

It seems to me it must be admitted that a dam at such a point may indirectly obstruct navigation, but that nevertheless Congress has the power to permit it. And why should one construe a permit applying to a point where ships can not pass as a declaration that the dam will not interfere with the navigation of the stream any more than a similar permit applying to a navigable portion? The same reasoning would apply to every permit. Why should not all permits be interpreted as admitting that the proposed work will not affect navigation? But this is a reductio ad absurdum. For it would follow that Congress had no right to regulate at all, since every time a license was granted it would be in itself evidence that no license was required, so that the mere granting of the license would carry with it the implication that the Government was exceeding its powers in granting it. But notoriously there is no such general implication. To construe the acts of Congress above referred to, which grant permission to build dams at "shoals" or "rapids" or "falls," as nothing more than official declarations by Congress that the dams will not affect navigation and that the Government has no concern with them, is to give an astonishing turn to the language of Congress. For all these acts read as though Congress considered itself to have a very lively concern, indeed. The phraseology commonly used by Congress is that the grantee, "its successors and assigns, is hereby authorized to construct, maintain, and operate a dam," etc. Such language, instead of being a mere renunciation of jurisdiction by Congress, sounds much more like what the Supreme Court of the United States in the Newport Bridge case, supra, called it, viz, a "grant of a franchise." Congress itself has seemed to consider that it was granting a franchise. (See act June 4, 1906, 34 Stat., 211.)

There is no ground for construing a permit to construct a dam at a nonnavigable point of a river in any different way from a permit to build a dam at a navigable point or a permit to divert water where the Government owns the dam. The same reasoning would apply to all three cases. The use of the word "obstruction" does not change the case. It does not matter whether an obstacle to navigation caused by the dam is direct or indirect. The only question is whether such a structure affects navigation either at that point or any other point. If it does, it is unlawful without a permit. I submit, therefore, that there can be no justification for construing such a permit to be anything other than what it purports to be, viz, governmental sanction for an undertaking which without such sanction would be unlawful.

I conclude, therefore, that all three of these classes of cases are governed by precisely the same legal principles. The power of Congress to exact compensation necessarily flows from power to prohibit absolutely or to grant permission, and there is just as much power in one case as in the other.

(D) PERMISSION TO ERECT A DAM ACROSS A NONNAVIGABLE PORTION LYING ABOVE ANY NAVIGABLE PORTION OF A RIVER.

If a dam in such a position would affect the navigability of any navigable portion of the river lower down, then Congress could prohibit it; and if it could prohibit it, it could grant permission to erect it upon terms.

The dam might destroy the navigability of all the lower reaches of the river. Such apparently would be the effect of the dam considered in United States *v.* Rio Grande Irrigation Co. (174 U. S., 690). Here were irrigation works proposed to be constructed by private individuals many miles above any navigable portion of the river. The effect of the dam apparently would be to withdraw so much water as to seriously affect the navigability of the lower reaches. The court held that the proposed act could be enjoined upon the suit of the Government. I do not doubt, however, that in this very case, even after the decision of the court, Congress could have passed an act legalizing this structure. And since the owners of the dam could not continue it under the decision of the court without such authorization, how could they have escaped the performance of any terms which Congress might have imposed upon them? Why should not Congress have power to decide that while it would not permit the navigability of the lower reaches of this river to be injured for private benefit, it would permit this injury in exchange for a public benefit in its opinion of more importance to the community than the continued navigability of the stream? And this greater benefit to the public might be in the form of a cash payment to be used in some public work, or it might be in the form of securing an equitable plan of irrigation for the general benefit of the public. Is it said that Congress ought not to be allowed to sell the navigability of its rivers, no matter how great the benefit promised in return? The pertinent

answer is that it ought to be allowed to sell it if it can give it away.

The hydraulic mining case, which I have cited, is an extreme illustration of the power of Congress to prohibit actions on source streams which only indirectly affect navigation.

To say, however, that Congress has the legal power to prohibit all dams on all source streams is certainly claiming the extreme limit of the powers of Congress in this direction. The court said of a similar contention in Leovy *v.* United States (174 U. S., 801) that it would mean "that there is scarcely a creek or stream in the entire country which is not a navigable water of the United States," and they added: "If such were the necessary construction of the statutes here involved their validity might well be questioned." This, however, was only a dictum; and there can be no doubt that Congress may legally prohibit the erection of some dams across source streams above any navigable water, and as to those dams Congress can impose conditions.

Although as a strictly legal question it ought not to make any difference, still I think the attitude of the Supreme Court toward an act of Congress which prohibited dams across source streams except on the payment of a money compensation might be affected by the uses to which the money was to be put.

If they thought that the real purpose of Congress was to raise money out of water powers not in aid of navigation, but for general purposes, they might hold the whole act bad, not on the ground that the conditions were illegal, but on the ground that the dams which the act undertook to prohibit would not affect navigation. And therefore, as a practical matter, it might swing the scale in favor of the constitutionality of such an act, if it were provided that all the moneys received by way of compensation should be devoted to improving the navigability of the river. The practice of disposing of the water power for the purpose of improving navigation has been sanctioned by the custom of several of the States.

After all is said and done, what is meant by saying that it is beyond the constitutional power of Congress to exact compensation in a case where it is admitted it can grant or withhold permission in its discretion? As I see it, an act of Congress to be unconstitutional must be either an invasion of the rights of an individual or of the separate States. There is nothing of the first sort here. None of the constitutional provisions for the protection of individual rights is infringed. So that if this is unconstitutional it must be because the rights of the States are encroached upon. Admittedly it is in general a governmental power to impose terms upon the granting of permission to place structures in navigable rivers. That being so, this governmental power must reside somewhere. Where is it? It is not in the States, since no dam can be built without the consent of Congress, and if that is secured the consent of the State is not necessary. A dam can be built, notwithstanding the protest of the State. Can it be said that here is a governmental power with no government constitutionally capable of exercising it? A dangerous doctrine, surely. Does it not follow that Congress has all the governmental power in regard to obstructions to navigable waters since it can authorize obstructions, notwithstanding the protest of a State?

Those who deny this power to Congress, it seems to me, look too narrowly at the powers of Congress. The General Government is just as truly sovereign as the States. The sovereignty is split up. Whether this power be in the General Government or in the States, in either case it does not depend upon technical ownership. Any such power depends upon political authority over the subject matter. And it can not be denied that the General Government has the actual power in this case. And is it not a contradiction in terms to say that a thing which Congress can actually accomplish without any court having the power to intervene is unconstitutional? If it can do a thing with no court having the right to interfere, is not that thing necessarily within its constitutional powers? Admittedly in a given case Congress can in explicit terms prohibit the erection of a specific dam, and it can in so many words explicitly authorize the dam. Suppose it passed an act like this:

Whereas ——— ——— has applied for permission to construct a dam across the ——— River at ———, being a navigable water of the United States: Now, therefore,

Be it enacted, That the Secretary of War may issue a permit to erect said dam over said river, upon and after the performance by the said grantee of the following conditions (among others): That is to say, the payment by the said grantee into the United States Treasury for General Government purposes of the sum of ——— dollars.

And the said Secretary of War is hereby expressly forbidden to permit said dam and said dam shall be unlawful until said grantee has performed the foregoing conditions.

In just what way can the unconstitutionality of an act of that sort be demonstrated? It will not be claimed that the applicant could build his dam without the permit from the Secretary of War, nor, I suppose, will it be claimed that the Secretary of War could be compelled to issue the permit until the conditions had been complied with; and, if the applicant should perform the conditions and get the permit, I suppose no one would say that he could sue and recover back the money that he had paid. Then, could a court at the suit of one interested in navigation enjoin the erection of the dam on the ground that the act of Congress was unconstitutional? Surely not. Congress has power to authorize or forbid the dam, and the interests of navigation are not in any way affected by the motives of Congress in granting or withholding consent. As was said in the Doyle case, supra, "An unconstitutional reason or contention is an impracticable suggestion." Nor can I see a way by which any State could intervene. Would it not have to be admitted that this legislation would be effectual to accomplish the purposes Congress had in mind, namely, the securing of a sum of money as the price of permission to erect the dam? But can it be that it is within the power of Congress to accomplish a thing with no court having power to upset it, and yet that thing be unconstitutional? Does not the very term "unconstitutional" as used in our law when applied to an act of Congress mean that in the last resort the effect of it can be nullified by the Supreme Court of the United States in some proper legal proceeding?

It seems to me that a doctrine the effect of which will deprive Congress of the power to protect these public rights ought not to be strained after. The public right of navigation at a given point might be regarded by Congress as of slight value to the public, but yet, slight as it was, a thing not to be parted with without some corresponding public benefit. And there would be no public benefit whatever if it permitted a dam to be built for private purposes. It would in that case be destroying a public right of some value, although small, for the purpose of enriching private individuals. Since commerce and navigation affect the whole people, why may not Congress properly say that if a private individual desires permission to produce an injurious effect, slight as you please, upon that commerce and navigation, then he must give in return some public benefit. I see no reason why Congress—the granting power—is not the suitable body to determine just what public benefit is the equivalent of the public detriment. An ordinary citizen would be perplexed to be told that there was no governmental power to secure for the public the benefits which the licensee stood ready to give. Admittedly no State or municipality could require any compensation, because they have no control over the subject matter. It is not beyond the bounds of possibility that the time may come when all navigation by rivers will be of slight value, so slight that it may be unanimously agreed that the loss of all such navigation will bring no substantial harm to the community. What, then, would be done with the rivers? Would there be no alternative except either to keep this practically useless public right or to turn over the water power for private exploitation? Such a conclusion ought not to be accepted unless it is inevitable.

The opinion of the Attorney General, dated July 13, 1909, has been called to my attention. With admirable clearness he points out the nature and extent of this power of Congress. The question to which he was primarily devoting himself, namely, the true construction to be placed upon various acts of Congress, does not concern us here; but I note that he, by implication, at any rate, supports the views I have in this opinion suggested. He seems to approve the provisions of the act of Congress of June 21, 1906 (34 Stat., 386), authorizing the Secretary of War to impose as a condition upon the permit to construct a dam a requirement that the person owning such dam shall convey to the United States free of cost "title to such land as may be required for a lock" and shall grant to the United States a "free use of water power for building and operating such constructions." And the Attorney General goes on to say that Congress "may undoubtedly require such payments or assumption of expenses as are necessary or proper to insure the navigability of the stream." This is really all that is necessary for our purposes, for under this suggestion to insure the validity of an act of Congress it would be enough if the grantee were required to pay certain sums of money, "said sums to be expended under the direction of the Secretary of War in improving the navigability of said river." There can, of course, be no distinction made between an act requiring the grantee to donate land and power directly and one requiring him to furnish money with which the Government may purchase land and power to be used in improving navigation.

EDWARD B. BURLING.

War—Reply to Hon. Franklin D. Roosevelt.

SPEECH

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 27, 1914.

The Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12873) relating to the assessment for taxation of real estate in the District of Columbia, and for other purposes.

Mr. STAFFORD. Mr. Chairman, I yield 10 minutes to the gentleman from Washington [Mr. JOHNSON].

Mr. JOHNSON of Washington. Mr. Chairman, on the night of this day one week ago, when the House voted for the President's "near-war" resolution, which resolution was promptly thrown into the wastebasket by the Senate, Hon. Franklin D. Roosevelt, Assistant Secretary of the Navy, was in the city of Seattle, and at a Democratic meeting there that night saw fit to criticize the votes of my colleague [Mr. LA FOLLETTE] and myself. Of course, Mr. Chairman, the Assistant Secretary of the Navy has the full and free right to criticize any vote I may cast, but I regret that he deemed it wise to appear at a meeting of a Democratic club more than 3,000 miles from his office in order to charge me with casting a partisan vote. His criticism came from the wrong place. He said:

Just 37 Members of the House of Representatives put themselves in their true character.

He continued:

Party fealty was greater than national fealty. These men can not see above party affairs. They have not put back of them the days when Republicans could oppose Democrats and Democrats Republicans with impunity, disregardful of the merits of the cause.

I am informed, Mr. Chairman, that the Assistant Secretary of the Navy, Mr. Roosevelt, further along in his speech before the Seattle Democrats discussed the doings of his party. This statement I have just quoted was not greeted with quite the enthusiasm that he had expected. One daily newspaper reports that he had misjudged his audience. Further along, when Mr. Roosevelt reached the subject of the tariff and undertook to tell the people of western Washington how splendidly it was working, the silence there was death itself.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. JOHNSON of Washington. I will, gladly.

Mr. HUMPHREY of Washington. I want simply to suggest that he was talking to a Democratic club.

Mr. JOHNSON of Washington. Exactly so. He was speaking at a Democratic club meeting. I am not criticizing the Assistant Secretary, whose office must be a very busy one right now, but I want to make the point that it seems hardly fair for an official high in the affairs of the Nation in this time of stress, to turn up in a Democratic club meeting 3,000 miles from his office and charge any Member of Congress with casting a partisan vote on this question. If ever in my whole life I cast a vote which was not partisan in any way it was on last Monday, when I voted against that resolution.

The text of the resolution, as adopted by the House after heated debate, was as follows:

A joint resolution justifying the employment of the armed forces of the United States in enforcing certain demands against Victoriano Huerta.

Resolved, etc., That the President of the United States is justified in the employment of the armed forces of the United States to enforce the demands upon Victoriano Huerta for unequivocal amends to the Government of the United States for affronts and indignities committed against this Government by Gen. Huerta and his representatives.

When that resolution went over to the Senate, all of the Senators except one or two voted against it. After long debate an entirely new statement was adopted, notably different from the House declaration, and carrying the following additional clause:

Resolved, That the United States disclaims any hostility to the Mexican people of any purpose to make war upon them.

The Senate was straightening out and correcting the short-sighted House resolution at the very moment Assistant Secretary Roosevelt was trying to make politics out of the situation in far-away Seattle.

It seems, Mr. Chairman, that while the Assistant Secretary of the Navy was making his speech in Seattle he brought up and undertook to defend the repeal of the free-tolls clause, and once again there was silence as deep as death.

He also undertook to defend the Secretary of State, and again his words failed to win acclaim. The Secretary of State at that time was either going or coming from a lecture tour; the Secretary of Labor was campaigning in Pennsylvania; and the Assistant Secretary of the Navy was making a political speech in Seattle.

Next day, in the House, I had occasion to make a few remarks in which I expressed the hope that international peace might be arranged. I pointed out what the four great powers might do, and in the course of my remarks on that occasion I quoted from one of the articles of William J. Bryan in the last Commoner, and I said that Mr. Bryan had written these——

Mr. THOMPSON of Oklahoma. Will the gentleman yield?

Mr. JOHNSON of Washington. I will yield.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I raise the point of order that the gentleman is not speaking to the subject under consideration.

Mr. JOHNSON of Washington. This is general discussion, Mr. Chairman.

The CHAIRMAN. We are under general debate, and the gentleman has the right, as the Chair understands.

Mr. THOMPSON of Oklahoma. I make the point that the gentleman can not talk about anything except the subject under consideration.

The CHAIRMAN. The Chair's understanding of the status is that a bill is now under general debate, and the rule is that under general debate it would be in order for a gentleman to discuss any question he desires.

Mr. THOMPSON of Oklahoma. The gentleman can talk about the sun, moon, and stars, and still be in order?

The CHAIRMAN. He would be entirely in order while a bill is under general debate.

Mr. JOHNSON of Washington. Mr. Chairman, I hope that this is not to be taken out of my time. On Wednesday last I undertook to read from the New York Sun some quotations from W. J. Bryan's Commoner, and a little later I defended Mr. Bryan, showing that what he said in the Commoner as to what he wanted to do was not what he was, as Secretary of State, was forced to do by conditions and circumstances. The New York Sun charges that I am "lauding the cooing dove, Mr. Bryan." Then the Sun proceeds to have some fun with the names of counties in my district such as Chehalis, Clallam, Klickitat, Skamania, and Wahkiakum, but, nevertheless, the Sun called attention to the fact that Mr. Bryan on March 5, speaking to newspaper men the day after he had been sworn in as Secretary of State, said:

The United States shall never go to war as long as I am Secretary of State.

Mr. Chairman, the determination of the Secretary is commendable; the views of the President are praiseworthy. The desires of both that there shall be no war by us on Mexico are the views of a great majority of our people. But, Mr. Chairman, having gone thus far; having captured a customhouse with shot and shell, when a simple note would have done the business; having, to quote the President's own words:

Gone down to Mexico to serve mankind.

And, having armed one side and disarmed the other, together with the expressed determination of this administration to settle the land problems of our distressed sister, I can greatly fear, Mr. Chairman, that we will be there a long, long time. That is why the definite statement on the part of the Senate that the United States disclaims hosility to the Mexican people and will not make war on them is a wise and sane declaration, and one that will carry for all time, I hope.

While we are debating the plank of the Democratic platform which calls for a free Philippines, we will be supervising elections in Mexico and O. K.ing this or that brand of paper money below the Rio Grande. We are into it now. Our first bill of expenses amounts to five or six millions. We will vote that without a dissenting vote, just as there were no votes here against the Senate resolution of a week ago when it came to this side of the Capitol.

I do not believe that the United States desires to assimilate any more tropical people. We can pay out our money to better purpose.

Mr. Chairman, I ask unanimous consent to extend my remarks by adding letters written by Mr. LA FOLLETTE and by Mr. JOHNSON of Utah, and some further statements.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection? [After a pause.] The Chair hears none.

Mr. JOHNSON of Washington. Mr. Chairman, yesterday Representative LA FOLLETTE received a letter from a constituent criticizing his vote. Mr. LA FOLLETTE made the following reply, which, in my opinion, deserves wide circulation.

REPRESENTATIVE LA FOLLETTE'S LETTER.

WASHINGTON, D. C., *April 27, 1914.*

Mr. L. C. CAMPBELL.

MY DEAR MR. CAMPBELL: I am in receipt of your favor of April 21, wherein you express your indignation at my vote, "No," on a certain resolution introduced and voted on in the House of Representatives on April 20, in answer to a request and following a message delivered by President Wilson on that day.

I beg to preface this reply to your letter by saying that you were evidently misled by the article you read to the extent of misunderstanding what the President asked for and what the vote did or did not stand for.

You say: "If you are correctly reported in to-day's paper as voting against the resolution to back up President Wilson in his request for authority, etc." He asked for no authority. He said he already had authority. He asked for our "approval" of what he was about to do. The resolution, which was submitted to Secretary of State Bryan by the committee having the same in charge, was in turn submitted by Secretary Bryan to the President. He, Bryan, breaking all speed limits in getting the resolution to the White House, and the resolution, you might say, was the President's own as it passed the House absolutely as O. K'd by him, and it read:

"*Resolved, etc.*, That the President of the United States is justified in the employment of the armed forces of the United States of America to enforce demands made upon Victoriano Huerta for unequivocal amends to the Government of the United States for affronts and indignities committed against this Government by Gen. Huerta and his representatives."

So you see it was not authority that he wanted; it was justification. He (the President) said:

"But I earnestly hope that war is not now in question."

Yet before he had succeeded in getting his vote of justification through Congress he had thrown our forces into Vera Cruz and killed and wounded more than 200 Mexicans, and this within a very few hours of the time he had said to Congress:

"We do not desire to control in any degree the affairs of our sister Republic. Our feeling for the people of Mexico is one of deep and genuine friendship," etc.

Mr. Campbell, I have no objection whatever to intervention in Mexico; in fact, I think we should have intervened several months ago. There was ample cause; but the causes the President gave for his action were so puerile and so unworthy a motive for hostilities, leading to death and desolation, that I think I do not overstate the truth when I say that every Member of Congress, regardless of the way he voted, was ashamed of them.

We were not asked to justify the President in what he was about to do because of crimes and outrages against American citizens or destruction of their property or long months of disgraceful domestic strife in Mexico, which it seemed they were not able to cope with and was growing steadily worse instead of better. Oh, no! President Wilson could not very well start against Huerta on these grounds, for he (Huerta) had steadily tried to maintain such order as was possible over the section of Mexico he controlled, and had also protected life and property. It was Villa, Carranza, and Zapetta who had committed most of those atrocities and outrages, and with these brigands the President of the United States had been communicating and impatiently awaiting the downfall of Huerta.

He had for that reason removed the embargo against arms and munitions of war going into Mexico across the northern border, and for months thousands of stands of arms and thousands of rounds of ammunition have been steadily pouring across the northern border, and it is safe to say that most of it will be used against our own troops if they cross the line with a hostile intent. No, we were not asking for justification for using the armed forces of the United States against Huerta because of atrocities or outrages, nor for humanity's sake. No! The President came before Congress and told of the landing of a small boat from one of our war vessels on the beach at Tampico and of their arrest by a petty Mexican officer; of their being conducted up one of the streets of the town; of their meeting a superior Mexican officer, who ordered them back to their boat, where they were detained about an hour and a half, when their release was ordered by the commandant of Tampico with an apology. This was later followed by expressions of regret by Gen. Huerta himself, with explanations of cause, etc.

The commander of the American ship, the *Dolphin*, Admiral Mayo, was not satisfied with the apology, and communicated with Washington. President Wilson, who had supinely waited and allowed outrages of many descriptions to pass unnoticed, or, if noticed, without protest, immediately came to the conclusion that the man whose reign he had refused to recognize—and I never blamed him for that—must fire 21 guns in salute of our flag in addition to two apologies already made for an act in which there had been no violence nor hardship of any kind. The commandant at Tampico had offered a salute of five guns; Gen. Huerta offered to give the salute of 21 guns if our vessel would acknowledge the salute with a return salute of 21 guns in honor of the Mexican flag. This President Wilson refused to accede to and went to war.

He mentioned one or two other affronts of minor importance, none of which entailed any suffering or hardship, only indignity at the hands of an unrecognized government. The main grievance was the Tampico affair. Because Huerta did not agree to burn 21 loads of powder instead of five, some 20 American boys who were alive when the President read his message are now dead, and 75 American boys are grievously wounded, and for what—only the difference between tweedledum and tweedledee.

Mr. Campbell, do you think the great, strong United States can afford to write on history's page a chronicle stating that for the above flimsy reasons we commenced hostilities against a sister Republic, spent thousands and millions of dollars, made childless homes, added to our roll of widows and orphans, and of maimed, crippled, and dependent men? You may feel like justifying it for such a reason; I did not; and I voted that way.

I have four boys; I feel that I could give them up for their country's sake if it was in peril, or even for the sake of bettering the conditions of suffering humanity in other lands, but not for a demand for the useless burning of 21 charges of gunpowder in addition to two apologies already offered for an offense committed by a government we had refused to recognize as a government; I would not willingly allow my boys to offer their lives for such a cause; I would not vote a justification for the President to send your boys for such a cause, where I could not conscientiously send my own. I regret losing your good opinion. But President Wilson must have what is in my opinion higher ground and a more worthy cause before he can get my vote of justification, and that was all this resolution called for. It was not for authority of any kind.

I shall always vote for the upholding of our national honor, if I am satisfied it requires bolstering. Now that war is practically declared, even for a flimsy and, in my judgment, an unholy reason, I will vote for money and for the raising of men to carry it to a successful conclusion. I feel that it is my duty so to do, and I shall always try to do my duty as I see it, but a vote of justification is another matter; that is a thing that has to be settled by a man's own conception of right or wrong, and I thank God that I have courage to vote in such a case as my conscience dictates. I offer no apology to anybody for so doing. I shall back the President of the United States just so long as I think he should be under the Constitution. I will back him when I think he is wrong if I think it is best for my country that I should do so. But I will never give him a vote of justification if I think he is wrong, so help me, God.

Some of the newspapers have tried to make it appear that politics had to do with the "no" vote against this justification resolution. Such a contention is simply silliness. There were 5 Democrats, 2 Progressives, 1 Independent, and 29 Republicans voted "no." I am satisfied that politics did not figure in the minds of any of them when they voted. I fully expected to receive much criticism for my vote instead of political advantage.

If I am defeated for reelection, or had I known I would be if I so voted, I would still be proud of that vote. While I regret losing the good opinion of some good people, I am satisfied that I will never cast a vote that meets with the approval of my own conscience more than did that vote on nonjustification.

With best wishes and kindest regards, I remain,

Very sincerely, yours,

WM. L. LA FOLLETTE.

POSITION OF MR. JOHNSON OF UTAH.

I desire to add a portion of a letter written by Representative JACOB JOHNSON, of Utah, to one of the Salt Lake newspapers that had criticized him.

His position is very much the same as mine, and he has stated it most clearly. His letter follows, in part:

In your article of criticism you evidently refer to the votes cast by the Hon. JOSEPH HOWELL and myself in the House of Representatives on Monday, the 20th day of April, 1914, when the said House had under consideration House joint resolution No. 251, and which said resolution was then passed by the House by a vote of 337 for and 37 against its passage, and of which said 37 votes Mr. HOWELL and myself cast 2.

Now, Mr. Editor, I will not believe that by the publication of said article you willfully intended to misrepresent Mr. HOWELL and myself. I prefer to believe that you had been misinformed, or had no sufficient information upon the subject to acquaint you with the facts.

Now, the facts are these: That on Monday, the 20th day of April, 1914, and after the President of the United States had delivered his message to the joint Houses of Congress, House joint resolution 251 was introduced in the House of Representatives, and after numerous amendments had been proposed to the said resolution by the 37 Members who voted against the original resolution, and had been promptly voted down by the majority, the original resolution was passed by the House by a vote of 337 to 37, Mr. HOWELL and myself being of the 37 who voted against the same. It immediately went to the Senate, where it failed to receive a single vote in its favor, but all of the resolution after the enacting clause was by the Senate stricken out and a new and different resolution was substituted in its stead, and which said substitute contained in substance the amendments which the 37 Members of the House had proposed in the House as amendments. And in this shape the substitute was passed by the Senate by a very large majority, after which the substitute was returned to the House and was passed by the House by practically a unanimous vote. And the original House joint resolution 251, and against which Mr. HOWELL and myself and 35 other Member voted, was repudiated, first, by the 37 votes of the House; second, by the whole Senate; and lastly, by the almost unanimous vote of the House in which it originated, and even without a roll call of the House, and it now reposes in the official wastebasket of the Senate, where it will rest forevermore.

The above facts may be verified by an examination of the CONGRESSIONAL RECORD on the 20th and 21st of April.

So the 37 Members, including Mr. HOWELL and myself, who voted against the original House joint resolution 251, have been vindicated by both Houses of Congress and, I believe, by the country at large and, I believe, will be by the people of Utah when they shall be made acquainted with the facts. Just wherein "Utah has been misrepresented" in this matter I am at a loss to discover, unless it shall be found in the publication of your said article. That because the Representatives of Utah refused to be carried off their feet by the clamor and excitement of the House for the moment, but stood firm in what they believed and what afterwards proved to be right, they are stigmatized as "Huertistas" and are accused of placing their State in a false position.

As for my patriotism and loyalty to the country and its flag I yield to no man, and my over 40 years' residence in Utah enables me to state that the people of Utah are, as you say, intensely patriotic and loyal to the country and its flag.

As to what will justify a declaration of war with Mexico, I may differ with some others. War is a terrible thing; once put in motion no man can say where, how, or when it may end. It should be avoided as long as may be, with honor; should be resorted to promptly when necessary for the protection of the lives and rights of the citizens and the vindication of national honor.

The conditions existing in Mexico present a vexed problem, which must be solved by the United States. It has no government which is recognized by our Government. It has a number of persons claiming to exercise authority in the Republic, such as Huerta, Villa, Carranza, Zapata, and others too numerous to mention, all claiming to be either presidents, generals, chiefs, bandits, and what not, and practically all engaged in war, the one with the other, for supremacy in that unhappy country. During their strife the citizens of the United States residing in Mexico have suffered greatly; they have been insulted, robbed, tortured, and killed by the score; the mothers, wives, sisters, and daughters of citizens of the United States have been insulted, assaulted, outraged, tortured, and killed by the score; they have been driven from their homes and their property destroyed or confiscated, all by such of the Mexican chiefs as for the time being happened to have the power to execute their diabolical purpose, and all with apparent impunity. They, and each of them, are all equally guilty. They have insulted our flag and defied our authority, and I regret to say that the State of Utah has suffered more than many of the other States from the above conditions.

The above-mentioned and many other grievances suffered by the people of the United States and without any prospects of redress or a discontinuation of such wrongs are, to my mind, sufficient to not only justify but they demand that our Government should declare to the world that it will resort to force for the redress thereof; and our declaration of war against Mexico should be based upon such wrongs and against all who have participated therein and not upon the personal animosity which the President of the United States may entertain against any one of such alleged chiefs. The Tampico incident, in and of itself, when the facts are fully understood, is not a sufficient justification for a declaration of war. It resulted from the mutual mistakes of the marines on the one side and the arresting officer on the other. The marines erred in landing their boat at the Iturbide bridge, in violation of the orders of the commander of Tampico, but the marines had no notice of such orders. The arresting officer erred in his belief that the marines had notice of the orders not to land at that point, and the further belief that the marines were willfully violating the order by such landing, and thereupon arresting them for such violation; but as soon as the matter came to the knowledge of the commandant of the place, he immediately ordered the marines to be released and apologized to the marines. The commander of Tampico also sent an apology to the naval commander of the United States at Tampico for the arrest. Huerta also sent from Mexico City his regrets and apology for the arrest of the United States naval commander at Tampico.

Huerta, not being recognized by the United States as other than a private person, could not be required by the United States to do any act other than a personal one. He should not be required to deliver a national salute of the Mexican Government, because we have constantly refused to recognize him as representing the Mexican Government.

We have ample cause for war against Mexico without the Tampico and kindred incidents, and, as a matter of fact, war now exists between the United States and Mexico. Let us declare to the world the true reason for engaging in such war. The original House joint resolution No. 251, against which I voted and which died in the Senate, did not so state.

JACOB JOHNSON,
Representative in Congress from Utah.

WAR AND PEACE.

Mr. JOHNSON of Washington. Mr. Chairman, the strained situation in Mexico will soon pass. But we will be there when Huerta is gone, and we will not get away easily.

In the meantime thoughtful people might remember that in the past 10 years the United States of America, without an enemy in the world, has spent for wars, past or to come, $1,975,000,000, enough to have paid the entire national debt and built three Panama Canals, or to have covered the entire Nation from coast to coast with a network of the finest roads in the world.

Also, that the cost of our Civil War to free the slaves, entirely aside from the billion dollars of pensions paid since, would have bought, paid for, freed, educated, and endowed for life every slave ten times over.

And again, during the past 30 years 71 per cent of the entire income of the United States Government has been expended for war supplies, armaments, the Army, Navy, interest on war debts and war pensions, and but 29 per cent for all other purposes combined. Does that sound good to those who pay the taxes?

WAR MACHINES BRING ON WAR.

Mr. Chairman, the "civilized" nations of the world spend two and a quarter billion dollars a year on their military establishments. As long as they build great war machines and try to regulate each others' affairs they will fight. If the United States gets too insistent for humanity in Mexico, we will increase the number of war widows and orphans at home.

We often hear that war is what Gen. Sherman said it is. Do you remember just what he said? Here it is:

I am tired and sick of war. Its glory is all moonshine. It is only those who have neither fired a shot nor heard the shrieks and groans of the wounded who cry aloud for more blood, more vengeance, more desolation. War is hell.

I close, Mr. Chairman, with a stanza from Rudyard Kipling's famous "Recessional":

If, drunk with sight of power, we loose
Wild tongues that have not Thee in awe—
Such boasting as the Gentiles use,
Or lesser breeds without the law—
Lord God of Hosts, be with us yet,
Lest we forget; lest we forget!

Indian Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM KETTNER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, July 27, 1914.

On the conference report on the bill (H. R. 12579) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1915.

Mr. KETTNER. Mr. Speaker, I am intensely interested in some of the provisions of this bill, because they concern and have to do with a large number of the wards of our Government who are either living within my district or else frequently journey into it in their efforts to provide themselves with sustenance. Our Government is now maintaining 25 Indian schools in California, of which 15 are in my own district, and it is also maintaining 35 reservations, with a total population of over 5,000 Indians, within the district. In addition, in the lands bordering along the Colorado River, which is between my district and the State of Arizona, several other large reservations, supporting a goodly population, provide us with constant visitors.

My interest, therefore, in the continued welfare of our Indian tribes lies not only in the fact of my general desire and disposition to do well by these wards of our Government, whithersoever they may be dispersed, but also in the fact that from my long acquaintance with conditions in my own district, I know the needs of our Indians therein and know how well they are entitled to and how much they can profit from our bounty. As wards we owe them not only the duty of giving them food and raiment as the same may be needed, but, more than that, we should provide them with such opportunities as may be possible whereby through their own efforts they may contribute to their own welfare and peace of mind.

In this spirit I am particularly concerned with two items—one providing for the support and education at Sherman Institute, Riverside, of 100 more pupils than are now accommodated there and the other appropriating $25,000 in aid of the construction of a bridge over the Colorado River.

The work accomplished and being carried on in educating the Indians at Sherman Institute is of an inspiring nature. The superintendent in charge has given particular attention to educating the boys and girls into a vocation—teaching the boys blacksmithing, carpentry, painting, and so forth; teaching the girls cooking, the elements of nursing, sewing—giving them credits on the farm and household work done during the vacations, so they will go back to their homes the leaders and teachers of the better methods, instead of being educated away from their home conditions, with no new place made for them. Owing to the excellent climate at Riverside and the possibility of utilizing sleeping porches during all of the year, the school has been running at its full capacity, while its high character has brought scores of applications for admittance that of necessity were turned down. It is therefore gratifying that this bill provides for 100 more pupils in this school.

The other item, as I have already suggested, refers to a new bridge over the Colorado River. By the terms of the bill $25,000 is appropriated for the construction of a wagon bridge across the Colorado River at or near Topock, a station a few miles from Needles and nearly midway between the Colorado and Mojave Indian Reservations, situate in Arizona, along the boundary between that State and California. The appropriation is intended to supplement other appropriations that have been promised by the States just named, and the actual expenditure of the money embraced in this item is made conditional upon the appropriation and expenditure of such amounts by the authorities of Arizona and California.

It is estimated that with the $75,000 thus secured a good substantial steel bridge can be erected over the Colorado, whereby freer access may be had between the States named and a fair opportunity may be afforded the members of the various Indian tribes located upon the two reservations in western Arizona to cross the Colorado River and journey to Needles, which is the market and supply point for the entire valley. It is also the end of a division on the railroad, with several overland trains a day, and the Indians depend upon the travelers on these trains for the sale of beadwork, baskets, rugs, and blankets. Besides this, the town is a market for the agricultural products raised by the Indians and for the cordwood which is cut on the reservation.

The only means of communication across the Colorado is a dilapidated ferryboat and rowboats owned by the Indians. During the low water it takes from a half hour to an hour to cross, and during the high water, besides being extremely dangerous, it takes from three to five hours to make the trip one way. In the summer of 1909 a boatload of supplies for the Fort Mohave Reservation, amounting to $1,400, sank; supplies are damaged to a considerable extent every year; and this spring several of the Indians lost their lives. These conditions fully warrant, if not demand, a diversion of the public revenues for this aid.

It is in keeping with the action taken a year ago in the Indian appropriation bill in providing for a similar bridge near Yuma. In addition, as a result of the active cooperation of the Federal Government and of the two States named, interstate traffic of every sort will be promoted and another step toward

the settling up of the cultivable portions of the great southwestern desert will be taken.

For over 30 years I have watched and marveled at the growth of the agricultural importance of California, a growth brought about and made possible only through the settling up and reclaiming of her erstwhile arid lands, lands that until the coming of the industrious farmer and the hardy pioneer were barren, unproductive, and inhospitable to an extreme degree.

The multiplication of the means of communication and of travel by the construction and maintenance of such necessary structures as is here under consideration can not do other than spell for greater opportunities and greater benefits for large numbers of our people.

Rules and Regulations of the Chamber of Commerce of Minneapolis.

EXTENSION OF REMARKS
OF
HON. CHARLES H. DILLON,
OF SOUTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 6, 1914.

THE GRAIN MARKET OF THE NORTHWEST.

Mr. DILLON. Mr. Speaker, I shall briefly discuss the rules and regulations of the Chamber of Commerce of Minneapolis and make a few observations concerning the grain market of the Northwest.

The Chamber of Commerce of Minneapolis was organized October 19, 1881. Its declared purpose is to inculcate just and equitable principles of trade, to adjust disputes among its members, to create a board of arbitration, a board of appeals, with power to administer oaths, to try offenders for disobedience of its rules, and to inflict penalties therefor.

The corporation itself is not engaged in trade, neither is it conducted for corporate profits. It exists for its members, a mere fraternal organization trading in the food supplies; a device to bring together the speculators on the grain market. The operations of its members are for personal gain. They do not operate for the benefit of the producer or the consumer.

It will be conceded that the members are making legitimate sales and purchases, yet they are also engaged in America's greatest gambling game—the buying and selling of future options. I assert that under the rules and practices of the chamber its members are violating the provisions of the antitrust law.

THE RULES AND REGULATIONS OF THE CHAMBER OF COMMERCE.

Let us now examine the rules and regulations. Section 1, rule 12, proclaims its membership shall not exceed 550. Section 2 gives the directors the arbitrary right to reject an applicant who may present an unimpaired certificate of membership, duly transferred. Moral character, business ability, or financial integrity do not constitute a passport into the grain-trading combine. A new member must pay a transfer fee of $15, while the old member pays no transfer fee whatever.

Section 6 of the same rule allows a member to hold any number of membership certificates, but limits his voting power to one vote. In the hearing before the Committee on Rules it was declared that more than 100 of the shares were held by the milling industry and elevator companies.

The Minnesota legislative investigation of 1913 clearly established the fact that the big milling industries and the elevator companies have controlled and dictated the policies of the chamber of commerce. Through interlocking directorates and business associations these institutions have for 30 years been levying their tribute upon the food supplies of the Northwest.

The value of the certificate of membership ranges from $3,500 to $5,000. If one member becomes indebted to another on grain transactions the rules give the creditor a lien upon the debtors certificate for the sum so due. This lien is superior to the rights of other creditors, and all disputes must be adjusted before the certificate can be transferred.

The rules exclude the courts from passing upon controversies of the members and places the right of trial in a board of directors, whose decisions are final, without appeal. The directors may inflict fines, suspend or expel the members. Through the absolute power vested in the board of directors the combination of members are able to control and perpetuate their monopolistic powers.

The rates of commission are established by fixed rules. Under rule 8 no member can handle consigned grain for less than the established commission rates. The rates of commission are higher for nonmembers than for members.

The member who purchases grain for shipment to Minneapolis must make allowance for transportation, commission, switching, inspection, and weighing charges and must charge interest on all advances made on grain shipments.

Under section 7 of rule 4 the member can not accept a speculative account from the employee of another member without the consent of such employer. Under Circular 141, issued December 20, 1909, the member can not trade before or after the regular trading hours, but may remain in the exchange room 15 minutes for the purpose of adjusting his accounts; then the exchange room must be vacated.

By section 2 of rule 13 any person who is in default on account of any business transaction with a member of the chamber shall not be permitted admission to the exchange room while such defalcation remains unsettled. Under section 7 of rule 11 the members are prohibited from gathering in any place, public or private, except the exchange room, for the purpose of making any trade or contract for the future delivery of grain.

Circular 61, issued December 10, 1907, prohibits "personal bids" or "personal offers" on the exchange and provides that all bids or offers to buy or sell grain shall be open for acceptance by any member.

Circular 223, issued December 8, 1910, provides that all offers to buy or sell futures or cash grain in the exchange room before the opening of the market, price being based upon the opening price or any other price, are forbidden.

Circular 401, issued September 25, 1912, interprets section 11 of rule 8 to the effect that the member is prohibited from placing on deposit any money in any bank on any basis for the purpose of influencing shipment of grain by or through the bank. Circular 296 requires the members to report all spot sales of cash grain from country points to the cash-grain reporter.

Section 10 of rule 8 provides that every member buying in carload lots on track at country points for shipment to Minneapolis shall make their purchases on the basis of the Minneapolis market values less commission, and such bids shall be subject to the charges of switching, inspection, weighing, freight, and interest on advances.

Here we find a rule that fixes the value of every carload of grain and prohibits the members from buying at any other price. The individuality of the purchaser and seller is eliminated. The institution acts for them, makes the price, and enforces its mandates by its rules. Thus are the antitrust statutes violated with impunity.

Circular 440, issued March 15, 1913, prohibits the member to whom grain is consigned for sale from selling the same to any company either owned or controlled by such consignee. This circular cites the fact that shippers were consigning grain for sale to members of the chamber who were selling such grain to companies owned or controlled by such consignee. The circular further states that the board of directors deem the practice unwise because it might furnish temptation for unfair dealing.

In the hearings before the Rules Committee it was shown that this system of double dealing was a common practice and had existed in the chamber for many years. No rule of law could justify such double dealing. Here the consignee, who pretended to represent his principal, was selling the principal's grain to his own company. He was representing the principal and at the same time representing himself. He was the seller as well as the buyer. The chamber of commerce through many years tolerated this system of double dealing until public sentiment condemned it, resulting in the issuing of the circular prohibiting the practice, but the evil was not eliminated. They now accomplish the same result through dummy sales.

A member may employ a regular traveling representative, but such agent can not act until he passes an examination and obtains a license from the chamber. He is subject to the rules and regulations and may be fined or suspended, and his license may be revoked at any time.

The price for future delivery of grain dealt in is absolutely fixed by the chamber of commerce. Under section 7 of rule 4 no member can buy at a price higher than the current selling price nor sell below the current bid price for future delivery of any commodity dealt in on the trading floor of the chamber of commerce.

Circular 405, issued October 8, 1911, forbids the member from acting as the agent of any individual, firm, or corporation in the cities of Minneapolis or St. Paul or elsewhere not a member of the chamber and who is soliciting shipments of grain from the farmer or the country shipper.

These rules are not reasonable, and very few of them could be enforced in court if contested. They prevent competition; they stifle individual effort; they destroy freedom of trade; they permit the members to manipulate the market; they subvert the rights of the producer and the consumer; they create a monopoly among the members of the association. The law of supply and demand does not fix the price of the future delivery. Neither does the Liverpool market control it, but the association pushes aside the functions of supply and demand and substitutes its own judgment in the interest of its own members. The rules themselves furnish conclusive evidence that the members of the organization are violating the provisions of the antitrust laws.

DAMAGES FIXED ON DEALING IN FUTURE OPTIONS.

Section 1 of rule 10 provides the damages to which parties shall be entitled when contract for future delivery is broken. This section clearly contemplates that the value may be manipulated for the purpose of obtaining damages, because the rule gives a remedy for such manipulated cases by the following language:

Provided this section shall not be construed as authorizing extortionate claims based on values manipulated for the purpose of securing such claims.

A special committee is authorized to hear and determine the question as to "the equitable measure of damages, if any, to be paid by the party in default." Also—

The said committee in determining the measure of damages to be paid by the defaulter shall be authorized to consider whether or not the value of the property in dispute has been enhanced by combination or by any individual for the purpose of extorting unreasonable damages and shall also consider the effect on values produced by sales in excess of the marketable supply.

This section fixes damages for default on future deliveries. If the sale is legitimate, the defaulting party should pay the full damages and thus make good his contract. This section, however, contemplates that the members may be engaged in gambling contracts for future deliveries. Otherwise, why protect him from "extortionate claims based on values manipulated"? Why relieve the member from the fixed rule of damages and establish an "equitable measure of damages"? Why consider whether the "value of the property in dispute has been enhanced by combination"? Why "consider the effect on values produced by sales in excess of the marketable supply"?

These rules expressly recognize the fact that the members are engaged in gambling on the grain market. They protect themselves while dealing with each other, but they prey upon the inexperienced, the tenderfoot, and the sucker.

THE CHAMBER OF COMMERCE AND ELEVATORS ACTING TOGETHER.

Rule 21 permits the chamber of commerce to say which elevators will be considered regular. Under this rule the chamber reaches out and brings favorite elevators under its own control. The rule provides that elevators operating under the State warehouse law shall file with the secretary a weekly report of grain in store by grades. They must enter into an agreement to render full and unreserved compliance with the rules of the chamber before being considered regular. Section 5 of the rule provides that the managers shall honestly and cordially comply with the rules of the chamber of commerce.

Section 7 provides that the secretary of the chamber of commerce or his assistant is to have free access at all times to all "regular" terminal elevator books. Section 8 makes it the duty of the regular warehouse at all times to furnish in writing a statement of the condition and management of the business. Section 9 provides for a system of inspecting and of measuring the contents of the regular elevators.

On page 113 of the Thirtieth Annual Report of the Chamber of Commerce, December, 1912, it is stated that on December 31, 1912, the total storage capacity for grain in Minneapolis amounted to 38,550,000 bushels. The capacity of public State elevators, regular under chamber of commerce rules, being 31,650,000 bushels, while the capacity of public State elevators not under chamber of commerce rules and private elevators was 6,900,000 bushels. Following this we find the statement:

The receipts of private houses and public State elevators not under chamber of commerce rules are not regular for delivery on contract.

Why should the chamber of commerce assume the power to declare which elevators are regular and which are irregular? Why require them to enter into an agreement to comply with the rules? Why should it have free access at all times to the books of the regular terminal elevators? Why should the terminal elevators furnish statements of their condition and the management of their business? Why should the representative of the chamber inspect and measure the contents of regular warehouses? Under what rule of fair dealing can it discriminate against other public State elevators and private warehouses?

Here are trustees who invite the representatives of the chamber of commerce to take a full inventory of the trust's properties. Here the custodian, in violation of law, permits the bailement to be controlled by the rules and regulations of the chamber. The regular elevator permits an inspection of its books and records, which constitutes a rank breach of the duty it owes to the consignors of the grain.

The purpose of creating regular elevators is to make more effective the combination of the milling industries and the elevator companies, in order that the grain market may be more fully controlled and manipulated. Under these rules a few manipulators are able to and do control the grain market in violation of the antitrust laws.

CHARGES URGED AGAINST THE CHAMBER OF COMMERCE.

In the hearing before the Rules Committee it was openly charged that the shippers were badly cheated by the system of inspection and grading; that more grain of the higher grade was shipped out than was received; that it was not necessary that grain should be elevated to the cupola in order to get honest weights; that the grain was frequently doctored and mixed with inferior grain and the value thus lowered; that the lower grades of grain, through the process of mixture, were stored in the public elevators and formed the basis on which gambling in futures was conducted; that the milling companies refused to buy grain from the cooperative exchange; that a price-list bureau was in operation, with its office in the chamber of commerce, showing price of grain at local stations, which price was often manipulated at the request of the elevator companies.

It was claimed that the crop news as disseminated was wholly unreliable; that the chamber assumed a paternalism over the regular elevators and denied the same privilege to other public elevators; that the members of the chamber for 20 years collected illegal switching charges and illegal demurrage charges until forced to discontinue the extortionate practice.

The testimony in the Minnesota legislative investigation in 1913 discloses that the expense of maintaining one of the commission houses amounted to $300 per day. It was conceded in the hearings that 33 commission houses in Minneapolis incurred an expenditure of $519,000 in 1911 and $443,722 in 1912. There are not less than 100 of these commission houses engaged in the grain trade in that city, and their office expenses amount to $1,400,000 per year. The chamber also maintains a clearing house for clearing transactions of its members at an annual expenditure of $24,000.

The receipts in Minneapolis of wheat, oats, corn, barley, and rye in 1912 were 164,905,770 bushels, while the Chicago receipts for the same year amounted to 290,249,000 bushels. The commission on cash wheat sales is 1 cent per bushel, rye and barley three-fourths cent per bushel, and oats one-half cent per bushel. The commission firms do not get a commission on more than one-half of the grain shipped into these cities, and it is estimated that not more than 50 per cent of the grain shipped is consigned grain.

The elevator companies buy their own grain and make their own shipments. Assuming that the Chamber of Commerce of Minneapolis and the Board of Trade of Chicago handle one-half of all the grain received at 1 cent per bushel, on an average each member of the Chamber of Commerce of Minneapolis would receive less than $1,500 per year, while the members of the Board of Trade of Chicago would receive less than $885 each per year.

Where do they get the money to pay their expenses, to maintain their expensive equipment and luxurious offices, and accumulate enormous wealth? It is the repeated sales to themselves, the sales for future deliveries, the gambling in the grain supplies, that furnish them the expenses of operating and the profits of the business in which they are engaged.

The burden of these expenses is a dead weight on the trade, and is carried by the producer and the consumer who must pay for the operation of this extravagant system. The 550 members of the Minneapolis Chamber of Commerce and the 1,640 members of the Chicago Board of Trade should not be commissioned trustees for those who produce the grain, nor should they be allowed to manipulate the market for their selfish purposes.

FUTURE SALES.

The amount of future sales in these terminal markets is unknown. No investigation has ever been able to disclose the amount of "phantom" grain that is sold by the members of the exchanges. Mr. Benjamin Drake, of Minneapolis, estimates that the sales in future transactions in the Minneapolis exchange exceed 10,000,000,000 bushels per year. Mr. S. A. Greeley estimates that the members of the Board of Trade of Chicago sell 30,000,000,000 bushels of grain every year for future delivery.

Ninety-nine per cent of the transactions in the pit are never consummated by actual delivery. The speculators, by concert of action in the different markets, often throw on the market immense hedging orders, which must of necessity depress the market. If the buying orders are numerous, the price will necessarily go up. If the selling orders are heavy, the price will of necessity go down.

The grain producers usually sell their grain as soon as it is harvested, and it thus passes out of the hands of the producers into the hands of the speculators and remains there until it finally reaches the consuming public. The distribution goes on while values rise and fall during the period of speculation. The producer is not carrying the risk of distribution, nor is the consumer. They have turned the job over to the speculators, who have assumed the burden for compensation, and during the period of distribution the gambling on the risk goes on.

The speculators relieve everybody from the hazards of distribution except their own victims. These operators will tell you that everyone has the right to hedge; that it is an insurance that the banks will accept as security, but they fail to inform us about the other fellow, who buys the hedging contracts for speculative purposes.

It must be admitted that every deal in futures must register its effect upon the cash price of grain. The cash price responds to the bidding on futures. Here is a comparative table of Minneapolis and Chicago future markets for eight years taken from page 107 of the Thirtieth Annual Report of the Chamber of Commerce of Minneapolis, issued December 31, 1912, namely:

Comparative table of Minneapolis and Chicago future market for eight years.

MINNEAPOLIS.

Date.	May.			July.			September.			December.		
	High.	Low.	Difference.	High.	Low.	Difference.	High.	Low.	Difference.	High.	Low.	Difference.
1905	$1.29	$0.60	$0.65	$1.17⅛	$0.90⅛	$0.27	$0.99⅛	$0.78	$0.21⅛	$0.96⅛	$0.79⅛	$0.17⅛
1906	.90⅛	.75	.15⅛	.88	.73½	.15½	.83⅛	.68⅛	.15⅛	.84½	.69½	.15
1907	1.03½	.75½	.28	1.05⅛	.77⅛	.27⅛	1.09	.76⅝	.32⅜	1.15½	.77	.38½
1908	1.18	.96½	.21½	1.18½	.96⅞	.21⅝	1.06	.87	.19	1.09⅛	.85⅞	.23⅜
1909	1.34⅛	1.00⅞	.34⅜	1.34½	1.04⅛	.29⅜	1.13⅜	.93½	.20½	1.14	.91⅞	.22⅛

1912	1.16⅝	1.02⅞	.14⅛	1.17⅛	1.02½	.15½	1.09⅛	.84⅛	.24½	1.08	.78¼	.29¾

CHICAGO.

1905	$1.21⅛	$0.83⅞	$0.38⅛	$1.02⅛	$0.81⅛	$0.21½	$0.95⅛	$0.77⅞	$0.17⅜	$0.90⅞	$0.77½	$0.13⅜
1906	.92⅞	.76½	.16⅜	.85⅛	.76⅛	.09⅛	.84⅛	.69½	.15⅛	.85½	.71⅝	.14⅛
1907	1.12⅜	.75	.37⅜	1.05⅛	.74⅞	.30⅜	1.04½	.75⅝	.28⅞	1.07⅛	.80⅝	.27½
1908	1.11	.89	.22	1.04½	.83⅜	.20⅛	.98⅛	.82½	.16⅛	1.04⅛	.84⅜	.19⅞
1909	1.35½	.96⅝	.38⅜	1.29	.95⅝	.33⅜	1.20	.93	.27	1.19½	.92⅝	.26⅞
1910	1.16⅛	.93½	.22⅝	1.11½	.91½	.20⅛	1.09	.88½	.20½	1.10⅛	.87	.23⅛
1911	1.15	.84½	.30½	1.00½	.84⅜	.15⅛	.96	.85	.11	1.02½	.86⅞	.15⅝
1912	1.19	.94½	.24½	1.15	.92	.23	1.11	.87⅜	.23⅝	1.11	.83½	.27½

It will be observed that the difference between Minneapolis high and low May wheat for 1905 was 65 cents per bushel, while the difference between high and low tide in Chicago for May wheat in 1905 was 38¼ cents per bushel. This leeway constitutes the gambler's delight.

During these eight years the lowest figure between the high and low water mark in Minneapolis for May wheat was 14½ cents per bushel, while in Chicago it was 16⅜ cents per bushel.

This table, issued by the Minneapolis Chamber of Commerce, conclusively proves that there is a constant fluctuation in the grain values caused by the speculations in futures.

C. W. Smith, of England, in speaking of the evils of the board of trade, said:

> It is by such deadly "bull and bear" international gambling weapons that these men have also cunningly and secretly obtained the key to the financial, agricultural, and commercial conquest of the world.

Hon. W. P. Hepburn, of Iowa, said:

> All the race-track gambling in the world, all the games of cards in the "tenderloins" and "red-light districts" of the cities, all the games of chance at Monte Carlo and the other famous gambling resorts of the world are as drops in the bucket compared with the enormous transactions of the stock exchanges of the United States.

Secretary William J. Bryan in 1908 said:

> The legitimate business transacted by the stock exchanges is infinitesimal compared with its gambling business. It is the most gigantic sneak-thief bullyragger civilization has ever known.

The farmers' elevator companies for years waged a fight in competition with the old-line elevator combine at local stations. They won the fight, they established for themselves a better market. The elevator combine, pressed in competition at local markets, seized the terminal grain markets, and from this citadel of power they, with the cooperation of the boards of trade, are now controlling the terminal markets for their selfish purposes.

What matters it to them who controls the local markets so long as they are supreme at the terminal stations, so long as they can hold the supply until it is needed for consumption, and so long as they can keep this waiting supply for gambling purposes on future options? The accumulation of grain in private elevators at the terminal grain markets under the control of the board of trade constitutes the gamblers' reserve. It is this pile of chips upon which the game in future options is being played.

In 1912 the entire amount of wheat shipped into Chicago amounted to only 35,914,000 bushels. We are informed by the press of the country that on July 28, 1914, 100,000,000 bushels of wheat were sold on the Chicago Board of Trade. The sales amounted to 100,000 bushels per minute. An obscure pit trader while playing at the game pocketed $25,000 in five minutes. This obscure pit trader did not produce any wheat, did not own any. He bought and sold something that was not in existence; he was a "juggler" playing in the great gambling game on our food products.

REMEDIES.

To tax contracts carrying future delivery will not destroy the evil. It should be exterminated. The system is indefensible and serves no useful purpose. It is a school of vice; its devotees sow nothing, reap nothing, own nothing, yet they buy and sell "prophecies," and through the gambling game they live in luxury.

Those engaged in the business have selected stocks and grain for their gambling operations. These exchanges constitute the trust that is now engaged in buying and selling these commodities. No one speculates in future delivery of coal, coffee, or sugar, yet the value of these commodities should not be more stable than the grain value. The trusts have undertaken the job of distributing coal, coffee, and sugar, while the stock exchanges have taken over the job of distributing farm products.

As soon as the farmer harvests his crop he puts it on the market at a time when it is not needed for consumption. It will not do to assume that the consumer wants the grain when the market is oversupplied; it is the speculator who wants it. The crop should go to the consumer as rapidly as it is needed for consumption.

The successful manufacturer does not rush his product on the consumer regardless of the demand. He holds it and thus feeds the demand, and so does every other producer except the farmer. Forgetful of the rule of supply and demand, forgetful of the expenses of distribution, he fails to engage in distribution and turns it over to the speculators.

The farmers, through organization, ought to hold their grain and sell only as fast as it is needed for consumption, and by so doing they would supply the market according to the demand. This is what every other business is doing. The farmer, in protecting his own interest, should not stop with production, but should follow his grain to the end of distribution. To him distribution is as important as production. For the want of cooperation he has been forced to turn his products over to the speculators.

To reach results they should establish warehouse systems with a central management and deliver their products, not to the speculator but to their own selling agency for the consumer. Thus the wholesaler, the jobber, and milling company would buy direct from the selling agency and cut out the speculator. With unity of action, through cooperative terminal warehouses, they could put the speculator out of business and become masters of their own products from seeding time to harvest and from harvest to the time of consumption.

Prohibiting the exchanges from dealing in future sales should be the first step. This, however, will bring no lasting relief to the producer, because the speculator would instantly take up the business of distributing the products and make all the profit that could be wrought out of the business.

The burden of caring for distribution belongs to the producer, and he should protect that distribution until it reaches the consumer. If he does not do so, the speculator will assume the function and pocket the profits. The operators on these exchanges do not produce any grain, and they add no value to the product. They simply rake in the sheckels and give no value in return.

Cooperative action is the demand of the hour. State associations, binding together local cooperative associations, should be formed for the mutual benefit of the members and should be operated without profit. The fruit growers and the tobacco planters have succeeded in putting into operation the cooperative system, and what they have accomplished is a forerunner of what the grain-producing farmer may accomplish through cooperation.

The individual should not buy separately, nor should the individual sell separately. The association should be the selling agency for all members of the local association. The products of the American farms in 1912 was valued at $13,000,000,000. In the distribution of these products the railroads received 3.8 per cent, the selling expenses were 9.2 per cent, waste in selling was 12 per cent, dealers' profit was 28.9 per cent, and the producers' share was 46.1 per cent.

It will be seen that it costs more to distribute than it does to produce. The object should be to eliminate the waste. Local production for local consumption is no longer feasible. The local dealers will not buy the farmer's stock for local consumption for fear the packers will refuse to sell him supplies. The local dealer recognizes that the farmers' sales will not make a continuous supply for the market, while the packers furnish regularly the demand of the consuming public.

The farmer must discard the old individual methods of sale. He must eliminate the monopolistic methods and join in the cooperative system of business founded upon a genuine cooperation with his neighbor, whether weak or strong, operated in a spirit of loyalty and good will toward the neighbor. Without loyalty there can not be cooperation.

There should be standardization, Federal inspection, and grading of the products. Let the farmer enter into the enterprise of distribution, becoming a part of the cooperative system that reaches from the producer to the consumer, and gather in the fruits of his labor.

The remedies needed are, first, prohibit gambling on the stock and grain exchanges; second, provide a system of rural credits, furnishing long-time loans at low interest rates; third, conservation of the farm products through the cooperative system reaching from the producer to the consumer; fourth, Government warehouses at terminals, Federal inspection, grading, and standardization of farm products at terminal market places.

Our Export and Import Trade.

EXTENSION OF REMARKS
OF
HON. CHARLES A. TALCOTT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 30, 1914.

Mr. TALCOTT of New York. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I insert the following:

THE SECRETARY OF COMMERCE.
July 19, 1914.

HON. CHARLES A. TALCOTT,
House of Representatives, Washington.

DEAR MR. TALCOTT: Herein is an example of how an official statement can be emasculated by omissions. I prepared the statement myself, and was curious to see how it was treated. The New York Times gives it in full. The Post makes some significant omissions. The first omission is that showing the decrease in exports and increase in imports to be very largely due to our own crop shortage of foodstuffs in 1913 and its consequent results; but that the foodstuffs imported, so far from being a menace to our farmers, were only a small portion of what we lacked. This condition has already altered.

The second omission is that showing the tendency of our recent import excess to change. This is a point—this import excess—on which our adversaries harp no little. Observe the facts which the Post omits:

Import excess—	
April	$11,339,544
May	2,476,896
June	653,522

Now that harvesting is forward this is likely to disappear in July and leave an export excess as usual. The net exports—excess exports—of gold are not serious, and have in the past been exceeded. The whole statement is very interesting as showing the substantial maintenance of our foreign trade under adverse foreign conditions, the changes being but 4.47 per cent and 4.07 per cent, respectively, and these due to short crops chiefly. The trade balance of $470,000,000 is greater than that of Taft's first year and over double that of his second year, during which period the foreign markets in which we have to sell were better far than of late they have been.

Sincerely,

WILLIAM C. REDFIELD.

[Special to the New York Times.]

WASHINGTON, *July 18, 1914.*

The foreign commerce of the United States in the fiscal year ended June 30, 1914, aggregated $4,258,795,735, being only $20,096,648, or less than one-half of 1 per cent, below the high record of 1913 and $401,208,392 above the highest record of any earlier year. Imports, according to preliminary estimates just completed by the Bureau of Foreign and Domestic Commerce of the Department of Commerce, aggregated $1,894,169,180, an increase of $81,160,946, or 4.47 per cent, over last year; and domestic exports aggregated $2,329,731,886, a decrease of $98,774,472, or 4.07 per cent. Foreign goods reexported were valued at $34,894,669, or $2,483,122 less than those of 1913.

In a statement on the subject to-day the Bureau of Foreign and Domestic Commerce says:

The details of exports and imports are not yet available, but for the 11 months ending May 31 there was a decrease in total exports of foodstuffs in excess of $70,000,000 and an increase in total imports of foodstuffs of over $53,000,000.

For the month of June imports aggregated $157,772,973, an increase of $26,527,096 over June of last year, being, however, $6,436,542 below May, $16,122,803 below April, and $24,782,331 below March of the current year. Total exports during June were valued at $157,119,451, a decrease of $6,285,465 compared with June, 1913, and being $4,613,168 below May, $5,433,119 below April, and $30,379,783 below March of the current year.

About 59½ per cent of the imports in June and the fiscal year which ended with June entered free of duty, against 54½ per cent in the year before.

The excess of exports over imports for the year ending June 30, 1914, was $470,457,375, against an excess of $652,875,915 in the year ending June 30, 1913, $551,057,475 in the year ending June 30, 1912, $522,094,094 in the year ending June 30, 1911, $188,037,290, in the year ending June 30, 1910, and $351,090,880 in the year ending June 30, 1909.

Gold imports aggregated $66,538,659 and gold exports $112,038,529, while silver imports aggregated $30,326,604 and silver exports $54,965,022 during the year.

[From the Washington Post July 19, 1914.]

Foreign commerce of the United States during the year ended June 30 aggregated $4,258,795,735, being $20,096,648, or less than one-half of 1 per cent below the high record of 1913, and $401,208,392 above the highest record in any earlier year. Imports, according to preliminary figures by the Bureau of Foreign and Domestic Commerce, aggregated $1,894,169,180, an increase of $81,160,946, or 4.47 per cent over last year, and domestic exports aggregated $2,329,731,886, a decrease of $98,774,472, or 4.07 per cent. Foreign goods reexported were valued at $34,894,669, or $2,483,122 less than those of 1913.

FOODSTUFF EXPORTS FALL OFF.

Details of exports and imports are not now available, but for the 11 months ended May 31 there was a decrease in total exports of foodstuffs in excess of $70,000,000, and an increase in total imports of foodstuffs of over $53,000,000.

June imports aggregated $157,772,972, a decrease of $6,436,542 under May; exports aggregated $157,119,451, a decrease of $4,613,168 under May.

About 59½ per cent of the imports entered free of duty, against 54½ per cent in the year previous.

The excess of exports over imports for the year ended June 30, 1914, was $470,457,375, against an excess of $652,875,915 in the year ended June 30, 1913; $551,057,475 in the year ended June 30, 1912; $522,094,094 in the year ended June 30, 1911; $188,037,290 in the year ended June 30, 1910, and $351,090,880 in the year ended June 30, 1909.

HEAVY EXPORTS OF GOLD.

Gold imports aggregated $66,538,659 and gold exports $112,038,529, while silver imports aggregated $30,326,604 and silver exports $54,965,023 during the year.

Logan Day.

EXTENSION OF REMARKS
OF
HON. MARTIN D. FOSTER,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 11, 1914.

Mr. FOSTER. Mr. Speaker, under the unanimous consent granted to me to print I include an address delivered by my colleague, Mr. HILL, at Murphysboro, Ill., on Logan Day.

The address is as follows:

DELIVERED AT MURPHYSBORO, ILL., ON AUGUST 3, 1914.

Ladies and gentlemen: First, I desire to congratulate this vast audience of thousands of attentive listeners who are here and who have been standing in this intense heat for three hours, giving the closest heed and ear to all that is being said on this occasion. I know that you could not be so intently held under these conditions were it not for the fact that we are here celebrating the beautiful life of the most favorite patriot of this county and one of the greatest known in all history.

It is indeed a genuine as well as a great pleasure that I have been accorded the opportunity to participate in the exercises to-day, to lend my encouragement and assistance in behalf of the efforts of Worthen Post, of the Grand Army of the Republic, to set in operation the movement to erect a fitting monument to the memory of one of the most distinguished sons ever produced in the great State of Illinois.

First, I wish to emphasize the gratitude and praise due Senator Keller, of this county, for initiating the plans and program for the purpose of securing funds with which to erect this monument on the very spot where Gen. Logan was born almost one century ago.

My friends, as I understand it, this is a meeting for the purpose of providing plans to raise funds for the erection of a monument to the memory of this distinguished warrior and patriot. I here now offer my services and means to help carry out any plan that is here agreed upon. Some time ago I prepared a bill for Government aid to this proposition. I talked the matter over with Senator Keller, and he requested that it be not introduced in Congress until after this meeting and probably not at all if it should be decided that these funds should be raised by personal popular donations. I am to-day leaving a copy of this bill with your committee and stand ready to act in accordance with your conclusions.

About three weeks ago the telephone in my office rang at about 10 o'clock in the morning. Upon answering the same this is what I heard in a clear and distinct tone: "This is Mrs. Logan. Do you intend to be in Murphysboro on the 3d of August. I intend to go, and I thought maybe we could arrange to go on the same train." I regret most exceedingly that she could not be here, but it was impossible for her to come on such a long journey at this time in this extreme heat, and although she is now a thousand miles away, yet I know her heart is here. Yes, my friends, it extends here and entwines with sincere love and good cheer every person present who is here to make this meeting in honor of her noble husband a success. To know Mrs. Logan is to admire and love her. I have been a guest in her home, I have been her guest on public occasions, but at no time nowhere have I enjoyed being her guest more than I enjoy it on this occasion, together with the thousands of other guests of hers here to-day. I shall ever cherish this day as one of the most pleasant events of my life.

In this connection allow me to say that I would not, if it were within my power, say one word that would detract from or lessen the glory and honor achieved by Gen. Logan as a soldier, a statesman, or a benefactor to mankind, but I do want to say that the good companion of Gen. Logan during all the most active years of his life as a soldier and a statesman contributed consistently and materially to all his achievements.

What gave George Washington courage to lead his soldiers, who were ragged and starving and whose foot tracks were marked with blood through the awful horrors of Valley Forge, and who were finally successful and triumphantly victorious on the blood-stained heights of Yorktown? Was it for pomp of power or glory and renown? Ah, no, my friends; it was his devotion to the cause of liberty for the oppressed American people. The result of his achievements was a successful campaign to sustain the Declaration of Independence and paved the way for the formation of that immortal document, the Constitution of the United States. The very preamble of this everlasting document provided—

to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.

In 1861, when the very tenets of this preamble were about to be assailed, when the "more perfect Union" was attacked with threatened dissolution, when "domestic tranquillity" was about to be destroyed, when the "blessings of liberty" were constantly being overthrown, it remained for brave, independent, and courageous men to assert themselves.

When the first gun broke the stillness at Charleston Harbor and resounded across the bay against Fort Sumter, the fire of enthusiasm utterly inflamed the spirit of devotion to patriotism in the brave breast of Congressman Logan. Endowed with the same patriotic devotion to the cause of liberty that inspired Washington to fight for our liberty and the establishment of this Union, the matchless Logan resigned his seat in Congress to fight for the preservation of this Union and for the honor of our flag. He returned here to his district and raised the gallant, brave, and fighting Thirty-first Illinois Regiment, and it is here noteworthy to say that this district, then the ninth congressional district, furnished more soldiers according to its population than any other congressional district in the United States.

His first engagement was at Belmont, Mo. The next was at Fort Donelson, and at this place Col. Logan was dangerously injured. On account of his undaunted bravery and marvelous military sagacity at Donelson the eagle of the colonel gave way to the star on his shoulder straps, in a short time to be replaced by the double star of the major general. He never sought promotion, but it came to him almost of necessity.

Time will not permit me to follow him through the history of the war. Belmont, Donelson, Corinth, Champion Hills, Jackson, Raymond, and Vicksburg were witnesses to his valor. All along the march to Atlanta and the sea battlefields are linked with his fame and took reflected luster from the gleam of his sword.

In my judgment, as a general his record is second to no one, and it is everywhere conceded that he was the greatest volunteer general on earth.

Gen. Logan was born a leader of men. As a soldier he was the spirit of intense energy. He enjoyed the confidence of his superiors and the most enthusiastic love and devotion of his soldiers. Yes, my friends, Gen. Logan fought to sustain a "more perfect Union," and to secure "the blessings of liberty to ourselves and our posterity."

In his public service for his country he was the same patriot, honest, brave, independent, and fearless. He was the soul of honesty. He lived in times of great corruption when many men fell by public exposure and otherwise, but this great patriot's life of 5 years of Army service and 30 years of public official service stands aglow without tarnish or stain.

Gen. Logan died poor in purse, but he left his family and his country the inheritance of a good name more precious than rubies. Gen. Logan was the commoner of his time. His heart was full of sympathy that reached out at all times to all mankind. There is a story accredited to Congressman JACK BEALL of Texas, and in this connection I will relate it: "I heard a story; read it somewhere, of a mother, a great lady of the land, who was about to start on a long journey. She had three sons. She asked them to give her before she left them some token of their affection and love. One of the sons brought to her a beautiful tablet of marble, with her name chiseled upon it; another brought her a piece of finest gold, with her likeness engraved upon it; the third son came to her and said: 'Mother, I have no tablet of marble, no likeness of gold to give you; but I have a heart; upon that heart your name is written and your likeness is engraved; that heart full of affection will follow you wherever you may go and be with you wherever you may repose.'"

No; Gen. Logan could not erect towering monuments to his family or those who have done great deeds; he could not endow great institutions as men of riches do, but the affection of his heart toward his fellow man erected a towering name that no power on earth can molest or destroy. Hearts full of affection as his was are doing the great work in uplifting humanity and inspiring it with nobler ideals and higher actions. The golden thread of sympathy and love and affection that extends from one brother down into the depths touches and is entwined about the heart of the fallen one, lifting him up, is making the world more grand and beautiful than it has ever been before.

To look upon his life, it is grand. I fail to find words to express my conception of it. In conclusion, I can not do better than to refer to a few lines from one of the lectures of John Temple Graves: "I have seen by night the glowing headlight of a great locomotive rushing onward in the darkness, heedless of danger and uncertainty, and I have thought the spectacle grand. I have seen the lightning flash across the storm-swept sky till night and darkness and the shadow-haunted earth gleamed with noonday splendor, and I have thought the spectacle grand. I have seen the light come over the eastern hills in glory till leaf and tree and blade of grass sparkled like myriad diamonds in the morning, and I have thought that it was grand, but the grandest thing, next to the radiance that flows from the Almighty's throne, is the light of a noble and beautiful life shining in benediction upon the destinies of men and finding its home at last in the bosom of the everlasting God."

So, my friends, the lives of all the soldiers who fought for the preservation of this Union, together with the life of the devoted patriot, brave soldier, and fearless statesman which we are to-day honoring, will forever be an inspiration and benediction to all mankind.

Compensation of Rural Carriers.

EXTENSION OF REMARKS
OF
HON. J. CHARLES LINTHICUM,
OF MARYLAND,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, August 11, 1914.

Mr. LINTHICUM. Mr. Speaker, I am opposed to the amendment of the gentleman from Indiana for several reasons, the chief one of which is that I believe the Post Office Department should be conducted strictly on a business basis. I am convinced that it would be impossible to do this under the amendment offered. Reflecting the views of the post-office employees themselves on this measure, I submit herewith a letter received this morning from Mr. E. J. Cantwell, secretary of the National Association of Letter Carriers:

MY DEAR CONGRESSMAN: Under date of August 7, 1914, when the bill (H. R. 17042) to amend the postal and civil-service laws, and for other purposes, was under consideration, an amendment was offered by Mr. CULLOP, of Indiana, which reads as follows:

"Strike out section 3 and insert the following in lieu thereof: That hereafter any assistant postmaster, clerk, or employee in any post office, who may be required by law or by authority or direction of the Postmaster General to execute a bond to the United States to secure faithful performance of official duty may be required to also execute a bond to the faithful performance of his duties as such, in the discretion of the Postmaster General. The postmaster of all such offices shall have the power to select his assistant postmaster, all clerks, and employees irrespective of any civil-service law to the contrary, and all laws, regulations, and orders in conflict with this act are hereby repealed and nullified: *Provided*, That all such appointments shall be for a period of four years."

This amendment was agreed to by a vote of 75 in favor to 25 against.

After the bill had been disposed of in the Committee of the Whole a separate vote was demanded on the Cullop amendment. A roll call developed no quorum present. Another vote will be taken when the bill again comes up for consideration, which will probably be the first business on Tuesday, August 11.

Should this amendment become a law it will virtually break down the civil-service law in so far as it applies to post-office employees, and will no doubt have a tendency to injure the effectiveness of the postal service, the success of which depends largely on the efficiency of the employees.

I trust you will inquire into the merits of this amendment and that you will not think it presumptuous on my part for drawing your attention to it.

To this letter from Mr. Cantwell I immediately replied as follows:

I do not think the Letter Carriers' Association need have any fear on account of amendments of this sort; they will never, in my judgment, be passed and will always be voted down when brought before the House and a roll call is asked for. I have no idea that the Members of the present Congress have any desire to cripple the civil service as it now affects the postal employees.

The same objections expressed by the National Association of Letter Carriers appear to be shared by the National Federation of Post-office Clerks. A letter embodying their views was addressed to my colleague, Hon. CHARLES F. CURRY, Member from the third California district, which he has just handed me and which I submit:

WASHINGTON, D. C., *August 11, 1914.*

Hon. CHAS. F. CURRY.
House of Representatives, Washington, D. C.

DEAR SIR: In behalf of the National Federation of Post-office Clerks, an organization made up of men in the ranks of the Postal Service, who have come into it under the rules prescribed by the Civil Service Commission, I ask your aid in defeating the Cullop amendment to the Moon bill, now pending before the House, which seeks to remove postal employees from their civil-service status by granting to postmasters the full power to appoint their subordinates for a period of four years, irrespective of the present civil-service laws.

Knowing you to be a practical post-office man, a former employee in the service, and knowing that since your entrance into public life you have always retained a keen interest in the welfare of the postal workers, I feel that we can depend upon you to view this attack as we do—an unwarranted, unjustifiable attempt to despoil the present efficient postal organization. I look for the weight of your influence to be exerted toward maintaining the efficiency of the service by aiding in the decisive repulse of this assault upon the employees proposed by the Cullop amendment.

Having had the advantage of personally coming into contact with the men in the Postal Service, and learning intimately from years of association of their duties, you realize perfectly well what would happen if the men were removed from their present civil-service status and made the political pawns of each transient political boss. Instead of the present orderly force we would have chaos. Instead of a permanent body of capable workers we would have a changing crew, whose chief interest was the perpetuation in office of its particular political guardian. The proper handling of the mails would be subordinated to the reelection of the ticket.

You can readily conceive, I know, of this situation arising under the system proposed by the Cullop amendment: The carriers on their routes would, of necessity, devote the bulk of their time and attention toward the upbuilding of the postmaster's political machine, upon which the permanency of their position depended, rather than serving the patrons. It would be a case of "carry" the district for the boss rather than carry the mail for the people. A carrier's worth would be measured by the number of votes he "carried" instead of the amount of mail. Or picture the clerks driven to the necessity of cultivating a large acquaintanceship among the "boys," in their hours off duty, instead of utilizing this time in studying distribution schemes. Men placed on the pay roll at the request of influential politicians—and the service would be rapidly filled with such men—with the probabilities of only a four-year term ahead of them, would not settle down to master the details of the many intricacies of the Postal Service. And with the uncertainty of their tenure of position, no one could condemn them for not wasting time in acquiring knowledge which can not be applied out of the service in any other occupation.

I regret that all of our legislators do not know, as you do, that more than one-half of the entire clerical force in this Postal Service must work nights or portions of nights to keep this great volume of mail in constant motion. In order to qualify to distribute this mail, it should be known, it takes years of tiresome study of perplexing scheme books. A post-office scheme is never mastered; changing train schedules and addresses of business firms necessitate constant study on the part of the distributor, in order that the letters and parcels be properly dispatched without any loss of time. And this expert knowledge, representing a lifetime of study, is absolutely valueless outside the walls of the particular post office in which the clerk is assigned. Who can conceive of a four-year-term post-office clerk taking home after office hours an intricate scheme book in order to master its contents? Yet that is what the clerks, the 20,000 distributors in the service, are doing every day and night. These men make the service their life work, their profession, devoting themselves assiduously toward acquiring information to be used solely toward expediting the dispatch of mail.

Under the Cullop amendment, should it be enacted, we would shortly have a mail service topheavy with titled officials. Congressmen and postmasters would be besieged with willing applicants for executive positions with the titles and the emoluments, but few of the faithful constituents, I fear, would be clamoring to do the hard, burdensome work which is so necessary to keep the great mass of daily mail in motion.

Imagine the rude awakening of a political constituent placed on the department pay roll when, instead of a desk and swivel chair which he fondly pictured as perquisites of a post-office clerkship, he is ordered to report at night, don overalls and jumper, to aid in distributing a mountainous pile of letters, cards, parcels, and papers, working at top speed and high tension amid insanitary surroundings in order that no dispatch or delivery be missed. Such is the daily, or nightly rather, routine of the poor postal clerk, whose job appears so attractive to those who see it from the outside. These night workers, these men who are toiling behind the granite walls of the magnificent post offices which dot our land, frequently working under conditions which the Government would not long tolerate in any corporation, are deprived of participation in all social life. Their evenings are given over to the Government. And now the one redeeming feature of their work—its permanency—is attacked. After fitting themselves by years of study for mail distributers, thereby naturally unfitting themselves for anything else, it is proposed to limit their tenure of position to four years.

Picture, if you can, the surprise of the average political appointees—the men who want the "soft" berths—should they be ordered to report at daybreak to case and deliver a hundred pounds or so of mail to impatient patrons, with the route so scientifically arranged that not a moment's time can be wasted. Summer or winter, regardless of the elements, the carrier must make his schedule or suffer the penalties that weigh with heavy hand upon the luckless post-office employee unfortunate enough to run contrary to the thousands of rules and regulations which hem him in.

Or picture the indignant surprise of the expectant office seeker who happened to be placed on the substitute list of a large post office as clerk or carrier. He would find it necessary to report daily to take chances of some mishap incapacitating a regular, thereby necessitating the employment of a substitute. Often, maybe for days, he would get no work. And no work means no pay, for a substitute is paid only for actual services rendered. It follows, then, that the income of the

substitute depends upon circumstances—it fluctuates from month to month. In the "lean" months Mr. Substitute may not earn $30—less than a dollar a day. As the period of substitution may run from one year to six or seven years in some instances, during which time the department can not guarantee to pay him except for actual work performed, the postal service presents a much less roseate hue from the inside to the substitute than it presents to the man on the outside clamoring for the job with no definite knowledge of its requirements.

A regular clerk or carrier in first or second class post offices begins at $800 after serving his period of substitution, which varies according to circumstances. Promotions, based always on efficiency—for efficiency is the shibboleth of the service—are granted to the clerks and city carriers yearly until $1,100 is reached. From $1,100 to $1,200 but 75 per cent of the men are promoted in the first-class offices, Congress having adhered to this policy in recent years. The $1,200 grade, then, is the pinnacle; and every man in this grade, in these days of economy and efficiency experts, earns every dollar of his salary. The ever-present fear of demotion stirs the old and young to greater efforts. And now Congress, if it adopts the Cullop amendment, will put the still greater fear of the probable loss of position into the hearts of these faithful postal workers.

If Congress is sincere in any effort to improve the efficiency of the Postal Service there is a way open. It can remove it entirely from politics and make it possible for the young man entering the service to aspire by meritorious work to reach the highest positions in the department. To inject an additional political flavor into the service can result only in its complete demoralization, the breaking down of its efficiency.

In conclusion, Mr. CURRY, I realize that you appreciate the extent of the calamity that would result from the adoption of the Cullop amendment, and I ask that you again show your interest in the welfare of the service and the employees by combating its enactment.

Appreciating your past efforts toward the extension rather than the contraction or the abolishment of the civil service, I am,

Sincerely, yours,

THOS. F. FLAHERTY,
Secretary-Treasurer National Federation of Post-Office Clerks.

I believe that the Post Office Department should be conducted nearly as possible as a private individual or corporation would conduct an immense business. We should treat the employees of the department fairly and justly. We should pay them adequate salaries for the work performed, and in return we should insist upon receiving the very highest class of services possible. I favor adequate compensation to rural carriers, and I felt when voting for an increase in the salaries of the rural carriers that they were not receiving the compensation to which they were entitled for the services performed, and that this failure resulted in an injustice to them which should be remedied as early as possible.

The Postal Service is one branch of the activity of the National Government in which we all come intimately in contact. Hardly a day passes—I could almost say hardly an hour of the day—but what some representative of the Post Office Department is brought in personal contact with each of us. The class of men engaged in this service—indeed the class of men required for the service—is of a high order. They must be mentally alert and well informed, physically capable and active. And I hasten to say that the exception has been rare indeed among those members of the Postal Service with whom I have been brought in contact when they did not fully measure up to these qualifications.

I believe that the rural service is one branch of the post-office work which the majority of us view with particular admiration and pride. I remember very clearly that not many years ago the postman or post-office facilities was to the great bulk of our rural population as distant as the nearest town or village. To get a letter or a newspaper usually required a trip of several miles or more to the post office. Since we established the rural route as a factor in the delivery of rural mail the post office has been brought in closer relations with many additional millions of our population. I have often had occasion to observe the rural carrier who serves the route which supplies the mail to my farm at Linthicum Heights. He is but a representative of the type of men engaged in the rural service, and when this measure came before us I could not help but have in mind a personal recollection of the value of his work to myself and the other patrons of the route which he attends.

It would be a difficult matter for you to find in any branch of the Government service a class of employees whose duties are more exacting and onerous, whose time is more fully taken, whose duties are more important, than those rendered by our rural carriers. They are an exceptional army of splendid men excellently qualified for the work in which they are engaged. To refuse to pay men of this character possessing these abilities engaged in such a responsible work an income such as will amply compensate them for the time, labor, and expenses involved is to perpetrate a grave injustice.

In a small way, my time since I have been in Congress has been devoted to correcting injustices which have been brought to my attention, and I promise you that on this occasion I do not purpose to change that policy even though my resolution may result in the expenditure of a few hundred thousand dollars more of Government revenue. In truth, as an economic proposition, I believe it better to have well-paid, competent, satisfied men, than underpaid, incompetent, and dissatisfied ones. It has been written, "The laborer is worthy of his hire," I fail to see why the rural carrier should be exempted from the operation of this statement.

We have been told that our Postal Service is practically self-supporting, that it is a formidable institution contributing to the education of our people, to the intellectual necessities of our citizenship, wielding a tremendous moral force which is a potent factor in the uplift of all classes of our inhabitants. This I believe to be true, and it is for these reasons that I am unqualifiedly in favor of maintaining the personnel of this service of a high order. You can not secure good men in the Postal Service, you can not expect these men to devote the best years of their life to this service, unless you hold out to them the promise of permanency of tenure, and pay them a salary that will enable them to live under conditions to which the average American citizen is habituated.

It was for these reasons, I believe, that Congress was influenced to enact the law approved March 9, 1914. Apparently the intent of that act is not clear to our Postmaster General, and I hope that the present amendment will supply any deficiency in its meaning and authorize the Post Office Department to do what Congress intended to have done. I agree with the Postmaster General in the wisdom of stimulating rural carriers to activities that will result in increased business, for I believe that would be the attitude and policy of private employers, but I do not believe that this effort for greater business should be sought in a way to override what was the obvious, clear intent of Congress.

It was manifestly the intent, judging from statements made on the floor of this House, that 43,535 rural carriers should receive an increase of $100 each, and the appropriation for the pay of these carriers was increased to meet that figure.

I want the rural carriers of Maryland to have the increase we voted to give them, and therefore I favor the amendment to make our intent along that line so clear that it can not be misinterpreted by any one. The rural carriers in Maryland, I know, are worthy and deserving of this increase, and so far as it is within the range of my vote to secure it for them they shall have it.

An Efficient Government.

EXTENSION OF REMARKS
OF
HON. HENRY M. GOLDFOGLE,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Friday, August 14, 1914.

Mr. GOLDFOGLE. Mr. Speaker, under the leave accorded by the House, I desire to call the country's attention to the well-written editorial in the New York Evening Post of last Tuesday, August 11, which portrays the highly efficient manner in which, amid the trying and difficult situations that recently have presented themselves, Woodrow Wilson, our President, conducted the administration of affairs.

That editorial is as follows:

AN EFFICIENT GOVERNMENT.

"Whatever of evil the war of nations may have brought upon us Americans, the country is indebted to it for a clear revelation of the efficiency of the administration of President Woodrow Wilson. The great machinery of government has functioned quickly and well. If we have seen in England a fairly amazing subsiding of popular passion, but yesterday threatening civil war, we have witnessed on this side of the water a similar and a most praiseworthy readiness to rise above partisanship and stand by the President in his effort to take in all possible sail and render the ship of state as safe as may be in the hurricane that has suddenly burst upon it. Quietly and effectively every disposition has been made, without the slightest blowing of trumpets or hurrahing about it; if anything has been overlooked which might have been foreseen, it has yet to appear.

"While the credit for all this belongs to many men, the chief praise is, of course, due to the captain, who, face to face with a most distressing personal bereavement, yet continued to wreak himself upon his work, precisely as is his mind were completely at ease as to all private affairs. He has met the national emergency with the same poise and skill with which he has held Congress to its work from the very inception of his administration. The sneered-at college professor has shown again not only

what it means to have communed with the world's philosophers, but has demonstrated the supreme value of rigid mental discipline as well. His hand on the helm has never wavered; his own coolness and steadiness under conditions which might have snapped many a physically stronger man have won him the unbounded admiration of the corps of newspaper men, who have daily found him about the only outwardly unruffled man in the intense heat and fearful strain of Washington. They will not soon forget the eloquent words with which he outlined to them the gravity of the war crisis and the duty of the press—words spoken primarily for them, but which they demanded for publication. And the public will not forget that his message tendering the good offices of this Government to the warring nations of Europe was written at the bedside of his dying wife. In every way in this grave emergency he has given fresh proof of his marked fitness for the headship of the Nation.

"It was Mr. Wilson who seized the opportunity to press for the confirmation of the nomination of Mr. Warburg, and quickly selected Mr. Delano to fill the vacancy created by the withdrawal of Mr. Jones. Under his direction the Aldrich-Vreeland Act providing for an emergency bank-note currency was put into force, to the great relief of the financial world. The President himself moved to have Congress amend our shipping laws to meet the emergency on the ocean; if the result of this is not yet clear, it is certainly a step in the right direction, and will doubtless be followed by others. And his administration is entitled to special praise for cooperating vigorously in the organization of strong committees to deal with all phases of the business situation as the emergencies may arise—a bit of constructive statemanship deserving higher praise and greater attention than it has received. To all of this must be added the prompt measures for the relief of the stranded Americans abroad—all of which were submitted for presidential approval—and the constant keeping in touch with our foreign ambassadors, who have had to assume heavier burdens than have ever fallen to the lot of American diplomats. The administration has also acted vigorously and most wisely in dealing with the enforcement of our own neutrality, the President himself writing a letter directing Army and Navy officers to refrain from all comment on foreign happenings, and particularly the military operations.

"That all of this has been appreciated by the public is obvious from the changed political atmosphere in Washington. So far from being impatient to return home, Congressmen are ready now to stay on as long as the leader in the White House demands it. The Senate has speeded up its own business so that its deck may be cleared of the trust bills by the end of this month, and it may be ready for any action the Nation's situation may then warrant. That so keen a politician as Mr. Roosevelt has called off his proposed criticisms of the amateur in the White House is clear proof of the changed status at Washington. It is no longer the thing to talk about the Democrats' certain loss of the House. If a financial depression is impending, the Democrats are not likely to suffer from it; no Republicans would have the face to lay this at their rivals' door, though they have done about as unwarranted things in the past. If anything like this should be attempted, the answer can readily be imagined. It will be sufficient to silence any critic by simply asking him what he thinks of Mr. Wilson's handling of the war situation, and whether at any period in our history we have ever had a smoother-working governmental machinery in a grave national crisis. It is a record of which the whole country may justly be proud, and one that will be all the more creditable as time passes."

First Aid for Calamity Howlers.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 13, 1914.

Mr. BAILEY. Mr. Speaker, I have been a sympathetic listener to the howls of calamity from my friends across the aisle, and particularly to those proceeding so ceaselessly from the distinguished gentleman from Washington [Mr. HUMPHREY]. Only one without heart could hear his wails unmoved. Day after day, week after week, month after month he has lifted up his voice in anguished protest against the frightful conditions which he has conjured up from the vasty deep of his perturbed imagination with respect to a Democratic tariff, which has limited or cut off the secret levies of the trusts and combines on the substance of the plain people. But it has seemed to me, Mr. Speaker, that the gentleman from Washington has been betraying symptoms of personal distress here of late, a certain feebleness of purpose, a groping for further material, a disposition to work over old stuff in the absence of new. So it has occurred to me, Mr. Speaker, to come to his assistance, and I do so by furnishing him for his enjoyment and the enrichment of his store of calamity a few newspaper headlines which should bring joy to his soul and fresh inspiration to his lagging imagination.

Let me read the first, and let me hope he will seize upon it with accustomed avidity:

More than 2,000 men march to city hall at Detroit and demand work.

Who said that a Democratic tariff was not the forerunner of industrial distress? Who said it was not the enemy of the wage earner?

Then here is another. It is just as impressive as the first and just as certain to serve the gentle purpose of the Jeremiah of Seattle:

Chicago Federation of Labor estimates the total number of unemployed men in Chicago at 100,000, and issues a warning to all craftsmen to keep away from the city.

Joy, and still more joy. Here is grist for the calamity mill. Here is Ossa piled on Pelion for proof of what a deadly Democratic tariff will do. Here is gloom enough not merely to satisfy the somber knight from the far Pacific, but to spread over into the realm of the gentleman from Wyoming [Mr. MONDELL] and into that of the gentleman from Pennsylvania [Mr. MOORE].

Nor is this all. Headlines tell other stories, which I fear the gentleman from Washington has overlooked, but which I am humbly and gratefully able to supply for his melancholy satisfaction. Let him read and treasure this:

New York City government urged by Central Federated Labor Union to let subway contract to furnish work for 500,000 unemployed men.

Five hundred thousand unemployed men, in one city, at one time; and yet there are those with the effrontery to sneer and carp at the gentleman from Washington when he shouts calamity and calls for the mountains to fall upon the Underwood tariff and bury it beyond the hope of resurrection. There are those, like the gentleman from Alabama [Mr. HEFLIN], who would mock at him and make merry at his expense when he assumes the rôle of chief mourner at the funeral of prosperity.

My disposition to help the gentleman from Washington does not faint thus early, and I proceed, Mr. Speaker, to quote the headlines for his sorrowful exaltation. Let him roll this under his tongue as a sweet morsel, and so transform it into another biting indictment of criminal Democratic stupidity:

One hundred thousand men march through the streets of New York singing the Marseillaise; speakers preach revolution and demand work; a bomb thrown at police by anarchists.

Yet ribaldry is heard from Alabama and laughter and derision from New York when the gentleman from Washington arises in his place to chant the mournful strains which he has made so familiar and to fulminate his denunciation of a party lost to all the finer sensibilities associated with big business and alien to that enlightened selfishness which has flowered forth in our Carnegies, our Weyerhaeusers, our Havemeyers, our Perkinses, our Schwabs, our Fricks, and our Guggenheims.

And still the headlines run red across the page of history in the making to tell the tragic tale of Democratic ineptitude or worse:

More than 200 Bulgarians petition governor of Colorado for employment or for aid to return to Bulgaria.

Stranded in the land of freedom! Penniless in a State whose hills are seamed with silver! Workless in a region where opportunity is unbounded and where Republicanism flourished like a green bay tree for more than a quarter of a century! And yet we have on this side of the Chamber impatient persons, like the irrepressible gentleman from Connecticut [Mr. DONOVAN], who would choke off the gifted prophet of disaster from the West when he seeks to warn a stricken land of the perfidy and dishonor which have overtaken it under the leadership of Woodrow Wilson and OSCAR UNDERWOOD.

Nor is the chapter closed. Other and perhaps direr revelations remain to be made, for here is another headline to challenge even the least thoughtful:

One thousand foreigners march toward Philadelphia City Hall demanding work; a riot; 3 policemen shot; 14 marchers arrested; hundreds beaten by mounted police.

That this should have escaped the eagle eye of the gentleman from Washington is queer. Yet, evidently he was so absorbed

in the contemplation of his own genius as an inventor of calamitous circumstance that so small a thing passed him unnoticed.

This also must have been the case with the following:

Labor union report 50,000 idle men in Kensington (Pa.) district—

The district where protection is supposed to have made all things blossom as the rose, the district that, of all others, should—and the gentleman from Washington doubtless believes would—exhibit the finest fruits of that blessed policy which a besotted Democracy has so ruthlessly attacked.

Not alone in the East is the tragic tale unfolded. The evil eye has fallen upon the Golden Gate, and from the troubled waters of the bay come rolling thunders of discontent. Listen:

Unemployed in San Francisco form a league and demand the issue of $23,000,000 in bonds to aid unemployed.

Has not the gentleman from Washington ample occasion for his deepening gloom? Is he not in the fullest degree justified in attributing all the woes of this western world to the presence of a Democratic President in the White House and a Democratic majority in both wings of the Capitol?

And the bread line, the soup house, the tramping thousands. Who is permitted to forget them while our Republican friends on the other side still have breath left in their shaken bodies? Here is a headline telling its own story better than I could hope to do, perhaps even more succinctly than the fluent gentleman from Washington would consent to attempt:

On thousand Hungarians march through the rain to receive a loaf of bread each at Toledo.

And still there are those who have the temerity to doubt the honest gentleman from Washington when he clothes himself in sackcloth and ashes and sits in the gate to prophesy of direful things. Could anything be more direful than the marching Hungarians in the rain or more appealing to human pity than the meager loaf of bread doled out by charity?

The types click, the presses roll, and red ink and black proclaim the happenings of a day. And here is one of them chronicled in another headline which I pass along for the behoof of the gentleman from Washington:

At Camden, N. J., a riot follows application of 1,500 men for 300 jobs advertised by the Joseph Campbell Co.

Five men for each job. Stop a moment to think of it. It is bad enough when there are 10 men for 9 jobs; it is a fearful tragedy when the men outnumber the jobs 5 to 1. And when the gentleman from Washington stumbles upon instances such as this which I here present him free of cost he has a right to howl with all his strength and with all his soul and with all his genius for howling, for there is nothing in all the affairs of men which is so challenging as a surplusage of men in relation to the jobs that are to be done. This, indeed, is the problem of the ages—a problem which seems not to have been solved at Camden.

Nor yet at Philadelphia. For a headline throws light on the situation there:

Loan of $9,000,000 to provide funds for public works asked by city of Philadelphia unemployed; race riot followed demonstration of unemployed; Italians attacked by other nationalities.

What a tale this tells. What hunger and nakedness and distress it suggests. What occasion it gives for the howl of calamity. With what unction it should be embraced by the gentleman from Washington as ammunition for his arsenal of woe.

All this, Mr. Speaker, is submitted to him with my respectful compliments and renewed assurances of my distinguished consideration. But do I hear it suggested that the headlines I have taken the liberty to quote are not current? That they date back to 1907 and 1908? That they tell of happenings under Theodore Roosevelt and the ever-blessed Dingley tariff? Well, what of that? Were not all these things as clearly traceable to the Underwood tariff of 1913 as the panic of 1893 was to the Wilson tariff of 1894? Was not Tenterden steeple the cause of the Goodwin sands? And may we not with equal logic ascribe the tragic story told in the headlines quoted above to what a sinful and perverse Democracy has done years later?

It has been in a spirit of generous good feeling that I have made this little contribution to the gayety of nations for the especial edification of the gentleman from Washington. Perhaps I may not be rewarded with the gratitude to which I am clearly entitled. Yet I shall not be cast down. The reward is in the doing. It is enough to know that I have restocked the empty magazine of my valiant friend, who stands guard at the citadel of privilege. With the material now at hand, he may perform feats in comparison with which those of the more recent past must pale into utter insignificance.

The Effect of the Hydroelectric Enterprise of the Mississippi River Power Co., at Keokuk, Iowa, and Hamilton, Ill., Upon Industrial Development, Navigation, and the Welfare of the Region Served.

EXTENSION OF REMARKS

OF

HON. CHARLES A. KENNEDY,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 11, 1914.

Mr. KENNEDY of Iowa. Mr. Speaker, in view of the many misstatements that have gained currency, and charges made in the committee bearing on the development of the power in the Mississippi at Keokuk, Iowa, I submit this summary of the facts:

HISTORY OF THE DEVELOPMENT.

EARLY PLANS.

For over 60 years—from 1836, when a company was organized for the purpose, until 1910, when construction by the Mississippi River Power Co. was begun—efforts were made by the people of the Mississippi River Valley to have developed the water power in the Mississippi River at Keokuk, Iowa. The project was impossible commercially until the country reached a certain stage of development; it was impossible in engineering until the revival of concrete construction.

In April, 1900, was organized the Keokuk & Hamilton Water Power Co., of Illinois. This corporation was unique. The money it spent was appropriated to its use by the city councils of Keokuk, Iowa, and Hamilton, Ill. These appropriations were made after very full public notices of intentions through newspaper articles, with the request that any objections be filed in advance. There was actual unanimity of the citizens in favor of these appropriations. Some years later every dollar thus appropriated was paid back into the city treasuries when the project became a reality.

ACTION BY CONGRESS.

In 1901 this company secured from Congress permission to build a wing dam on the east side of the river (31 U. S. Stat., 764), and later the plan of a wing dam was abandoned for a dam across the river. Congress passed a resolution directing an examination and report on the project by the War Department Board of Engineers, especially as regards its effect on navigation. This board reported that the project was feasible, practical, and would aid navigation (Annual Report, War Department, vol. 10, pt. 2, pp. 1507–1812), and various public organizations like the Upper Mississippi River Improvement Association and the Trans-Mississippi River Congress indorsed the project.

The Illinois Legislature passed a resolution in January, 1905, urging the passage of the act then pending before Congress, which act became known as the act of February 9, 1905. (See Laws of Illinois, 44, G. A. 1905, p. 405.) The resolution was based on the improvement to navigation. For the debates on this act of February 9, 1905, in Congress, see CONGRESSIONAL RECORD, January 27, 1905, page 1537, and February 2, 1905, page 1788.

The report of the committee of the House of Representatives having the measure in charge is known as Report No. 3089, House of Representatives, Fifty-eighth Congress, third session, and this reopr states that the construction of the proposed dam and new lock would render navigation easier for some distance above the dam and over the present Des Moines Rapids, and to that extent would greatly aid navigation; it also stated that the total cost of the expense of operation of the new lock would be nominal as compared with the expense of operation of the series of locks.

A hearing was had before the Committee on Interstate and Foreign Commerce of the House of Representatives on January 20, 1905, and the proceedings of this were published. The report of this committee was also published on January 26, 1905. The bill was passed by the House of Representatives on January 27, 1905, reported to the Senate by the Committee on Commerce of the Senate, and passed on February 2, 1905, and approved by President Roosevelt February 9, 1905. (See for final act, 33 U. S., 712.)

At this time the Keokuk & Hamilton Water Power Co. was composed of 23 citizens of Keokuk, Iowa, and Hamilton, Ill.

DIFFICULTY OF INTERESTING CAPITAL IN THE PROJECT—FINAL SUCCESS.

The corporation to which the rights had been granted now advertised that it stood ready to transfer its rights and privileges to somebody who would and could build the works. It issued a prospectus containing a great deal of information, which was mailed to engineers and capitalists, but no responsible persons or corporations could be found before September, 1905, to carry the work to completion.

In September, 1905, Hugh L. Cooper came in contact with the Keokuk & Hamilton Water Power Co.

Mr. Cooper is an American, born in Minnesota, and is not an Englishman, as has been asserted. He has built bridges in Iowa and elsewhere, and was in charge of large bridge construction near Seattle, but later changed his activities to hydraulic engineering. His first water-power construction was in Jamaica. Later he did more important work in Mexico, and the very important water-power installation at San Paula, Brazil, in the high, almost inaccessible mountains. He was constructing engineer of a plant at Niagara, the tail race of which opened under the curtain of the fall. He was chief engineer of the development at McCalls Ferry, Pa. He has been consulting engineer for many hydraulic promotions in Europe and Asia. Before he came to Keokuk Mr. Cooper had built twice as much water-power development as any other single engineer.

The company gave Mr. Cooper and certain Toronto bankers a two years' option on its stock and franchise, but the Toronto capitalists abandoned the plan.

Between February and December, 1906, Mr. Cooper made a preliminary survey of this part of the river. In July, 1907, the local corporation made a new contract with Mr. Cooper, giving him personally the same option previously given his Toronto backers, which later was extended to February 1, 1910. In October, 1908, the local corporation, before the Mississippi River Power Co. came into existence, made a contract for furnishing 60,000 horsepower in St. Louis. Mr. Cooper then exercised his option on the Keokuk & Hamilton Water Power Co., which was turned over to him and reorganized with new officers and directors.

For a period of several years before and after the last date above Mr. Cooper had been making strenuous exertions to induce capitalists to invest in the enterprise, but without success. He visited capitalists with large resources, and scores of these rebuffed him before he awakened any serious interests in anyone. The risk of investment in water-power development was thought too great to tempt any of the bankers, engineering or construction firms. Fifty-six prospective sources of capital for the enterprise in this country and abroad refused to take sufficient interest in furnishing the money needed. This list of important financial houses is in the files and records of Mr. Cooper and of the Mississippi River Power Co.

Mr. Cooper expended all of his own personal assets in this search for capital, even to mortgaging his property. The necessary amount had not been obtained after four years of labor, when, in the latter part of 1909, Mr. Cooper succeeded in obtaining financial help.

WORK OF CONSTRUCTION.

Construction work began with the beginning of the year 1910; from the middle of 1911 to the middle of 1913 it continued on a large scale; it will be completed practically by the end of 1914, except the south half of the power house, which is deferred.

Eminent European engineers have called this the greatest achievement in the history of engineering. It involves building the greatest power dam in the world, the largest hydroelectric power house in the world, the lock of the same width as those at Panama, with a higher lift than in any one lock in the Isthmus; the largest dry dock in fresh water; the relocation and elevation of 14 miles of railroad track without interruption to operation; the building of 25 miles of expensive roads, with a maximum grade of 6 per cent over the river bluffs, with such incidental features as one fill of 200,000 cubic yards for the dry dock, and excavation and dredging below the works costing about $200,000. All this work was done with a minimum interruption of the regular activities in the vicinities, although the work is offshore the middle of a city of 15,000 population; there was no interruption to railroad traffic, agricultural pursuits, nor any commercial activities. The interruption to navigation was only a few weeks' delay in opening navigation in 1913, with the approval and by order of the War Department.

DESCRIPTION OF THE PLANT.

A brief description of the plant as it now stands is as follows:

PLANT.

Dam, power house, lock, dry dock, sea wall, ice fender, all one concrete monolith with a total linear measurement of 13,185 feet, or 2½ miles, and containing more than half as much concrete as has been used at Panama.

DAM.

Length, 4,278 feet, plus east abutment, 290 feet, and west abutment, 81 feet; total, 4,649 feet, or nearly nine-tenths of a mile; width, 29 feet at the top and 42 feet at bottom, composed of 119 arched spans with piers 6 feet thick and span 30 feet inside; spillway sections each 30 feet long. Steel gates on top of spillways, 11 by 32 feet. Upstream face, vertical; downstream face of spillways, an ogee curve. Dam keyed into limestone bottom of river about 5 feet.

POWER HOUSE.

Final length, 1,718 feet; width, 132 feet 10 inches; total height, 177 feet 6 inches. Substructure of monolithic concrete; walls of reinforced concrete. Four floors, first containing generators and accessories and others containing oil switches and electric accessories. Substructure, 70 feet high to generator floor, 78 feet high to transformer floor. Superstructure, 107 feet 6 inches from generator floor to pinnacle.

INSTALLATION.

Fifteen power units. Turbines, each 11,000 horsepower. Generators, each 7,500 kilowatts. Total capacity of present station, 165,000 horsepower.

TRANSMISSION LINES.

One to St. Louis, 144 miles; voltage, 110,000; six copper cables five-eighths inch in diameter, each composed of 19 wires, supported on steel towers set on concrete foundations in right of way 100 feet wide. Crosses Mississippi River twice and Missouri River once. One to Burlington, 40 miles; voltage, 11,000; aluminum cables on poles. Both lines built to withstand extraordinary weather and minimize accidents.

LOCK.

Width, 110 feet; maximum lift, 40 feet; height of walls, 52 feet 4 inches; thickness of walls, 8 to 33 feet; length of lock, 400 feet inside and 618 feet 6 inches outside; depth on sill, 8 feet; gates span 115 feet; are steel trussed, pivots hardened steel on bronze; motive power, pneumatic from water power; time of lockage, 10 to 15 minutes; time saved steamboats between Keokuk and Montrose, over 2 hours. Lock ceded to United States gratis after being built by the water-power company entirely at its own expense.

DRY DOCK.

Location, between lock and Iowa shore. Dimensions, 150 by 463 feet. Like the lock, dry dock, with power to operate perpetually, is deeded to the Government gratis, after being built by the water-power company at its own expense.

THE DEVELOPMENT HAS GREATLY IMPROVED NAVIGATION.

BENEFICIAL CHANGE IN NAVIGATION CONDITIONS.

Formerly the Des Moines rapids in the Mississippi River extended from Keokuk upriver about 12 miles, with a slope of about 23 feet in that distance. To enable steamboats to pass above Keokuk the United States many years ago built a canal about 9 miles long, with three locks 80 feet wide and a lift of about 8 feet in each. These locks were almost worn out and would have needed large repairs in 1913. The cost of operating the canal is stated by Montgomery Meigs, United States civil engineer in charge, to have been over $40,000 a year. (Hearing by War Department commission and in several public statements.)

These former conditions are replaced by a lake about 40 feet deep at the dam, and raises the gauge zero at Burlington over 7 feet; one lock requires about 15 minutes only for its operation; in the lake above the dam steamboats now ply in straight courses instead of the frequent tackings required to keep the channel in other parts of the river. The river landings along the lake have a more constant height above the water, which rises and falls little with the changes in river stage. Various upriver towns contemplate building modern river terminals, and the Mississippi River Power Co. has built docks at Hamilton, Ill., and Montrose, Iowa, at its own cost.

The value of the improvements to navigation caused by the Keokuk Dam is difficult to state in terms of dollars. The United States saves in the cost of maintaining and operating the old canal $25,000 a year; the cost of wing dams and dredging to provide a channel between the head of the old channel and a point above Burlington, which Col. C. W. Durham, United States Army, stated would save the Government about a million dollars; the replacing of a comparatively small dry dock at the old middle lock by the largest dry dock in fresh water in the world, which, like the lock, becomes the property of the United States upon completion at the cost of the company, with a power plant for its perpetual operation. These and other items make a total which may be conservatively estimated at a capitalization of

$5,000,000, which a number of steamboat men place at $10,000,000. The variation is caused by different estimates of costs and benefits made by the Government engineers.

It has been stated that the Government is required to purchase power for lock operation. This is not true. The Mississippi River Power Co. built at its own expense an independent water-power plant for this purpose which was given to the United States. The arrangement, contrary to statements which have been made, makes the Government independent of the power company.

The Keokuk Lock is 110 feet wide, 400 feet long inside the chambers, with a normal lift of 40 feet, which is the same width and higher lift than in any one lock chamber at Panama. The first boats locked through were two of the largest boats on the upper river, at the same time. The lock was opened June 12, 1913. Before the close of navigation in that year there passed 98,281 steamboat passengers, which was more than double the number in 1912, and steamers aggregating 162,029 tons, an increase over the previous year. (See official report of lock station.)

NEED OF IMPROVEMENT RECOGNIZED.

The improvement to navigation to result from the building of the dam was investigated, discussed, and recognized before construction began.

The river and harbor act of June 13, 1902, in the first paragraph thereof, authorized the Secretary of War to cause an examination to be made of the Mississippi River at the foot of the Des Moines Rapids to determine whether a dam constructed at the foot of said rapids would be a benefit or impediment to the navigation of said river. As a result of this resolution the Government engineer made a detailed report September 22, 1902, showing the many advantages to navigation of the proposed development.

The Upper Mississippi River Improvement Association and its officers, by resolutions and public statements, approved the effect to be had on navigation. See resolution of October 10, 1906; report made on October 7, 1909; speeches of president of association July 12, 1910, and October 26, 1911, in which he said:

The dam will create a deep pond of practically slack water, over 40 miles long, and by having only one lock instead of three, as now, there is no question but that it will be a great boon to navigation on that stretch of the river and a large saving to the Government in costs of operation over the present system of locks and canals.

The General Government and the water-power company both realize the value that each is to the other, and especially the General Government realizes that the water-power company has been liberal toward it in the navigation end of the enterprise.

Your association can proudly point to the fact that for many years it has been a constant and loyal worker for the success of this development now rapidly being completed, and you have reason to be especially encouraged in the work you have in hand in finding your efforts in this behalf crowned with success.

The work and its effect on navigation were approved officially by the Illinois Legislature by resolution in January, 1905.

The Trans-Mississippi River Congress approved by resolution the work and its effect on navigation.

BENEFICIAL EFFECT OFFICIALLY RECOGNIZED.

The general effect upon navigation has been so beneficial that it is a matter of common knowledge and universally admitted by Government engineers.

Maj. Meigs, in charge of the Des Moines Rapids Canal, in an address at Hannibal, Mo., in the fall of 1913, in speaking of the Keokuk water power and the Mississippi River Power Co., used the following language:

After 60 years of dreaming that it could be accomplished a genius comes along and makes the dream a fact. Congress authorized this because it was seen to be a conservation of something going to waste and valuable to the whole of this country. It is saving right now a thousand tons of coal daily, 365,000 tons per annum, and when fully developed will save much more. So far as I can see the men who built that power have acted in good faith with the Government.

They have replaced our old canal, with its slow navigation and the dangerous 3½ miles of rocky channel below Montrose, with a lake 40 feet deep, where boats can run at top speed without thinking about the channel nearly to Burlington.

Lake Cooper itself is a beauty spot that the steamers have brought thousands of tourists to see and which vies with Lake Pepin in scenic beauty. The old locks, whose dimensions were too small for the largest modern river boats, have been replaced by a great lock sufficient in dimensions for anything likely to come along in the next 50 years.

They have shortened the time by river between Keokuk and Burlington two hours. The lock and dry dock are built even better perhaps than the Government would have built for itself. They have shown no inclination whatever to spare any expense in making what they built for the Government what they tried to do for themselves, a work as perfect as the present knowledge of engineering enables them to do.

They have cut down the $40,000 which it took to operate the old canal to $14,000 per annum; capitalized this means $560,000. The lock and dry dock will cost them $1,000,000. They are cutting a channel through the rock bottom below the lock to give a 7-foot depth at low water that will cost them $100,000 to $150,000 more. They are to give the Government $50,000 to be used as it sees fit in improving the river, if necessary, below the bridge at Keokuk. The improvement of the river between Keokuk and Burlington rendered unnecessary by the dam means an added $900,000.

Gen. W. H. Bixby, United States Army, retired, former Chief of Engineers, on October 19, 1913, said:

The completion of the Keokuk Dam I regard as a gold mine to this section of the valley. * * * Your future is assured if you grasp the opportunities confronting you. I notice the steamboat men are apparently misinformed regarding the holding back of the water by the power company, as, to my mind, the dam is of great benefit to the boats plying this section of the river, below as well as above Keokuk. * * * The power company would not hold back water for two reasons: First, because if they could hold it back for over 24 hours, it would be illegal, and, second, it would be bad business policy. * * * You must also note that if the water should at any time be kept back for a few hours and the water should change its stage, the steamboats, by waiting, would have the same chance that a steamer waiting for the tide has and get the benefit of a better stage of water than if they moved before the high water had a chance to help them.

Brig. Gen. A. Mackenzie, Chief of Engineers, United States Army, in memorandum to Secretary of War, March 24, 1908, said:

It will be noted, moreover, that the company obligates itself to contribute $50,000 whenever required to aid in any work * * * below the dam for the purpose of increasing the depth in that portion of the river. Attention should, therefore, be invited to the great advantages resulting to the navigation of the river by the construction of these works. These are:

First. The elimination of two locks in passing the Des Moines and substitution of one lock for the three.

Second. The substantial increase in dimensions of this lock. This feature is very greatly emphasized and its value to river commerce is urged in strong terms by leading representatives of river interests.

Third. The substitution of a canal trunk 11½ miles long of limited width and depth for a wide and deep pool 40 miles long, carrying all navigation of the best possible type from Keokuk practically to the city of Burlington.

Fourth. The reconstruction of the Government dock at Keokuk.

The United States engineer who has charge of the lock for the Government at Hannibal, Mo., October 15, 1913, said:

This one delay to the *Quincy* (Streckfus Line) is the only one I know of to any boat due to low water last season. The *Keokuk*, the daily packet (Blair's White Collar Line), got aground at the landing, but that was because they took no precautions such as every boat uses at St. Louis in setting spars to keep the boats away from the bank. * * * At once, after the occurrence of August 26 (to the *Quincy*, due to some big stones not yet removed by the dredges), the officials of the power company took steps to minimise these fluctuations as much as possible.

In a letter by Lieut. Col. Leach, Corps of Engineers, dated April 9, 1908, he said:

I am sure that we all highly appreciate the fullness of satisfaction which you express at the outcome of our recent negotiations anent the *Keokuk* and Hamilton Water Power Co.'s proposition. The discussion was in many of its aspects a novelty in the experience of this office. To have the interests of the United States carefully recognized by persons whose personal interests were adverse, is a pleasure we do not often enjoy.

Maj. Charles Keller, Corps of United States Engineers, said at a public hearing on August 14, 1912:

Col. Burr suggests that, in justice to the United States and to aid you and the interests you represent to take a more liberal view of the entire situation, it is proper to explain that the power company has, in its relations with the United States, conceded everything that the United States has asked in behalf of navigation and has also given a great deal over that to the United States that it has not expected, and every citizen ought to understand that in all the relations between the power company and the United States the power company has not only tried to do everything that is necessary, but it has given things that we regard as almost superfluous, but are nevertheless useful, and have involved a good deal of expense, at least $200,000.

DEEPER NAVIGATION PROVIDED FOR.

The Government originally planned to have water 8 feet in depth over the miter sill in the new lock. The upper lock gates, as constructed, provide for 11 feet of water over the miter sill in the lock. This difference made the gates more expensive than if the concrete miter sill had been built up higher and a gate of 8 feet provided, but in this way a deeper waterway was rendered available and the more expensive gates were installed.

In a letter of January 20, 1906, Maj. C. S. Riché, Corps of Engineers, United States Army, wrote Mr. Cooper in regard to the question of gates:

Regarding design for similar structures at Keokuk, especially as to choice between metal and wood for gates, what I believe to be proper is that the United States should require what is most economical in ultimate cost, first cost being given proper weight. For example, steel gates would unquestionably be most economical to the United States in ultimate cost, where in this case you, and not the United States, had to pay the first cost; but this would hardly seem equitable.

We believe you should be required to put in what the United States would put in if it was doing the work itself. With this view, therefore, it may develop that wooden upper gates would be the most economical, in which case I would be willing to accept them.

Steel gates were put in nevertheless. Two gates, in fact, were put in where, if the Government had been doing it, doubtless only one would have been installed.

INCIDENTAL PUBLIC IMPROVEMENTS.

GOOD ROADS.

The power company flooded public highways on both sides of the river above the dam. A far better road on both sides of the river was constructed. This road is over 25 miles in length.

Much of the distance along the river the old road was established by prescription, and was no wider than the actual traveled way. This was replaced with a wide road—for much of the distance 15 to 20 feet wider, crossing iron bridges with concrete decks.

From Keokuk to Montrose, in Iowa, and from Hamilton to Nauvoo, in Illinois, an excellent roadbed was dug out of the sides of the hills, graded to a very nominal grade, with no steep inclines, properly ditched and properly bridged, and a good, heavy macadam roadbed constructed.

On the Illinois shore between Nauvoo and Fort Madison a roadway was constructed which hitherto has been suitable for travel only by pedestrians and those on horseback, and across a creek was swung an excellent iron bridge, which hitherto has not been spanned by any bridge.

FLOWAGE AND OTHER LANDS SECURED BY DIRECT PURCHASE.

The power company purchased outright 23,232.75 acres of land and, in addition, acquired the right to overflow 5,696.41 acres. In acquiring its land rights it expended $3,075,885.52. In acquiring the necessary rights in regard to overflow land it had dealings with over 1,000 landowners and had only two condemnation suits.

In both cases the jury awarded a less amount than had been offered by the power company. In addition to this the power company purchased a transmission line to St. Louis, Mo., a distance of 147 miles, and a branch to Alton, Ill., of some 28 miles in length; and there was not a condemnation suit had in connection with the purchase of the entire transmission line right of way.

RAILWAY IMPROVEMENTS.

The Chicago, Burlington & Quincy Railroad Co. relocated its entire right of way from Keokuk to a point about 2 miles north of Montrose, placing it upon a modern, substantial roadbed. In addition to this, the Chicago, Burlington & Quincy rebuilt and relocated its entire switching yards in Keokuk, Iowa, and expended thereon an immense sum of money.

The Keokuk Electric Co., which was the owner of the street railways in Keokuk, relaid practically its entire railway system, put on new cars, discarded the old ones, and in many ways improved its railway and street car system.

RIVER FRONT.

The scenic beauty along the river front was very much improved. Heretofore the river banks had been lined with willows, driftwood, and an irregular growth of trees, which were removed.

At Montrose, Iowa, the company expended a considerable sum of money in the construction of a wharf. The wharf formerly at Montrose was a muddy river bank with sloping sides. The company has filled in the water, piled in rock, rolled the same, and raised the earth above the new water so as to provide a splendid wharf extending the full length of a block.

At Hamilton, Ill., the company constructed a wharf of considerable length in a similar manner to that at Montrose, and also built a warehouse for the city on the wharf.

At Fort Madison the company filled in a considerable part of the river-front park and added to its area, raising the same above the new water level, and in addition to that gave the city $10,000, which it could use in any way it saw fit in building a harbor.

INCREASE OF TAXABLE VALUATION.

The taxable valuation has increased and in a large part is attributable to the construction work of the development. Practically all the property that has been purchased by the power company was increased in the assessed valuation given it.

STIMULATION OF PUBLIC IMPROVEMENTS.

Immediately after the commencement of the construction work on the power house, lock, dry dock, and dam there was a great impetus given public improvements in all the cities roundabout. In the smaller cities proprietors of store buildings tore the front of their establishments out and made them into modern store fronts; where there had been old and dingy stores, the buildings now have modern entrances and are well lighted. There was a general improvement in all forms of private property in Keokuk, Hamilton, and other surrounding cities.

New waterworks systems, lighting systems, both gas and electric, have been installed in the cities of the zone of power distribution. The city of Hamilton, for instance, spent $100,000 for a sewerage system. At Keokuk the Government grounds have been quadrupled in area, all of which is raised up level with the sea wall, and on this will be constructed a Government office building and other shops and necessary buildings which the Government has required. All of these will be larger and more commodious and more substantial than the buildings formerly owned by the Government. The buildings that were formerly located here were old sheds and in a very much dilapidated condition, and were of little or no value. The office building, while it was substantial and well built, was small and overcrowded.

The company has also agreed to pay to the Government, at any time it sees fit to demand it, $50,000, to be used in improving the river bed south of the lock and dry dock.

CONSERVATION AND INDUSTRY.

AVAILABLE POWER GREATLY INCREASED.

Study of population, manufacturing, and coal production in the United States leads to the inevitable conclusion that the maintenance of the present standard of civilized living depends greatly upon the ability to produce cheap power in ever-increasing quantities. The dam and hydroelectric plant at Keokuk, Iowa, and Hamilton, Ill., has added already 120,000 delivered horsepower to the available supply. The ultimate capacity is nearly double the present capacity. This is 12 per cent of the existing water power in the United States. (Figures based on United States Census Bureau.) It is 4 per cent of the capacity of all electric stations in the United States in 1912. (United States census figures.)

CONSERVATION OF COAL SUPPLY.

A plant or plants capable of delivering by coal consumption the present output of this Keokuk hydroelectric development would require over 500,000 tons of coal per year, more than 2,000 tons per day.

The resource of this water power has been and would be wasted for every day that it remained undeveloped.

Had this plant been constructed 10 years earlier, assuming the demand for power to have been the present demand, 3,600,000,000 kilowatt hours would have been caught and used by mankind.

At the average rate of income per kilowatt hour of all the electric stations in the United States, this 10 years of undeveloped power has wasted over $94,000,000.

At the rate of income per kilowatt hour of electric energy of the Mississippi River Power Co., approximately $18,000,000 of value in production electric energy has been lost in the 10 years before development was made.

ENCOURAGING NEW ENTERPRISE.

The Mississippi River Power Co. now has a capacity of 120,000 horsepower (delivered). It has thus far been able to market only 92,000. To increase its sales the company has formed an industrial department to assist the industrial associations and commercial bodies in the towns served by the transmission lines of the company in securing interest toward the ultimate location of manufacturing industries. This department has recently secured offices in Chicago and in New York, at which places men will be stationed to assist in this general work, so that interviews can be had without any appreciable loss of time for traveling, at the same time offering opportunity to the industrial bodies in the different towns to have a place to meet with prospective manufacturers.

Arrangements have been, or will be, made with many agents located in different parts of the United States to assist in this general work and to forward to the industrial department of the Mississippi River Power Co. information relating to the possible moving of existing plants or the formation of new companies, so that steps may be taken to persuade them to locate in the power zone. The expense of this work is estimated at $25,000 a year.

Any of the industrial associations in the power zone will testify to the cooperation furnished.

HOW THE COMPANY SELLS ITS POWER.

A WHOLESALER—ITS TRANSMISSION LINES.

The Mississippi River & Power Co. is a wholesaler and not a retailer of electric energy; it sells energy in large blocks only. The company has built lines to East St. Louis, Ill., serving through retail companies St. Louis, Alton, a plant in Hannibal, Mo., the city of Quincy, and a few other customers hereafter mentioned, and to Burlington, serving Nauvoo and Dallas City, Ill., Fort Madison and Burlington, Iowa. The line to St. Louis is of 110,000 voltage; that to Burlington, 11,000 voltage. The company serves also the public-utility companies at Keokuk, Iowa, and Hamilton, Ill., direct from the power house.

SERVICE OPEN TO ALL.

The company is a public-service company, and sells without discrimination to all who require its service. To take service from the high-tension transmission lines requires substations, transformers, and other transmission lines—apparatus which must be paid for by the buyer or included in the cost of service by the seller. The fact that any prospective buyer has or will in the future be met by this immutable economic condition is not chargeable to the company and is not discriminating in any sense.

PRINCIPAL SALES TO PUBLIC UTILITIES.

Its principal sales of power are to public utilities which have been established in the business of retailing electric energy and which have franchises of their own and investment in distributing systems.

The public utilities to which power are sold are in Iowa, Illinois, and Missouri, each of which States, except Iowa, now has a public-service commission which is empowered to regulate rates and service of these public utilities. In Iowa the municipalities have this power.

The Mississippi River Power Co., when contracting to sell electric energy, has not attempted to fix the resale price of electric energy, except that it has insisted that rates charged in resales shall not be above the maximum established by the rate schedule of the company, a provision which benefits the consumer. The Mississippi River Power Co. is not, however, chargeable with responsibility for resale prices.

EXISTING CONTRACTS ANALYZED.

The company has contracts to supply power to the following public-service companies:

First. People's Gas & Electric Co., of Burlington, Iowa. This is the name of the local company at Burlington which supplies light and power. No one connected with the Mississippi River Power Co. has any interest in that company. It is a company that is controlled by what is known as the Walsh interests. The Walsh people have no interest in the Mississippi River Power Co. aside from their interest in this contract.

Second. Nauvoo Electric Light & Power Co., of Nauvoo, Ill. This is the local company which suplies light and power in Nauvoo, Ill., and the Mississippi River Power Co. does not own any of its stock and has no connection with the management of that company.

Third. Quincy Gas, Electric & Heating Co., of Quincy, Ill. This is the name of the local company supplying light and power at Quincy, and is not connected in any way with the Mississippi River Power Co. other than by this contract.

Fourth. East St. Louis Light & Power Co., of East St. Louis, Ill. This is the name of the local company supplying light and power at East St. Louis, and is not identified with the power company in any way with respect to stock ownership or control of either company. This company also supplies light and heat at Alton, Ill., and it is controlled by what is commonly known as the Clark Syndicate, and the power company has no stock interest in this company.

Fifth. North Missouri Light & Power Co. This company is to serve the towns of Perry, Center, New London, and Frankford, Mo. It is a local company organized by local men, and that company has no interest in the Mississippi River Power Co. other than this contract. Neither does the power company have any interest in that company.

Sixth. E. T. Perkins Syndicate. This company is to serve territory in Marion County, Mo. This company is not interested in the Mississippi River Power Co. Neither is the power company interested in the Perkins Syndicate.

Seventh. The Electric Co. of Missouri, of St. Louis, Mo. This company was formerly known as the Mississippi River Power Distribution Co., and is controlled by men identified with the North American Co. The power company has no interest whatever in the stock or profits of the Electric Co. of Missouri or its predecessor aside from the contract with it.

Eighth. The Central Illinois Public Service Co. This is a corporation that serves a number of towns in central Illinois between the Mississippi and Illinois Rivers, extending as far south as Jerseyville, Ill. It is a company organized by Samuel Insull and men identified with him. The power company has no voice in its affairs or management and no interest in it aside from the contract for power.

Ninth. In addition to the foregoing, the power company has contracts to serve a few private concerns not within cities, such as the Atlas Portland Cement Co. and the E. I. du Pont de Nemours Powder Co. These are consumers of large blocks of power and have built up their own industrial communities.

In none of the foregoing companies, however, do any of the officers of the power company have any voice in the affairs of said companies, and neither do those companies have any interest in the Mississippi River Power Co. aside from the contracts. The relation between them is merely that of wholesale power seller and buyer.

Tenth. Neither the men identified with the North American Co. nor the Central Illinois Public Service Co. nor the Electric Co. of Missouri have anything to do with the management and operation of the Mississippi River Power Co. The Electric Co. of Missouri sells its power to the Union Electric Co., of St. Louis, and the United Railways, which are companies owned and controlled by the North American Co.

Eleventh. In addition to the foregoing, the Mississippi River Power Co. has a contract with the Fort Madison Electric Co., of Fort Mad'son, Iowa; the Keokuk Electric Co., of Keokuk, Iowa; and will have a contract in the near future with the Dallas City Light Co., of Dallas City, Ill. These three companies serve the people in their towns with light and power, and each of these three companies is managed by the Stone & Webster Management Association, which manages the power company.

The prices charged these companies by the power company for electric energy are based upon the same rates and methods of charge which may be enjoyed by any of its customers demanding the same service.

The rates charged by them to the consumers are as low as, or lower than, any in effect in the cities where the energy of the power company is distributed under like condition.

COMPANY'S RATES FOR POWER.

LESS THAN 6 MILLS PER KILOWATT HOUR.

The company necessarily does a wholesale business only, dealing with customers whose minimum requirements are 100 horsepower.

Its rates are based upon the kind of power sold.

Two kinds of power are sold, i. e., primary power and excess power.

Primary power is power which the company obligates itself to deliver for 365 days in the year.

Excess power is power which the company is able to deliver at times when the river flow will allow it to do so, and the purchaser operating his own generating plant at such times as the company is unable to deliver. Rates for this class of service are approximately one-half those charged for primary power.

These rates are based upon a scientific schedule.

The average income yielded to the company per kilowatt hour is less than 6 mills.

The average income per kilowatt hour of all electric-generating plants in the United States is 2 cents and 6 mills. (See U. S. Census reports.)

COAL COMPETITION OVERRIDDEN.

The effect of this cheap electric energy has been to override the competition of coal-generated power. Any statement to the contrary is false and is refuted by the following facts:

An analysis of various steam plants in the Mississippi Valley, 22 in number, with a total capacity of 4,730 horsepower, plants which have replaced steam drive with electricity since the new development was made, shows a cost varying from $21 to $67 per horsepower year on the steam plant, and $17 to $50 per horsepower year on electric drive. The accompanying table gives the actual conditions and costs of the energy required in the manufacturing processes of these plants. The number of tons of coal saved yearly is 68,550.

Steam.

Plant No.	Horsepower.	Total cost.	Cost per horsepower year.	Total cost.	Cost per horsepower year.
1	100	$5,200	$52.00	$4,800	$48.00
2	330	15,180	46.00	9,800	30.00
3	200	7,600	38.00	5,600	28.00
4	100	6,000	60.00	3,500	35.00
5	100	4,300	43.00	2,530	25.00
6	50	2,606	52.00	1,432	28.00
7	275	14,000	51.00	12,000	44.00
8	80	5,000	62.00	3,600	45.00
9	275	13,000	47.00	8,700	31.00
10	250	9,000	36.00	8,000	32.00
11	80	4,600	57.00	3,300	41.00
12	150	4,500	30.00	2,800	15.00
13	125	7,800	62.00	6,300	50.00
14	75	5,000	67.00	2,500	34.00
15	60	1,900	32.00	1,000	17.00
16	330	9,000	27.00	7,500	23.00
17	200	7,700	38.00	5,900	29.00
18	450	9,500	21.00	7,500	17.00
19	700	21,000	30.00	15,000	21.00
20	600	12,500	21.00	10,000	17.00
21	200	10,800	54.00	5,300	27.00
22	1,200	50,000	42.00	34,400	29.00

NOTE.—Variation in cost per horsepower due to variation of load.

STEAM PLANTS DISCARDED.

That the electric energy sold by the company is low in price and much lower than that generated by coal and steam is indicated not only by the fact that purchasers have bought it, but by the fact that, discarding steam generation and preparing to receive electric energy, they have invested, on their own account, in equipment, a total of over two million and a half dollars.

REDUCTION IN RATES TO CONSUMERS.

The Mississippi River Power Co., as has been explained, does no retail business. Its sales of cheap energy to public utilities

furnishing current for lighting purposes, however, has been the cause of marked reduction in rates in the zone of its sales. Any allegation to the contrary is refuted by the changes in the retail lighting rates since the company began its sale of power in the territory served.

A typical effect in the result of the retail rate reductions can be shown in the case of Keokuk. There the average receipts per kilowatt hour have been reduced 29 per cent, or from 4¼ cents in 1912 to 3.01 cents in 1913.

RETAIL LIGHTING RATES REDUCED.

These reductions vary according to size of the community served, state of development of the service, improvements needed, and distance of transmission, as shown by the following:

Burlington, Iowa.

OLD RATES.

Residence lighting:	
First 30 kilowatt hours	$0.126
Next 60 kilowatt hours	.108

Monthly minimum charge for elevator service, $1 net per horsepower per month.

Maximum demand: For 1 to 5 horsepower, inclusive, the connected load will be taken as demand. Above 5 horsepower 80 per cent of the connected load will be assumed as demand.

For 10 horsepower or more of connected load measured demand at maximum load may be used instead of 80 per cent of connected load.

Wholesale power: Five cents to 3 cents per kilowatt hour.

Wholesale power: For not less than 50 horsepower, a monthly maintenance and investment charge of $0.67½ net per horsepower, together with a current charge of $0.0135 per kilowatt hour for the first 8,000 kilowatt hours' use each month, and $0.0054 per kilowatt hour for the kilowatt hours taken each month in excess of 8,000.

A discount of 10 per cent is allowed on the kilowatt-hour charge provided monthly bill is paid by the 10th of the following month.

Kcokuk, Iowa.

Same reductions as at Hamilton, Ill.

Quincy, Ill.

After Mississippi River Power Co. service was contracted city council made local company adopt a schedule reducing rates substantially to conform to other reductions in power zone. This schedule is as follows:

(See Quincy ordinance No. 523, sec. 17.)

OLD RATE.

Commercial: Flat rate of 11.4 cents per kilowatt hour.
Retail power rates: 5 cents to 3 cents per kilowatt hour.
Wholesale power: 5 cents to 3 cents per kilowatt hour.

NEW RATE.

Commercial:	
First 30 kilowatt hour use of one-half connected load	$0.11
Next 60 kilowatt hour use of one-half connected load	.09
All excess kilowatt hours	.05

Retail power rates: 0.06 for first kilowatt hour per horsepower of connected load; 75 cents per horsepower per month minimum.

1 to 10 horsepower, 100 per cent of connected load.
11 to 20 horsepower, 80 per cent of connected load.
21 horsepower and up, actual measured demand.
Next 1,000 kilowatt hour, at 2 cents.
Next 1,000 kilowatt hour, at 1.5 cents.
All excess, 1 cent.

For a customer's use of over 3,000 kilowatt hours per month a discount of 10 per cent.

Wholesale power: For not less than 100 horsepower, a monthly maintenance and investment charge of 75 cents net per horsepower, together with a current charge of .015 cents per kilowatt hour for first 8,000 kilowatt hours used each month, and .006 cent per kilowatt hour for the kilowatt hours taken each month in excess of 8,000.

A discount of 10 per cent is allowed on kilowatt hours charged, provided a monthly bill is paid by 10th of following month.

Seamen's Bill.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 12, 1914.

Mr. BRYAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following letter:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., August 11, 1914.

Hon. JAMES W. BRYAN,
Member Committee on Merchant Marine and Fisheries, House of Representatives, Washington, D. C.

SIR: It has come to me that the Committee on the Merchant Marine and Fisheries, of which you are a member, is about to have a meeting for the consideration of a number of corrections and amendments to the committee's substitute for Senate bill 136, commonly known as the seamen's bill, and having in mind that you, as well as your associate members of the committee, would desire to have enacted a bill which shall for at least a long period of time have the effect of determining a better condition for seamen, I am impelled to submit to you a few thoughts which I trust may commend themselves to your earnest and favorable consideration. From the information which comes to me there appears some doubt upon incorporating in the bill certain features, and it is to these I desire to apply myself.

As you know, section 4 of the committee's substitute bill provides that the seamen shall be entitled to one-half of their pay in any port where the vessel loads or discharges cargo. This provision is made applicable to foreign vessels while in harbors of the United States—

Provided, That treaties in force between the United States and foreign nations do not conflict herewith.

My information is that the half-pay provision would apply to the vessels of Great Britain and of Japan only, and there is some doubt as to Japan, by reason of the most-favored-nation clause in our treaty with that country.

When other workingmen leave their employment they usually receive the wages earned. The purpose of the proviso seems to be to deny to the seamen even one-half of the wages earned, and thus compel them to remain with the vessels against their will. What justification can there be for any law that would give to a man the right to quit his employer but would authorize the employer to withhold from him all the wages that he had earned, and thus leave him destitute among strangers in a strange country? Such a law can have but one purpose, namely, to compel men against their will to remain with the employer.

Then, again, as you know, section 11 of the committee's substitute bill prohibits all advancement of wages or any allotment to an original creditor, and this section is made applicable to foreign vessels while in the ports of the United States. But you will observe also that the following proviso is incorporated in this section:

Provided, That treaties in force between the United States and foreign nations do not conflict herewith.

Under this proviso I am advised that German vessels would be enabled to continue to pay advances, and it is not necessary to call your attention to the fact that other nations might, and no doubt would, claim the same right under a most-favored-nation clause of any of existing treaties or under treaties which may be negotiated.

The provision in the Senate bill was to destroy the pernicious crimping system, a system which every student of the seamen's situation, and everyone who hopes to do fairly by the seamen, has denounced and undertaken to remedy.

I am advised that the subject determining the three shifts for the firemen, oilers, and water tenders has been satisfactorily concluded, and therefore it is not necessary that I should refer to that subject herein. I trust, however, that no more than four hours' continuous work in the fireroom shall be required of these workers.

May I submit that sections 4 and 11 of the committee's substitute bill be so changed as to strike out the provisos contained therein?

Summarizing the above, I respectfully submit for your favorable consideration that sections 4 and 11 of the committee's substitute be so changed as to strike out the provisos hereinabove quoted, and that section 16, page 72, be amended, on line 5,

by inserting, after the word "imprisonment," the words "and any other treaty provision in conflict with the provisions of this act," so as to make the House committee's substitute correspond with the Senate act on this particular point.

In the form herein suggested, and to maintain the integrity of the purpose of the bill, I earnestly submit to your serious and I trust favorable consideration and action that it may pass the House, so that the other differences between the Senate bill and the committee's substitute may be then considered in conference and passed.

Of course I understand that some men may entertain grave doubts as to the wisdom of granting this new freedom, and particularly to seamen. Indeed, there never was conceived an idea to give greater freedom to any people but what was viewed with great concern and alarm. It is not necessary to call your attention to the fact that greater freedom has always been accompanied with greater self-respect, self-restraint, and a higher and better conception of duty and obligation. Shipowners and masters of vessels have for centuries believed not only in the necessity of their absolutism in dominating the lives of the seamen at sea, but when the ships were in safe harbor. Under the old and still existing conditions the fact that seamen in foreign ports could be hounded and hunted and returned to their vessels and perform compulsory, involuntary labor, gave the masters and shipowners such a tremendously unchallenged power that they treated the seamen tyrannically and often brutally.

The legislation proposed in the bill and as herein suggested would, it is true, give the seamen some freedom to quit their employment when the vessel was in safe harbor, but it would be at the sacrifice of half the pay they had already earned, and it is only a fair presumption that they would not quit the vessel and make that sacrifice if conditions on the vessel for the return trip were at all tolerable, but that they would have the right to quit the vessel in safe harbor when the conditions were intolerable they could do so by making the forfeiture of half their pay and yet have some little means to tide them over for a brief period and to seek employment upon another vessel, and this newly acquired right would compel better consideration and treatment at the hands of shipowners and masters, and unquestionably tend not only to reduce the number of desertions, but to bring about a better mutual understanding between all concerned.

I am sending a copy of this letter to each member of the House Committee on the Merchant Marine and Fisheries.

Very respectfully, yours,

SAML. GOMPERS,
President American Federation of Labor.

Coastwise Ships Ought to Be Safeguarded as Well as Cotton or Corn.

EXTENSION OF REMARKS
OF
HON. JULIUS KAHN,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 15, 1914,

On the conference report on the bill (H. R. 18202) to provide for the admission of foreign-built ships to American registry for the foreign trade, and for other purposes.

Mr. KAHN. Mr. Speaker, there are several provisions of this conference report that are open to severe criticism, but that provision which would put the newly acquired vessels into the coastwise trade even for a limited period of two years is downright vicious and ought to be defeated. Does anyone here believe that these vessels will be withdrawn from that trade in two years from now? Why, you all know better than that. It will be the old story of the camel first getting his head under the tent, preliminary to getting his whole body into it. This provision is manifestly unfair to the steamship lines now engaged in the coastwise trade of this country for a number of reasons. In the first place, the American ships at present in that trade were all constructed in American shipyards. They could have been built in foreign yards for from 40 to 50 per cent cheaper than in the American yards, the additional cost being largely due to the higher wages paid in this country. There is no doubt about that.

Take a case in point that I know about personally. Within the year the Matson Navigation Co., of California, constructed two new steamers to ply between San Francisco and the ports of the Hawaiian Territory. They are the *Matsonia* and the *Manoa*. The former cost $1,450,000 and the latter $800,000. They were built at the Newport News Shipbuilding Co.'s plant, in the State of Virginia. Under existing law they had to be built in this country in order to run in that trade between the ports of San Francisco, Honolulu, and Hilo. These two vessels are not yet a year old. They could have been built in a foreign shipyard for about $1,350,000. At the very outside they might have cost abroad $1,500,000, thereby saving the company on the two ships from $750,000 to $900,000. In order to run these ships profitably the company must figure earnings on $2,250,000. It must figure insurance on that basis. It must earn enough on that amount to enable it to write off 5 per cent every year on the investment, in accordance with the rule universally followed in the shipping industry. It carries a crew hired in the United States and pays American wages to its officers and men. How can the company hope to compete with ships built in foreign shipyards at 60 per cent of the cost of their ships, with officers and crews shipped in foreign lands and receiving foreign wages? The thing is simply impossible. The Americans will be driven to the wall if this folly be persisted in.

And what is true of the Matson Co. is equally true of every other company in the coastwise trade of the United States. Ah, Mr. Speaker, I know the difficulties under which the American companies running between the mainland of the United States and Honolulu have labored. Some years ago an agitation was started to abolish the coastwise trade laws between the Hawaiian Islands and the mainland. If the fight for the repeal of those laws had been successful, it is doubtful whether we would have any American ships in that trade at this time, except possibly the Pacific Mail Steamship Co.'s vessels. The Japanese line, the Toyo Kisen Kaisha, officered and manned almost exclusively by Japanese and Chinese—whose wages are only a small fraction of the wages paid to the officers and men on American ships—this Japanese line, whose ships cost only a fraction of what the American ships cost, would have run the latter off the Pacific Ocean long ere this. I had the honor of leading that fight against repeal on this floor on several occasions. Fortunately the legislation was never enacted. As a result seven splendidly equipped American ships have been put into that service within the past five or six years, and to-day there is no complaint from Honolulu or anywhere else about inadequacy of steamship accommodations between the mainland and the Hawaiian Islands. By having given the American companies a chance for their lives those companies have made good and have added a considerable tonnage to our merchant marine.

And now it is proposed once more to inflict hardships on those whose money is invested in these ships. When this proposed emergency legislation was offered in this House there was no reference in the bill to the coastwise trade. That provision, not exactly in the form in which it is now before us, was inserted by the body at the other end of this Capitol. Sirs, you from the Southern States, and you from the Mississippi Valley region, who want to protect the investments of your cotton growers and your corn growers, ought to have some consideration for those Americans who have invested their money in ships built in American shipyards and paying American wages to their officers and crews. These American shipowners are just as much entitled to your consideration as are your cotton growers and your corn growers. Ships are as valuable as cotton or corn. The money they represent is just as material to the country's welfare as is the money represented by cotton or corn.

Oh, this matter of the upbuilding and maintenance of the American merchant marine is not a new question. It has been thrashed out over and over again in this House and on this floor as well as in the Senate. We can sympathize with the agriculturalists of the South and Middle West who find themselves with bumper crops on their hands, but no ships in which to send those crops to the great world markets in which they are generally consumed. But, sir, the condition that exists to-day is entirely of their own making.

The Representatives from the Southern States and from the Middle West have constantly fought all attempts to build up an American merchant marine. These Representatives claimed to voice the sentiment of the cotton growers and the farmers of their respective sections. If the ocean mail pay bill of a few years ago had been enacted into law, as it should have been, we would have had to-day a goodly number of American-built ships, flying the American flag, engaged in the over-sea trade. They would have been able to carry not alone your crops to market, but to bring home the thousands of American citizens who now are marooned in the warring countries of Europe, looking with anxious eyes toward their own Government to

bring them home. The heartburnings, the worry, the annoyance, the nervous strain under which they are laboring would all have been avoided. Surely the present situation must be a lesson to you. Let us see if you can rise equal to the occasion. Let us see whether you can take the broad view of the question. Let us see whether you believe that the owners of cotton and corn are entitled to special consideration, a consideration which you would deny to owners of American coastwise ships. Let us see whether you are so thoroughly imbued with your own selfish interests that you are willing to sacrifice the interests of the men whose money is invested in American ships engaged in the American coastwise trade. Let us see whether you are big enough and patriotic enough and broad minded enough to take the larger view of this question and strike out the vicious clause that would deal such a severe, and, in many instances, fatal blow to the American coastwise trade.

The Democratic Administration and the Merit System.

EXTENSION OF REMARKS
OF
HON. FREDERICK H. GILLETT,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 11, 1914.

Mr. GILLETT. Mr. Speaker, the Democratic Party has now been in power long enough for us to judge of its purposes, not simply by its professions, but by its conduct. I wish to trace succinctly its conduct toward the civil service during the past 15 months. It shows an unvarying and unrelenting hostility to the merit system, evidenced by assaults so persistent that they have inflicted on it more serious damage than it has suffered in all the 30 years since first it was enacted into law. This has been accomplished in the face of the pledge of their platform, which hypocritically declared that—

The law pertaining to the civil service should be honestly and rigidly enforced, to the end that merit and ability shall be the standard of appointment and promotion rather than service rendered to a political party.

And with the acquiescence and assistance of their President, who before his election had been a vice president of the National Civil Service Reform League, and on resigning that office to become President declared that his interest and support of the cause would in no wise diminish.

Moreover, these assaults have been committed at a time when it was easier for a politician to support the merit system than ever before, because it had secured a stronger hold on the public favor. To stand up and fight for it 20 years ago required courage, for it was then imperfectly understood and had few friends. To-day in many sections of the country it has strong popular support, so that a man or a party can stand by its convictions or its promises without danger. The excuse of necessity or expediency no longer holds; if the merit system is assailed, it is from choice and not from popular compulsion.

In this House there has developed under this administration a system of partisanship and greed for spoils unexampled in recent history. Party discipline was not unheard of here before. For years the Democratic Party denounced the power of the Republican machine here and deplored the lack of individual influence and responsibility and the crushing omnipotence of the Speaker and his party management. Revolution against the rules was organized and successfully effected by a coalition between the Democrats and those Republicans who claimed that there should be more individual freedom and more exemption from party and machine domination. Yet in this very House, where the Democratic Party has for years proclaimed itself the champion of individual independence, there has resulted from the Democratic control a rough overriding not only of the minority party but of the majority party by means of secret party caucuses, which has established a party discipline and a party tyranny and an overthrow of individual influence and responsibility unknown for a generation.

I believe in party government and party responsibility, but I do not believe the people want all legislation originated and amended and completed in the secret caucus of one party. The tendency of late years has been against strict party domination, and Democrats in this House have been most vociferous and indignant in condemning it, but with power they seem to have acquired new principles and now themselves are practicing and elaborating and extending what they have so long been denouncing in us.

This year the party has not only framed in caucus the tariff bill and the currency bill in all their minutest details and bound themselves to support them without regard to individual convictions or the interests of their constituents, but they have also determined in caucus what other legislation should be permitted—and none could be introduced without caucus approval. And not only has this caucus rule prevailed in the House, but even in the Senate, where it has been unknown, where the pride of the individual Senator has established that famous and demoralizing "courtesy of the Senate"; even there this new steam-roller system of legislation has been successfully introduced and Democratic Senators have bound themselves in secret caucus to abandon their individual opinions and obey the majority. The Senate used to taunt us with our rigid rules and our previous question and boast that theirs was the only body of true deliberation and free and effective debate, but they must now abandon their claim, for debate in the open Senate on administration bills is now a farce; there, too, judgment has been made up in advance, minds are not free to be influenced by argument, speeches are made for the RECORD and not to affect the result—for that has already been decreed in a secret party caucus.

And if current rumor and opinion is correct, both in caucus and out of caucus the Democrats have recognized the controlling voice of their leader in the White House and the Legislature has obediently registered his will. There has been no such example of party discipline and party subserviency for a generation at least, and the individual influence and responsibility and equality for which Democrats in this House have been pathetically pleading for 10 years has absolutely vanished under their own system of legislation.

And as a natural corollary to this spirit of partisanship the old spoils system has revived and the cause of civil-service reform has already suffered more severely during this administration than in any period since it was first introduced.

At the beginning of the session an outcry was at once raised in this House against the order of President Taft extending the order of President Roosevelt and placing all fourth-class postmasters under civil service. I can well understand the dismay on that side of the House at seeing this time-honored relic of the old spoils system snatched away from them just as their mouths were watering for its reception, and it was not surprising that a movement was inaugurated to set aside such a depressing order. A motion was made here to exempt all fourth-class postmasters from the civil-service requirements. But the ingenuity of the administration was equal to the emergency and made this legislation superfluous. The enraged Congressmen who had been so violent against this extension of the civil service listened with satisfied and mirthful complacency to the manifesto of the President that the civil-service principle which had so outraged them was to be still further extended, and that as a further measure of reform all existing fourth-class postmasters were to submit to competitive examinations. The pent-up wrath was at once dissipated and the whole Democratic side experienced a miraculous conversion to this extremist extension of civil service. The program is for the Civil Service Commission to certify to the Postmaster General the three highest eligibles for each post office, and then he will ask the Congressman of the district which of the three would make the most efficient officer. Political considerations are nominally to be barred, but I can imagine just how many Republican postmasters will be indorsed or appointed in Democratic districts and how inefficient all opponents of the Congressmen will prove to be. Throughout the South they might just as well have printed in the circular of qualifications "no Republican need apply." Under the pretense of extending civil-service reform they are really devitalizing it, and under the ingenious cloak of a fresh examination they are accomplishing the purpose, which so many of them avowed, of turning Republicans out and installing Democrats in their places. That is not civil-service reform.

Exactly the same course has been followed with the assistant postmasters, except that in this case the change has been made by this House and not by the President. When the Post Office Committee reported the Post Office bill last winter it contained a provision taking all assistant postmasters out of the classified service and making them once more pure patronage appointments. This was peculiarly unjustifiable, for when President Taft covered the assistant postmasters into the classified service and so gave them a tenure during good behavior and prevented them being the spoils of politicians, he inserted a provision, different from any other, that this classification should only apply to such assistant postmasters as should be able to satisfy the Postmaster General of their capacity and efficiency. All men were not covered in—only the efficient ones. Moreover, it

is peculiarly important that the assistant postmaster should be a man experienced in the office and should not be turned out like the postmaster at every change of administration. He is the permanent, valuable man who can instruct the new postmaster and keep the office running properly during all changes, and even when an incompetent political hack is above him. Our system certainly needs such a class of officers. It is preposterous that such an enormous business institution should be managed as it is. A system which puts at the head of the largest and costliest business enterprise in the country a southern planter without any business experience and forces upon him for his agents thousands of politicians, many of them equally inexperienced and not selected for efficiency, such a system must cost this Government wasted millions of dollars—and ought to have some class of permanent and experienced assistants. Yet despite this the Democratic Post Office Committee, in making its appropriations of hundreds of millions for the service, recommended changing the law and making all assistant postmasters once more spoils appointments. To show that it was done for the purpose of getting the patronage I will quote a few sentences from the speech of the chairman, Mr. MOON of Tennessee, when advocating the change:

That is what I call a Democratic section of this bill. [Applause on the Democratic side.]

If the power were mine, I would put none but Democrats on guard. [Applause on the Democratic side.]

I want to say that so far as the postmasters and their assistants are concerned I would have the party in power to name them and to take the responsibility. You can not administer this Government in accordance with the principles and policies of the Democratic Party as decreed by the people at the polls a year and a half ago unless you have Democrats to aid in this administration. [Applause on the Democratic side.]

That is what the gentleman really desired, and that is what that side of the House really purposed; but the Postmaster General, who is a man of great ability and high purpose, opposed the change, and against his influence the Post Office Committee could not carry their proposition. So, being forced to drop that, they attempted to do indirectly what they could not do directly, and followed exactly the precedent of the fourth-class postmasters, and in their next bill provided that all existing assistant postmasters should be subject to a fresh competitive examination to show again the efficiency which they have already once proved. Of course the purpose is not to show who is efficient, but to enable the Congressman, when the names of the three who stand highest are certified, to have a chance to select a helpful politician and eject the trained and experienced official. Their real desire was disclosed by Mr. RUCKER, of Missouri, when advocating the original bill, in the following colloquy:

Mr. COOPER. Is it not true that under the policy or practice suggested by the question of the gentleman from Missouri [Mr. RUCKER] assistant postmasters were appointed in this way: The Member of Congress wanted it understood that if John Smith was appointed postmaster it was done upon the express condition that John Brown should be the assistant postmaster, and that in many cases the postmaster had to agree to that before he could get the appointment, and in that way the Congressman fixed up a part of his own machine.

Mr. RUCKER. That is exactly what I would do in every case, and I have no apology for it.

Is it not clear that the purpose of ordering new examinations for fourth-class postmasters and assistant postmasters was not to test the officials but to get party spoils?

Suspiciously contemporaneous with the new activity imposed upon the Civil Service Commission by the President as to fourth-class postmasters came the reorganization of that commission by the President. In the 20 years that I have been here appointments to that commission have been singularly free from any charge of partisanship. I know of no time up to the present administration when selections to that commission did not seem to be made for merit and not for partisan purposes.

The law provides that the commission shall consist of three persons, not more than two of whom shall be adherents of the same political party. As the main purpose of the commission was to eliminate partisanship from appointments, care was taken that the commission itself should not be partisan. That spirit was so recognized and obeyed in the administrations of Presidents Roosevelt and Taft that two of the three commissioners, including the president of the board, were Democrats, although the administrations that appointed them and retained them and had full power of removal were Republican. Ever since Theodore Roosevelt resigned from the commission, in 1895, the president of the board has been a Democrat, and during these administrations no changes occurred in the board except by the voluntary resignation of a commissioner.

But although two of the three commissioners were Democrats, in its eagerness for patronage this administration at once peremptorily removed two of them, one Republican and one Democrat. It is not often that an administration can dispose for a useful partisan purpose of an office that must be filled by a member of the opposite party, but the Republican commissioner, whom I always found an exceptionally able and efficient official, was removed and his place filled by a citizen of the State of Washington, recommended by a Progressive Senator from that State, and that Senator's vote has steadily favored every important administration measure. No Republican was left upon the board. The Democrat who was removed was a man of great distinction, who had been commander of the Grand Army of the Republic, and his place was given to the secretary of one of the Senators from South Carolina, whose training one would hardly expect to fit him preeminently for this nonpartisan position.

Encouraged, apparently, by the administration attitude, the Democrats in Congress sought new opportunities for patronage. In the tariff bill the Senate inserted a provision that collectors of the income tax should be exempt from civil-service requirements. It was already in the power of the President to exempt them if he thought there was occasion for it, but Congress did not propose to take the chances of his action, for he still had some reputation as a civil-service reformer. This amendment can not have escaped his attention. If current rumor is correct, he was not backward in making suggestions as the bill progressed—and his suggestions were seldom in vain—but he evidently offered no objection to this amendment, and it passed the Senate. When it came back to the House Ways and Means Committee the Democrats there, doubtless overjoyed at finding the President so amenable to the arguments of the spoilsmen, and so willing to see his power curtailed and his right to classify income-tax collectors taken away, ventured to go a step further and provided that these income-tax collectors might be employed in other work of the internal-revenue office, thus making it possible to gradually fill that whole immense bureau with patronage appointees and drive out the classified employees already there. Still no objection came from the White House, and in that form the bill was enacted by both Houses and approved by the President. While this matter was being considered in the Senate and before the even more vicious House amendment was added, the National Civil Service Reform League sent a long letter to each Member of Congress on the subject—and, I presume, to the President—in which they said:

This proposed legislation is an attempt to secure patronage at the expense of the merit system and is contrary to the civil-service planks in the platforms of the three great parties. We therefore ask your assistance in preventing any such spoils raid.

The President, before his entrance into politics, had been a supporter and officer of this league, but this did not prevent his joining in this "spoils raid," and he has never since expressed publicly any disapproval.

Grown bolder by such Executive approval, the Senate seized the next possible opportunity and amended the deficiency bill by providing that deputy marshals and deputy collectors of internal revenue and their subordinates should be removed from the classified service. The legislation in the tariff bill about income-tax collectors was a vicious departure from the civil-service system, but this was far worse. That applied only to new offices just coming into existence, and which, therefore, had no previous civil-service status, although under existing regulations they would have been automatically classified except for this legislation. But this exemption of deputy collectors and marshals was a distinct step backward and reversed a practice of many years. Deputy marshals were first covered into the classified service by President Cleveland in 1896, were excepted by President McKinley in 1899, and were again classified by President Taft in 1909. Deputy collectors were classified by President Roosevelt in 1906. So that both offices have been in the classified service seven years, during which Congress has seen no reason to interfere.

But now at the outset of an administration eager for spoils the satisfactory experience of seven years has been ignored, the party platform abandoned, and for the first time since the adoption of the civil-service law in 1883 the legislative and executive branches have combined to remove from the classified service large classes of offices which had been included there for years. I can see no reason or excuse for such action except a selfish partisan desire for the old-fashioned, discredited patronage.

The vote in the House on the amendment exempting those officers from the civil-service law was very close. Despite the enormous Democratic majority, so many Democrats voted against the amendment that it was only carried by a majority of four. Can anyone doubt that a word or whisper of disapproval from the President, who has not seemed in other cases at all averse to such suggestions, would have changed the majority? It was a singularly sectional vote. In the northern States, where Democrats have to fight for their election, where

there is a large independent vote, and where men no longer dare to openly advocate the old spoils system, a majority of the Democrats voted against the amendment, but in the South every Democrat voted for it. Every Republican vote was against it, but enough northern Democrats joined with the solid South to carry the amendment. I fully expected the President to veto the bill. I believed that he had been sincere in his civil-service professions. It was not a pressing bill. There was no special urgency for its passage. A veto would only have caused a short delay until the obnoxious clause which could never have procured a two-thirds vote was stricken out. President Roosevelt vetoed a great census bill because of a departure from civil-service principles much less flagrant, though he thereby caused the bill to go over to another Congress and another administration. If the President had wished to defeat this patronage legislation, the way by a veto was clear and sure. But he signed the bill, and then gave out this extraordinary statement:

I am convinced, after a careful examination of the facts, that the offices of deputy collector and deputy marshal were never intended to be included under the ordinary provisions of the civil-service law. The control of the whole method and spirit of the administration of the provision in this bill which concerns the appointment of these officers is no less entirely in my hands now than it was before the bill became law; my warm advocacy and support both of the principle and of the bona fide practice of civil-service reform is known to the whole country, and there is no danger that the spoils principle will creep in with my approval or connivance.

Certainly his advocacy and his conduct here part company. In this extra session his party in two different bills have inserted clauses intentionally violating the principle and practice of civil-service reform—one of them the most reactionary step ever taken. A word of disapproval from him would easily have eliminated them during their progress through Congress. A veto of the most vicious one would have caused no other inconvenience. He waits until it becomes law—until the mischief is done—and then chooses the moment of giving his approval to this permanent breach in the civil-service law to assure us of his devotion to the principle he has just maimed and crippled.

As to the clerical positions affected by the provision he offers no justification, but says he is convinced that the other offices were never intended to be included under the civil-service law. That is the familiar argument that every spoilsman has advanced in every debate on the subject. I presume it is true that the originators of this law did not foresee how far it could and would be extended. I presume they never intended, for instance, that the fourth-class postmasters, whose classification President Wilson recently approved, should be included. The application of the law has broadened steadily ever since its passage, and doubtless many classes are now included which its framers never dreamed of. But by friends of the principle that possibility of growth and development has been considered one of the best features of the law. It has been only the foes of the principle who have constantly complained that the scope had become vastly larger than was intended. But that argument has gone down in defeat again and again before the steady expansion by presidential order, and it is strange now to hear a President who is a friend of the principle criticizing what each one of his predecessors in office has approved and adopting the threadbare argument of its inveterate enemies.

The President also states that the control of appointments is no less in his hands than before, and that his reputation as a civil-service reformer is a guaranty that the spoils principle will not creep in. There are several obvious answers to this argument.

But perhaps the best answer is the practical one of experience; and I will give an illustration from my own State, which I presume is typical: When the newly appointed Democratic collector of internal revenue of Massachusetts turned out his experienced deputies, in filling their places he allowed each Democratic Congressman to nominate one deputy. There were eight Democratic Congressmen from Massachusetts and nine deputies. When the collector began to get acquainted with this heterogeneous body of novices, who had no experience in common except politics, he found it impossible to perform his duties through such agents, and hastened to Washington for a remedy. This was published in the press. Did the President interfere? Was the collector advised, in the words of the President's statement, that the "appointments were still in the President's hands, and that the spoils principle must not creep in"? Oh, no. The collector and the Treasury Department consulted, and were able to persuade some of the Congressmen to change their recommendations, and a body of deputies was wrung from them with which it was possible to begin business. I do not believe they were efficient. I do not believe they were nearly as useful as would have been secured through civil service, but they were not utterly impossible. I presume a similar experience is repeated in each State, though I fear often the collector does not even protest, but accepts whatever material is forced upon him. How much it costs the Nation in unearned salaries and inefficient collections who can tell?

Good Government, the organ of the National Civil Service Reform League, called on the President, if he was sincere, to issue an order, as he had a right to, requiring all these offices to be filled by competitive examination, but he refused and issued a general order forbidding political appointments—and how well he enforced it the Massachusetts experience illustrates.

This provision has the distinction of being the only law which has been passed since the first civil-service law was enacted in 1883 which takes a positive step backward and throws again into patronage offices which had been classified; and it seems almost sarcasm for a President, in signing such a law, to profess his warm support of the principle of civil-service reform.

The most recent example of greed for patronage is in the law creating the Reserve Board. One would expect that in first establishing such a body, which has boundless control of our whole financial system, every effort would be made to command the confidence and cooperation of all parties. But they could not resist the temptation of obtaining a few new places for partisans, and the law expressly exempted "all attorneys, experts, assistants, clerks, and other employees" from the civil-service laws, thus making sure that all these places would be filled by Democratic workers and political favorites. Every member of that board of seven as originally nominated was a Democrat.

These facts are enough to show, I think, a constant purpose during this administration to cripple the merit system, to make partisanship and not efficiency the test for office, to weaken and destroy at every opportunity the civil-service reform which has been encouraged and developed by every President since Grant, to break the pledge of the Democratic platform, and to return to that system of political patronage which popular indignation condemned and overthrew 30 years ago and which it will never allow to be permanently reestablished.

Editorials From the Washington Post of August 6 and 7.

EXTENSION OF REMARKS

OF

HON. OTIS T. WINGO,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 12, 1914.

Mr. WINGO. Mr. Speaker, the Washington Post, in its issue of August 6, 1914, contained an editorial in which there is used this language:

"It is too early to comment upon the utter collapse of the much-vaunted gold basis of European financiers, upon the breaking down of its pretensions and the crumbling away of its promises in the very citadels of its pride and power—London, Paris, Berlin, and St. Petersburg.

"It has fallen amid its worshipers.

"Its ruins are marked by the placards of moratoriums, official notices to the world of its failure, its wreck, and its downfall.

"A financial system that was to be a Gibraltar for the world went down in disaster upon the urgent needs of five nations, Great Britain, France, Germany, Russia, and Austria-Hungary, its strongest upholders, its pillars and supports.

"Instead of being able to do the work securely and safely for all the continents, it fell, shattered and shivered, at the calls of one."

On the next day the same paper contained an editorial on the handling of the cotton crop, which is as follows:

"The delay in Congress of the financial legislation promised for the relief of the agriculturists of the country renders it more needful for the administration and that legislative body to extend special relief to the cotton planters of the South in this time of suspended ocean transportation.

"Granted that much of the unwise opposition to the promotion of an American marine service has come from the representatives of the southern planters.

"Granted that the planters themselves, in large measure, are the parties responsible, by that opposition, for the lack of ocean transportation for their cotton and cotton manufactures to-day, yet there should be no hesitation in protecting the cotton planters, as far as possible, from the evil results of existing conditions.

"It would be a grievous blunder, an egregious error, a deplorable failure on the part of our Government to fail to aid the cotton planters now in holding for later exportation and sale the results of their work of the past 12 months—their crops of cotton.

"It would be more than all this; it would be a national calamity to permit this crop, which will bring many hundreds of millions of dollars in gold to its producers later on, to fall into the hands of speculators now to reap the higher prices which will surely come within the next 60 or 90 days.

"It is the planters, the men who produce this crop, who should be the recipients of the favor and aid of the Government now and during the continuation of the abnormal conditions prevailing in financial conditions abroad and in ocean transportation at every port.

"We sincerely trust that the Secretary of the Treasury, the banks of the country, and, if need be, the Congress will be able to devise and perfect some plan by which the cotton planters of the South will be financially aided over this brief interval between now and resumption of exportation of their crop.

"It is due to the people of the South, it is to the interests of every citizen of the United States that this be done—done promptly, done efficiently, done fully—so that not a planter will suffer from the extraordinary conditions now prevailing in finance abroad and transportation on every ocean."

The Late Representative Roddenbery.

MEMORIAL ADDRESS
OF
HON. EDWARD W. SAUNDERS,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 8, 1914,

On House resolution (H. Res. 407) paying tribute to the memory of Hon. S. A. RODDENBERY, late a Representative from the State of Georgia.

Mr. SAUNDERS. Mr. Speaker, another colleague has left us. Another vibrant voice is hushed. Pallid death has stilled forever the activities of that flaming spirit we knew in the flesh as SEABORN A. RODDENBERY. He died in harness, a slave to duty, self-immolated on the altar of toil. In his unremitting application, in his eager response to every call to service, he failed to heed the limitations imposed by a fragile physique, which established barriers that he could not pass without loosing the silver cord, and breaking the golden bowl of life. I fancy that he knew this. I fancy that in the silent watches of the night, when he communed with his own spirit, there was borne in upon him the conviction that in the strenuous discharge of his self-imposed duties as a Member of this House, he was literally taking his life in his hand, was deliberately shortening a career that was rich in its promise of usefulness, and honors. But so intense were his convictions, so ardent his spirit, so vehement his noble rage against wrong, and wrongdoing, whether among men of high or low degree, that all consideration of self was eliminated, when he threw down his gage of battle in behalf of a cause that enlisted his sympathies, and enchained his convictions. He must have counted a life spent in battling for the right, as a life well lost. Not otherwise can we explain the strain to which he deliberately subjected a frail constitution in the discharge of a devoted and unselfish service. A Member of Congress sooner or later, becomes associated with some particular phase of the work of the House, either as an advocate, or an opponent. In the rôle thus assumed, whether by choice, or force of circumstances, we find our level, and make, or unmake ourselves in the estimation of our colleagues, and of the country. Mr. RODDENBERY'S chief work during his all too brief career in the House of Representatives, was that of a tireless, indefatigable, and resourceful opponent of omnibus pension bills. With unerring precision he put his finger on the unworthy, and undeserving who have found, and continue to find, a place in our pension system, for lack of a sufficient, collective manhood in this body, to resist these ignoble demands, and disregard the political advantage that is supposed to attach to legislation of this character.

His task was a hopeless, and a thankless one, and frequent defeat would have deterred a less bold spirit from renewing the conflict. But like Antaeus, who was refreshed and invigorated when hurled to his mother earth, our friend seemed to find in defeat an excuse for further effort, and an inspiration to greater activity. He soon ascertained that to be most effective in his chosen field of combat, it was not sufficient to be a keen and logical debater, or to limit his activities to the cut and thrust, the parry and return, that mark our parliamentary contests, and bring to mind the picture of the ancient duello. To be most effective it was necessary to call to his aid the resources that are furnished to the diligent student, in the vast body of congressional precedents. Hence he became a student of parliamentary law, and wielding the weapons thereby afforded, he was soon a very thorn in the flesh of his harassed and wondering adversaries. And thus he grew to the fullness of his stature in the esteem and admiration of his colleagues. There was no element of malice, or personal antagonism in his attitude. Fully recognizing the propriety of a pension system founded in justice and right, and dealing with the men who did actual service in the cause of the Union, he was ablaze with indignation against that class of unworthy pensioners who have been aptly described as "pension buccaneers." He lashed them, and the efforts to pension them, with vivid invective, and glowing rhetoric, well knowing that he was fighting a losing cause. But he took counsel neither of his fears, nor his hopes. He was contented to do his duty as he saw it. In his own words, he lived his convictions, and in his closing hours this reflection must have afforded him much gracious comfort. In his parliamentary combats he gave hard blows, and received returns with equanimity, but he was unfailing in his courtesy, and never overstepped the line of propriety, or hit below the belt. In these contests, when smitten on one cheek he did not turn the other, but sought to make his return with usury. In this he often succeeded. His mind was keen, analytical, fertile, and resourceful.

In addition, unremitting study had supplied him with so abundant a store of facts, and figures, of repartee, and illustration, that he was a foeman worthy of any man's steel. He was loyal to his friends, and to the cause which he espoused. In their behalf, he spared neither time, nor endeavor, but expended himself with a lavish zeal that recked little of his own interests. To these habits of profuse endeavor, of generous and lavish expenditure of time, talent, and energy, may be traced with unerring precision the untimely termination of a career that was fairly flowering into its highest usefulness. There was no selfish purpose in his make-up. So far as it is given to mortal nature to be, he was altruistic in that field of work and endeavor which had early brought him into favor with the people of his State, and in due time marked him for a seat in this parliamentary Chamber, so often and so justly acclaimed as the greatest legislative body in the world. In the darkest and most hopeless hours of whatever cause he championed, he was cheerful, alert and sanguine, if not of immediate, at least of ultimate success. "His courage never faltered. He was stirring, potent, tireless, resourceful, filled with the joy and fire of battle." Others have told of his early struggles, his success as a teacher, his victories at the bar, his triumphs on the hustings. He did not wait on success. He achieved it. His private life was beautiful, and his devotion to his wife and children has been noted as a conspicuous feature in his strong and notable character. He was trusted by his fellow men, because he deserved to be, because he was earnest, hearty, true, clean, and brave. The pastor who received him into the church, and pronounced the benediction at the grave, wrote of him that he was a friend who could be counted on at all times, and under all circumstances, that he was bold and aggressive in his advocacy of what he conceived to be right, true and loyal to his friends, and to the cause which he espoused, and always on the right side of every moral question. Sometimes these things are said under the impulse of that charitable disposition which inclines us to say nothing, save what is good, of the dead. But in this case, these are the words of truth, and soberness, not of lavish and indiscriminating eulogy. We mourn a good, strong, brave, clean man. His life should be an inspiration to his people, at once so gentle, and with the elements so well mixed, that all the world which knew him, was prompt to say, "This was a man." He was one of the forces that have contributed life, and hope, and power to this generation. No soldier on a forlorn hope, ever rendered himself up more freely to the call of duty, than our colleague. He kept his faith and fought his fight without the blare of trumpets, or the boom of guns, day by day holding his post with unflinching tenacity in the very shadow of approaching death. If to-day is better than yesterday, and to-morrow will be better than to-day, it is because men like S. A. RODDENBERY have lived, and have eagerly pressed forward toward the mark of the prize of their high calling. The reflection that such men do not die in vain, tempers our sense of loss in his death. The fleeting breath can never be recalled to its mansion. So in reverent submission to the eternal wisdom that orders all things well, let us say of our friend, "Peace to his ashes."

State of California.

EXTENSION OF REMARKS

OF

HON. DENVER S. CHURCH,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 20, 1914.

Mr. CHURCH. Mr. Speaker, it affords me great pleasure to address this House upon the subject of my native State, California. Out there we enjoy many blessings, yet we have some woes peculiar to ourselves, from which we must look to Washington for relief.

First, California must be protected against the influx of Hindus and Japanese, not because we despise these people, for we despise none of the sons of Adam, but because they are a detriment to our civilization and State. Back in the black past, far beyond the first glimmer of the torchlight of history, they united their destinies with the land in which they now reside, and we are anxious they should there remain.

Over in Asia, not far from India and Japan, they tell us is located the birthplace of the human race. They tell us mankind possessed a restless and roving spirit; that immediately after his creation he broke the rules and passed beyond the boundaries of his garden home, and, choosing the sun as his guide, started on a great pilgrimage westward, destined to take him around the world.

In this long and weary way all things were new. No blazed trees to indicate a hidden pathway through the woods, no buried cities, no Aztec ruins, and no beacon lights encouraged and directed him in his course. His was a cautious and a courageous task. In his great march he crossed one river after another, emerged from one forest into another, climbed one mountain range after another, went from one island of the sea to another, crossed one ocean after another, and at last from the Old World with triumph he stepped onto the continent of the new, but no historian can ever describe the wars, pestilence, and famine that beset him in his way. More lives were lost than there are sands on the ocean's shore, and more blood spilled than there are drops of water in the great Amazon.

Did it pay? The philosophers of earth declare with boasting tongue that it did. In exploring the world we have developed the human race and carried out the will of God.

Mr. Speaker, the men of nations toiled, explored, and died on the outposts of the long and tedious reaches of the way, and their brothers, pressing on, finding the mute and grim remains, took up the fallen banner of progress and bore it on until interrupted by a similar fate. At last through the strength, courage, and lives of hundreds of generations, the prizes of progress were won, wrestled from jungles, oceans' grasp, and bloody battle fields.

During all of this time the Japanese and Hindus bore no flag and contributed nothing to that long, sad, weary march. They were at home eating with wooden spoons and plowing their lands with crooked, wooden sticks. They were at home worshipping strange gods with glaring eyes and serpents that coil and hiss. Yes, they were at home while all the world was on the march, while the great battles of humanity were being fought, at home asleep while intellectual day and light was beaming on other lands.

When at last the Anglo-Saxon pioneers reached the last land of the West, the prize land, California, and stood upon its golden, happy shores and saw the white caps of the sea toss and nod like the cotton fields now in Dixie land, they knew across the great watery way was the morning land from whence they came, and that their great journey was at an end. Gentlemen, I wish I could describe to you the wealth and beauty of that prize. As the night of rest comes after a day of toil, so God reserved for humanity as His last choice gift this land of promise.

I wish I could describe this land—my native land—to you. I wish I could place you at a favorite, lonesome spot near Shelter Cove, and from under the great pines have you watch the sun go down behind the sea and view its crimson streak reaching backward toward the shore, and watch the great waves beat and dash against the black and ancient rocks, and see the tide come in and the ships pursue their lonesome, solitary way. I wish you could be at Ocean Park, Long Beach, or Venice-by-the-Sea, down where the breakers roll. I wish you could stand on the summit of the Sierras, 12,000 feet above that shore, at close of day, like the pioneers of old, and with your hand above your brow, look westward and behold the sun as it passes through the red heavens behind the Pacific, far away—superb vision of beauty, surpassing any of the fancy pictures of this eastern land—and in the morning behold the twin sister picture of the night before, the sun rise above the Wasatch, this side of the great Salt Lake, a thousand miles away. Step lightly, you are on hallowed ground, for this is where the pioneers stood in 1849, and by yon spring is where they camped and slept the first night on California soil. From here they picked their trails and took their course. They ran the drifts, they sunk the shafts, they washed the sands and rocked the mountain streams for gold; but they are gone, their camp fires have long since ceased to burn, their cabins have fallen with the weight of years, and, like their broken picks and shovels, their work is done and they are still.

From where you stand behold the peaks marking the outlines of the great Yosemite—

> Where the storm king reigns upon his granite throne,
> Where the lightnings flash around the thunder's home,
> Where the eagle builds her nest, and the lofty peaks defy.
> Where rivers fall from towering heights, and rainbows paint the sky.

Or look down upon Tehippitti, with its dome 5,000 feet hanging overhead, monarch of the sky, chiseled smooth and polished through the ages by winter's storm and nature's hand. And oh, the mossy glades, the tossing fountains, the drifting spray, the fishes in the stream eager to grasp the hook, and the wild deer bounding around the cliffs, and the sighing pine trees overhead will charm your heart. Look down among the redwood and sequoia groves, wonders of the West, for as Mount Whitney, less than a hundred miles away, lifts its snowy, ancient head above all other mountains of this land, so these great trees stand, without kith or kin, survivors of another age from which all but they are gone. Oh, if they could speak what strange stories would they tell of mountain peaks, of canyons, of wilderness, and possibly of prehistoric man—history not written on tablets or in books, but on circles, strata, petrifications, and banks of shells. They would tell of a day about which no others speak, when mad winds swept the land, when strange clouds and smoke filled the sky and when ashes fell, when cliffs went down and mountains rose and canyons deep were made, and the great inland waters burst through the Golden Gate and mingled with the seas and the western plains were born. They would tell how when the storm was past they stood alone, their companions gone, a new world everywhere. Oh, if they could only speak, what history would they tell; but they will not speak. What did I say? They will not speak? Why, in days gone by they have spoken in silvery tones to me. When, a shoeless child, I tried to climb their rough and rugged trunks they spoke to me, and when in after years at night I camped alone amid their groves and heard the forest winds and saw the shadows change and the great moon drifting overhead they spoke to me, and in winter, far back in Sierra's heights, when the snow was deep and fond memories constrained me to visit my ancient friends, I found them standing as they had stood through the ages, and there in solitude, clad in overcoats of snow, these sullen, sulky giants spoke to me. I never asked them a question they did not answer. And oh, the choice lessons they imparted. They taught me to love the lesser trees, the vines, the mountain trail, the snow-clad heights, and all the wonders of the woods. They taught me to love my fellow man. They made me wonder, and as I wondered I thought of God, the destiny of my country, and of the human race.

Away to the north you might see the steam rising from the crest of Mount Larsen, the California volcano. Down south you would behold Tehachapi, which holds the gateway to the desert, and divides northern from southern California. Below this is Los Angeles, and on every side, far and near, orange and lemon trees surpassing the groves of Italy.

Below, again, is San Diego, the city of marvelous growth, where now, with superb energy and skill, it is preparing for a great fair. Below San Diego the dim outlines of marvelous Imperial Valley, with its fields of green extending like a panorama down to the Colorado and the border of Mexico.

Far away to the north and west is our great metropolis, San Francisco, standing by the Golden Gate through which the ships of all nations come and go. There the great fair is practically complete, waiting for the thousands to come and view its wonders.

Eleven thousand feet below you will see the inland valley of the State, as rich as the Valley of the Nile, and the largest of its kind in the world. It is 500 miles from north to south, with an average width of 60 miles, and is as level as this floor.

In the high Sierras to the north and east the Sacramento River has its source, and passes south and westward through this great valley to mingle its icy waters with the bitter waters of the sea, while high in the same range, to the south and east, starts the beautiful San Joaquin, and after reaching the valley runs north and westward until it joins the Sacramento and passes to the bay. This valley contains 11,425,000 acres of splendid soil. Within its boundaries 140,000,000 pounds of raisins are annually produced, more than 99 per cent of the entire raisin product of the United States.

Within this valley we have soil, water, and sunshine sufficient to produce enough raisins to supply the world. Here nearly a third of the oranges and lemons of the United States are grown; and we have water, soil, and sunshine enough to supply the whole United States with citrus fruit. In this valley we grow Smyrna and other choice figs, nowhere surpassed for size and quality; and we have here soil, water, and sunshine enough to supply figs for all Europe.

The best table grapes you have here come from that valley, and the dried peaches and prunes you use come from there. We have 30 cities within its boundaries, and farmhouses, stock farms, and green fields of alfalfa everywhere. That land is now a land of milk and honey. Sixty years ago it was a desert, bleak and bare, where nothing but sagebrush grew, and where the coyote's howl was heard at night; but to-day it is a land transformed, a desert blooming as the rose. Irrigation has done its work; for these two rivers, the Sacramento and the San Joaquin, and many smaller rivers which contribute to their water supply, have been diverted from their original channels and made to meander like great serpents around and across those plains. But, gentlemen, I am sorry to say millions of acres of that land is yet a desert unreclaimed, and that the great bulk of our mountain water passes down and serves no purpose save to feed the fishes of the sea. The great problem of my people is to bring this waste water in touch with the dry lands of the plains. In the high Sierras, where the rivers start, and which bound this valley on the east, the snow falls 10 or 15 feet in depth and remains there until the warm summer sun smites it and turns it free; then it passes down in torrents, swollen streams, and rivers that overflow their banks. Frequently the waters of the Sacramento and the San Joaquin Rivers, during these periods of overflow, submerge hundreds of thousands of acres of fertile fields about the time the farmer is ready to gather his crop.

We need Government aid to assist in building great reservoirs in these mountains to enable us to catch, hold, and distribute at will these flood waters upon the parched land of the plains. Water is the farmer's friend, the chief ingredient of his crop, and to permit it thus to go to waste is like casting gold dust into the sea.

Since being here in Washington, and years before I came, this thought has been the burden of my mind, and many of you, I am thankful to say, are trying to help me work it out. It is a shame for any part of this wonderful valley to remain a desert when there is waste water enough, if conserved and properly distributed, to make every acre a source of revenue to the Government and State. It is the hope of my people that some day soon Uncle Sam will come to their relief and at least assist in conserving the flood waters for irrigation purposes, instead of permitting them to go to waste. These reservoirs would serve two important purposes: First, hold the flood waters of the rivers and mountains so the same could be regulated and used at the time and in the manner most necessary. Second, this regulation would prevent the disastrous and dreaded overflow. This plan would bring complete relief, in my judgment, to the dry lands, as well as to the overflowed lands in that division of the valley through which passes the San Joaquin. The reservoir system, however, would not bring adequate relief to the lands adjacent to the Sacramento River. There being such a tremendous amount of flood water it would be impossible to manage it in this way; therefore the flood-control project to which the Government has recently committed itself will necessarily have to be carried out as the only remedy against the submerging of hundreds of thousands of acres of good land along the Sacramento River.

Representing, as I do, a large portion of this, one of the largest agricultural valleys in the world, I can not refrain at this time from saying, while the Underwood tariff bill is the best tariff measure that has been passed in several decades, I am not altogether satisfied with some of its provisions. I think some of our Western products were discriminated against, and that it would have been much better to have permitted a higher rate of duty on the products of some of our local and struggling industries.

No party believes in injuring a legitimate industry by tariff manipulation. I do not claim to say we have felt as yet any evil effects, and am greatly encouraged for the future when I take into consideration the promise to me on the part of some of our leaders that if evil effects shall arise the same will be remedied by later amendments. Personally I am in favor of taking the consideration of tariff schedules from the hands of political parties. I am pleased to note a growing sentiment in this respect among all political parties. I do not maintain this view because the Democratic Party holds an erroneous view, but because no political party should hold the destiny of all the business interests of this country in its hand. It causes instability, financial uncertainty, and unrest. It paralyzes business of all kinds during general election time. Generally men are politicians, not statesmen, when they first come as Representatives to Washington. Little do they know, and little opportunity have they had to know, the details of the complex tariff schedules and bewildering tariff law. The majority of us would have to study the subject at least five years before being informed sufficiently to cast an independent, intelligent vote.

I want to see this matter in the future handled in a business-like way by a nonpartisan commission composed of the wisest and all-around biggest men this country can produce, and have them serve during good behavior for a long period of years. Pay them an annual salary sufficient to guarantee the best business brains that can possibly be found and let them, without fear or favor, dig and work the matter out. Such a committee, working for the good of the whole country and not in the interests of any political party, and working with Congress under adequate and suitable laws, will have a permanent effect for good.

Gentlemen, in order to further convince you of the wonders of this great western valley, let me say, on its border, nestling among the foothills, are great oil fields, the marvel of the world. In these fields nearly one-fourth of the oil output of the world is found. A bill recently introduced by me was passed the other day and is now the law. This law is calculated to bring much-needed relief; but another bill, which I also filed, is pending, and I sincerely hope when it comes before this House you will consider its provisions well, because all we ask is just.

Mr. Speaker, I have wandered far from India and Japan, the real objects of these remarks. These nations, through all the ages, have been sitting with idle hands and satisfied brains in temples of superstition, dreaming of spooks and hobgoblins and worshiping false and wooden gods. Now and then some traveler, by infinite patience and courage, taught them some of the rewards of progress, won by the blood, daring, and ingenuity of those brave spirits who obeyed the voice of God and went forth to conquer the earth. At first they rebelled against any change, and the strange man of progress was tried in heathen courts, and in the presence of the grinning and hideous gods was adjudged worthy of death.

Gentlemen, there are many reasons why these strange people should not be admitted to our shores. First, their form of government and ours is fundamentally different. Ours to them is a matter of amusement and curiosity, while theirs to us seems ridiculous and absurd. It is impossible, within the same land, for Christians and heathen to live in peace. Each will be an object of hatred and ridicule to the other, and by-and-by this will lead to war. Had we not excluded the Chinese in time their presence would have caused the wholesale shedding of blood, and if we do not exclude the Hindu and Japanese their presence will in time lead to war. That may seem strange to some, but it is true.

I am in favor of excluding the orientals, because I believe an ounce of preventive is worth a pound of cure; because legislation is always superior to the sword. They can never be assimilated by our people, because we have no use for them and they have no use for us. They dislike us as a people as much even as we dislike them. They will not stop at any American hotel nor eat at a white man's table; neither will they partake of food except prepared by a man of their own caste and race. While I was district attorney of Fresno County, Cal., I was frequently called upon to prosecute Hindus for robbery and other violations of the law, and it was a real problem to keep the defendant from starving while he was in jail, for in every instance each utterly refused to eat the food touched by the unclean and sacrilegious American hand. In my district in California, where there are thousands of them, they make their homes generally beside the public highway. Their visible earthly belongings consist of a few blankets spread upon the ground. When they move they put out their fires and slowly walk away. They can be seen going on the public highways all hours of the day and night.

I maintain their heathen and outlandish superstitions forbid even the thought of their living in this Christian land. Let us recall some of their vicious practices and decide whether we want them instituted in the United States.

Heretofore the most terrible of all the Hindu gods was the crocodile, and in order to appease the wrath of these scaly and saw-teethed monsters loving, but superstitious, mothers frequently cast from the banks of the Ganges their helpless offspring into the crocodile's mouth.

This heathen Hindu land is overrun by 33 varieties of poisonous serpents, the worst of which is the cobra. By the natives these reptiles are worshiped as a god. The bite of the cobra is certain death. A hundred thousand lives each year are sacrificed as victims of its fangs. To injure this miserable, slimy reptile is an insult to the heathen's god, and so the cobra is everywhere given the right of way. To kill a poisonous snake would equal the assassination of a god. They have special shrines for snake gods in the Himalaya Mountains. In Benares, Nagiswar is the serpent deity. Harmless snakes they regard as the ghosts of their ancestors and guardians of their homes and goods. Many of the villagers believe in the domunha, a serpent with a mouth at both ends. I submit a poisonous snake with a mouth at both ends would cause a general stampede in this country.

With these thoughts in view it is plain the ideals of the Hindu will not fit the notions of the West. Their sacred crocodiles and serpents can not exist in harmony with our emblem, the California bear. Their darkness will spoil our light, their superstitions will ruin our enlightment, and their strange gods can never reign with our God, Jehovah.

I wish you had seen the Hindu and knew him as I do. If such were the case I would not have to speak to you of him. His swarthy, ragged form, his leaden, dreamy eyes, would speak. His lifeless, shuffling walk and drooping, downcast head would speak. He is as hopeless as a lonesome crane, a human form from which light and hope seem gone, while the body wanders on, guided by strange, superstitious fears.

Another reason for urging this exclusion is because it would be absolutely necessary some time to pass the law, and the question is, Why not do it now? Three hundred and fifty million Hindus are at home in India, dark, benighted, and oppressed. Fifty million of them, at least, in time will permanently abide with us if we permit. Shall we wait until the tidal wave is on? Absurd! Let us exclude them now.

Another reason for making the exclusion is to prevent the debasing of our wage standard. In Japan the average wage for a day's labor is 42 per cent of a yen, equal to 21 cents in American money. In India the average daily wage is from 12 to 24 cents per day. The Hindu is perfectly willing to work for the same wage in this country that he does at home, if necessary. At present he cuts wages and is content with what he gets. The only thing a Hindu likes that pertains to our civilization is the American dollar. By and by, if the immigration of these fellows is not restricted, wages will be the same here as in India, for every one who comes lowers, in a certain definite degree, not only our standard of wages but our standard of morality, intelligence, and patriotism as well. Not only do they lower our wage standard, but every dollar that comes into their possession they send home to British India, from whence no dollar ever returns. I wish right here to read and have inserted in the RECORD a statement compiled by Myra Ellsworth, superintendent of the money-order division of the Stockton (Cal.) post office, for the month of October of last year as a sample showing to what country our money is going:

Great Britain	$358.01
British India	18,489.27
Germany	303.93
Italy	1,628.00
Greece	150.25
Sweden	105.00
Japan	3,908.00
Norway	97.00
France	81.01
Austria	853.10
Russia	86.75
Switzerland	39.00
Denmark	110.00
Turkey	15.00
Azore Islands	50.00
Hungary	3.50
Holland	5.00
Total	26,282.82

It will be observed that of the total, $26,282.82, $18,489.27 went to British India.

Mr. Speaker, it is evident if we propose to save any jobs for the laboring classes of the future or save any money in circulation for any classes we must hasten to make this exclusion. They are coming now by the thousands; in the future, if not prevented, will come by the millions. American labor can not and does not want to compete with them. A Hindu can live as cheap as a wild goose, and he is as wiry and tough as a piece of rawhide. He has no more love for this country than a rattlesnake has for a young turkey. About all he consumes comes from India, and he can live on a handful of rice or corn for a day. When he becomes hungry he simply takes up another notch in his belt.

At present they do not bring their slaves—the female Hindus—with them; traveling expenses are too high; but it will be only a matter of time when they will establish themselves here domestically and religiously. That is, they will bring with them their families and their family gods, the latter consisting of graven images, crocodiles, and venomous reptiles. When that day shall come, tourists traveling in our sublime Sierras will have to wear iron boots in order to escape the poisonous fangs of the Hindu god; and I suppose on the banks of our two majestic rivers, the Sacramento and the San Joaquin, will be Hindu temples dedicated to the charming god crocodile.

The last reason I urge for the exclusion of the oriental laborer is because it is constitutionally wrong for these strange people, who have slept and degenerated through the ages, to thus wait until the last great prize of civilization, America and California, has been won, and then take a short and reversed course across the sea, traveling in ships made possible through the inventive genius of other lands, and fall upon California like hateful birds upon the first ripe fruits of spring. I believe the rewards of civilization should be enjoyed only by those who have endured the hardships of the way. I object to having California become the babbling and gabbling ground of people speaking strange tongues. I object to our beautiful valleys of the West being filled with serfs and hovels in which strange people live. I object to our far-famed cities being disfigured by oriental sheds and shacks, and I object to the seashore, the river banks, and the green mountain sides of my California becoming the building sites of heathen temples. California deserves no such oriental scourge. Its founders were the bravest of the brave.

They came in ox teams from far across the plains. They brought progression, light, and hope, the intellectual achievements of every land. Superstition's chains had long since been cast aside and simple faith and trust in God were the leading tenets of their creed. The destiny of such a State in such hands is safe, for progression has ever followed in their wake—schoolhouses, churches, universities, institutions of learning everywhere. To wound that people's pride and command the Golden Gate to stand ajar to permit heathen to invade their land would be to deface earth's greatest landscape and stab civilization to the heart.

Mr. Speaker, over in India there are 350,000,000 Hindus. A large per cent of them are anxious to come and abide with us. The question is, Do we want them? If not, we must pass the Hindu exclusion bill now pending in committee. If this bill is not passed, in time California will have 15 Hindus for every white man, and its fertile valleys and beautiful garden spots will then be dungeons of poverty and want, inhabited by this strange black race from across the sea. There is no use of waiting for a few thousand Hindus more to come before enacting the law. Our cup is full; we have enough. Had we waited until now to have passed the Chinese exclusion act, instead of having a few hundred thousand, as we have, there would be at least 5,000,000 Chinese in the West, and a greater pilgrimage would have taken place of the white man toward the East than there was toward the West when gold was discovered in California. For as the oriental, with his dark, devious, and superstitous ways, comes in, the American, with his ideals, standards, and religion, goes out. We were far too late in excluding the Chinese, for we have hundreds of thousands of them on the Pacific coast and hundreds of joss houses full of idols and altars dedicated to heathen gods. You must bear in mind it is just as necessary to exclue the Japanese and Hindu as it was a few years ago to exclude the Chinese.

If there is one man in this Chamber who is looking backward instead of forward, who believes the Anglo-Saxon race has advanced far enough, and that it is time to let loose of the ladder of progress and roll back into the swamps at the foot of the hill, I would like to have him rise and declare himself in favor of the oriental invasion.

Mr. Speaker, in conclusion let me say, if we make this Asiatic exclusion, when your children or your children's children shall go to California to choose a home they will find a land for beauty unsurpassed. They will see our cities blooming with thrift and pride and our highways gay with happy life. They

will see the farmer king of men, his bounteous crops and happy homes in valleys fair, where fruit trees thrive and grapevines make the landscape green.

To this land the farmer of the Old World lifts his tired eyes and in his imagination beholds this goodly land across the sea. With such a land and such a longing on the part of the people of the Old World to come, I submit we should exercise great care in determining who shall help us work out the destiny of this Nation. Our form of government, like our soil, is the envy of the world. Our great Statue of Liberty represents the intellectual light upon our shores, for here we have the accumulated experience of the ages—the intellectual, religious, and moral gleanings of all time. It would be a shame to lower our standards; a shame for heathen temples to deface California; a shame for heathen incense to darken its sky, for out there the moon is big, the stars are bright, the heavens are blue, the nights are calm, and the days are filled with peace. Our there are sons of pioneers, the choice blood of the human race. Out there we have one flag and one Master—God.

Rural Credits

EXTENSION OF REMARKS

OF

HON. J. A. FALCONER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 3, 1914,

On the bill (S. 6192) to amend section 27 of an act approved December 23, 1913, and known as the "Federal Reserve Act."

Mr. FALCONER. Mr. Speaker, the haste and the hurry with which we are asked to consider this measure, an emergency currency measure, is very extraordinary. And the ease with which we propose to increase our currency to the extent of $500,000,000 is certainly interesting. The cry comes from the New York Exchange and the response here in the Congress is phenomenally quick. The gentleman from Kansas [Mr. MURDOCK] asserts that this measure gives aid to the investment bankers at the expense of the discount bankers of the country. The gentleman from Alabama [Mr. UNDERWOOD] replies that the passage of this act, and that right speedily, is necessary to save the country from a panic such as we have not seen before. I am impressed, Mr. Speaker, more than ever before that the issuance of currency is a Governmental function. The New York Exchange should not have the exclusive or subsidized right to set the Government in action in the exercise of this function. Why do we not pass a bill at this session of Congress that would accrue to the men engaged in productive enterprises?

FARM CREDITS.

Mr. Speaker, some months ago I inserted an article in the RECORD covering the subjects of Land Development and Long-time, Low-interest Farm Loans. Of late I have received a number of communications referring to this article and the subjects involved.

I am convinced, Mr. Speaker, that one of the most interesting and far-reaching questions before the country to-day is the land question, involving land ownership, and further, the value of land as a basis upon which to fix loans for land development and establishment of country home life.

In the State in which I live there are vast tracts of fertile stump lands, undeveloped because of the expense of clearing, and arid lands needing large capital for reclamation.

The Government of the United States has done much for arid lands in our State. Thousands of farmers have benefited by the Government's reclamation policy.

But stump lands found in portions of our State have had little opportunity for development because of the want of financial arrangements whereby the farmer could procure low-interest money.

The subject of farm credits is not a local question. Every State in the Union is interested in the subject. Evidence of this is found in the fact that nearly every State, through its Representatives, has introduced bills dealing with the matter. Probably at this time there are pending before Congress a hundred different bills, introduced by as many Congressmen.

STATE SYSTEMS OF FARM CREDITS.

Nor is this subject confined to the consideration of the Congress, for a number of our States have inaugurated systems of farm credit, some of which are working admirably.

Idaho's system loans permanent educational school funds, and now has $2,000,000 outstanding on farm loans, and in 20 years time has had only six foreclosures.

Iowa loans its common-school funds through its several counties, charging only 4½ per cent to the counties, which charge the farmer 5 per cent.

Indiana loans common-school funds in limited amounts on real estate at 6 per cent, term five years, and loans are made through the counties.

North Dakota has over $2,000,000 loaned at 5 per cent; term of loan limited to 12 years. The law provides that one-third of the permanent school funds shall be loaned to farmers on land mortgages. Eventually $17,000,000 will, under this law, be loaned on farm mortgages. Only one foreclosure has been made in the State in 25 years.

South Dakota has a similar plan and loans its school funds on farm lands.

Oklahoma has made 3,700 loans to farmers in the last seven years; term, five years and interest 5 per cent.

Utah has made provision for farm loans, as also has Oregon.

AUSTRALIAN SYSTEM.

I have previously, Mr. Speaker, referred to the system in force in an Australian State. This system provides loans direct to the farmer at 6 per cent; 4½ per cent of which pays interest and 1½ per cent is placed in a sinking fund to pay principal; term of loan is 31½ years.

This system is comprehensive and helpful and in many ways extraordinary.

One of the leading points in this system is the provision for a public-land overseer, a man who sees that land speculators do not sap the substance of the settler. The State protects the immigrant by directing him to good lands at first price. The policy of the State is to open an opportunity to every man of industry regardless of money or means.

The State advances 75 per cent for permanent improvements and for clearing, grading, and seeding one-fourth of his land, and gives him 10, 20, and 30 years to repay the money advanced.

NEW ZEALAND.

New Zealand, in 1894, 20 years ago, passed an act providing for farm loans. Bonds are sold as low as 3 per cent and the State charges the farmer 5 per cent, resulting in a large annual income to the Government. Loans are made for 20, 30, and 36½ year terms.

New Zealand has a population slightly less than Washington State. Since the inauguration of the system 36,000 farmers have made loans, the total amount aggregating over $66,000,000, averaging about $1,800 each. Only 36 mortgages have been foreclosed, and in this no loss has resulted to the Government. More than 50 per cent of the borrowers have paid up their entire indebtedness, and generally long before it is due.

NORWEGIAN SYSTEM.

Mr. Speaker, I would call attention to the system and progress made by the Norwegian Bank of Laborers' Holdings and Dwellings, which has been in vogue for 10 years. State funds are used to capitalize this bank; present capitalization, 10,000,000 crowns.

Funds needed for loans are raised by issue of loans to bearer, guaranteed by the Government. The limit of bond issue is six times its capital.

Loans are made for the purchase of farms at 3½ per cent, also for permanent improvement at 4 per cent. The character and integrity of the individual is a large factor. Loans are granted up to nine-tenths land value. This could not be done in our State because of great difference in land prices. The land speculator and exploiter would prove embarrassing factors to the inauguration of this system in Washington.

DENMARK'S SYSTEM.

Cooperation is the leading factor in Denmark's success. The Government is very generous with an industrious and deserving citizen. Every encouragement is offered the small farmer. In 1900 the Government decided that the thing most needed to put Denmark on a thriving basis was tillers of the soil; accordingly it was provided that any laborer of good character, with agricultural experience, could borrow a certain sum to engage in farming. The limit was put at nine-tenths value of the land he elected to buy, and the amount of the loan was not in any case to exceed $2,144. The loan carries 3 per cent.

THE GERMAN SYSTEM.

Germany did a farm-loan business in 1909 and 1910 of many million dollars. The several banking systems employed seem to work in harmony. The principle of each institution differs little from the other, but covers a different field.

The Raiffeisen system does a volume of business of over $1,500,000,000 per annum. There was outstanding at the end of

the year $465,000,000 and deposits at the end of the year of $460,000,000. This system handles chattel mortgages and serves along lines of personal securities as well as a limited amount of land mortgages.

The Schulze-Delitzsch system did a total business of over $3,000,000,000 in 1910. This system has to do principally with town people and has done for the villages and towns people what the Reiffeisen system has done for the country people. During 1910 loans granted amounted to $998,000,000, and there was outstanding at the end of the year $321,000,000. This system has two kinds of assets, money paid in for shares and the unlimited pool of the credit of all members.

This system compares in some respects to our building and loan associations, installments and dividends paid in the same way. Profits are divided in two parts, one part to the reserve fund, which shall amount to 20 per cent of the share capital and the other part to the shareholder. The Schulze-Delitzsch Bank gets its funds from deposits and from rediscounts by outside banks.

The Landschaften system is a real land-loan institution, and does an annual volume of business of nearly one billion dollars. This system is carried on on lines of the strongest cooperation and has the "brand" found on the operations of the American Trust. Groups of farmers merge their lands, and issue negotiable bonds which, because of substantial backing and safe security, find ready sale in the money market. Men of character and farms of value, little or great, find ready earning power through this system. It eliminates the jobber—the commission merchant. The farmer is the whole thing up to the consumer.

The Landschaften (land banks) are syndicates of borrowers. The candidate for a loan applies to the bank for a bond for which he gives a mortgage on his property after the application has been accepted by the officers. Either he or the bank sells the bond in the open market and this bond is secured by the entire masses of mortgages in the aggregate. Four per cent bonds find a ready market. The loaning of money is mandatory when the borrower meets all the requirements. But should the borrower let his property deteriorate, the loan can be recalled. Because of the integrity of the individual admitted to membership and because of the positive spirit of cooperation, the securities of the Landschaften are gilt edge and sell on the market as readily as railroad or any other bonds or securities.

The origin of the landschaften is as interesting as their development, quoting Mr. Frederick J. Haskin:

> We must go back to the Seven Years' War in Germany to see the beginnings of the present system of cooperative credit. That war hit the noble landholders a terrific blow, leaving them land-poor in the superlative degree. They had acres and acres of land, but they had not a mark with which to cultivate it. To add to the confusion, Frederick the Great suspended all interest charges against debtors for a period of three years, and afterwards extended the period, thereby banishing the money lender, and leaving the landowner with no power to get money.
>
> At this juncture there came upon the scene a Berlin business man, Herr Buhring, who had the ear of the great monarch. "Require the nobles to pool their credit," said he to Frederick, "and then they can borrow money." So a royal edict was issued, forcing the nobles to join the association whether they wanted to borrow money or not, and to make their lands liable, without limit, for all loans granted by the association. In that idea were born the two greatest factors in modern commercial life—the trust and the cooperative credit association.
>
> The experiment worked like a charm. Soon the association found itself with unlimited credit in keeping with the unlimited liability it extended, and so the first landschaft started. Others were formed voluntarily. And from that day to this, nearly a century and a half, the associations of borrowers in Germany have thrived and have made German agriculture the world's best example of the possibilities of the soil.

THE FRENCH SYSTEM.

The French system, established only 30 years ago, follows cooperative credit lines. Local agricultural banks and state regional banks combine in one great organization.

The Bank of France under the law must advance to the state without interest a loan of eight millions and pay an annual tax upon the basis of business done, which averages about $800,000. These funds the Government places at the disposal of the regional banks. The local French rural bank must subscribe to a certain number of shares of the regional bank, and as a result can take advantage of the regional bank's credit facilities. A member of a local bank borrows money by signing a bill, which, if accepted, is indorsed by the local bank and sent to the regional bank, which bank discounts the bill, charging 3 per cent, and forwards the cash to the local bank, which charges 1 per cent additional, making 4 per cent. The regional banks discount as high as $15,000,000 per year in this way. Time of loan is limited from 3 months to one year.

Another system in force is the Credit Foncier, organized along lines of the German Landschaften. The term of loan is from 10 to 75 years. It is a centralized institution and has produced splendid results in financing French farmers and landholders. The Government appoints its principal officers. It has brought the borrower and the lender together with the least possible expense of administration.

Under the laws of France the Credit Foncier may receive deposits of $20,000,000, one-fourth to be kept as a reserve fund. Besides the long-term mortgage business it does it has a large short-term credit business. On long-time loan the annuities are small, and the amortization system is generally accepted. Nothing but first-mortgage securities are accepted on long-time loans, and these only on property producing a certain income. Fifty per cent of the land value is the maximum for loans, and the society makes loans and issues the bonds upon the mortgages. Under this system the French Government has fully met the needs of rural credit in France.

ITALIAN SYSTEMS.

For 35 years Italy has employed a farm-loan system, resembling the German cooperative Landschaften. The Catholic Church has taken up this work and fully two-thirds of the rural banks are under its supervision. Unlimited liability of all its members for the bank's obligation resembles the German system.

The Luzzatti town bank system of Italy is unique in having a large board of directors with much power. This system has no unlimited liability feature. It keeps close watch over the individual's assets and habits as regards his industry and integrity. Thousands of small Italian farmers have been enabled to get a substantial start through Italy's banks.

SOUTH AFRICA.

Even South Africa has risen to the opportunity for improvement in rural matters. Transvaal, Natal, and Orange Free State have established the Agricultural Bank of South Africa, which handles the agricultural loans of these three States, amounting to something less than forty millions, for which the Government has issued bonds. Direct appropriation provides funds. It is strictly a governmental affair. The rates of interest are 5 per cent and less. The average loan is about $1,700. The Government clears from one-half to three-quarters of a million a year on the enterprise.

PHILIPPINE ISLANDS.

In 1907, by the act of March 4, the Philippine Government was authorized to pay and guarantee 4 per cent on private capital, invested for a period of 25 years, in agricultural banks, which loaned their capital and deposits to the Philippine farmers. It was not successful, because money could find investment at a greater interest. The Government was quick to act, and on the advice of the United States Attorney-General Bonaparte, the Philippine Government, on June 1, 1907, established an agricultural bank and provided capital to the amount of half a million dollars from Government funds. This bank started operations some 15 months later, and the ministers of finance and justice report of 1910 says that usury in the Provinces was greatly on the decrease.

The United States Government has helped the Philippine farmer greatly in this matter, and demonstates the efficiency of the system, I believe, if applied to the domestic farmer.

AUSTRIA, RUSSIA, HUNGARY, SWITZERLAND, AND CANADA

have established and are operating to the advantage of the farmer systems of land loan banks. The whole tendency of these systems is to make the cooperating farmer a predominating and leading factor in financial affairs. It is a fact demonstrated in every country tried out that where the Government has given its capital to establish mortgage credit the results have been beneficial to the agricultural interests.

I want here, Mr. Speaker, to say that the principle of cooperation is an established principle in European countries. Men of relatively meager means and men of larger means seem to draw together for the purpose of mutual help. They have a neighborly and lively interest in each other's welfare, resulting in uniting for mutual benefit. This in a large measure is the result of the success of the cooperative banking system of these European countries. The very remarkable volume of business done in Germany in the Raiffeisen, the Schulze-Delitzsch, and the Land-schaften systems is made possible through the fixed and accepted practice of cooperation.

Among the farmers of America the cooperative spirit does not obtain to any marked degree. As a matter of fact the per cent of farmers in America who would enter into a cooperative scheme where each would be liable as far as his wealth would extend, for the total indebtedness of the mutual association, up to this time has been negative.

Our farmers will cooperate to sell produce and to buy certain merchandise, but that is about the limit of cooperation for the American farmer, and it is due very largely in our western country to the vast areas of undeveloped lands which have up to this time failed to reach an approximately fixed average value.

In old-established Central and Eastern States, where the land values are fixed, where each knows the value of his neighbor's holdings, a cooperative system might be feasible, and yet it is doubtful if these farmers would pool in a common fund the "old homestead." These men pool their wealth, but it is usually surplus, invested in bank stock, looking for the best interest investment.

There is very little difference between a farmer banker and a city banker when it comes to considering "interest getting" on their surplus money.

I have had the pleasure and the advantage of a very interesting two hours' conversation with Mr. David Luben, the American delegate to the International Institute of Agriculture. He, together with the delegates of all civilized countries, is stationed at Rome, Italy, and it is their office and duty to make statistical forecastings of the world's crops.

Mr. Luben has given close attention to the agricultural status and progress of European nations. He has given much information to the executive departments of our Government on the systems of farm and finance cooperation. He has succeeded in interesting our economists, with the result that rural credit and agricultural cooperation is a live subject and holds a strong position in proposed legislation.

The Southern Commercial Congress espoused the cause and recommended that a commission of Americans go abroad to make a close study of the detailed operation of the several systems in Europe. The commission did its work and has made a report of its findings and to-day many public men and many agriculturists are studying the several systems.

PROPOSED AMERICAN SYSTEMS.

Returning, Mr. Speaker, to the Congress, a brief review of the bills indicate that there is a tendency to follow two lines of procedure.

First. Local and Federal land banks issuing currency direct on mortgage paper of the individual, or on the mortgage paper of a local association with common liability, or issuing bonds backed by the corporations, association mortgage paper and turning the funds raised over to the local organization.

Second. Perfecting the postal-savings-bank system to meet the demand for long-time, low-interest money.

The post-office bill, which passed the House recently, raised the maximum amount of deposit to $1,000, and no doubt when the administration perfects its plans through the rural organization branch of the Agricultural Department, the interest item will be raised to a figure that will attract much larger deposits and for longer periods.

Mr. Speaker, of the many rural-credit bills now before Congress I will consider several to demonstrate the views of gentlemen who have given much time to this subject. They have made a study of the expert testimony of men who have traveled abroad at the direction of our Government and of those who work under the auspices of the several societies interested in farm credits.

H. R. 11897, by Mr. BATHRICK, of Ohio, provides for a farm credit bureau in charge of a commissioner appointed by the President; a farm credit board consisting of the Secretaries of Agriculture and Treasury and Postmaster General and two farmers appointed by the President shall make necessary regulations for the carrying out of the act. Loans made to the farmers through these farm credit associations organized under this act must not exceed 60 per cent value of the property. The commissioner shall organize division districts. Application for loans must be made through the chief examiner of that district.

H. R. 11524, by Mr. THOMPSON of Oklahoma, provides for a bureau to be known as the "Division of Rural Banking." A rural banking board, consisting of the Secretary of Treasury, Secretary of Agriculture, and Secretary of Labor, shall have charge through the commissioner of the system. A central credit bank shall be located in Washington with a capital stock of $100,000,000. This bank shall be the clearing house for the local banks organized under the provisions of the act. Local rural credit banks shall issue bonds for not more than 50 per cent value of farm lands, for which is given a first mortgage, or for 40 per cent value of growing crops.

H. R. 12685, by Mr. Moss of Indiana, provides that a bureau shall be formed in the Department of Treasury to supervise farm-land banks, whose chief shall be commissioner of farm-land banks. He shall be appointed by the President and under the direction of the Secretary of Treasury. Amortization tables shall be provided covering periods of from 6 to 35 years at varying rates of interest. Associations formed of not less than 10 persons shall be called "National Farm-Land Banks," or when wishing to apply cooperative principles, "National Farm-Land Bank Cooperative."

The powers of the farm-land banks will be to (*a*) accept deposits and pay interest on said deposits; (*b*) to make loans upon farm lands anywhere in the State in which such bank is operated. Loans must be no longer than 35 years, and such loan be secured by first mortgages. Loans to be made for following purposes:

First. To complete the purchase of agricultural lands mortgaged.

Second. To improve lands.

Third. To pay debts secured by mortgages.

Loans must not exceed 50 per cent value of lands.

During the Sixty-third Congress, second session, Mr. HULINGS, of Pennsylvania, speaking before the House committee on H. R. 9088, says:

The plan proposed is an adaptation of the building and loan plan to farm loans. Any number of practical farmers, not less than 25, within a given radius from the chosen place of business, may organize a Federal corporation with a capital stock of not less than $25,000 in manner following closely the method of organizing national banks. Subscribers are required to give their notes, secured by mortgage upon farm lands that for three years preceding have been assessed for taxation at double the amount of the mortgage, payable to a trustee, for use of the United States, with such rate of interest as the association may prescribe.

The association then makes its note payable to the Treasurer of the United States for the amount of its capital stock for the term of 25 years, with 3 per cent interest, with amortized payments that will, after the second year, gradually discharge the principal debt; and as a security therefor attaches the individual notes and mortgages of the subscribers, together with a satisfactory bond of the trustee and policies of insurance of the titles by approved title-insurance companies.

The Secretary of the Treasury then issues to the association, out of the funds not otherwise appropriated or from the proceeds of 3 per cent United States bonds that are authorized to be sold for the purpose, Treasury notes to the amount of the capital stock of the association, and places in the hands of the trustee the individual notes and mortgages for collection and, in addition, charges him with the prevention of waste or other diminution of the securities.

The association distributes this fund among its shareholders in proportion as they have contributed the securities.

So long as the shareholder pays the rate of interest agreed upon—which presumably will be 3 per cent semiannually—foreclosure has no terrors for him. He is assured that if the stipulated interest is paid to the end of the term he will be free from debt, and every dollar paid above 3 per cent and the cost of administration discharges a part of his debt.

The longer the term the smaller is the sum required each year, and to this sum is added the administration expenses, which, for a small association, should not exceed $250 per annum.

The proposition includes also the plan of requiring a cash subscription of 10 per cent, which would defray preliminary expenses and serve as a fund from which small loans could be made to meet the temporary wants of the members. This provision, coupled with the plan of paying no part of the principal for two years, and then gradually increasing the amortized payments to a sufficient sum to repay the Government within the term, would result in the gradual increase of a fund from which "short loans" could be made. Each association can also provide that members or nonmembers may deposit savings which can be loaned to short-term borrowers working out a scheme on the same general plan of building and loan companies without in any manner involving the Government or affecting its security.

The stipulations of repayment to the Government are provided as follows:

Three per cent of sum borrowed for 2 years.
Five per cent of sum borrowed for 3 years.
Six per cent of sum borrowed for 10 years.
Seven per cent of sum borrowed for 10 years.
This is an average of 6.04 per cent.

Worked out on the assumed plan that 10 per cent were originally paid in cash for preliminary expenses and capital, and that a loan for $25,000 should be secured from the Government, and the administration expense should not exceed $250 a year—which should be sufficient for a small neighborhood concern—the following would be the results:

The total cost to the shareholders would be		$45,912
Less surplus at end of term	$2,231	
Less cash received from Government	25,000	
		$27,231
Net cost of loan to shareholders		$18,681
Net cost of loan annually		$747
Average annual amount of loans to stockholders		$28,955
Rate of interest paid resultant from compounded accretions	per cent	2.58

That is, 3 per cent paid semiannually for 25 years will pay the principal and 3 per cent interest plus the assumed administration expenses and accumulate besides a sum sufficient to reduce the actual cost of the loans to a 2.58 per cent rate.

The cost of a loan under this plan as compared with a straight 6 per cent loan is apparent:

Interest on $28,955, at 6 per cent for 25 years		$43,432.50
Principal that must be repaid		28,955.00
Amount of principal and simple interest		72,387.50
Cost of same by this plan	$45,912	
Less surplus at end of term	2,231	
		43,681.00
Difference in favor of this plan		28,706.50

Mr. DOOLITTLE, of Kansas, speaking of his bill H. R. 11755, says:

The establishment of a bureau of farm loans in the Treasury Department, for the purpose of loaning money to bona fide tillers of the soil, taking farm mortgages as security for repayment. It is a home-builders' bill and will put a family on every quarter section in the Middle West and insists that borrowers shall be residents of the farm to obtain the benefits of its provisions. It provides for the appointment of an assistant farm loan commissioner in each State, whose

office shall be at the State capital. This is done to make the department easier of access, and to expedite business. This commissioner is to pass on the title and see that all applications are made in due form; if he finds everything correct he recommends the making of the loan to the bureau in Washington, who in turn instructs the preparation of the funds, and the money is sent to the borrower through the proper State commissioner. The loan can not exceed 65 per cent of the taxable value of the land, nor more than $6,000 in any event. This limitation is made for safety, and the tax value is taken as the real value to do away with the necessity of a lot of appraisers and the chance for any favoritism. The loan can only be made for the purposes of purchasing land, permanently improving it, or paying off indebtedness for prior incumbrances contracted for the purchase price or improvements. This limitation is to prevent speculation. All loans are made for 50 years, at not exceeding 3 per cent interest, payable at any time, and provides that 2 per cent per year be paid on the principal sum—amortization it is called—thus wiping out the whole debt by paying 5 per cent, which includes interest and principal each year. As the mortgages are paid just so is the currency issued on them retired and canceled. When the mortgage is all paid it is canceled and release recorded. And in the concluding section a penalty is provided for false statements and breach of conditions. These are my views in what I consider an ideal and at the same time practical and businesslike system and are expressed in the bill. If this system is paternalism I prefer it to capitalism! It is not class legislation. Any one who would comply with the conditions could obtain the loan.

S. 5003, by Mr. GRONNA, of North Dakota, provides that there shall be created a farm-loans bureau in charge of a director appointed by the President.

The United States shall be divided into districts, in each of which shall be established a branch of farm-loans bureau in charge of manager appointed by the Secretary of the Treasury. The board of organization consists of the Secretary of the Treasury, Secretary of Agriculture, and director of farm.

Loans to be made for no less than $200 or more than $15,000, and only to actual farmers engaged in tilling the soil. Rate of interest, 4½ per cent; terms, not less than 1 or more than 20 years.

The funds to be loaned include: First, postal-savings funds deposited in Federal Reserve Bank. Second, other moneys Secretary of Treasury shall have deposited in any Federal Reserve Bank beyond what the Secretary of the Treasury shall deem necessary for business of the Government. Third, funds obtained by sale of bonds borrowed from the Government in accordance with the provisions of the act.

H. R. 12746, by Mr. HOWARD, of Georgia, provides that a "division of farm-land banking" shall be created in the Treasury Department under the direction of a farm-land banking board, consisting of Secretary of the Treasury, chairman; Secretary of Agriculture; and Comptroller of Currency, the work to be in charge of a director of farm-land banking appointed by the President.

Local, State, and National farm-land banks may be formed. The amount of stock in a local bank is limited, and provision is made to prevent the control of any set of individuals, according to the author of the bill. The distinguishing feature of the farm-land banks is "To guarantee the payment of loans upon farm lands located within the county or other political subdivision in which such bank is operated."

One feature of the bill is the acceptance of postal-savings deposits and placing as security for such deposits the national land-bank bonds issued against mortgages in the State where the local bank is situated.

Mr. HOWARD says in regard to it:

> It is a serious question as to whether the Government shall invest postal-savings funds directly in national farm-land bonds. Under this provision the Government simply deposits the postal-savings funds with the local banks and takes as security therefor the national land-bank bonds issued by the central bank.

H. R. 18135, by Mr. KEATING, of Colorado, provides for a farm-loan bureau, to be established in the United States Treasury. The bureau to be in charge of a commissioner appointed by the President. The commissioner, together with the Secretary of the Treasury and Secretary of Agriculture, form a board of supervision of the farm-loan bureau.

The purpose of this act is to loan money direct to the farmers of the United States upon the security of farm first mortgages through the agency of the postal-savings banks.

S. 5756, by Mr. POINDEXTER, of Washington, provides that one-half of the funds deposited in postal-savings banks shall be loaned upon approved farm mortgages at not more than 4 nor less than 3 per cent interest. Principal to be repaid in not less than 5 nor more than 30 equal annual instalments.

Postmaster General shall provide post offices with printed forms to be used for applications and shall make rules necessary and have charge of the administration of the act.

Mr. Speaker, I have briefed the plans of these several bills for the purpose of giving a general idea of the scope of proposed legislative action on rural-credit systems of finance.

Practically all the bills before the committees of Congress follow some one of these lines.

It is reported to be in the program of the administration to enact a farm-loan banking law before this Congress adjourns.

The postal savings banks present a tangible basis upon which to build, and no doubt will be a substantial factor in the final solution. Increasing the rate of interest paid to the depositor and removing the amount limit of deposit of the individual are material features being considered. The deposits covered into the Government farm-loan banks to be loaned directly to individuals on first mortgages and the loan value of the land to be based upon assessed valuation covering a period of several years back.

This would probably eliminate some lands in my State which have been sold on inflated values by the land speculator, but the fact that ours is a country of magnificent land areas varying in acreage value presents a problem here that thickly-settled European countries do not have. It is essential to the success of the farm-loan systems adopted that the land values be fixed on a safe basis.

National and State granges, the Treasury and Agricultural Departments, and many men who have made a study of this subject are at work, and a system or systems will soon be demonstrating the wisdom of long-time, low-interest farm loans.

The Democratic Tariff and the Price of Sugar.

EXTENSION OF REMARKS
OF
HON. FRANK W. MONDELL,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 18, 1914.

Mr. MONDELL. Mr. Speaker, granulated sugar is selling to-day on the New York market at $7.75 a hundred pounds wholesale. It was selling for less than $4.25 a hundred when the European war broke out. I am not proposing to charge the Democratic Party for this advance of $3.50 a hundred pounds in the price of sugar in less than three weeks, but I do charge that the principal beneficiary of this advance is the ally of the Democratic Party, the Sugar Refining Trust, for with the exception of the sugar which grocers and jobbers may have had on hand no one in this country except the Refining Trust had any considerable quantity of sugar at the outbreak of the war.

I do not pretend to know how much of the increase is justified by war conditions in the great sugar producing and exporting regions of France and Germany, and how much of it is just pure criminal manipulation on the part of the Sugar Refining Trust. I have been in hopes that every available agency of the Government would be utilized for the purpose of learning the facts as to increased prices of sugar and other foodstuffs, and have been glad to hear that such investigation and inquiry was proposed and on foot with a view of punishing those who might be found guilty of forestalling the market or combining to raise prices. My hopes with regard to these investigations have, however, been somewhat disappointed by the reported trend of some of the inquiries being made. For instance, relative to sugar prices, I noticed in the Washington Herald of last Sunday, August 16, in what seemed to be an inspired statement from the Department of Justice, the following:

> One report as bearing on the sharp increase in the price of sugar was of especial interest to the department. It is stated that there is an unaccountable and apparently unwarranted delay in the shipment of the western beet-sugar crop to the refineries.

I fear some practical joker was trying to have fun with the dignified Department of Justice, as beet sugar is refined at the factories where it is extracted from the beets and never goes to a "refinery." It might, I presume, very truthfully be said at any time that there was "delay" in shipping it to the refineries. It never goes there. The Washington Star of last Sunday also gives us a little information from the Department of Justice, as follows:

> The big beet-sugar supply and crops which should now be on the market, but which are being held up somewhere, furnish excellent clews for the Government to follow.

I sincerely hope the "Government agents" will follow this promising clew. They will find that with the exception of the California sugar-beet crop, which is just beginning to be made into sugar, the sugar-beet crop of the country will not mature for a month or more. It may be a little expensive to have to educate these Government agents to that fact, which most schoolboys know, but it may be worth while.

PUTTING THE DEPARTMENT ON A BLIND TRAIL.

The Sugar Refining Trust is an astute organization; they can be depended upon to be on the job when their interests are at stake or in jeopardy. They robbed the Government out of millions of dollars in revenue through the manipulation of scales, and paid a partial penalty in fines running into the millions and in jail sentences for their officers and employees; nevertheless they were on sufficiently intimate terms with the Democratic leaders to be able to put their arguments for free sugar in the Democratic textbook of 1912, and their agents furnished the Democratic Party with the arguments on which free sugar was advocated and provided for in the Underwood bill. All this being true, it is not strange that the agents of the trust, realizing that they were responsible for and almost the only beneficiaries of the increase in the recent rise in sugar should impose on the uninformed and gullable agents of the Department of Justice and start them off on the wrong scent in the search after the causes of the increased price of sugar.

I hope the department will investigate the situation with regard to American producers of sugar, beet and cane, and I hope they will publish the facts as they discover them; then, if it is not expecting too much, I hope they will get after the real culprit, to wit, the Refining Trust, which does not produce any sugar but which buys sugar in the raw, mostly from foreigners, and sells it in the refined form. The department will have no special difficulty in finding out about the beet-sugar industry. Mr. Truman G. Palmer, under date of August 18, has furnished the essential facts, which can be easily verified.

Mr. Palmer publishes telegrams from seven of the nine California manufacturers of beet sugar. These telegrams show that these factories are not only not holding back any sugar, but that all they have made so far has been shipped as fast as made, and that these shipments and more to follow were sold at the prices prevailing before the advance since the European war. With the exception of these California factories no American beet-sugar factory can begin to manufacture sugar until the latter part of September or the early part of October, for the very good reason that beets will not be mature until that time. Furthermore, I am reliably informed that following their usual custom, the bulk of the anticipated product of all these factories for the coming fall and winter was contracted for long before the recent advance in price, so that if the price continues to be high the American beet-sugar producers will be benefited only to the extent of that limited portion of their output which was not sold in advance. The situation of the refiners is far different. They had large stocks of raw and refined on hand when the war broke out, the price of which they immediately advanced. Their increased profits must be many millions of dollars wrung from the American people.

DISASTROUS EFFECT OF REDUCTION OF DUTY ON SUGAR.

What I have said relates to the present sugar situation. What I particularly desire to discuss, however, is the effect before the European war began of the reduction of duty on sugar and the proposal to put sugar on the free list, on the American people and the American sugar industry. The unexpected war conditions, the unjustified increasing of the price of sugar by the Refiners' Trust have thrown a new and sinister light on the questions involved. This war coming at a time when American producers of cane sugar in Louisiana, and of beet sugar throughout the country, had no sugar on hand and had not had for months, left the country completely at the mercy of the importers and refiners of foreign sugar. How much worse off we would be, if the war in Europe is to continue, had we no beet-sugar industry in the country to temper prices when their product comes on the market. This is the condition which the refiners seek to accomplish through free sugar. Eight beet-sugar factories will be idle this fall, which but for the reduction in the duty and the certainty of free trade in two years would be running, and the acreage of the other factories has been so reduced that the output for this year will be less than last by nearly 3,000,000 bags of 100 pounds each. Let us see what the effect of the Underwood tariff bill policy was before the beginning of the present war conditions. What I shall say now was written August 1 and relates to the situation then.

THE SITUATION BEFORE AUGUST 1.

Mr. Speaker, the Underwood tariff bill reduced the duty on sugar 25 per cent, or 34 cents per hundred pounds, beginning March 1 of this year, and provided that sugar should go on the free list May 1, 1916. Most vigorous protests against radical reductions of the sugar schedule were voiced by Republicans on behalf of all of our sugar-producing industries and by Democrats from Louisiana on behalf particularly of the Louisiana cane-sugar industry.

Those familiar with conditions in the portions of the country producing beet sugar were willing to agree to a reduction of about 20 per cent in the existing duties, as it was believed that the beet-sugar industry having become well established, in certain parts of the country at least, could be maintained and reasonably expanded under such a reduction. The Louisiana sugar growers, however, insisted that even so slight a reduction would be very harmful to, if not destructive of, their industry.

But the free traders, supported in their position by the President, would have nothing less than a complete wiping out of the tariff without regard to its effect upon industries. They declined to include the sugar-producing industry in the United States among the "legitimate" industries which, before the election, the President assured the people would not be injured. It was claimed feebly by some Democrats that the beet-sugar industry in the United States could thrive even under free trade, but few were foolhardy enough to venture such an assertion. Most of them took refuge in the claim that reduced rates and free sugar would be of great advantage, through lower prices to consumers, and therefore were justified even though the industry were wiped out.

The friends of protection contended that the 25 per cent reduction in tariff would not help the consumer or give him cheaper sugar, but that, coupled with the provision placing sugar on the free list in 1916, it would close factories, reduce the income of the farmers engaged in raising sugar beets, and discourage the building of new factories. Protectionists insisted that no new factories would be built and that with the coming of free sugar in 1916 practically all of the beet-sugar factories, except a few which might survive owing to local markets, would close, thereby depriving farmers of a market for millions of dollars' worth of sugar beets and other industries of a market for a wide variety of products used in the making of beet sugar.

As sufficient time has not elapsed to verify all of these predictions the free traders may and still do insist that the results prophesied will not all come to pass; some of them cling to the wholly contradictory view that sugar will be reduced to a price below what it can be produced for here and that American production will still flourish and expand. It can be said, however, with regard to the predictions made by the friends of protection as to the effect of the reduction already made in the duty on sugar that they have been more than borne out by the actual facts of the situation since the passage of the Underwood bill. The harmful effects so far have been even worse than was anticipated, while no benefits whatever have come to the American consumer.

THOSE AFFECTED.

Mr. Speaker, the 25 per cent reduction in the sugar tariff, which became effective March 1 of this year, affects, either favorably or unfavorably, four classes, namely, the consumer, the domestic beet and Louisiana cane-sugar industries, the farmers, and the refiners of imported raw sugar.

Some gentlemen on the Democratic side have had the temerity to contend that the price of sugar to the consumer has been lowered since the tariff reduction became effective and that it is lower to-day than it was prior to the reduction. If this is true in any single case, it can only be where retail dealers make a "leader" of sugar, selling it sometimes below the price at which they purchased it at wholesale in order to attract trade, or where they sell sugar at a loss, provided the purchaser buys $1 or $2 worth of other commodities on which there is a large profit. But it is self-evident that the average consumer is not able to purchase his sugar at a lower price than he did prior to the 25 per cent tariff reduction, for the wholesale price of granulated sugar is higher now and has been on the average since the reduced rates went into effect. To prove this assertion, I present a table showing the average weekly New York wholesale price of granulated sugar from January 8 to July 30, 1914, and the decrease or increase in this price since March 1, based upon the average weekly price for 8 weeks prior to tariff reduction, or from January 8 to February 26. (The table is printed on following page.)

From this table it will be seen that the average weekly New York wholesale price of granulated sugar from January 8 to February 26, the last weekly quotation prior to the date when the 25 per cent reduction became effective, was 3.92 cents per pound. For the week ending March 5 the price remained the same. From March 12 to May 7 the decrease in the wholesale price ranged from less than one-tenth of a cent to two and a half tenths of a cent per pound. Mr. Speaker, it is a well-known fact that the retailer works on a very small margin in selling sugar, and it is idle to contend that a reduction in the wholesale price of nine one-hundredths, fifteen one-hundredths, or even twenty-

five one-hundredths of a cent a pound is reflected in the retail price of sugar. But the slight reduction in the wholesale price of granulated only lasted for nine weeks after the tariff reduction became effective. Since that time the price gradually has been increasing, and to-day the wholesale price is nearly a third of a cent nigher than it was for eight or nine weeks before the reduction became effective. As will be seen by the table, for the week ending May 14 the price was 3.92 cents per pound, the same as it was prior to reduction; the next week it increased slightly; for the next three weeks it increased nineteen one-hundredths of a cent per pound; and for the past six weeks it has been selling for twenty-nine one-hundredths of a cent higher, and for the week ending July 30 for 24.5 higher than the average for eight weeks prior to reduction.

Consumer's table.

[1] 25 per cent tariff reduction effective Mar. 1, 1914.

Mr. Speaker, in the face of these figures, it is apparent that when my Democratic colleagues claim that the consumer is getting sugar cheaper to-day than he was before the 25 per cent tariff reduction became effective they must be talking "psychologically" and not according to the facts in the case. The only way in which anyone can get sugar for less than before the tariff reduction is by buying it below cost or at a reduced profit, for sugar is higher than it was and not lower.

EFFECT ON BEET AND CANE SUGAR INDUSTRIES.

Now, let us see what effect the sugar tariff reduction has had upon the domestic beet and Louisiana cane-sugar industries. It is not necessary to argue that it practically has destroyed the Louisiana industry. Even the friends of the Underwood bill admit this fact—yea, even glory in it. Frank C. Lowry, the sales agent of the Spreckels Sugar Refining Co., says the Louisiana sugar industry does not deserve to live. Lowry wrote that part of the Democratic campaign book relating to the sugar question. His employers contributed liberally to the Democratic campaign fund. It is up to the people of Louisiana to decide what they propose to do in the face of this Democratic betrayal of their great industry for the benefit of the Sugar Trust, which was the active agent in the campaign for free sugar.

The effect of the tariff reduction on the domestic beet-sugar industry has been ably portrayed by the gentleman from Michigan [Mr. FORDNEY] and the gentleman from Tennessee [Mr. AUSTIN]. The disastrous effect may be "psychological," Mr. Speaker, but it is a stern reality that the beet-sugar factories are closing their doors, throwing out of employment thousands of technical experts and laborers, and that approximately $10,000,000 of capital invested in these factories will remain idle this year, and unless the Democratic administration sees the error of its way and repeals the free-sugar clause of the Underwood bill these factories, together with the others which have accepted the short respite granted by the Democratic Party and are still operating, will be thrown onto the scrap heap in 1916.

Mr. Speaker, let us glance a moment at the magnitude of the beet-sugar industry in this country. I have not complete figures for the 1913–14 campaign, but in 1912–13 there were 73 beet-sugar factories in operation in this country, scattered all the way from Ohio to California. The cost of construction of these plants, exclusive of lands, irrigation works, working capital, and so forth, is estimated at about $84,000,000. The total number of operatives in 1912–13 was approximately 32,000. The aggregate daily slicing capacity of the factories was 67,208 tons of beets, or 5,224,377 tons during the campaign, from which were produced 692,556 short tons of granulated sugar. The output of domestic beet sugar during the 1913–14 campaign is given by the Agricultural Department as 733,401 short tons. The foregoing figures give one an idea, in a general way, of the manufacturing end of this industry, and when it is remembered that it has grown to these great proportions within the past 15 years, notwithstanding all the agricultural, technical, and legislative vicissitudes through which it has passed, its growth must be conceded to be marvelous.

The following beet-sugar factories have so far been put out of business by the reduction of duty and the certainty of free trade in sugar; they have not contracted for beets and will not operate, with more to follow:

Name of company.	Location of factory.	Daily slicing capacity, tons of beets.	Erected.
Continental Sugar Co.	Fremont, Ohio	500	1900
Rock County Sugar Co.	Janesville, Wis.	700	1904
San Luis Valley Beet Sugar Co.	Monte Vista, Colo.	600	1911
Sacramento Valley Sugar Co.	Hamilton City, Cal.	700	1906
Alameda Sugar Co.	Alvarado, Cal.	800	1870
Nevada Sugar Co.	Fallon, Nev.	500	1912
Iowa Sugar Co.	Waverly, Iowa.	500	1907
Ottowa Sugar Co.	Ottowa, Ohio.	600	1912

This list does not include a number of factories which have had the question of closing down under advisement and may yet conclude to close down. Neither does it include a number of factories, including the Western Sugar Refining Co., at Marine City, Mich.; Holly Sugar Co., Holly, Colo.; Las Animas Sugar Co., Las Animas, Colo.; and American Beet Sugar Co., Lamar, Colo., which will not operate this year and did not operate last year. The probability is, however, that all or a part of these factories would have operated this year had it not been for the hostile legislation in the Underwood bill.

OTHER INDUSTRIES INJURED.

But the destruction of the beet-sugar industry, Mr. Chairman, will also seriously affect other industries. No industry, great or small, stands by itself. The effect of a failure or the destruction of one industry necessarily is felt in other lines of trade. And this especially is so of the beet-sugar industry. In the operation of these factories immense sums of money are spent annually in the purchase of supplies, such as coal, coke, lime rock, cotton and burlap bags, filter cloths, expensive machinery, and so forth.

Railroads are benefited by the vast amount of freight which they haul, including beets and supplies to the factory and the shipment of sugar, molasses, and pulp from the factory. In 1912–13 the total expenditures for these purposes amounted to over $32,000,000, while approximately $30,000,000 were paid to the farmers for beets. It is estimated that since the erection of these 73 factories approximately $400,000,000 has been expended for these various items. All of these expenditures will, of course, cease with the placing of sugar on the free list, and the loss of this business naturally will be felt, and seriously, too, in many instances, in other lines of trade.

But the Democratic Party has decreed that sugar shall be placed on the free list on May 1, 1916. These 73 gigantic sugar mills, except as a few of them may be able to struggle along on local markets, will cease operations and will stand as silent monuments over the grave of a great American industry whose life was sacrificed on the altar of political theoretics.

HOW INDUSTRY SUFFERS THOUGH PRICES ARE NOT PERMANENTLY LOWERED.

The question may be asked if the price of sugar has not decreased since the 25 per cent tariff reduction became effective why has it been necessary for the 10 or 12 beet-sugar factories to shut down? It is not so much the present price of sugar which has caused the closing down of these factories as it is the fact that the seaboard refiners have a lever in their hands

on account of the reduction by which they can seriously cripple the domestic beet-sugar industry at will. The beet-sugar manufacturers do not sell their sugar direct to the retailer; it is sold through brokers to wholesale dealers, and so the wholesale price governs their sales. The price they have to compete with is the wholesale price, which is fixed by the refiners of imported raw sugar. Beet sugar being on the market for but three to five months in the year, while the refiners' product is on the market the year round, in order to induce the wholesaler to divert his sugar purchases from cane to beet sugar during the time the latter is on the market the beet-sugar manufacturer must undersell the refiners' product. This he does, beet-sugar quotations usually ranging from 10 to 30 cents a hundred below refined cane sugar, although there is absolutely no difference in the quality.

The beet-sugar manufacturer knows that while at the present time the seaboard refiners are absorbing 100 per cent of the 34 cents per hundred tariff reduction, they have it within their power to pass this reduction on to the wholesaler during the time when beet sugar shall come on the market. If temporarily they cease to pocket all or the bulk of the reduction and reduce the wholesale price 34 cents per hundred pounds, and the beet-sugar manufacturer is compelled, for the reason stated above, to undersell their product from 10 to 30 cents a hundred, it means a selling price for beet sugar at a figure so low that there is no profit to the manufacturer at all, and perhaps a loss. But in addition to all this there is the prospect of free sugar in two years, when the refiners will be given another cent a pound reduction in the tariff, which they can use temporarily to beat down the wholesale price of granulated sugar far below the cost of producing domestic beet sugar. Then, when they have destroyed this competition, they can fix the price to the consumer to suit their will.

Again, the beet-sugar manufacturer, in carrying on his business, must look ahead at least one year and sometimes two years. He first must contract with the farmer this year for the beets he is to grow the next, guaranteeing the farmer a stated price per ton for his beets, no matter at what price he may be able to sell his sugar. If he is successful in securing sufficient acreage to operate his factory, he must contract for the sugar-beet seed in advance of the sowing. As he figures on his expenses a year in advance, so must he figure in advance on his probable profits, which are based not upon the selling price of sugar this year but a year hence, so that while the price of sugar has not been reduced since the 25 per cent tariff reduction became effective, many of the beet-sugar manufacturers do not feel warranted in entering into contracts to purchase beets, seeds, and so forth, for the next year's campaign, when they know that the refiners have it within their power—and without question will exert that power—to reduce temporarily the wholesale price of sugar low enough to crush beet-sugar competition and destroy that industry.

HARD BLOW TO FARMERS.

Having shown that the consumer has not benefited by the 25 per cent reduction in the sugar tariff and that this reduction has seriously crippled the Louisiana cane and domestic beet-sugar industries, I will now consider the effect of this legislation upon the sixty-odd thousand American farmers who grow sugar beets and the additional 60,000 farm laborers which the Department of Agriculture estimates are engaged each year in beet culture. In order to have some assurance that they will not operate at a loss, most of those beet-sugar factories which have not "given up the ghost" have found it necessary to reduce the price paid to farmers for beets an average of about 50 cents per ton. It is well known that American farmers are paid a much higher price for their beets than the farmers of any other country in the world, and the question naturally arises, Can the American farmer afford to take less for his beets—that is, can he compete with European beet growers? For under free sugar he indirectly is thrown into competition with them. To answer this question, Mr. Speaker, it only is necessary to compare the farm-wage rates prevailing in this country and in Europe.

In the Department of Agriculture Crop Reporter for March, 1913, is given a table of the wages of farm labor in the United States in 1902 and in 1912. The average wage of farm labor in the United States in 1912 is given as $1.87 per day at harvest and $1.47 per day during other seasons of the year. From this table I have taken the average farm-wage rates prevailing in the 16 beet-sugar States in 1912, the average being $2.45 per day at harvest and $1.95 per day during other seasons.

Official reports of European Governments show that the prevailing wage rate in the beet fields of those countries, without board, is as follows:

Country.	Men.	Women.	Children.
	Cts. per day.	*Cts. per day.*	*Cts. per day.*
France	69.0	43.0	.....
Germany	47.0	28.5	22.8
Hungary	44.9	32.7	24.7

Mr. Speaker, when we compare the average farm wage of $2.45 per day prevailing in the 16 beet-sugar States in this country with the average daily wage for men in Europe of 43.2 cents, no argument is necessary to show why the American farmer can not compete with European farmers in raising beets. And, as the gentleman from Michigan has stated on the floor, no one who has seen the condition of the European farm laborer and his family working at these low wages would ask that our American farmer and farm laborer be compelled to work at such starvation wages and place himself upon the same level with them, as far as living conditions are concerned.

Many American beet-sugar factories facing the possible reduction in the price of sugar through the reduction in the tariff, a reduction which the Democrats who voted for reduced duties said was sure to come, felt obliged to reduce the amount which they paid the farmers for sugar beets. I have not complete data as to the reduction made by all the factories, but I have information to the effect that the following factories reduced their prices for sugar beets in the amounts stated:

Great Western Sugar Co. (nine factories in Colorado), 37½ to 50 cents per ton reduction.
Billings Sugar Co., Billings, Mont., from 37½ to 50 cents per ton.
Scottsbluff Sugar Co., Scottsbluff, Nebr., 50 cents per ton.
Santa Ana Cooperative Sugar Co., Santa Ana, Cal., 75 cents per ton.
Southern California Sugar Co., Santa Ana, Cal., 75 cents per ton.
Western Sugar & Land Co., Grand Junction, Colo., 50 cents per ton.
Owosso Sugar Co., Bay City, Mich., 50 cents per ton.

The closing up of those factories which have ceased operations on account of the Underwood tariff bill will mean the loss to American farmers of a market for approximately 500,000 tons of sugar beets, which, figured on the average price which they received per ton for their beets last year, will amount to nearly $3,000,000. It is estimated that the decrease in acreage grown to sugar beets this year as compared to last year will amount to about 20 per cent, or approximately 139,000 acres. This means the loss of a market for an additional 1,390,000 tons of beets. In other words, based on the 1912–13 farm value of beets, the farmers this year will stand to lose nearly $11,000,000, due to the Democratic tariff bill. Of course, when sugar is placed on the free list, and the beet-sugar industry is destroyed, our farmers will lose a market for over $32,000,000 worth of sugar beets.

It may be argued that these farmers will devote their beet lands to other crops, which is true. But, Mr. Speaker, aside from the cash returns of the sugar-beet crop, there is another feature of sugar-beet culture which is of far more importance, not only to the farmers of this country, but to every citizen of the land. I allude to the fact that sugar-beet culture improves the condition of the soil and greatly increases the yield of all other crops following on the same land. Until a few years ago the idea prevailed among our farmers that sugar beets were hard on the soil. This was due to the fact that, through lack of experience, the beet growers had been planting beets on the same tract of land year after year, instead of rotating them with other crops.

The continuous planting of any land to one crop naturally will deplete the soil, and without giving consideration to this fact, the farmers became so prejudiced against sugar beets that the factories had great difficulty in securing a supply of beets sufficient to operate to their full capacity. But now our farmers have come to learn that by a proper system of rotation—planting beets on the same tract of land only once in every three or four years, as they do in Europe—they thereby increase the acreage yield of all other crops planted on the same soil from 25 to 100 per cent, and to-day there is hardly a beet grower who is not enthusiastic in the praise of the sugar beet as an important factor in increasing his acreage yield of all other crops. When this indirect advantage of sugar-beet culture shall have permeated the minds of all of the sixty-odd thousand American beet growers, when they realize that through practicing a proper method of rotation in growing sugar beets they can grow two bushels of grain where they now grow but one, and this without additional acreage and with very little

additional expense, they probably will be willing to take a much lower price for their beets than they now receive, but it will take time to make them all realize this fact, as it took time to accomplish the same result in Europe.

CONTEMPLATED FACTORIES ABANDONED.

As disastrous to the hopes of communities as the closing of factories already built, and even more far-reaching in its paralyzing effect, is the blasting of the hopes of many communities which were looking forward to the establishment of sugar factories. I am in a position to know that the State of Wyoming, which I have the honor to represent on this floor, would in all human probability have had at least two beet-sugar factories under way or built at this time had it not been for the passage of the Underwood bill. Options had been taken for lands to be used in connection with one of these factories. I do not pretend to be personally informed with regard to the prospects for factories elsewhere, but I have no doubt but what the passage of the Underwood bill had as disastrous an effect on the hopes and expectations in this regard of the people of other States as upon the people of our State. Had the tariff on sugar remained unchanged, or only reasonably reduced, the industry of growing sugar beets and of making beet sugar would have continued to develop and expand with even greater rapidity than in the past.

THE REFINERS THE ONLY BENEFICIARIES.

Now, Mr. Speaker, I come to the fourth class which has been affected by the reduction in the sugar tariff, namely, the seaboard refiners of imported raw sugar, and I will show that, with the exception of the Cuban planter, who has received a small portion of the tariff reduction, the refiners are the only ones who have received any benefit whatever from the 25 per cent reduction. To substantiate this assertion, I present a table covering the price of raw and refined sugar, the refiners' margin, and other data, from January 8 to July 30, 1914, based on the figures of Willett & Gray.

Refiners' table showing that the seaboard refiners have received 77.8 per cent of the 33.7 cents tariff reduction.

Date, 1914—	New York price of Cuban 96° centrifugal sugar, duty paid.	New York wholesale price of granulated.	Decrease in duty paid, price of raw sugar since Mar. 1, based on average prices for 8 weeks prior to tariff reduction.	Increase or decrease in New York wholesale prices of granulated since Mar. 1, based on average for 8 weeks prior to tariff reduction.		Refiners' margin between raw and refined.	Increase in refiners' margin since Mar. 1, based on average for 8 weeks prior to tariff reduction.	Proportion of reduction absorbed by refiners.[2]

[1] Mar. 1, decrease in duty, 0.337 cent per pound.
[2] In each of these periods the increase in the refiners' margin amounted to more than the 33.7 cents per hundred tariff reduction, as shown by column 7.

Column 1 shows the weekly New York price of Cuban 96° sugar, duty paid; column 2, the weekly wholesale price of granulated; column 3, the decrease in the duty-paid price of raw sugar since the 25 per cent reduction became effective, based on the average price for eight weeks prior to reduction; column 4 shows the weeks and the amount of decrease in the wholesale price of granulated since tariff reduction, based on the average price for eight weeks prior to reduction; column 5 shows the weeks and amount of increase in price since reduction; column 6 shows the refiners' margin; column 7, the increase in refiners' margin since reduction; and column 8 shows the percentage of the 33.7 cents reduction in the tariff which the seaboard refiners have absorbed.

If anything is needed to substantiate the argument that the refiners are the principal beneficiaries of tariff reduction, these figures certainly demonstrate the fact.

An analysis of the table shows that, using as a basis the figures for eight weeks prior to tariff reduction, the average duty-paid price of Cuban 96° raw sugar has declined 22.6 cents per hundred pounds, while the wholesale price of refined increased 5.5 cents per hundred, making the average increase in the refiners' margin 28.1 cents per hundred. The 25 per cent reduction in the sugar tariff amounts to 33.7 cents per hundred. The refiners absorbed 77.8 per cent of this amount, or about 26 cents per hundred, and the consumer paying 5.5 cents per hundred more for his sugar than he did before the reduction.

Mr. Speaker, the 28.1 cents per hundred increase in the refiners' margin amounts to $6.32 per ton. On the meltings of the refiners since March 1 this means an additional profit to the refiners of approximately $7,000,000, and on our total annual consumption of 4,000,000 tons would add $25,000,000 to their profits. No wonder that the refiners fought so hard for free sugar, when a 25 per cent reduction alone will add over $25,000,000 to their profits.

A GREAT REVENUE PRODUCER.

Sugar at the rate of duty which has heretofore been carried upon it has been one of our great revenue producers. The duty collected on sugar for the year 1913 amounted to more than $53,000,000; and yet sugar at the price at which it has been sold in the United States, which, by the way, is lower than that of any European country except Great Britain, has, compared with its food value, been one of the very cheapest articles of food. It is one of the few articles of food which has declined in price when other classes of food were steadily advancing.

This decline in price under protection is clearly shown in the following table:

New York wholesale price of raw and refined sugars, 1882 to 1913, inclusive.

LOSS OF REVENUE.

The placing of sugar on the free list will result in the entire loss of the great revenue which we have been obtaining from that source. The reduction of 25 per cent in the duty on sugar, which went into effect March 1, has resulted in a loss of revenue for the four months, March to June, inclusive, of approximately $8,640,000.

If this great loss of revenue were benefiting the American people by a reduction in the price they pay for sugar, thus reducing the cost of living, we could well forego the revenue and secure it in some other way; but the fact is that no dollar of this loss of revenue has gone to the benefit of American consumers. On the contrary, the greater part of it has gone directly into the pockets of the refiners, while a little of it has gone to the benefit of the Cuban planter and the small remainder to the benefit of the wholesale dealers. Sugar July 31 and for some time before was higher in price at wholesale than it was when the duty was reduced, or for a considerable period prior to that time. I am not surprised at that condition of affairs, for it is exactly what we prophesied would occur when the Underwood bill became a law. The refiner, however, has it in his power to drop the price at any time, and it is this menace, this danger, that prevents the maintenance or the extension of the domestic industry and will render it impossible to continue it to any considerable extent, at least when sugar goes on the free list.

THE ILL EFFECTS OF THE CHANGE OF THE SUGAR DUTY.

It has practically ruined the Louisiana sugar industry.

It has closed eight great beet-sugar factories.

It has rendered idle $10,000,000 invested in these factories.

It has prevented the starting up of four factories heretofore built.

It has discouraged the erection of new factories which were in contemplation.

It has compelled fifteen factories to reduce the price of beets about 50 cents a ton.

It will throw thousands of experts and factory hands out of employment by the closing of factories.

It has deprived American farmers of a market for half a million tons of beets.

It has reduced the farmers' sugar-beet market to the extent of $11,000,000.

It has resulted in loss to railway and other industries of at least a million dollars by reason of reduced demand for service and supplies.

It has reduced the revenues of the Government over $8,640,000.

Over against these disastrous effects it is impossible to set any compensating benefits to the public at large. Sugar is not cheaper; it is higher. No industry has taken or will by operation of the tariff take the place of those destroyed or crippled. No new employment has been or will be furnished under the Underwood bill to those who have lost or will lose their employment in field and factory. Out of this loss and ruin but one interest has benefited—the Sugar Trust. The reduction of the duty has added over $7,000,000 to their profit. They have absorbed practically all that the Federal Government has lost in revenue. All this, let it be remembered, relates to the period antedating August 1 to the effect of Democratic tariff legislation before the outbreak of the war in Europe. I commend these facts to the defenders of and apologists for the Democratic tariff bill. Such gentlemen will, no doubt, ask the farmers and the investors in sugar industries to console themselves with the fact that the trust is doing well.

Lake Superior and Mississippi River Canal.

EXTENSION OF REMARKS

OF

HON. CHARLES R. DAVIS,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 12, 1914.

Mr. DAVIS. Mr. Speaker, for 25 years the slogan of the friends of American waterway transportation has been for a "Lakes-to-the-Gulf through channel of navigation."

Waterway conventions by the score have been assembled at the sound of that slogan in the cities of the Mississippi Valley, the Great Lakes, the Gulf, and the National Capital during that quarter of a century period. The logic of such a through waterway is plain. Commerce requires through channels; it abhors dead ends. Shipments are not ordered until the connections are complete. There must be an uninterrupted and unbroken line of connection from the point of production through all ramifying lines to the thousand points of final consumption.

The Government has expended about $160,000,000 on the improvement of the Mississippi River and its tributaries without producing any considerable volume of commerce. Why the failure to develop commerce? The answer is, Lack of through connections and channels of through commerce. There was only the little local trade of the "way stations," St. Paul being the last "way station" on the Mississippi going north.

On the other hand, about $100,000,000 had been expended on the Great Lakes for harbors, the Soo Canal, the Detroit River, and kindred improvements. The Lakes investment developed commerce for two reasons: First, because for 1,000 miles from Duluth to Buffalo a chain of great inland seas lay ready at hand for what is now the greatest merchant fleet which floats the American flag; and, second, because the opening of the Soo Canal link between Lake Superior and the lower lakes opened a through channel of commerce between the iron mines, wheat fields, lumber camps, and flour mills of Minnesota on the one hand and, on the other, the furnaces, factories, and general markets of the lower lakes region, the cities of the Atlantic coast, and Europe.

The Great Lakes waterway investment, therefore, was laid on a logical basis, namely, it opened up a through channel of commerce for such western commodities as iron ore, wheat, flour, and lumber, and likewise for return cargoes of coal and merchandise. How enormous this commerce has become we may read in the report of the United States engineers in charge.

Last season there were carried through the Soo Canal 79,718,344 tons of freight, as against 20,125,120 tons carried through the Suez Canal, which measures the volume of intercontinental and interocean commerce between Europe and all the nations which border upon the Pacific and Indian Oceans.

In other words, that short link which furnished through connections and an open channel to commerce to and from Lake Superior and the lower lakes and Atlantic developed a volume of commerce nearly four times that which passes between the continents of Europe and Asia. It developed a commerce which required during seven months of lake navigation last year the services of 853 registered vessels, which earned $44,380,864 of freight revenue in carrying a volume of freight valued at $865,957,838, an achievement in commercial navigation which double discounts all other operations combined of the American merchant marine on our coasts and the high seas.

It is the purpose of the Lake Superior-Mississippi Canal link to continue this channel of commerce via the canalized St. Croix into the Mississippi to the Gulf.

There is no question that in the comparatively near future there will be a Lakes-to-the-Gulf channel of through commerce. The demand for it is universal. There appears to be no dissenting voice. The only question is the route. Of course Ohio favors a link from Lake Erie via the Ohio River, and Illinois favors the expansion of the Illinois Drainage Canal as the route from Lakes to Gulf. I may say here that the time appears to be ripe for our friends at the head of the Lakes—Duluth and Superior—to look after their laurels.

However, I think that it can be easily demonstrated that the logical route from Lakes to Gulf is from Lake Superior to the Mississippi and not from Lake Michigan or the lower lake. The first point is tonnage. Of about 90,000,000 tons—1912 record—of total lake tonnage, through and local, 72,000,000, or just four-fifths of the whole, is to and from Lake Superior. The continued development of the Northwest beyond Duluth-Superior and the development of steel works and great coaling plants at Duluth-Superior insure a still more heavy trend of lake commerce through the Soo Canal into Lake Superior in the future than in the past.

Compare the 72,000,000 tons of Lake Superior commerce (Chief of Engineers, 1912), largely that of Minnesota, with the Lake Michigan commerce handled via Chicago, South Chicago, and Milwaukee. The 1913 report of the Chief of United States Engineers gives the total receipts and shipments of lake commerce for Chicago in the calendar year ending December 31, 1912, as 3,644,745 tons; South Chicago, 8,318,838 tons, of which 5,552,727 tons represent iron ore brought chiefly from Minnesota mines; while the Milwaukee total is 7,779,627 tons. That is to say, the total lake commerce of Chicago, South Chicago, and Milwaukee, via Lake Michigan, is barely 20,000,000 tons, and it appears that approximately one-half of this consists of iron ore, wheat, and lumber from Lake Superior, chiefly destined to South Chicago and other near-by mills and furnaces for consumption.

The fact stands that in the calendar year of 1912 the official register of lake commerce was 45,635,496 tons for the harbor of Duluth-Superior and 3,644,745 tons for Chicago and not quite 12,000,000 tons for Chicago and South Chicago combined, of which over one-half represented iron ore, grain, and lumber from Lake Superior.

Moreover, while Chicago's lake commerce declined from 6,105,553 tons in 1903 to 3,644,745 in 1912, that of Duluth-Superior Harbor increased from 18,000,000 tons in 1903 to 45,000,000 in 1912. So that Chicago has ceased to be a lake port of the first class, and its lake tonnage is on the wane; whereas, with a record of over 100 per cent growth in the past 10 years, Duluth-Superior to-day has the largest tonnage of any harbor in the world.

This should be sufficient to deterimne and fix the location of the lake end of the Lakes-to-the-Gulf connecting channel at Duluth-Superior. The purpose of the waterway is to carry commerce, and the commercial tonnage available is that of Lake Superior.

There is also a vital engineering and treaty cause which appears to bar the Chicago Drainage Canal from the necessary deepening and development of its channel for any considerable volume of commerce, a cause which does not affect the Lake Superior-Mississippi route. The water supply for the Chicago Canal, if deepened for commerce, would be drawn from Lake Michigan. This neither the Canadian nor the American engineers can allow, for the boundary treaty between the United States and Great Britain in regard to international waters and likewise the Lake navigation interests of Canada and this country will not permit the lowering of the lake level by artificial means.

The Lake Superior-Mississippi project, on the other hand, avoids this dilemma by drawing its water not from Lake Superior, but from the great timbered and watered plateau of northwestern Wisconsin, which is the source not only of the St. Croix and the Brule, but of nearly all the other Wisconsin tributaries of the Mississippi and of many streams which supply the lake along the south shore. This broad height of land bordering the south shore of Lake Superior is filled with lakes and swamps and has a heavy rainfall and run-off. It has ample water for the canal, and brings us into no conflict with the Canadian and United States Governments in regard to the level of international waters.

It appears that private capital, supposed to represent iron and coal interests, is about to build the Lake Erie-Ohio River canal, the Government taking charge of the job of construction. But this project is to be developed rather for the local purpose of cheap transportation of iron ore from Lake Erie to Pittsburgh, with coal for return cargoes, than as a Lakes-to-the-Gulf project of through commerce. Its development should prove a stimulus to northwestern enterprise in water transportation, rather than a detriment. Certainly the Lake Erie project means more abundant and cheap coal for the entire lake trade and increased cargoes for the Lake Superior-Mississippi waterway.

This brings us to a consideration of the local industries, the tonnage, the towns, and territory that will be most directly affected by the operation of the St. Croix canalization project. Attention has been widely called to the effect of this canal link upon through commerce. It is within the memory of nearly all adult readers of these lines when the commerce of the Great Lakes was a comparatively small affair. The Soo Canal link developed the commerce and the industries. Without the Soo Canal, which gave Minnesota iron ore access to the furnaces of the lower lakes and Pittsburgh, the great iron ranges of Minnesota would have stood undeveloped for decades. The increase in Soo traffic from 9,000,000 tons in 1890 to 79,000,000 tons in 1913, along with a reduction of 50 per cent in lake rates and a corresponding reduction in competitive rail rates, tells the story of what one rightly placed canal link will do in developing through commerce. The St. Croix link carries this lake commerce south into the Mississippi to the Gulf, and at the same time virtually makes Duluth-Superior Harbor the head of Mississippi River navigation. This volume of through commerce will be strongly accelerated by four industrial and navigation projects:

1. The completion next year of the new $130,000,000 Erie Barge Canal which New York is building to secure the grain, flour, and general commerce of the Northwest and the upper Mississippi Valley.

2. The completion of the $25,000,000 furnace, coke oven, cement works, and steel works of the Minnesota Steel Co. at Duluth, which is expected to be in operation during the coming year.

3. The completion of additional extensive coal-handling and coal-storage plants at Duluth-Superior, bringing the coal capacity of that harbor to 20,000,000 tons.

4. The completion of the $20,000,000 upper Mississippi River improvement project establishing 6 feet as the minimum low-water stage for navigation up to St. Paul and concluding with the 30-foot dam across the Mississippi between St. Paul and Minneapolis with slack-water navigation to the Minneapolis mills.

These projects will all be complete and in operation some time before it is possible to finish the Lake Superior-Mississippi project, even were the work to start next season. But each of these highly important projects will add greatly to the tonnage and commercial efficiency of the proposed canal, and will count greatly as a stimulus to local industry and commerce.

It is proper that we of the third Minnesota congressional district should allow our neighbors at the Twin City and Duluth-Superior terminals to grow enthusiastic in regard to the possibilities of cheap water transportation in developing their terminal commerce. We are glad to see them wake up and take notice. There is no question of the great benefits that will result to our big neighbors. At the same time, why should we ignore the fact, so plain that a schoolboy can read the returns in advance, that the most direct and signal benefit from this waterway will go to the towns and counties en route; and especially to such towns as Stillwater, Hastings, South St. Paul, Red Wing, and near-by points along the upper Mississippi and St. Croix, which will enjoy a shorter haul and thereby lower rates than even the Twin Cities. In the handling of coal, grain, brick, stone, cement, iron, and steel, and heavy produce and merchandise generally, these river towns will enjoy a restoration of commerce which will be phenomenal. With doubled transportation facilities, reduced rates, economical handling, a short route, and other advantages of direct location on the waterway, the towns of this district will prosper in every line of industrial and commercial development.

It is interesting to look over the field and note the principal industries that will receive benefit. Among such enterprises are the flouring mills, saw mills, grain elevators, stone quarries, brickyards, sand and gravel pits, foundries, machine shops, coal yards, cement works, packing houses, linseed-oil mills, warehouses for such heavy commodities as salt, iron, and steel, and manufacturing works which turn out pottery, sash and doors, and building materials in general. And the benefits will extend to all lines of agriculture not only because of lower rates for transportation but because of stimulated home markets for farm produce.

It is surprising to note how large a figure such little-advertised industries as clay and stone working cut in the volume of the country's business. The clay products of this country in 1912 were valued at $172,800,000, which nearly equals the value of the anthracite-coal product, and exceeds the combined gold

and silver product by $40,000,000. The stone, sand, and gravel industries—not including slate, talc, pyrites, phosphate rock, mica, grindstones, lime, and gypsum, which together total $40,000,000—which supply building industries only, turn out a $100,000,000 product, which beats the gold output by $7,000,000.

The St. Croix and upper Mississippi have immense deposits of clay and limestone, even forming the banks of the streams for miles. These clay banks have received marked development from the Twin Cities down to Red Wing, and limestone quarries constitute a general source of industry through the Minnesota and upper Mississippi Valleys. Barges southbound with coal cargoes from the lake will load with brick and stone for return cargoes. Besides the finished product, the barges likewise will take crude lime rock for the Duluth furnaces and cement works. It is estimated that the Duluth blast furnaces will require upward of 1,000,000 tons of limestone for the furnaces as a flux in blasting iron ore. The lime which goes through the furnaces and comes out as slag is thereupon converted into cement at the steel plant, and the unit of production at Duluth for this purpose is a 1,000,000-ton cement plant.

Stillwater, Hastings, South St. Paul, Red Wing, and their municipal neighbors will become distributing points for coal, iron, steel, and cement from Duluth-Superior; and elevator, milling, and general shipping points for grain, flour, brick, limestone, packing-house and general farm products destined to the Great Lakes and New York. They will do business for considerable areas of tributary territory on both sides of the river.

Consider for a moment the great volume of agricultural interests that will be affected. Statistics compiled by the Lake Superior-Mississippi River Canal Commission show that the value of the farms in the 12 Minnesota counties in the canal zone and lying between Winona and the head of the lakes grew in value from $111,000,000 in 1900 to $205,000,000 in 1910, and that the crop and live-stock value of the products of these farms in 1910 was $47,000,000. These dozen counties produced 8,000,000 bushels of potatoes and 27,000,000 bushels of grain along with a large dairy, fruit, and widely diversified farm product. But 18 other southern Minnesota counties, whose grain surplus must either cross the Mississippi to reach Chicago or go to the lakes, raise 70,000,000 bushels additional of grain alone, which, if it does not use the canal and river route for direct reduction in rates, will profit indirectly by the effect on competitive rail rates.

The commission's figures indicate a reduction of about 42 cents per ton, which is a cut of 40 per cent in the present average ton rate in car lots from the Twin Cities to Duluth-Superior, as a result of the use of the proposed water route. If the third congressional district contributes only 1,000,000 tons a season all told in cargoes both ways—including coal, iron and steel, cement, salt, and general merchandise from the lakes, and grain, flour, brick, pottery, limestone, packing-house and general farm products destined to the lakes—the value in rate reduction to this district will reach $400,000 a year. This saving may eventually increase to $1,000,000 per annum. But after all the great benefit is the industrial development which will result from these added facilities and lower rates, in furnishing employment and wages to labor, and stimulating legitimate enterprise in all lines, and the building and improvement of homes.

The reason why the State of New York is now investing $130,000,000 in the new Erie Barge Canal, as stated by the commission which includes representatives of the New York Stock and Produce Exchanges, is that it was the old Erie Canal which gave New York its great ascendancy over Philadelphia and Boston in the days when these three cities fought for the position of chief emporium of the Atlantic coast. If New York business men can justify a $130,000,000 investment in a 500-mile canal to Lake Erie in order to enjoy the benefits of lake commerce, how much more readily ought not Minnesota to see a justification in building a 200-mile waterway at a cost of only $8,000,000. Moreover, the waterway advantages of the Lake Superior-Mississippi River project are doubled, because of the fact that in opening the channel of through commerce we are receiving the benefits not only of lake navigation and commerce but of the commerce which thereby will be developed over the Mississippi to the Gulf as well.

As a regulator of rates the Soo Canal has reduced not only lake-and-canal and lake-and-rail but all-rail rates on wheat, flour, and other commodities over one-half, even between Chicago and New York, because of lake competition via Duluth. Rates on the old Erie Canal on wheat from Buffalo to New York averaged 2 mills per ton-mile compared with 6 mills by rail. The Monongahela carries 12,000,000 tons of river coal into Pittsburgh at a rate so low that even the roads which parallel the river banks have no chance in competition; the saving, as shown by the report of the Chief of United States Engineers, being as much as 30 to 50 cents per ton even on a short haul of 50 to 75 miles.

This rate reduction has a wide radius of influence, and the ultimate benefit to Minnesota producers, merchants, and shippers from the combined upper Mississippi River improvement project and the Lake Superior-Mississippi Canal, with their large increase in transportation facilities at reduced rates, will be distributed over a wide range of territory.

In the general movement for the rehabilitation of the inland waterways of the country to relieve the traffic congestion of the railways there is no project more logical and worthy in its purpose than that joining the two greatest waterway systems of our continent, the Mississippi system and the Great Lakes, by the proposed Lake Superior-Mississippi link. The Government has invested $160,000,000 on the Mississippi and its tributaries without opening the necessary connecting link to produce a through channel of commerce. A further investment of $100,000,000 on the Great Lakes leaves the benefits of lake commerce only half extended. The $8,000,000 estimated by the Government engineers as necessary to build the Lake Superior-Mississippi Canal is only 3 per cent added for connecting the two great projects of waterway development into one system of through commerce, while the benefits to the commerce of the great Mississippi Valley might be doubled or increased 100 per cent. An increase of 3 per cent in the extension of an enterprise in order to complete its main purpose and double its benefits would ordinarily be considered an exceedingly conservative and businesslike proposition.

Extension of the American Merchant Marine.

EXTENSION OF REMARKS

OF

HON. ALFRED G. ALLEN,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 14, 1914.

Mr. ALLEN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article from the Cincinnati Post of Wednesday, August 12, 1914.

The article is as follows:

[From the Cincinnati Post, Wednesday, August 12, 1914.]

MORE SHIPS FOR UNCLE SAM.

Before our Civil War Uncle Sam's flag floated over two of every three merchant ships that plowed the seas.

In the struggle to end negro slavery it all but disappeared.

War takes away, but war can restore.

When the *Oregon*, under rush orders, had to round the Horn ere it could take part in the humbling of Spain the American Nation awoke to the fact that a canal at Panama had to be. That dream of the ages is now a reality, its splendid completion in less than the estimated time having added to the world's great achievements an entry of which every mother's son of us is proud.

The canal wasn't dug by a private corporation seeking profit. It was dug by the American people as a work of prime necessity.

And now another war—this time not of our making—finds us face to face with the need of supplying many nations, but without ships to carry the goods.

Congress has voted to let American-owned ships which have been sailing under other flags take down those other flags and put up the Stars and Stripes. But the ships will still be privately owned, and the change of flags will bring neither certainty of escape from risks of capture nor assurance that, trouble over, the flags won't be switched right back again.

You can't insure a ship's immunity in war time by changing its flag and its register.

There is, however, a way by which, on lawful errands, its safety may be assured beyond a shadow of doubt.

That is, for the American people to buy it and own it. Own it unconditionally, as they own their battleships.

The reason for such ownership is identically the reason for national ownership of the Panama Canal—public necessity; the necessity of national defense.

We are not to blame because the ships which have been carrying to foreign markets the products of our mines, farms, and shops are suddenly taken out of this useful service to be used in war.

But we should be very much to blame if we did not see to it that not again shall our peaceful commerce be thus wiped out.

There have been thrust before us both the duty and the extraordinary opportunity of protecting our millions of peaceful workers and traders both at once and for years to come. It will not be enough to temporize with private makeshifts liable to fail us as soon as the crisis of the present war shall have passed.

Our flag shall go back on the high seas to stay.

Uncle Sam himself should carry as well as make and fetch.

Now is the time to make Congress see this.

Strike while the iron is hot.

We have the money. We have the goods. Let's make dead sure that we'll never again lack the ships to carry the products of our soil and factories to the markets of the world.

Attitude of the Democratic Party on Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 31, 1914.

Mr. MONDELL. Mr. Speaker, on the first day of the present session of Congress I introduced House joint resolution No. 1, which is as follows:

Joint resolution proposing an amendment to the Constitution of the United States, extending the right of suffrage to women.

Resolved by the Senate and House of Representatives of the United State of America in Congress assembled (two-thirds of each House concurring therein), That the following article be proposed to the legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said legislatures, shall be valid as part of said Constitution, namely:

"ARTICLE —.—SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

"SEC. 2. Congress shall have power, by appropriate legislation, to enforce the provisions of this article."

This resolution was referred to the Committee on the Judiciary, and on the 3d day of March, 1914, a hearing was had before that committee, at which hearing I spoke in part as follows, as reported in the hearings:

"Gentlemen of the committee, in the very brief period alloted to me it would be impossible for me to make an argument, or at least an extended one, as to the propriety and advisability of giving the people of the States an opportunity to express their opinion relative to this very important subject. A very high authority in this country—the highest of all authorities in the country—has recently said that the ladies were abundantly able to speak for themselves. We are sure that has been demonstrated this morning and will be further demonstrated as the hearing proceeds. Unlike that high authority, I am very happy to speak for them if the opportunity affords, but I think it is hardly necessary to speak for them at any great length, for, as the President says, they are abundantly able to speak for themselves.

"Personally, while I belong to the Republican household of faith, which is supposed to be somewhat Federalistic in its tendencies, I am a good deal of a 'States' righter,' as you, my colleagues, know. And yet I believe that it is entirely proper, expedient, and wise that this matter of granting the franchise to women, or of preventing any State from denying or prejudicing the right of franchise to women, be presented to the people of the country for their determination. The Federal Constitution is difficult of amendment. For one, I would not make it less difficult. I believe that the fundamental law should not be changed except after careful consideration and upon the approval of a very large majority of the people. But, gentlemen, I understand it to be your duty not to decide whether you individually believe that it would be wise and proper and for the public interest that women should vote, but the decision with you is as to whether this is a question of sufficient importance and sufficiently lively interest throughout the country that it is your duty as members of this great committee to give the Congress an opportunity to pass upon the question of presenting it to the States for their determination. [Applause.]

"There is, it seems to me, one very strong and really convincing argument among the multitude of arguments presented that ought to appeal to us all relative to this matter. The National Government, the people as a whole, have invaded—if I may use that word—the rights of States relative to suffrage in the fifteenth amendment. I think no one will suggest that it is not infinitely more important that the States shall not deny the suffrage to the more virtuous and intelligent half of its citizenship than that they shall not deny the suffrage to people by reason of race, color, or previous condition of servitude. [Applause.] And the necessity, the importance, the wisdom of a Federal amendment increases as suffrage spreads through the States, because as State after State grants its women the franchise we are gradually reaching that condition where a denial of franchise to women by some of the States results in depriving American citizens of the franchise as they move from one Commonwealth to another. [Applause.]

"Uniformity in the exercise of the franchise is a most excellent thing, and it seems to me that our Federal Union will be more and more cemented as we come more nearly to that point where qualifications for citizenship are approximately the same throughout the Union. I would not deny to the States the right to withhold the franchise from the illiterate, or from other classes, by reason of their own faults, who are believed not to be entitled to the franchise; but to deny the franchise by reason of a failing which the individual may himself cure and to deny the right of franchise because of sex are two widely differing propositions." [Applause.]

On the 9th day of May the Committee on the Judiciary reported the resolution to the House without recommendation, and on May 14 I introduced a resolution, which was referred to the Committee on Rules, asking for a rule for the consideration of the resolution.

In the meantime a movement was started for the appointment of a Committee on Woman Suffrage, which would be charged with the duty of considering the resolution for an amendment to the Constitution and all other proposals of legislation relating to the question of woman suffrage. Hearings were had and forceful and eloquent arguments were made for the appointment of such a committee, but the Democratic members of the Rules Committee declined to act favorably on the proposition.

From the very beginning of the Wilson administration women interested in the cause of woman suffrage and delegations representing the suffrage movement endeavored, from time to time, to secure an expression from the President as to his views on the subject and his attitude toward pending legislation. All such efforts made during the special session of Congress were fruitless, the President insisting that the necessity of considering tariff and currency legislation excluded all other matters.

NEW JERSEY WOMEN CALL ON THE PRESIDENT.

On November 16, 1913, however, a deputation of women from New Jersey succeeded in seeing the President and in getting a brief though somewhat criptic statement from him. The interview and its result was reported in The Suffragist of November 22, 1913, as follows:

SUFFRAGE DEPUTATION INTERVIEWS PRESIDENT WILSON.

The deputation of New Jersey women who visited Washington last week for the purpose of waiting on President Wilson in behalf of the suffrage amendment were received at the White House at 11 o'clock Monday morning. The delegation was composed of 73 women representing the New Jersey State Suffrage Association, the Women's Political Union, and the Equal Franchise Society, the three suffrage organizations in the State.

Although the leaders of the deputation had made strenuous efforts to arrange an appointment with the President, they were unsuccessful, and when the delegates met on Monday at the headquarters of the Congressional Union their expected audience was without date; that is, it was without date at the White House. Representative McCoy, of New Jersey, who had offered to arrange the audience, had apparently failed in his mission and could not be located.

NO ONE TO MAKE OUR APPOINTMENT WITH.

Efforts were made to reach by telephone the President's secretary, Mr. Tumulty, but he, too, had mysteriously disappeared. The leader of the deputation asked the unknown at the other end of the wire if it would be possible for the women to see the President without the formality of an appointment. The answer, in a shocked and reproving voice, came back:

"Certainly not. Nobody can possibly see the President unless an appointment has been made."

Whereupon the women's representative replied gently, but firmly, "Very well. The deputation is starting immediately for the White House. It will arrive in 10 minutes and it expects to be received by the President. The women have come prepared to stay a month, if necessary, but they intend to see the President. They have something important which they desire to communicate to him. Good-by."

In 10 minutes the women, 73 strong, appeared at the door of the Executive Office. Here they were met by a White House attaché who courteously informed them that the entire delegation would be received after the President had talked with the leaders. The presidents of the three organizations, Mrs. E. F. Feikert, Mrs. Mina Van Winkle, and Mrs. Harry Compton, with several members of the Congressional Union, were at once shown into the private office, where the President stood waiting to receive them.

MRS. FEIKERT AND MRS. VAN WINKLE SPEAK.

Mrs. Feikert spoke for the New Jersey State association, saying that she represented 7,000 women in the State who desired the ballot, and briefly reviewing suffrage activities, including the introduction in Congress of joint resolution No. 1, for a suffrage amendment to the Consti-

tution. Mrs. Feikert reminded the President of the enormous number of petitions presented to the Senate on July 31 and of the cordial reception the petitioners had been accorded by men high in the councils of the various parties represented in Congress. She added:

"Since our measures have not met with the desired success, we have been asked by the women of New Jersey to come to Washington at this time to lay our cause before our Representatives in Congress and before you, Mr. President. We ask you to take up the matter of equal suffrage in your next message to Congress and to make it an administration measure. We also hope that you will use your best efforts to have a woman-suffrage committee appointed in the House of Representatives, such as has already been appointed in the Senate."

Mrs. Van Winkle, president of the Women's Political Union of New Jersey, made a speech, stating facts regarding the condition of working women in the State and pointing out the urgent necessity of giving them the protection of the ballot.

WILSON ON SUFFRAGE.

President Wilson replied: "I am pleased, indeed, to greet you and your adherents here, and I will say to you that I was talking only yesterday with several Members of Congress in regard to a suffrage committee in the House. The subject is one in which I am deeply interested, and you may rest assured that I will give it my earnest attention."

At this point the rest of the deputation was admitted and was most cordially received by the President.

The Suffragist of the same date comments on this interview with the President editorially as follows:

PRESIDENT WILSON HAS THOUGHT ABOUT SUFFRAGE.

President Wilson has been brought face to face with the question of the woman-suffrage amendment, and his response, while not entirely satisfactory, has become a matter of record. Heretofore President Wilson has been resolutely noncommittal on the subject of woman suffrage. His nearest friends have been unable to guess his attitude toward this important reform. His invariable reply to questions has been, "I am thinking about it."

Now, at last, we know that he has really been thinking about it, and more than that, he has been talking about it with Members of Congress. Presumably those Members were also members of the Rules Committee and of the Judiciary Committee, the two bodies in charge of the suffrage measures. We are justified in assuming that those committees will act in the matter as the President desires. In fact, it is hardly conceivable that they would do otherwise.

Thus we shall know, and know very quickly, whether President Wilson, chosen leader of the Democratic Party, is a true believer in the principles of democracy or if he merely believes in democracy for a privileged class; in other words, no democracy at all. President Wilson has been thinking about suffrage. Therefore, he is either a suffragist or he is not. Nobody can think about suffrage without lining up in one or the other rank.

If President Wilson, apostle of democracy, has decided that he is not a suffragist we shall have no House suffrage committee appointed this year, and we shall have no favorable report on the suffrage bill from the present Judiciary Committee. In all probability we shall have no consideration at all during the next Congress. If President Wilson has decided that he is a suffragist we shall have a splendid chance to get the Federal amendment through the next Congress. At all events, we shall see the amendment given every possible facility.

We are waiting to learn what President Wilson will do about suffrage. Meanwhile it will not be out of order to remind President Wilson that another President, to most minds the greatest one we ever placed in office, thought most favorably about it. Fifty years ago President Lincoln said, "I go for all sharing the privilege of the Government who assist in bearing its burdens, by no means excluding women."

No President could be accused of radicalism who does no more than confirm an opinion voiced by the wisest man of his generation 50 years ago. We hope that President Wilson will lose no time in informing the women of this country whether or not he agrees with those words of the immortal Lincoln. We hope that he will embody that information in his first message to the coming Congress.

If the President fails to do this we shall know that he has chosen to line up with the antisuffrage forces. Every man who is not an active friend is, at best, a passive foe to woman suffrage.

A second effort to enlist the aid of President Wilson was made on December 8, 1913, by a delegation of 55 women appointed by the National American Woman Suffrage Association. During the annual convention of this association in Washington President Wilson delivered his message to Congress on December 2. The following day this convention, made up of women from every State in the Union, unanimously voted to appoint a committee to call on President Wilson. Preceding the appointment of this committee and the adoption of resolutions Members expressed their surprise and indignation at the President's complete omission of all reference to woman suffrage in his message to Congress. The resolutions passed by this convention follow:

RESOLUTIONS PASSED BY CONVENTION.

Since the President omitted all mention of woman suffrage in his message of yesterday, and since he has announced that he will send several other messages to Congress outlining the measures which the administration will support, I move that the whole convention wait upon the President to enlighten him concerning our movement and to demand that he make the woman-suffrage amendment an administration measure, recommend it immediately to Congress, and insist that it be considered before taking up any other legislation whatsoever.

The following account of this interview is taken from the Suffragist of December 13, 1913:

The deputation which waited upon the President was made up of delegates sent to the national convention from every State in the Union.

Dr. Shaw, addressing the President, said they had come from the National Suffrage Association, authorized by the association to present the claims and the object for which they were organized, which object was to secure to the women of the United States a representation in the Government with the men citizens of the United States through legislative enactment. That they had made these pilgrimages for many, many years, and the committees had received them and listened to their arguments; the difficulty was that the committees had buried their requests. They had not permitted these requests to come before Congress so that Congress itself might act upon them, nor had they been submitted to the electors of the various States.

The wish of the association was to have a national constitutional amendment enfranchising the women citizens of the land and preventing the States from depriving the women citizens from an equal representation in the Government.

Since the committees of Congress had not reported the measure before Congress and had not given Congress an opportunity to discuss it, nor even given the men of the country an opportunity to speak upon it or express their will upon it, the women asked that a special committee in Congress should be appointed for that purpose.

Some years ago, Dr. Shaw continued, the Senate did appoint such a special committee, to which the question was referred; a group of suffragists had appeared before this committee this year, and the committee had reported favorably upon the request to present the measure to the Senate. Therefore, the women of the country were hoping that the administration, of which the President was the representative and head, would use its influence to bring the matter before the Senate, where it might be favorably acted on.

In the lower House women had failed to persuade the Judiciary Committee to report their measure. They appealed to the President, therefore, to ask his assistance.

The association asked the President, first, to send to Congress a special message asking Congress to submit to the legislatures of the country an amendment to the National Constitution enfranchising the women citizens of the United States; secondly, to use the administration's power to influence the Rules Committee to appoint in the lower House a committee corresponding with the Suffrage Committee in the upper House, a committee which had the leisure to examine the subject of woman suffrage and give it its time. The present Judiciary Committee, Dr. Shaw stated, would unquestionably give the subject more time if they had it; but she had found in the President's messages, which she read with great care and in which she was deeply interested, that this committee had been given an immense quantity of work and would have very little leisure for the suffrage question. Therefore it was necessary to ask that a special House committee be appointed in order to take the question into consideration and view it carefully and judicially on all sides.

"So we come," Dr. Shaw continued, "and appeal to you in behalf of the women citizens of the country. Many of the women have cast their ballots for the President already and have an influence in the Government and can affect the Government and do affect it; many of the women are very eager to take an equal part and appreciate the just manner in which you have, since your administration began, weighed these questions. Recognizing your splendid stand on the liberties and rights of the people, we appeal to you because we believe you will bring to our question that same spirit of justice which you have manifested toward all other great questions.

"In behalf of our association we make this appeal to you to-day, and thank you for the kindness you have shown, in your present ill health, in receiving so large a delegation and in giving us your time."

The answer of the President, as reported in the Washington Post of December 9, is as follows:

THE PRESIDENT'S SPEECH.

"I want you ladies, if possible—if I can make it clear to you—to realize just what my present situation is. Whenever I walk abroad I realize that I am not a free man; I am under arrest. I am so carefully and admirably guarded that I have not even the privilege of walking the street. That is, as it were, typical of my present transference from being an individual with his mind on any and every subject to being an official of a great Government and incidentally, or so it falls out under our system of government, the spokesman of a party. I set myself this very strict rule when I was governor of New Jersey, and have followed it as President, and shall follow it as President, that I am not at liberty to urge upon Congress in messages policies which have not had the organic consideration of those for whom I am spokesman. In other words, I have not yet presented any legislature my private views on any subject, and I never shall, because I conceive that to be part of the whole process of government, that I shall be spokesman for somebody, not for myself.

"When I speak for myself I am an individual; when I speak for an organic body I am a representative. For that reason, you see, I am by my own principles shut out, in the language of the street, from 'starting anything.' I have to confine myself to those things which have been embodied as promises to the people at an election. That is the strict rule I set for myself.

CREATION OF HOUSE SUFFRAGE COMMITTEE.

"I want to say that with regard to all other matters I am not only glad to be consulted by my colleagues in the two Houses but I hope that they will often pay me the compliment of consulting me when they want to know my opinions on any subject. One member of the Rules Committee did come to me and ask me what I thought about this suggestion of yours of appointing a special committee of the House, as the Senate has already appointed a special committee, for the consideration of the question of woman suffrage, and I told him that I thought it was a proper thing to do. So that, so far as my personal advice has been asked by a single member of the committee, it has been given to that effect. I wanted to tell you that to show you that I am strictly living up to my principles. When my private opinion is asked by those who are cooperating with me, I am most glad to give it; but I am not at liberty until I speak for somebody besides myself to urge legislation upon the Congress.

MEMBERS OF THE DELEGATION.

Accompanying Dr. Shaw were Mrs. Susan Walker Fitzgerald, Mrs. Mary Ware Dennett, Miss Ruutz-Rees, Mrs. Stanley McCormick, Mrs. Medill McCormick, Mrs. William Kent, Mrs. William Borah, Mrs. George H. Chamberlain, Mrs. Miles Poindexter, Mrs. Robert M. La Follette, Mrs. Frank W. Mondell, Mrs. Philander Claxton, Mrs. Grace Frances, Mrs. Frances Maule Björkman, Miss Clara Hill, Mrs. Eliza L. Jones, Miss Mabel Vernon, Mrs. Mary L. Lendon, Mrs. Ballenburg, Mrs. Jessie Hardy Subbs, Mrs. Elizabeth C. Earl, Mrs. Anna Noland, Miss Laura Clay, Mrs. George W. Woodland, Mrs. D. R. Hooker, Miss Garrett, Miss Margaret Foley, Mrs. W. Dexter, Mrs. Parker, Miss Katherine Klager, Mrs. T. J. Jennison, Mrs. Huntley Russell, Mrs. William F. McKnight, Mrs. C. B. Hamilton, Mrs. C. H. Clark, Mrs. Katherine Farrar, Miss Emily Perry, Mrs. William Clagett, Mrs. Mary Morris Lockwood, Miss Alice Paul, Miss Jeannette Rankin, Miss Doris Stevens, Miss Anne Martin, Mrs. George Rubell, Mrs. Gallinger, Miss Frances Baker, Mrs. Maud Anderson, Mrs. H. G. Danforth, Mrs. M. M. Welsh, Miss Portia Willis, Mrs. Minnie E. Brooke, Mrs. Nina E. Allender, Mrs. Harriet

Taylor Upton, Mrs. Russell MacLennan, Mrs. Lawrence Lewis, Miss Mary B. Anthony, Mrs. Yates, Mrs. E. S. Tenney, Mrs. L. Durand, Mrs. W. G. Crabbe, Mrs. Crozier, Mrs. Lota McDaniel Sells, Mrs. Charles V. Meredith, Mrs. Monroe Hopkins, Mrs. Randolph Keith Forrest, Mrs. Gilson Gardner, and Miss Charlotte Johnston.

The brief and unsatisfactory statement made by the President to the delegation of New Jersey women in November, and his equally evasive and adroit denial on December 8, remained his only statements on the subject until February 2, 1914, when a huge deputation of women, representing more than 50 trades in which women are engaged, from 10 States called on the President, hoping to get some friendly word from him in behalf of the suffrage movement. That meeting and its outcome is reported in the Suffragist for March 7, 1914, as follows:

PRESIDENT WILSON SEES WORKING WOMEN—CAN NOT SPEAK FOR PARTY.

The huge deputation of women who had come together from 10 industrial States, representing more than 50 trades in which women are engaged, assembled for a mass meeting preliminary to waiting upon the President. This deputation of self-supporting women was the most convincing argument for self-government that was ever put before any person, and by far the most significant to seek audience with President Wilson.

At 10.30 o'clock the Public Library auditorium was full to overflowing with those eager to hear the program arranged, while a still larger crowd began to slowly assemble on the plaza to await the deputation.

Miss Paul, chairman of the Congressional Union for Woman Suffrage, called the meeting to order. She said:

"We meet here this morning to welcome you on behalf of the Congressional Union, and to tell you of the support which we all give you in this deputation to the President.

"This is the sixth deputation which has gone to see President Wilson. Last spring a deputation of women voters called on the President. A deputation of college women and a deputation from the National Suffrage Association went to him also. This November 73 women from President Wilson's own State, the State of New Jersey, went to the President. In December the National Suffrage Convention, which was in session here, sent a deputation. These deputations appealed to him, as the leader of his party and as the head of the Nation, to aid in this struggle for enfranchisement.

"Though the President has taken no action as yet, we still hope and believe that he will realize the great opportunity before him, and will do something to help the women of this country.

"There is probably no deputation which has ever gone to him that is so full of meaning as is this labor deputation. We are filled with hope as to the results to be accomplished by your mission. What you are doing will help not only working women but all women. We wish you Godspeed.

"I will now introduce to you the first speaker, Miss Melinda Scott, an organizer of the Woman's Trade Union League and a resident of the State of New Jersey."

Miss Scott: "Madam Chairman and Friends: We have been asked to come to Washington and tell why working women need the ballot. First of all, woman suffrage is a woman's question. It is a woman's question because the issues involved are important to us women, caring as we do for the welfare of all women and children, and also because the problems of the working women are so great that they need the ballot to help them in their industrial conditions.

"No one could be serious when they maintain that the ballot will not help the working woman. It has helped the workingman to better his conditions and his wages. Men of every class regard the ballot as their greatest protection against the injustice of other men. Women even more than men need the ballot to protect their especial interests and their right to earn a living. The disenfranchised can not protect themselves nor their labor. [Applause.] How often have we proven this to be the case when we have journeyed to our different capitols, State and National, begging our legislatures to enact laws that will protect women and children and, indirectly, the Nation, such as a shorter working day. Eight hours a day is long enough for anyone to work [applause], much less women, who are supposed to be the weaker sex; and if we can not earn enough of wages to keep us from the poorhouse working eight hours a day, then there must be a leak somewhere in our industrial as well as our political system.

"We want a law that will prohibit home work. We know that home work is a deadly menace to all of society, not only by reason of its insanitary experiences, but because of its cutting down the wages of the women employed in the factories. [Applause.] We hear about the sacredness of the home. What sacredness is there about a home when it is turned into a factory, where we find a mother, very often with a child at her breast, running a sewing machine, running up 37 seams for a cent; ironing and pressing skirts, 70 cents a dozen; and children making artificial flowers for 1 cent a gross—think of it, 144 flowers for 1 cent—taking stitches out of coats, helping their mothers, where they have finished them for 6 cents a coat? These women have had no chance to make laws that would protect themselves or their children. Disenfranchisement helps to keep women's wages down. [Applause.]

"The organized working woman has learned through her trade-union the power of industrial organization, and she realizes what her power would be if she had the ballot. She could obtain through legislation the appointing of factory inspectors and labor commissioners who would be obliged to work earnestly and faithfully for the welfare of all women and children.

"Men legislating as a class for women and children as a class have done exactly what every other ruling class has done since the history of the world. They discriminate against the class that has no voice. Some of the men say, 'You women do not need the ballot; we will take care of you.' We have no faith in man's protection. [Applause.] Men are not very gallant as a rule to working women. She knows it by experience and not by theory. [Applause.] Give us the ballot and we will protect ourselves. [Applause.] Some people say that working women do not want the ballot; and we working women who do think we want to get it for the working women who say they do not want it, because we know when working women get the ballot our hours will be shorter. We shall have a chance to educate ourselves.

"We are part of the people who house and clothe and feed the world; and anyone that can support themselves under the industrial conditions as they are to-day ought not to be classed as an imbecile, lunatic, or idiot. [Applause.] Give the working women a chance to grow and work out their salvation. We are tired of being told by others what is good for us. You are ready to give us everything under the sun but wages and shorter hours and a chance to make our own home surroundings and our own pleasures. If you are really in earnest about helping the working women, if you really mean to help us, help us get the ballot. I will now conclude in the words of the national president of the Women's Trade Union League: 'The woman's movement and the labor movement are two expressions of the democratic spirit of our times. Every woman in America who wishes to see our land bring forth a great people must join us working women in insisting that unto us be given full control of the conditions under which we live and work.'" [Prolonged applause.]

Miss Scott was followed by Mrs. Mary Waxman, representing a delegation of unemployed women of New York City.

Miss Rose Schneidermann, vice president of the National Women's Trade Union League, then said:

"Fellow workers: I think the very fact that we are gathered here, all of us working women from 10 States, means a great thing in behalf of progress. President Wilson, in his 'New Freedom,' states that conditions to-day are so much different than they were 20 years ago. I think the President struck the note. Especially do working women find the conditions to-day different than they were during the times of their grandmothers. Women always worked all through history, only they did it under different conditions years ago. We did not work for wages at one time. We worked for the home; and with the introduction of machinery, we were forced out of that home. As a result we find ourselves to-day, women and children, in these factories; and the question is what we are going to do about it. We know that in industry there is no chivalry. We are not considered any more than the man next to us, unless we are going to take one-half of the wages that he asks for; and so long as we consider ourselves a loop, and so long as we are recognized as such, then so long we are going to be disenfranchised.

"In order to bring about better working conditions we need the ballot, and we need organization after we get the ballot. [Applause.] We need organization so as to sell our labor collectively, because individualism has played its last card. [Applause.]

"If you have got to work for your living, you need organization [applause]; and if all the working women of America were to organize to-day and demand the ballot, I am sure they would get it the same day they demanded it." [Applause.]

Miss Margaret Hinchey, of New York, a laundry worker, and Miss Rose Winslow, of Pennsylvania, a textile worker, in stirring and forceful manner made strong appeals for votes for the working women to improve their industrial conditions.

The delegates fell in immediately behind their State banners. Standards bearing their trades dotted the entire line. High in the air mottoes carrying pertinent bits of the President's "New Freedom" were easily read by the spectators. One heard them reading aloud, "We have got to humanize industry," "I absolutely protest against being put into the hands of trustees" etc.

It was a most impressive sight, the march of these women, with steady step, heads erect, and keenly alert to the justice of their demand. As the band struck up the glorious strains of "The Marseillaise," their faces seemed to shed light anew. Mrs. Glendower Evans, of Boston, carried the American flag, with Rose Schneidermann, vice president of the Women's Trade Union League, by her side, and led the procession. Directly behind them came Rose Winslow, Margaret Hinchey, and Melinda Scott, carrying the huge banner, "We demand an amendment to the United States Constitution enfranchising women."

The army of 400 arrived safely, with perfect police escort, at the doors of the White House. We were amazed to learn that the President would see only 25 of the women. He had said he would "receive the delegation." The selected number then went in; the remaining 375 waited in line outside.

Mrs. Glendower Evans, in her inimitable way, took charge of affairs inside. After the women had assembled, she at once began to address the President, saying:

"Mr. President, I had the honor a year and a half ago to have an interview with you upon this suffrage matter at Sea Girt. At that time you were good enough to explain to me your position somewhat fully, going into the pros and cons as they lay in your mind. I had not expected that, but only a straight yes or no. As you explained your position, you went such a very long way toward our side that I have since felt you were almost with us, and since your election I have been looking and hoping almost week by week for some favorable word from you. I come here now heading a deputation of working women. They come from 10 States in the Union—Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, Wisconsin, and the District of Columbia—among whom are representatives from practically every State in the Union. There are several hundred women waiting outside.

"As I said, these are working women, women who are earning their bread. As you know, there is no chivalry in industry. You know how powerfully the ballot has helped the workingmen and you must know that workingwomen, because they are weaker, need the defense of the ballot even more.

"As the leader of the party in control of the Government, a great power is in your hands. Will you use it to lift the legal disabilities under which these women labor? That is our question.

"I will now ask a few of the representatives of these workingwomen to speak for themselves, though under some difficulty as each one of them is under a limitation of two minutes. I now call upon Miss Margaret Hinchey, laundry worker, from New York."

Miss Margaret Hinchey, laundry worker, New York, then spoke. She said:

"Mr. President, it is shaking and trembling, I as a laundry worker, come here to speak in behalf of the workingwomen of the United States. I have read about you and think you are fair, square, on the level, and so much a real Democrat that I believe when it is made clear to you how much we workingwomen, who organize in the factories, the mills, the laundries, and the stores, can help every true Democrat you will use your power to wipe out this great injustice to women by giving us the vote."

Mrs. Evans: "I now call upon Miss Rose Schneidermann, cap maker and organizer of the Woman's Trade Union League."

Miss Schneidermann: "Mr. President, we workingwomen watched carefully for your message and were very disappointed to see no mention of our cause. You must know, Mr. President, that our conditions have changed. We have followed our work out into the industries and there suffer the same conditions as our men do. We know what it is to hunt for work, to be faced with the possibility of losing our jobs, and knowing that there is nothing but destruction and starvation left for us. Therefore, the vote to us is an economic necessity. We urge that you consider it."

Mrs. Evans: "I will now call upon Miss Melinda Scott, labor organizer from New Jersey, your own State, Mr. President."

Miss Melinda Scott: "We workingwomen come to you, Mr. President, because we are part of the people who house and clothe and feed the world. This Government is supposed to be a democratic Govern ent, but it can not be truly democratic when only one-half of the people have the making of the laws. We ought to have something to say about the laws under which we live and work. No one could be serious when they say the ballot has not bettered the workingman's condition, and we hope that you will bring out in your next message, Mr. President, the necessity of enfranchising the women."

Mrs. Evans: "I now call upon Miss Rose Winslow, of the textile workers in Pennsylvania."

Miss Winslow: "Mr. President, I am one of the thousands of women who work in the sweated trades, and have been since a child, who give their lives to build up these tremendous industries in this country, and at the end of the years of work our reward is the tuberculosis sanitarium or the street. I do not think to plead with you, Mr. President, nor make a regular speech. I don't speak to Presidents every day; it hasn't been my job, so I don't do it very gracefully."

Here the President interrupted Miss Winslow by stating that he did not see why she should be nervous, as Presidents are perfectly human. Miss Winslow then continued:

"Yes; I know, and that is why I can speak to you, because you are human and have a heart and mind and can realize our great need. I do not need to remind you how we women need the ballot. You are too intelligent a man and understand conditions too thoroughly in this country to need reminding, and I am confident that in a short time we will receive our enfranchisement through you."

The President, to committee of workingwomen, at the White House, February 2, 1914, said:

"I need not tell you that a group of women like this appeals to me very deeply, indeed. I do not have to tell you what my feelings are, but I have already explained—because I felt obliged to explain—the limitations that are laid upon me as the leader of a party. Until the party as such has considered a matter of this very supreme importance and taken its position, I am not at liberty to speak for it; and yet I am not at liberty to speak as an individual, for I am not an individual. As you see, I either speak to it in a message as you suggest or I do not speak at all. That is the limitation I am under, and all I can say to you ladies is that the strength of your agitation in this matter undoubtedly will make a profound impression."

Mrs. Evans said the following after the President spoke:

"We understand your position and its difficulties quite well, Mr. President, but nevertheless we ask, Can we look for political action? We recognize that the verdict must come not from you alone, but from the whole party. Nevertheless you are the leader of that party. I do not ask you to break with your party, what I ask is, Will you use your influence within your party? I don't ask the impossible, though I might from you, for you have done the impossible."

Miss Alice Paul, commenting on the answer of the President to the workingwomen's deputation, said:

"The President stated in sum that he was waiting for the verdict of his party on woman suffrage, and he commented on the strength of our agitation. Women must learn to go on agitating with a view to securing from the party in power a favorable verdict on the question of their right to political freedom."

The impression which the President's answer made on this delegation of self-supporting women is indicated by the following from The Suffragist of February 7, 1914:

THE PRESIDENT'S ANSWER.

[By Mrs. Glendower Evans.]

The President is a gentleman, and he is likewise an accomplished diplomat. It was an adroit turn when he closed an embarrassing dialogue with the working women's delegation to the White House by asking that the members of the delegation who had been excluded from the audience be admitted to the extent of shaking his hand. That courtesy delivered him for the moment. But for the moment only. In the meeting following, held at the Young Women's Christian Association, where the delegates adjourned for lunch, the poverty of his position was revealed in all its nakedness. "What did he say?" asked the excluded delegates. "Will he help us or won't he?" Then the hard fact came out with no handshaking to divert the issue. He will not raise his hand to help us. He will not speak a word, because he is bound by his party. He denies himself the right of free speech on this burning issue of justice and of freedom. "But if you can not speak for your party why not speak to it, Mr. President? Will you promise us that?"

Until he will give that promise both he and his party must be held responsible, together and singly, leader and rank and file. That is where the President left the issue. Let the women of the country, enfranchised and unenfranchised, understand.

The illogical attitude assumed by the President in regard to suffrage compared with his attitude on the question of the canal tolls is clearly set forth in the following editorial from the Suffragist of February 7, 1914:

PRESIDENT WILSON AND THE CANAL TOLLS.

"Until the party, as such, has considered a matter of this very supreme importance, and taken its position, I am not at liberty to speak for it; and yet I am not at liberty to speak for it as an individual, for I am not an individual." (President Wilson to the workingwomen's deputation, Feb. 2, 1914.)

Not all who heard President Wilson pronounce these words were deceived into thinking them anything more than an evasion, a "diplomatic utterance," as such things are called. A few there were, however, who went away from the White House depressed and disappointed. They really believed that the President meant what he said, that he was confiding in them one of the sacred policies by which the country is being governed. President Wilson was the servant of his party. He was going to do what the party, in its platform, promised the country that he would do. Moreover, he wasn't going to do anything else. No matter how much he yearned to effect some reform the platform forgot to mention he wasn't going to yield to temptation and effect it, because the party had not told him to. Perhaps some of the credulous, despairing of suffrage, went home and looked up the Democratic platform of 1912 to see for themselves what could happen to the country in the way of legislation during President Wilson's administration. If any woman did that she may have noticed two little paragraphs which read as follows:

"We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal.

"We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal."

The canal tolls plank in the platform was indorsed with great enthusiasm by the Democratic convention. In fact, not a single voice was raised against it. Tolls exemption for American vessels was almost the most popular thing in the way of planks that the Democratic carpenters handled that week in Baltimore. Tolls exemption figured in almost every speech made by Mr. Bryan and the other orators during the campaign. It was one of the policies on which the Democratic Party went to the country.

Yet, within a few days after President Wilson had told the women that he could not recommend a suffrage measure to Congress because the Democratic Party had not passed on suffrage, he did something still more impossible; he demanded of Congress the repeal of the free-tolls provision in the canal act. He not only recommended a reform not indorsed by his party, a thing he told the women he would never do, but he demanded a reform which the Democratic Party had expressly declared against. And he will get his reform. The Washington Times said, editorially: "President Wilson has demanded the repeal of the free-toll provision in the canal act, and it needs no gift of prophecy to foresee that a large number of the Democratic Members of the House and Senate who voted for free tolls will hasten to beat a retreat. The question will not be tried on its merits. For most of the Democratic membership of both Houses it will be sufficient to know what the President wants done."

Some of the Democratic leaders, rather aghast at this audacious repudiation of platform policy, yet anxious to obey the crack of the whip, have made a very brilliant suggestion. They advise a referendum of the convention delegates with a view to finding out the truth of a horrid rumor, to wit, that the free-tolls plank was slipped into the platform when everybody's back was turned. It was, in fact, handed to the party by a trick.

We like that suggestion immensely. You could do almost anything you liked with a simple device like that. For instance, you could take a referendum and find out that woman suffrage was left out of the Democratic platform by an oversight, or even that it was cut out of the platform at the lunch hour, like a Mona Lisa out of its frame. Then, of course, the President could tell Congress to appoint a suffrage committee in the lower House and carry the amendment to the voting stage. He might even order Congress to pass the bill, without receding from the policy outlined to Mrs. Glendower Evans and her deputation of working women. Certainly what is possible for a canal act ought to be possible for a suffrage amendment.

The activity of the various organizations, working on behalf of woman suffrage, naturally had its effect on the majority in Congress. A number of Democrats representing suffrage States, or States where there was a strong sentiment favorable to the extension of the right of franchise to women, feeling that their political fortunes were being endangered by the failure of the party to give fair consideration to the suffrage question, sought to secure caucus action on the subject, and a Democratic caucus was called and held on the evening of February 4. After considerable discussion the following resolution, introduced by Mr. HEFLIN, of Alabama, was adopted by a vote of 124 to 56:

Resolved, That it is the sense of this caucus that the question of suffrage is a State and not a Federal question.

I clipped from the Suffragist of February 7 the following editorial on this action of the Democratic caucus:

THE CAUCUS DECISION.

The decision of the Democratic Party in caucus last night that woman suffrage is not a Federal question is simply an error. Any question affecting citizens of more than one State is a Federal question. An amendment extending the franchise to the women of the country is most obviously a Federal question. It is always perfectly constitutional to amend the Constitution at any time and in any direction. It is the business of Congress to consider such proposed amendments on their merits. They may decide against these amendments, but to decide that they are not Federal questions is simply unreasonable.

There is direct and indirect precedent for Federal action on the suffrage question. The Federal Government has once by constitutional amendment extended the franchise to the negro. Indirectly they have also extended the franchise to many white men who vote to-day under Federal naturalization laws. That these naturalized citizens obtained the right to vote by State law does not affect the fact that millions of men became citizens and therefore voters by Federal law. If Federal interference in regard to the electorate of the various States were disastrous, a large part of our present voting arrangement must be regarded as disastrous.

It is true that the States can enfranchise their women. But that is no reason why Congress can not. It is women's business to decide by what avenue they shall seek enfranchisement; which road to success is the most direct and the most economical of their time, money, and energy. If we choose to appeal to the National Government, the National Government must hear our plea.

The vote of the Democrats in caucus simply means that the Democratic Party is not yet willing to use its power to extend the franchise to women.

The same issue of the Suffragist contains the following appeal to the Democrats to remedy the mistake they had made by their caucus action:

THE NEXT STEP.

On Monday President Wilson referred a deputation of suffragists to the Democratic Party for action on the suffrage measure. On Tuesday the suffrage question was put squarely up to the Democratic Party by the calling of the Democratic caucus. The Democratic Party by its action in caucus has refused at this moment to take up the suffrage cause. The work of suffragists from now on must be to organize such demonstrations throughout the country and to give such evidence of the strength of their movement as to convince the Democratic Party that the time has arrived for this question to be taken up by the party. We hope that before this session ends the Democratic Party will come to a realization of the great opportunity which is before it. It has in its hands at this moment as great an opportunity as that which was before the Republican Party when it enfranchised a race.

Suffragists are glad to know just where the Democratic Party stands, and just where further pressure ought to be brought to bear. They have by no means given up hope of attaining success in this present session, and will turn at once to the Judiciary Committee of the House, which has had the proposed suffrage amendment in its charge since last April. They will ask immediately for a hearing by this committee, and will press for a report.

Though the campaign for the creation of a suffrage committee in the House, similar to that existing in the Senate, has met with a temporary setback, the suffrage measure itself is still before both Houses of Congress, having received a unanimously favorable report in the Senate and being still in committee stage in the House.

The energy of suffragists will now be centered on the main suffrage bill, attention no longer being given to the minor question of a suffrage committee. We enter into this campaign full of hope that the Democratic Party will soon awaken to a realization of the justice of this question of self-government.

Meanwhile there was no let up in the efforts to get the Rules Committee to report out a rule for the consideration of the suffrage amendment. I made appeals in that behalf to different members of the committee at various times. I found the Republican members and the Progressive member of the committee ready to act at any time, but the Democratic members went so far as to avoid holding meetings of the committee in order to side-step a consideration of this matter.

Finally, however, the situation with regard to other legislation necessitated a meeting of the Rules Committee, and I quote from the Suffragist of June 20 a statement relative to what occurred, as follows:

RULES COMMITTEE MEETS—NO ACTION ON SUFFRAGE.

Wednesday morning, June 10, shortly after the antitrust measures were passed in the House and sent to the Senate, the Rules Committee met to frame a program for the ensuing days of the session. They had before them a resolution, introduced by Representative FOSTER, of Illinois, proposing a special rule providing time in the House for the consideration of a group of conservation bills, a rule introduced by Representative CANTRILL, of Kentucky, for the consideration of the prohibition measure, and the rule proposed by Representative MONDELL for the disposition of the suffrage amendment.

It is interesting to note that the conservation and prohibition rules were both proposed by members of the Rules Committee, Representatives CANTRILL and FOSTER. Dr. FOSTER had assured successive deputations of women that he would absolutely refuse to vote in favor of the suffrage rule because Congressmen were in need of a holiday and must not be detained for further business. Yet he was the author of the rule allotting time for the consideration of bills providing for the leasing of coal lands in Alaska, for the mining of radium, for the development of water power on public lands, and for a commission to codify and suggest amendments to the general mining laws. It is expected that the discussing of these measures will keep the great majority of Congressmen in Washington for at least a month.

The action of Dr. FOSTER and of Mr. CANTRILL in proposing their resolutions is a curious commentary on Mr. HENRY'S statement that the Rules Committee could not consider the suffrage rule until they were instructed to do so by the Democratic caucus.

The meeting of the committee was prolonged, and occasionally marked, according to report, by sharp debate. Representative MONDELL went in person to the Rules Committee room, and calling the chairman out, urged that his resolution allotting time for the consideration of the suffrage amendment be favorably reported to the House.

At 1 o'clock the committee adjourned till 4 the same afternoon. It was then officially announced that favorable action had been taken on the conservation measures, which have accordingly now become the privileged business of the House. At 4 the prohibition rule was considered at length. Action upon it was postponed till the next meeting of the Rules Committee on July 1. No action was taken with regard to the suffrage resolution. On the evening of the same day Chairman HENRY left for Texas, to be gone for two weeks.

ANOTHER DELEGATION TO SEE THE PRESIDENT.

Efforts to secure action by Congress having failed, the good women interested in the cause of suffrage concluded to make a seventh appeal to the President, and the plans and purposes of this deputation are set forth in the following article from the Suffragist of June 20:

CLUB WOMEN TO ASK ACTION—MRS. WILEY TO LEAD.

Immediately upon receipt of the news that the Federation of Women's Clubs had given its indorsement to suffrage, Mrs. Harvey W. Wiley, vice president of the District of Columbia branch of the federation, announced that she would lead a delegation of club women to wait upon President Wilson on June 30 to lay before him the fact that approximately a million organized women had gone on record as desiring the success of the suffrage movement and to urge him to secure the passage by Congress of the Bristow-Mondell suffrage amendment.

The deputation will go to the White House on the day preceding the meeting of the Rules Committee on July 1, and will ask the President's help in securing action from that committee in creating a special rule allotting time for the consideration of the suffrage resolution in the House.

This will be the seventh deputation of suffragists to wait upon the President since he assumed office, over a year ago.

PREVIOUS DEPUTATIONS.

The first deputation, representing the congressional committee of the National American Woman Suffrage Association, went to him shortly after his inauguration with the request that he include suffrage in the program which he would put before Congress in his message convening the special session. The second and third deputations, which went shortly after the first, and which represented the College Suffrage League and the National Council of Women Voters, respectively, laid the same request before him.

To the first delegation the President replied that he would take the matter under consideration. To the second and third he stated that he could not put suffrage in his message owing to the necessity of concentration at that particular time on the tariff.

Last November, shortly before the convening of the regular session, President Wilson was waited upon by a delegation of over 70 women from his own State of New Jersey, who came to Washington to ask him to put suffrage in his program for the regular session, as outlined in his forthcoming message. To this deputation he replied that the question was one in which he was much interested and which would have his serious consideration.

Immediately after his message had been given at the opening of the regular session, a committee of 55, representing the National American Woman Suffrage Association, which was then meeting in convention in the city, again waited upon him, expressing their dissatisfaction with his nonaction on the suffrage question, and again asking him to use his influence to secure the passage of the measure by Congress. He stated to this deputation that he was unable to act because he was simply the spokesman of his party, and his party had not given its indorsement to this measure.

Early in February a deputation of women wage earners called to ask him once more to take action on this question. To this deputation he gave the same reply as to the preceding one.

This seventh deputation, led by Mrs. Wiley, promises to be the largest and most representative that has yet approached the President. Its leaders hope that it will be the last that it will be necessary to send.

The same issue of The Suffragist sets forth clearly the reasons why, in the opinion of the friends of suffrage, the President should give his aid and encouragement to the cause, as follows:

PRESIDENT WILSON AND SUFFRAGE.

Once again suffragists are appealing to the President to do his part in removing the ancient sex inequality that has so long endured in our political life. We are appealing to him as the head of the National Government and as the leader of the party which is in control of Congress.

Six times we have been to the President without avail. Twice he has told us that he was interested in the subject and that it would have his earnest consideration. Twice he has told us that the program was too full to allow him to take up this matter; and twice he has said that he was the spokesman of his party and could not act until suffrage had received the party indorsement. To quote his own words: "I am not at liberty to urge upon Congress in messages policies which have not had the organic consideration of those for whom I am spokesman. * * * I have to confine myself to those things which have been embodied as promises to the people at an election." (Reply to deputation from National American Woman Suffrage Association, December, 1913.) Again, in meeting the labor deputation, in February, he said: "I have already explained * * * the limitations that are laid upon me as the leader of a party. Until the party as such has considered a matter of this very supreme importance and taken its position, I am not at liberty to speak for it."

We are now waiting anxiously to hear what reply he will make to this, the seventh deputation, and what action he will take before his great opportunity of playing his part in enfranchising many million of women has entirely passed away.

We will not be satisfied this time with the answer that he is considering the matter and giving it his serious attention. The subject is too important to be trifled with. Those who have power to help and who do not can not seek excuse on the ground that their minds are not yet made up. We are now facing the time for action. Those who are not with us are against us.

The President can not say this time that the program is too full to permit the consideration of suffrage. There is nothing before the House but the conservation and appropriation bills, which will soon be out of the way. All that is needed is a few hours for the settling of the question. The Senate has the antitrust measures before it, it is true, but the Senate has given long debate to the subject and can easily afford the time to call the roll again and pass the amendment.

The President can not plead this time that he is unable to act because of the lack of a party mandate on the subject. Since he made that statement to us in December and again in February he has himself, by his action on the Panama tolls case, abandoned the position that he is simply the spokesman of the party. On Monday of this week, with the signing of the Panama tolls repeal bill, a chapter in national legislation has been completed in which the President has not only initiated legislation but has actually forced it through when it was in actual contradiction to a plank in the Democratic platform.

No one who follows legislation at the National Capital need be told that the President is the mainspring of action and the great source of power. We have seen him put through the tariff and the currency bills according to his own views. We have seen him force through the Panama tolls repeal bill in violation of the terms of the Democratic platform. The antitrust measures, which have just been passed by the House and which the Senate is now reluctantly carrying through, were presented to Congress as the President's program. The conservation measures which have just been adopted as the next program for the House were known to have the administration's indorsement.

What the President has done in all these matters he can do with regard to suffrage. He has greater power than any other person or group of persons to secure the passage of the suffrage amendment before the session is over. As is his great power, so is his great responsibility. Suffragists are not content to wait until another session. If the President fails to use his power to help, he must bear the responsibility of having been against us in our hour of need.

THE PRESIDENT RETREATS.

According to program a large delegation of women, representing the National Federation of Women's Club, called on the President by appointment on July 1. The day was a beautiful one, the ladies were appropriately gowned for the occasion, nearly all in white, and as they marched up to the White House carrying their State and club banners they presented a most charming and inspiring sight. The manner of their reception is fully set forth in the article from the Suffragist of July 4, as follows:

PRESIDENT REFUSES AID TO DEPUTATION—FIVE HUNDRED CLUBWOMEN MARCH TO WHITE HOUSE.

President Wilson to-day retreated behind his high privilege as Chief Executive and refused to commit himself as to whether the framers

of the Constitution meant what they said when they wrote Article V providing for the amendment of that instrument.

Declaring that he had in the past expressed the limitations placed upon him as the head of his party, he stated to-day to 500 representative club women that personally he believed the question of woman suffrage should be settled by the States.

Mrs. Harvey W. Wiley, who led the deputation, begged to remind the President that three-fourths of the States would have to pass upon the proposed constitutional amendment enfranchising women before it could become law, and Mr. Wilson objected that by that process it would be forced upon the other one-fourth.

"Mr. President," said Mrs. Rheta Childe Dorr, who had made the appeal for the passage of the proposed amendment, "don't you think that when the Constitution was framed it was agreed that when three-fourths of the States wanted a reform, the other one-fourth would accept it also?"

The President's mouth hardened into a straight line. His face flushed. "I can not say," he said, stiffly, "what was agreed upon. I do not think that has anything to do with my convictions, and I do not think it is quite proper that I should submit myself to cross-examination."

THE DEPUTATION.

The deputation had assembled for a preliminary mass meeting at the Public Library at 1 o'clock, where an address of welcome had been made by Mrs. Harvey Wiley, who sent out the call which brought the club women to Washington. Stirring speeches were also made by Mrs. Ellis Logan, Mrs. Frank Miles Day, of Pennsylvania, Mrs. Eugene Shippen, of Michigan, and Mrs. Josepha Whitney, of Connecticut.

Leaving the library, the deputation, which extended over several blocks, marched in single file to the White House, preceded by a band playing the Marseillaise, the Star Spangled Banner, and other stirring national airs, and led by four banner bearers carrying the now famous amendment banner demanding the passage of the Bristow-Mondell amendment enfranchising women. Arriving at the White House, it passed through the arcade and into the East Room, the band continuing to play meanwhile outside the building.

The women were massed about the State Department, filling it from end to end and leaving a hollow square in which Mrs. Ellis Logan and Mrs. Wiley, president and vice president, respectively, of the District of Columbia Federation of Women's Clubs, and Mrs. Rheta Childe Dorr, of the Congressional Union for Woman Suffrage, awaited the President's arrival.

Preceded by his aid, Col. Harts, the President entered and bowed to Mrs. Wiley, who stepped forward to meet him.

"Mr. President," said Mrs. Wiley, "we come to you to-day as the representatives of 1,000,000 club women to present to you the resolution of the General Federation of Women's Clubs indorsing woman suffrage. This is a most significant action. No longer can it be said that women do not want the ballot, when the women's congress, meeting in biennial session, votes its 'earnest belief in the principle of political equality regardless of sex.' We come to you, therefore, backed by the force of this great body, to ask you to use your influence in the manner provided in the Constitution with that other Congress on the hill—to there further in every possible way the Bristow-Mondell amendment now pending before it. I will leave it to the two appointed speakers to bring this matter to you in detail.

"I have the pleasure of introducing Mrs. Ellis Logan, president of the District Federation of Women's Clubs, and Mrs. Rheta Childe Dorr, author of What Eight Million Women Want."

Mrs. Logan presented to Mr. Wilson an engrossed copy of the resolution adopted by the federation at Chicago indorsing the principle of political equality for men and women, regardless of sex.

"Eight million working women have their eyes on the results of this resolution to-day," said Mrs. Logan. "Suffrage is the duty of woman. It is her patriotism to safeguard her womanhood. This resolution demonstrates in unmistakable terms that the women of the country are looking to Congress to pass this amendment before this session adjourns.

"Mr. President, on the eve of the Fourth of July, when the Declaration of our forefathers still rings its jubilant note around the world, what more fitting hour and time for our President, the father of daughters, to give his voice and his influence to our cause?"

The President turned to Mrs. Dorr.

"Mr. President," said Mrs. Dorr, "we are well aware that you are the busiest of men. I shall therefore go directly to the point and tell you that our reason for calling on you to-day is to ask you if you will not use your powerful influence with Congress to have the Bristow-Mondell suffrage amendment passed in this session.

"On former occasions when we came to you on this business you told us that you could do nothing for us because you were committed to a restricted program defined by the Democratic platform and that you were determined never to initiate any important legislation until the party had given you its instructions. Since our last visit to the White House you have receded from that position. You have initiated and carried through Congress an extremely important piece of legislation without waiting for party instruction. In fact, you have carried it through in the face of positive instruction to the contrary written in the platform on which you were elected. You did this because you deemed it the wise and the right thing to do, and you had the courage to act according to your conscience and your convictions. In the matter of the legislation to which I have referred your justification rested on the fact that a certain situation had changed and a changed situation called for a changed policy. We submit that the situation in regard to woman suffrage has changed absolutely since the Baltimore platform was written. No other political situation has changed so completely as this one."

Mrs. Dorr traced briefly the growth of the suffrage movement and pointed out its evolution from an academic to a nationally important political issue. She asked the President to use his influence first with the Rules Committee to secure the report allotting time for the consideration of the measure in the House and then to do what he could to secure for women their enfranchisement during the life of the present Congress.

"And now, Mr. President," said Mrs. Dorr, "it was extremely kind of you to receive this deputation, but we have reached a point where we are not satisfied with kindness and toleration. We want action. We therefore ask you, President Wilson, to answer a plain question. What are you going to do now, in this present session of Congress, for woman suffrage? Are you going to use your powerful influence to induce Congress to pass the Bristow-Mondell resolution?"

THE PRESIDENT'S ANSWER.

The President replied:

"Mrs. Wiley and ladies, no one could fail to be impressed by this great company of thoughtful women, and I want to assure you that it is to me most impressive. I have stated once before the position which, as the leader of a party, I feel obliged to take, and I am sure that you will not wish me to state it again. Perhaps it would be more serviceable if I ventured upon the confident conjecture that the Baltimore convention did not embody this very important question in the platform which it adopted because of its conviction that the principles of the Constitution which allotted these questions to the States were well-considered principles from which they did not wish to depart. You have asked me to state my personal position with regard to the pending measure. It is my conviction that this is a matter for settlement by the States and not by the Federal Government, and therefore, that being my personal conviction, and it being obvious that there is no ground on your part for discouragement in the progress you are making, and my passion being for local self-government and the determination by the great communities into which this Nation is organized of their own policy and life, I can only say that, since you turned away from me as a leader of a party and asked me my position as a man, I am obliged to state it very frankly, and I believe that in stating it I am probably in agreement with those who framed the platform to which allusion has been made.

"I think that very few persons, perhaps, realize the difficulty of the dual duty that must be exercised, whether he will or not, by a President of the United States. He is President of the United States as an Executive charged with the administration of the law, but he is the choice of a party as a leader in policy. The policy is determined by the party or else upon unusual and new circumstances by the determination of those who lead the party. This is my situation as an individual. I have told you that I believed that the best way of settling this thing and the best-considered principles of the Constitution with regard to it is that it should be settled by the States. I am very much obliged to you."

The President paused. He looked relieved. There was a moment's silence, and then Mrs. Dorr said:

"May I ask you this question? Is it not a fact that we have very good precedents existing for altering the electorate by constitutional amendment?"

The President's face changed. "I do not think," he said, "that that has anything to do with my conviction as to the best way that it can be done."

"It has not," agreed Mrs. Dorr, "but it leaves room for the women of the country to say what they want through the Constitution of the United States."

"Certainly it does," the President said hastily. "There is good room. But I have stated my conviction. I have no right to criticize the opinions of others who have different convictions, and I certainly would not wish to do so."

Mrs. Wiley stepped forward. "Granted that it is a State matter," she said, "would it not give this great movement an impetus if the resolution now pending before Congress were passed?"

"But that resolution is for an amendement to the Constitution," the President objected.

"The States would have to pass upon it before it became an amendment," said Mrs. Wiley. "Would it not be a State matter then?"

"Yes," the President interrupted, "but by a very different process, for by that process it would be forced upon the minority; they would have to accept it."

"They could reject it if they wished to," said Mrs. Dorr. "Three-fourths of the States would have to pass it."

"Yes," the President said with distinct annoyance, "but the other fourth could not reject it."

"Mr. President," said Mrs. Dorr, "don't you think that when the Constitution was framed it was agreed that when three-fourths of the States wanted a reform, the other fourth should accept it also?"

The President was plainly disconcerted. He stepped back.

"I can not say," he replied, frigidly, "what was agreed upon. I can only say that I have tried to answer your question, and I do not think it is quite proper that I submit myself to cross-examination."

"Very well," Mrs. Dorr said, quietly. "We will not cross-examine you further."

"Thank you, Mr. President," said Mrs. Wiley, "for your courtesy in receiving us."

The President bowed. "I am very much obliged to you," he said. "It has been a pleasant occasion."

As the President retired, the women gathered in groups about the East Room and talked for several moments before there was a general movement toward the door. The interview had lasted more than half an hour.

The following editorial from the Suffragist of July 4 clearly indicates how little the President's attitude appealed to the judgment of the friends of the suffrage movement:

OUR DEMOCRATIC PRESIDENT.

The President has told a deputation of club women that they must win political freedom from State legislatures, but not from him, nor from Congress.

This position is obvious pretense. The National Government has the power, granted it by the Constitution, to enfranchise women. It has therefore the duty of doing so, if women's claim to enfranchisement is just.

The President knows as well as we do the enormous difficulty of winning the vote by amending the constitutions of 39 different States. It is amazing that a man can be found who will calmly direct women to take up this great burden when men are responsible for their need. Men alone, in all but 10 States, have the power to change our laws. The good or evil of these laws is their praise or blame. It is a public injustice to-day that men deny to women, in the ballot, a means of self-protection which they are glad to possess themselves. Men are ethically on the defensive—particularly the man or group of men who from time to time monopolize political power. For the President of the United States, who incorporates in himself the political power of the whole Nation and who is therefore more responsible than any other one person to-day for the subjection of women, to declare that he washes his hands of their whole case is to presume upon greater ignorance among women than he will find they possess.

Nevertheless we are specifically informed by the President that it is "not proper" for us to "cross-examine" him on the grounds of his refusal to help us.

Only fitfully do women realize the astounding arrogance of their rulers.

NO HOPE FOR SUFFRAGE FROM THE DEMOCRATIC PARTY.

There is little to record of progress in the suffrage movement before Congress since the President's retreat before the cross-

examination of the representatives of the women's clubs on July 1. This lack of progress is, however, in nowise due to any lack of earnestness or activity on the part of the women who are conducting the active work of the woman suffrage movement before Congress. The presentation of petitions from all over the country have kept Members informed as to the lively sentiment for suffrage in their districts. Whenever there has seemed the slightest hope of securing a meeting of the Committee on Rules ladies connected with the Congressional Union for Woman Suffrage have been on hand to urge the reporting of a rule for the consideration of the suffrage amendment.

But no rule has been reported. The Committee on Rules has not held a meeting, so far as is publicly known, since they reported out the rule for the conservation bills June 10. It was reported that a meeting was to be held on August 1, but August 1 came and went with no meeting. Meanwhile the Republican members and the Progressive member of the Committee on Rules stand ready to report out a rule at any time, but they can not hold a meeting unless the Democratic majority wills it. The Democratic majority of the committee, realizing that the Democratic majority of the House is not only opposed to woman suffrage, but opposed to giving the people of the country an opportunity to vote on it, decline to meet and decline to act, and there you are.

Hon. Wm. E. Humphrey's Work in Congress.

EXTENSION OF REMARKS
OF
HON. WILLIAM L. LA FOLLETTE,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 18, 1914.

Mr. LA FOLLETTE. Mr. Speaker, having served in this House several years with Congressman HUMPHREY, knowing his marked ability and his high standing in this body and his devotion to his duties and to the interests of his constituents, I take pleasure in inserting in the RECORD a letter written by Senator W. L. JONES, that has been published in the papers, giving a brief review of the work of Mr. HUMPHREY during his long service as a Representative in Congress. Perhaps no one is quite so well qualified from personal observation as is Senator JONES to write such letter. The letter, written at the request of Mr. J. P. Todd, of Seattle, is as follows, and speaks for itself:

SENATOR JONES'S STATEMENT.

MY DEAR MR. TODD: Your favor asking me for a statement of the record of work done by Congressman HUMPHREY during his service in the House at hand. I am pleased to comply with this request so far as it is possible to do so, and all the more so because of my continued service with him and because of our almost general agreement upon the important matters of legislation that have come up during the last 12 years. Of course, I can not cover everything he has done or been connected with. He has taken an active part in so many different matters and so many important subjects have been under consideration that to cover all would be beyond the scope of this letter.

No one who has kept track of his record at all will deny the fact that he has steadily grown in ability, effectiveness, and influence from the time of his entrance into the House. His ability, industry, courage, devotion to his constituents, and his high integrity are known to his friends and admitted by his opponents. Having served with him during the 12 years he has been in Congress and having cooperated with him unreservedly in behalf of the State on those great questions which have been up for consideration, I can speak of his work from personal knowledge as well as from the record. It is with pleasure that I call your attention to some of the most important measures he has favored and some of the most important work he has performed.

HIS RECORD ON LABOR LEGISLATION.

Labor: His votes have been uniformly in behalf of American labor. He voted for the employers' liability act and the workmen's compensation bill, which our Democratic friends have failed to pass; for requiring materials to be used in the construction of the Panama Canal to be purchased in the United States; for limiting the hours of service for the men working on railroads; for the various safety-appliance laws in relation to railroads; for the various eight-hour laws that have been passed; for the laws creating the Bureau of Mines, the Children's Bureau, and the Department of Labor; for a child-labor law for the District of Columbia; for the eight-hour law for women in the District of Columbia; and for many others of a similar character. Surely these mentioned show that his vote and his sympathy can always be counted upon for those who toil. This is natural. He worked with his hands when a boy and young man. He knows what it is to earn his daily bread by manual labor, and his sympathy for and interest in labor does not come from a theoretical idea of what it means to work, but from actual experience. He can be counted on to support every reasonable measure for the welfare and protection of labor.

FRIEND OF WAR VETERANS.

Pensions: Mr. HUMPHREY has always been an active friend of the old soldier. He voted for the age-pension law, the law increasing the pensions of widows, the law removing the income provisions for widows, the Indian veterans' pension law and its increase, and for every bill, public or private, for the relief of any soldier. His friendship for the old soldiers, their widows, and dependents has not decreased as their ranks have thinned and their numbers lessened. He has declared in public addresses "that it is a sacred duty of this Nation to pay to every soldier who served his country in its hour of need a sufficient pension to provide him with the necessities of life, and that the Nation should care for the soldier's widow and orphan." He has also supported every provision of law giving the soldier a preference in Government employment, and has protested against its violation.

ELECTION OF SENATORS AND INCOME-TAX AMENDMENTS TO CONSTITUTION.

He voted at every opportunity for the resolution submitting to the people an amendment to the Constitution providing for the election of Senators by the direct vote of the people, and he also voted for the resolution submitting the income-tax amendment to the people.

SUPPORTED REFORM MEASURES.

Regulating trusts and combines: He voted for the Hepburn law to prohibit rebates and discriminations by the railroads, probably the most important antitrust legislation that has gone upon the statute books since the passage of the Sherman antitrust law. He voted for the law enlarging the powers of the Interstate Commerce Commission by giving it, among other powers, the right to ascertain and fix reasonable rates; to suspend proposed rates until their reasonableness could be determined; the right to fix through rates on rail and water lines; the right to enforce terminal connections between rail and water lines; and the right to divest railroads of control and ownership over water lines that might be competitive. He voted for the law providing for the physical valuation of railroad, telephone, and telegraph lines, for the law prohibiting the giving of passes, and for many other acts tending to control trusts and prevent monopoly, including the act prohibiting corporations from making contributions to campaign funds.

He also voted for the laws requiring publicity of campaign contributions, both before and after elections.

POSTAL SERVICE.

He was one of the first men in Congress to make a speech in favor of the postal savings bank system, and did effective work for the passage of the present law. He favored and voted for the present parcel-post system.

AGGRESSIVE FOR PURE-FOOD LAW.

Health and morals: He worked and voted for the present meat-inspection law and for the pure-food law. He was especially aggressive in his work for the pure-food law, contending that it was and is one of the most important statutes that Congress ever enacted, and that it vitally affects the welfare of the entire people. He worked and voted for the "white-slave law" prohibiting the transportation of women for immoral purposes, and for the law prohibiting the importation of opium into this country for other than medicinal purposes.

ALASKA.

He has always been an aggressive and influential friend of Alaska. He fought for the act giving her a Delegate in Congress and helped to pass the law giving her a Territorial form of government. He drew, himself, and had passed the present Alaska game law. As a member of the Committees on the Merchant Marine and Fisheries and of Rivers and Harbors, he has been able to do much to protect the great fishing industry of Alaska and for the improvement of her harbors. His speech for the recent Alaska railroad bill was conceded to be one of the most effective and convincing delivered upon this subject. It contains a remarkable amount of definite information regarding that Territory. While his speech was very influential, I am in a position to know that the greatest and most effective

influence was exerted by him through his position on the Committee on Rivers and Harbors, and I doubt if any individual Member of the House had a greater influence than he in overcoming opposition to the measure appropriating $35,000,000 for the building of a railroad in Alaska by the Government. He is one of the best and most influential friends Alaska has in Congress to-day, and his retirement would be a loss to Alaska that can not be overestimated.

PANAMA CANAL.

Mr. HUMPHREY has always fought and worked for the construction of the Panama Canal or a canal across the Isthmus. As it is built on and entirely within American territory by the American people, and as the American people will pay for it, operate it, maintain it, and defend it, he believes that this Government has the right to control it and to use it with its own ships as it pleases. He believes that it is the right of the United States not only to do this, but that it is its duty to use the canal to bring about effective competition between the transcontinental railroads and the ships that pass through the canal in order to lower the freight rates between the two coasts for the benefit of the entire people of the country. He voted to have the canal constructed upon the present plan and vigorously opposed a "sea-level" canal.

We unhesitatingly approved the prompt, active, wise, and statesmanlike steps taken by President Roosevelt to promote the world's progress by acquiring the territory through which this canal could be constructed, and we will both oppose to the limit any action that will reflect upon him or compel the American people to pay blackmail money for doing that which was so necessary to the success of an undertaking primarily in the interest of all the nations of the earth.

FOUGHT AGAINST THE TOLLS REPEAL.

No man in Congress was more active or vigorous in the fight in favor of the law giving American ships in the coastwise trade the right to pass through the canal without the payment of tolls than Mr. HUMPHREY. WILLIAM C. ADAMSON, chairman of the Committee on Interstate and Foreign Commerce, says that no man in Congress did more to pass that act than he. As you know, he has been equally active and energetic in his opposition to the repeal of that law. He has denounced this proposed repeal as a cowardly and un-American surrender to Great Britain and to the transcontinental railroads.

His speech in the House is regarded by both Democrats and Republicans as one of the strongest made on this question. He pointed out especially the great injury that such action would bring to the State of Washington, and declared that if the present law is repealed it will take with it the great benefits that the canal would bring to the State of Washington and give them to British Columbia, and that it would be better if the canal had not been built. He is of the opinion, however, that the repeal of the present act will not end the fight, but that Congress will again enact a law reasserting our sovereignty in our own canal and bring about competition between the steamship lines and the transcontinental railways as soon as the people have had an opportunity to express their will at the polls upon this proposition.

ALWAYS A PROTECTIONIST.

Tariff: He has always been a protectionist. He has always believed that free trade means industrial ruin to the country and has always contended that our labor should be protected from the cheap pauper labor of the rest of the world. He has often declared that "this nation can not prosper if it gives its work and its wages to foreign labor." As you know, he declared in the last campaign repeatedly that if the Democratic Party came into power and revised the tariff it would bring industrial ruin to the counry; that mills and factories would close or reduce their output; and that many of our laboring people would be thrown out of employment and have their wages reduced. Present conditions demonstrate the correctness of this prophecy.

MEXICO.

He was one of the first public men to criticize the attitude of the administration toward Mexico. Speaking at Indianapolis on the 12th day of last February, he declared that while the administration was preaching peace their attitude and actions were daily bringing the country nearer war. He declared its policy at that time to be weak, vacillating, and blundering. Was he not correct?

ATTENTIVE TO HOME INTERESTS.

Local matters. I think you know and everyone should know that no constituent, however poor or humble, however prominent or influential, has even written to Mr. HUMPHREY that he did not receive a prompt reply and prompt attention to his request. During his entire service all these many matters have received his personal atttention, and he has performed his heavy task ungrudgingly, feeling that it was his duty to do so.

His State and his district have had his best service, and it is doubtful if any district in the Nation has received more from the National Government than the district which he now so ably represents. The expenditures made in the State of Washington by the National Government, through legislation of which he has had charge in the House, has amounted to many millions of dollars. Of the many appropriations which have been granted for needed improvements during his service and mine, and which have had his most earnest and efficient attention, I will mention the following:

Lake Washington Canal	$2,275,000
Dry dock at Bremerton	2,300,000
Fortifications on Puget Sound	4,000,000
For public buildings at Bellingham, Everett, Seattle, North Yakima, Olympia, Walla Walla, and others, over	1,000,000
For river and harbor improvements in the State	15,000,000
For submarines	2,000,000

Many others could be named, but these are sufficient to show the effectiveness of his work in behalf of local interests. They are the largest and most important, although I want to say that it not always the largest and the most important that calls for the most work and attention. This consideration of local interests has been secured without in any way compromising his opinions or his independence of action. He succeeded me on the Committee on Rivers and Harbors, and during the last six years has had practical charge of legislation in the House involving an expenditure in our State for public improvements of practically $25,000,000.

MAN OF POLITICAL INDEPENDENCE.

His political independence: He has the courage to follow his judgment, even against his own party. When the bill for the admission of New Mexico and Arizona as one State was before Congress both President Roosevelt and Speaker Cannon personally asked him to vote for it. He did not believe it was fair to the Southwest, and spoke and voted against it. He was strongly urged by President Taft to vote for the reciprocity bill, but he did not think it was fair to to the Northwest or to the State of Washington, and voted against it because of his own convictions. These instances show that he possesses the courage of his convictions, which is perhaps the most valuable of all traits in a public man. While he is a partisan, he refuses to follow his party when its action does not meet with his convictions of duty.

POSITION IN THE HOUSE.

Mr. HUMPHREY is now one of the recognized leaders of the House of Representatives. He is the oldest man in continuous service from the Pacific coast. Speaker CLARK once said:

Wisdom dictates that men who have proved that they are of service should be kept in Congress, and the value of their services increases in exact proportion to the length of service.

Mr. HUMPHREY is an illustration of the truth of that statement. His influence is constantly increasing, and he has grown more rapidly during this and the last Congress than ever before. He now has a national reputation and is everywhere regarded as an authority upon the questions of the tariff, rivers and harbors, merchant marine and fisheries, and the Panama Canal. His speeches in the House this session have been most widely circulated and most frequently commented upon. He has taken first rank among the debaters of the House. More than 75,000 copies of his speech at Indianapolis have been printed and circulated in various portions of the country.

IMPORTANCE OF HIS REELECTION.

Among those who are watching the trend of political affairs there is to-day a strong belief that is constantly growing that the Republican Party will have a majority in the next House of Representatives. If that should occur, Mr. HUMPHREY will be the chairman of the great Committee on Rivers and Harbors. This would be a higher honor and a position of greater influence than has ever come to a Member of the House from the State of Washington or from the entire Pacific coast. No one could well overestimate the value of his influence in this position, not only to the State of Washington, but to Alaska and the whole country.

He is now the ranking minority member on this committee. This places him on all conference committees relating to rivers and harbors and makes him the leader of his party in such matters and is a position of influence in all respects exceeded only by that of the chairman of the committee.

Much complaint has been made heretofore of the influence of Members from the East, both in the House and the Senate.

This influence has come from the very fact which Mr. HUMPHREY's position emphasizes. The East has kept its Members continuously in the House and the Senate, and in this way they have very naturally risen to positions of power and influence in both bodies. This power and influence will come to the West if it will but learn the lesson of experience and keep its active, energetic Members in Congress.

Mere differences of opinion on matters of minor importance can not justify retiring a Member of long experience and standing upon committees which give him a power and influence for good on behalf of his constituents which it would take a new man, however able and industrious, years to attain.

I do not desire to interfere improperly in the selection of a candidate by the Republican voters of Mr. HUMPHREY's district, but I believe that it is my duty as a citizen of the State of Washington to call attention to the importance of his renomination and election, not only to the people of his own district but to the people of the entire State, and then, of course, they will decide what is best for them to do.

BIG QUESTIONS LOOMING.

We are now practically at war with Mexico, and what the end will be no man can foresee. The Panama Canal question is one of vital and far-reaching importance and will not be settled at this session, no matter what our action may be. The industrial conditions of the country are very bad and call for immediate and wise changes in our tariff policies.

Alaska must have many additional laws passed if she is to develop as she should. If there has ever been a time during the past 25 years when it was important to keep in Congress men of ability, experience, and influence, it is now. Mr. HUMPHREY'S influence and standing, great as it now is, will constantly increase, and his usefulness will be greater in the next Congress than in this. The people of the State of Washington have been educating and training him during the past 12 years for the duties of Congress.

He has not neglected his opportunities, and his defeat now would be a public calamity to the entire Pacific coast. When he is better fitted than ever before to perform the duties of his office, when he is in a position to be of greater influence than ever before, when his services are more urgently needed than ever before, what could justify his retirement? Surely Seattle, with all her needs and with her local pride and local spirit, will not retire him from a position that is of such tremendous importance to her and her development.

When Congressman from the entire State and from a large district, though living in Seattle, Mr. HUMPHREY represented fully and impartially all sections of the State and his district.

Politics was not considered, and locality was not unduly considered; and now that his district is almost entirely confined to Seattle, I am sure that his great influence will be used for the benefit of the whole State; but very naturally he will give special attention to the needs and interests of his home city, and that city which has so long honored and trusted him will surely be for his reelection largely without regard to party or politics.

HIS LONG RECORD SATISFACTORY.

Criticism: Mr. HUMPHREY, like all men that have been in public life during the last 10 years, has been criticized by some as too radical, by others as being too conservative. In the light of to-day, those who criticize him for favoring the postal savings bank and the parcel post and various labor legislation will admit that he was right. As a follower and admirer of Col. Roosevelt, I believe that if you will study Mr. HUMPHREY's record during the last 12 years you will find little to criticize. I doubt if you would to-day say he voted wrong upon a single question.

What higher praise than this can be given his courage and judgment? He, as you are aware, has enjoyed in a high degree the confidence of Col. Roosevelt. The colonel, in a letter written to him for publication September 30, 1910, said:

> You always had in view the interests of the whole American people, and for those interests you stood in a straightforward and progressive fashion.

In one of his speeches, Mr. Roosevelt said:

> The man who has the power to act is to be judged not by his words but by his acts.

Judged by that standard, I feel certain that there is little in the record of Mr. HUMPHREY that you or any other Progressive or other Republican will condemn, and certainly there is much to meet your sincere approval and admiration. With very kindest regards, and trusting I have adequately complied with your request, I am,

Yours, sincerely, W. L. JONES.

The Civil-Service Propaganda.

SPEECH

OF

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 4, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 17042) to amend the postal and civil-service laws, and for other purposes.

Mr. CULLOP. Mr. Chairman, the amendment I have offered is as follows:

> That hereafter any assistant postmaster, clerk, or employee in any post office who may be required by law or by authority or direction of the Postmaster General to execute a bond to the United States to secure faithful performance of official duty may be required to also execute a bond to the postmaster whose assistant, clerk, or employee he is, for the faithful performance of his duties as such, in the discretion of the Postmaster General. The postmaster of all such offices shall have the power to select his assistant postmaster, all clerks, and employees, irrespective of any civil-service law to the contrary, and all laws, regulations, and orders in conflict with this act are hereby repealed and nullified: *Provided*, That all such appointments shall be for a period of four years.

This amendment I have offered and support its adoption in the interest of the improvement of the public service. I am aware of the fact that well-meaning people, but people who are not aware of the poor service foisted upon the country under the present system, will denounce this course on my part as that of a "spoilsman," and pour out their anathemas upon me, but if they would investigate the public service as operated under the civil-service law, they would soon change their attitude on this subject. I know to the theorist the civil-service system is most admirable; but all theories do not hold good when reduced to practice. This theory is one of them, as has been demonstrated beyond cavil and doubt. The more we see of it the less we like it. Men at the head of the post offices of the country realize this fact; they comprehend the real situation, and for the improvement of the service realize that a change of the system is desirable. Since this bill has been pending I have received a number of letters from different postmasters over the country, and I am going to take the liberty of reading from one of them bearing on this subject, as I think it very pertinent to the question under discussion. It is as follows:

> DEAR MR. CULLOP: I just got through rereading your amendment in regard to postal employees. I wish to express to you my admiration of your course in this matter. I have been for many years employing quite a large number of people, but never before have I been compelled to assume the responsibility of the conduct of a business without something to say about the personnel of the employees upon whom I have to depend in the conduct of its affairs.
>
> I do not mean that the employees of this office are insubordinate or inefficient, but there is a growing air of independence, particularly among the rural carriers, that to one who has had a long experience in handling men, says, "You have very little to do with us." That is humiliating, to say the least.
>
> For instance, they carry around a publication that seems to be of more interest to them than the P. L. & R., which encourages dissatisfaction among them with the orders of the department, and such dissatisfaction is easy to incite among a force who are to a man at heart enemies of the present administration, and who were used by a former one as a political machine.
>
> As an example, their salary was raised last month, or I should say that of part of them, those who did not receive the maximum, regardless of the amount of work done, are disgruntled and hope, through their union, as their association should be called, to bring about the payment of the maximum to all, regardless of the service performed.
>
> They are all what among sailors are known as "sea lawyers"; they take great pains to keep just within the limit of the law, and this can be done without great trouble, owing to the limited authority of the postmaster.
>
> Now, don't take it from this that I am having any trouble in this office, I am simply giving you the situation from the viewpoint of the man on the ground, which I hope may help you to get a comprehensive view of things.

This letter is from an experienced man of good business qualifications, and he has had the opportunity to observe the operation of the civil-service law. He is an ideal postmaster and fully understands the requirements of the service and the desires of the patrons. He realizes the difficulties the present system affords, the abuses it furnishes. He knows that it is indefensible and should be abolished for the good of the service and the improvement of this most important department of the Government. If there is one department of this Government above all others that the people are vitally interested in, it is the Post Office Department. All the people patronize it and desire it to be efficient, and hence they are zealous in having its standard high and its service thorough. As long as this is as now and has ever been a Government of parties politics will, is expected to, and must necessarily have something to do with

its administration. Men may attempt to eliminate this feature, but they never can, and all attempts will prove futile. It matters not how competent a Postmaster General may be, with the advent of a new administration of a different political faith he will be exchanged for one of the same political faith of the incoming administration. This is the fortune of politics. If experience and knowledge are so important in one, why not in the other? New blood and new energy is always desirable, and is so recognized in everything. The change is made in the Cabinet to have men in sympathy with the policies of the new administration. It should be made all along the line for the same reason. When the people vote for a change it should be given them.

But, now, what is the situation and the danger which confronts the Republic over this civil-service propaganda? In the classified civil service there are, in round numbers, 400,000 officials. This does not include the Army and Navy. This number is in the civil service of the Government. It is an enormous army of employees. Suppose their salaries average $1,000 a person per annum—and this is a conservative estimate—then their aggregate salaries amount to $400,000,000 per year—a stupendous sum. This is too much power and too valuable a patronage to intrust to the disposal of any three men. It endangers the safety of the Republic, is a constant menace to the liberties of the people, and unless restricted will assert itself to their detriment. It is not an exaggeration to say that each of these is able to control at least five votes, on account of relationship and personal friends, and this means a voting strength of 2,000,000.

If the three men who preside over this commission saw fit to wield the power confided to them they could control the election of the Federal officeholders; and this power has already on more than one occasion been attempted, with much success as a result. These employees are thoroughly organized, and permeate every community in the entire country, organized for the purpose of advancing their personal interests, and are able to do so with telling effect. We have just witnessed an instance. A few moments ago the gentleman from South Carolina [Mr. FINLEY] introduced an amendment to the bill under consideration to nullify an order of the Postmaster General promulgated a few days ago. The organization of civil-service employees affected by it was hostile to it because it affected their personal interest. What was the result? Every man on this floor knew the order was right, was fair, was founded on justice, and yet, in spite of all this, only four votes were cast against the Finley amendment. It was adopted by a vote of more than 25 to 1. As the organization which it affected ramifies every neighborhood in the entire country, it manifested its power and won the fight by almost a unanimous vote. The civil service has constructed in this country the greatest machine ever known; and here was an example of its influence, of its power when it is exerted.

The Post Office Department has ever been a party to the construction of this machine, fostered and nurtured it, and now in this instance it turned against its patron and knocked it completely out of the ring. It now recognizes how powerless it is when, though right, it attempts to foist something on the employees they do not want. This is a mere object lesson, and should be heeded.

I want to impress on the House the fact that the amendment I have offered limits the term of office to four years for those affected by it. The importance of this feature should not be overlooked or underestimated. A life tenure of office, such as is created by the civil-service law, is hostile to every principle underlying the foundation of our Government, and is a menace to the liberty of the citizen.

In only one department of our Government—the judicial—did its founders, wise and able as they were, provide for life tenure of office. They came, many of them, from countries where life tenures were the rule and not the exception, and well knew of the abuse of such a system of office holding. They knew the result of it was bureaucratic rule, dominated by a life-tenure office-holding class, and from its imperious rule they hoped to relieve the people of the new Republic, which was destined to be the greatest Government of all the world. They knew well that with power would come selfish demands to serve sordid interests, that history would repeat itself—and it has. What have we confronting us to-day? Potential in form, selfish in purpose, and tyrannical in demand—an old officeholders' pension. It is the outgrowth of the life-tenure system created by the civil-service law. It is backed by the most formidable lobby that ever patroled the corridors of this great Capitol. It is officered and manned by shrewd and able men who know how to manipulate legislative action. With whip in hand, spurs on their heels, they propose to force this legislation down the throats of the American people and fasten on this country a burden from which it will never be relieved. This is the outgrowth of civil service in the creation of life-tenure of office. Already men noticing the power of this vast organization of 400,000 persons, yearly increasing by leaps and bounds, the most perfect organization in the country, aside from the Army and Navy, are advocating in the Halls of Congress the enactment of this proposed legislation. Was there ever a political machine constructed anywhere in the world as perfectly organized and as powerful as this? Search will be made in vain to find one anywhere throughout the entire history of time. Notice what it proposes. I have heard it proposed that a law should be enacted retiring all civil officeholders who have served 30 years or attained the age of 60 years on a pension of three-fourths pay. What would this mean as a burden to the taxpayers of this country? There are now 400,000 employees, at least, under the classified service, and it is estimated that under such a law as proposed one-fourth of them are eligible now to retirement. That would mean 100,000 would go into retirement at once.

Estimating their average salaries at $1,000 per year each, three-fourths of which is $750, at the outset it would require $75,000,000 a year to pay this pension, and in less than 10 years it is estimated it would reach the enormous sum of $200,000,000. Does any man on the floor of this House believe his constituents would indorse such a proposition, that they are ready to assume such a burden for such a purpose? Would they tolerate such action? Oh, no; they would resent it and defeat the men who stood sponsor for it; but this is what the system is leading up to. Let no man deceive himself about it. If continued, it will come as sure as night and day follow each other. Why should these men be pensioned? They exerted themselves to get the positions they have, held onto them voluntarily; they were not compelled to hold them; other people wanted them, and they resisted all attempts of removal. Their remaining in office was a matter of choice and not of compulsion; they were at liberty to retire any day and engage in other businesses, but they did not. They remained in office, feeding from the Public Treasury, out of the taxpayers' garner, and now why should they be retired and still paid the remainder of their lives out of public moneys without rendering any service in return? No good reason can be given, and none will be attempted, but if their powerful machine is put in motion once on this measure, it will probably go through with as little resistance as the Finley amendment.

Now, I have more than once asserted on the floor of this House that the civil service is a machine operated for partisan purposes. I repeat the charge with confidence, and no man will be able to successfully contradict it. Let us for a moment consider a fact connected with it. Out of the 400,000 persons now in the classified service, more than 90 per cent are Republicans. If politics has not been considered in its operation, how did it happen that nearly all of one political faith secured the positions? We know that people of all political persuasions are about equal in ambition, in education, and in intelligence, and hence how, if appointments have been made on a nonpartisan basis, has it happened that the appointees have been almost entirely of one political faith? It is true they have been. Oh, politics have dominated the action and controlled the operations of the Civil Service Commission, as every close observing person well knows. From this conclusion there is no escape.

If an investigation of its operations for the last 16 years was made, it would strike rich pay dirt and expose a condition that would astonish its advocates and inform the public of its disgusting machinations. So revolting would the exposure be, in my judgment, that the people would rise and demand its immediate abolishment. They would denounce it as a "swindle service" instead of calling it a civil service. The sooner it is investigated the better it will be for the welfare of the people, the good of the service, and the efficient conduct of the departments. It would clearly demonstrate that it has been a machine prostituted to partisan purposes, a subterfuge, a sham, and a fraud. The people must control it, curtail its power, or it will soon dominate and rule the country. How vicious and audacious its emissaries have become—how brazen and tyrannical in conduct. It has been the case here in some instances that when appropriation bills have carried increases of salary for chiefs of bureaus that were not authorized by law, and points of order were made against the increases, that men affected thereby have threatened Members who have made the points of order that unless they withdrew them the offending Members would lose the patronage in the bureaus affected, and thereby innocent people, who pay for public service and are entitled to it, would be punished because their Congressman

had attempted to prevent an unwarranted raid on the Public Treasury. Such shameful methods have been employed by this life-tenure office-holding class as no other class of officials would dare indulge in or attempt to employ. Again, Mr. Chairman, it is a well-known fact, the experience of nearly every man, that not only the heads of departments but the chiefs of bureaus and divisions, to make an administration successful, should be in sympathy with it. We have to-day a large number of the heads of bureaus and a large majority of chiefs of divisions in this Government who are not in sympathy with the policies of this administration and are not ambitious for its success. They are ever attempting to embarrass, hinder, and discredit it. These heads of bureaus and chiefs of divisions make up estimates for appropriations, furnish information upon which important legislation is based, and hence are in positions where they can hinder and discredit the administration, and are in some instances doing it. Does any man doubt the proposition that it would be far better in the direction of the policies of this or any other administration that men who are to assist in the formation of its policies and the execution of them should be in sympathy with it and in harmony with its views in order to assure the proper formulation of legislative measures and their speedy adoption and successful execution? If so, what good reason can be given for the present conditions?

It is well known that now these chiefs of bureaus and heads of divisions are, in many instances, embarrassing the progress of the work of this administration, by a failure to give prompt service, in delaying information called for, and thereby discrediting its splendid work. No other officials than life-tenure officers would dare attempt such an embarrassing and discrediting course. Men elected to office for a term of years are most careful to keep in touch with public sentiment and respond to it, but men appointed for life feel no obligation to do so, and therefore disregard public sentiment, ignore public demands, and refuse to respond to their requirements. Life tenure denies the opportunity of the people to instruct officials to carry out public wishes and obey public requirements; it enables the official to be supreme, responsible to no one save himself and his peculiar whims. If the system is continued, it may become contagious, and with its power secure a foothold in the State and municipal governments of our Union, and there establish the policy of a life-tenure officeholding class, through appointments, and deprive the people of local self-government. Election of officers for a fixed period is the safest method, as experience has shown, for the preservation of self-government. It enables the people to select officials, to make changes when desirable, and to enforce their will, and thereby rule the officials and dictate the policies instead of being ruled by the officials and having them dictate the policies of the Government.

Postmasters should be elected by the patrons of the offices for a fixed period of years and held responsible for the administration of the same, and should select their own subordinates in order that they may control their official conduct. Under the life tenure the right is denied others, because of the favored few, to hold office and render public service. I do not believe the people of this country are in favor of the system of appointing men to office for life. I do not believe the people desire the system continued or enlarged, but desire it abolished. I do not believe the people of this country are ready to have established a bureaucratic government, which this system is rapidly doing, and directing the policies of legislation; but I do believe they desire that the governed shall dictate the policies, select the officials, and retain the power to rotate officials when they believe it is to their best interests to have it done, in order that the will of the people may be supreme and not the will of the officeholding class. I oppose the life-tenure system, a bureaucratic government, and insist that the people and not the officeholders are the masters, and I shall use my best efforts to preserve the rights of the people as was intended by the founders of this great Republic.

The civil-service law strikes a deadly blow at local self-government, the leading principle upon which the Government was founded and the guiding feature of its marvelous growth, strength, and endurance. It strikes it down and denies the people the right to select their officials, or even to have anything whatever to do with their selection; it foists upon them, without their consent, officials in many instances undesirable, and denies them the right of participation in their selection. This is hostile to the spirit of our institutions; it is breeding discontent among the people served, destroying interest in the official class, and is not conducive to a good public service. The people in each locality know far better and much more about who are suitable for the local Federal offices than any man or set of men a thousand miles away, it matters not who they are or what their positions may be. The people who are taxed to sustain an office, pay the salaries of the officeholders, and the expenses connected with its entire operation are vitally interested in its personnel and conduct and should, in all fairness, have a voice in the selection of the persons who are to hold and administer the same.

If the people are to be interested in the administration of the Government, it is essential that they have a voice in the selection of the persons chosen for that purpose, and to deny this right is the exercise of arbitrary power inimical to the ideals of our Government, a long step in the direction of the restraint of the liberties of the people, which sooner or later they will resent. The people have demonstrated their ability for self-government, their desire to maintain it, and their hope to extend it. Displaying these noble purposes, their rights should be extended instead of curtailed and every opportunity given to encourage them in their exalted purpose.

This is not merely a question who shall hold the offices, but underlying it is a much greater question, the preservation of the rights of the citizens, the perpetuity of our republican form of government, the preservation of our institutions as handed down to us by the patriotic and self-sacrificing founders who established here and committed to posterity the greatest of all free governments.

The Record Reviewed.

EXTENSION OF REMARKS

OF

HON. JOHN R. CONNELLY,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 14, 1914.

Mr. CONNELLY of Kansas. Mr. Speaker, I desire to take this opportunity to make some observations that I feel are proper and opportune. I hope that in discussing the matters that I desire to touch upon I may do so in such a way as not to be offensive to those who hold opinions different than my own. Parties are necessary in the great plan of our economic structure, and it is the part of good citizenship at all times in discussing party measures to exercise that charity for the opinions of others that is most pleasing when exercised toward us. The boundary line is very clearly marked between the statesman and the demagogue in this Congress as well as out of it by the charity that men exercise or fail to exercise for the honest opinions of their fellow men.

Mr. Speaker, it is significant that in the primaries held in the various States of the Union recently many of the candidates who have bitterly opposed this administration and have shown a disposition to unduly question the motives of President Wilson in this House and in the other legislative body have gone down in defeat if they have been so unfortunate as to have opposition. I believe that we are coming to the time in our national life when it is no longer safe for men elected to represent a great district in this Congress to play the demagogue. The politician who thinks that he can fool people by insincere criticism is paying his people a questionable compliment. In most districts of the country the people are bright enough to see through unfair and unmerited criticism, and they are patriotic enough to resent it. I am sure that as we grow nearer to the ideal in our Government we will grow further away from the bitter partisan criticism that always shows a bigoted and narrow mind, and we will grow into that other criticism that has for its purpose an appeal to the higher and better elements of civic endeavors. I am not saying that the man who has criticized this administration in a just and fair way is not a good patriot or that he has forfeited his right to the respect of good men and women in all parties. I believe that the right to criticize is one of the most sacred rights that belong to a people of a republic, and because it must ever remain a right inviolate by statutes, the governing power to regulate and to discern between fair criticism and bitter partisan rancor, must be the respect that the one inspires and the disgust the other incites in the breasts of fair and patriotic people.

The record of this Congress, whose members are soon to go out to the people of the country in the various districts and secure anew the right to remain in power, is one of which every Democrat can well be proud, and it is only fair to say that some of the Republicans have, e'ther through the belief that the laws were just or through the fear of the righteous indignation of their people at home, lent their assistance, and we want to believe in most instances that the desire to do right has been the impelling cause.

Mr. Speaker, I take it that the great majority of the laws of this Congress will be either approved by our Republican and Progressive neighbors in the coming campaign or they will be ignored with a stealth of purpose that will do honor to their judgment, if not to their purpose. I can not conceive of men and women going out to criticize the record of this Congress before the intelligent audiences of the country; I can not conceive of men and women trying to make the people believe that the income tax, that is the result of 20 years or more of Democratic agitation and which lays the burden of taxation on the backs of those who get most benefits from Government and who are best able to pay it, is a bad law.

I can not believe that these critics will say much about the currency law, that takes the control of the volume of money out of the hands of the banks and places it in the hands of the Government, that mobilizes the currency of the country in sections where it is needed and takes from the moneyed interests the power to bring on a panic at their will. I can not conceive of any man dwelling long on this law in criticizing the acts of this administration.

I do not believe that they will insult the intelligence of our people by telling them that the Democratic Party erred when it made United States Senators elective by the people.

I am sure that they will pass the matter of electing the committees of the House and doing away with "Cannonism" over very lightly.

I am sure that the driving of the great legislative lobby from the halls of this Capitol Building will not engage their criticism for long.

The liberality of this Congress in the matter of pensions to the soldiers of the Civil War and their widows and the giving to dependent widows and orphans of deceased Spanish-American War soldiers pensions will not compel attention in criticism for any great length of time.

I shall not expect them to dwell at length on the error made in passing the Alaskan Railway bill, for the RECORD will show that it was passed by practically a unanimous vote of Democratic, Republican, and Progressive Members.

They will be entitled to all the enthusiasm that they can inspire in criticizing the repeal of the Panama tolls bill, which took from the pockets of the taxpayers millions of money and handed it over to the Shipping Trust in the form of free passage for their vessels through the canal.

I can not believe they will dwell long on the criticism of the antitrust bills which seek to correct many of the evils that have grown out of so-called "big business" and which have been demanded by the best men in all parties for many years. The demand for this legislation was so universal that no man who represented an intelligent constituency dared to oppose its enactment into law.

They will hardly tell the farmers, as well as the urban voters, that increased appropriations to be expended to better the cause of agriculture in the country is not a wholesome interest in their behalf.

They will not stir up much enthusiasm when they tell the people that the developing of the parcel post, the good-roads legislation, the exempting of farmer and labor organizations from the provisions of the antitrust law are not all wholesome legislation and directly in line with the best and most progressive thought of the day.

One of the bright spots in the history of this administration is the policy that it has followed in dealing with that sorely stricken and war-cursed country of Mexico. Every week for many months the rabid partisans in the Republican Party in Congress arose in their seats and sent up a wail about the policy of watchful waiting that was so distasteful to them and demanded that a more rigorous policy be pursued by the administration. They would have had the President and his Secretary of State follow a policy that would have led to war with a people already sorely plagued with the horrors of a civil conflict. They would have called the young men and boys from the fields and factories, the mills and the mines of this peaceful and happy land, drilled them in the arts of organized conflict, and sent them away to fight a people who were already bleeding at every pore and who were fighting, many of them, for the right of constitutional government, as did your ancestors and mine.

I am persuaded that while the Republican partisans were blaming the President and a good many of them were voting to tie the hands of the President when he came to Congress and asked for its support and sympathy in handling affairs in Mexico, they were not representing the rank and file of their constituents at home, who I am fully persuaded were in sympathy with the President and wished him Godspeed. I refuse to believe that the people of this country are ready to repudiate the leadership of Woodrow Wilson and go back to the standard of Joseph G. Cannon, who announces that he is a candidate for his old place in the House and proclaims that the issue is squarely as to whether the people want to indorse President Wilson and this administration or whether they will repudiate the same. I say to you that the glove thrown at the feet of Democracy by the defeated and repudiated sage of Danville is taken up, and we are willing to go to the people on that issue, and we do not fear for the verdict at the ballot box in November.

After reviewing the various laws thus far and finding no grounds upon which a sane opposition can hope to make a fight, I am persuaded that the opposition will be compelled to make a great deal of noise about the new tariff law, for the reason that the intelligence of the people will prevent them from getting very far with opposition otherwise. If the matter of tariff legislation was as simple as are the other laws that have been enacted and as well understood, there would be no more chance to make the people believe that the present law was not enacted with their welfare in view than it is to convince them that the other laws are not wholesome. But with the tariff the matter is more difficult to understand. For years special interests have fattened off the earnings of the agricultural classes of the country and have employed the best talent, who have conjured up every catch phrase and every sophistry to mislead the people of the agricultural sections in regard to the merits of the tariff.

It has never been necessary to go to any great trouble to show the manufacturing sections that a tariff was to their interests and against the consuming sections of the country; but, as to the farmer, it has taxed the ingenuity of these hired emissaries of special interests to dodge from one untenable position to another faster than the rank and file of the people could follow and dislodge them with reason. So it will be this fall in the coming campaign. They will go out into the farming sections and not discuss the laws which are almost universally approved by the people, but their hope for success is to try to show the farmer by long lines of figures and tables of percentages that no one understands or cares about that he has been wronged by this tariff law. These prophets of evil omen started a year ago, when a prominent Republican Senator from the State of Kansas visited the State soon after the enactment of the new tariff law and gave out an interview in which he deplored the fact that, with meats on the free list, the Meat Trust would ship in this commodity from Argentina so cheap as to break the heart of the American cattle grower. His was a pitiable story indeed. Now, when the law has been in force well-nigh onto a year, cattle are selling in the markets of this country for a dollar a hundred more than they were at the time the law was enacted, and the farmer who was scared with the news that his beef would go begging in the markets of the world because of a Democratic tariff law knows now that the Senator who gave out the interview might have been honest, but he was not informed. After it was apparent that the prices of cattle were not going to slide up and down to meet their predictions, they were not discouraged to the extent that they refused further to speculate; but, on the other hand, the farmer and his good housewife were next to be approached with the warnings that eggs would come in from China and butter from Siberia in such quantities that it would not pay them to gather the eggs or skim the cream from the milk. The farmer and his wife have now had enough time to see that the ranges of prices for these things have seldom been higher than at this time, and another story of plaintive calamity has come to naught. Then, to finish the farmer and put him clear down and under the ropes, he was told that the corn from Argentina would come in and glut the market and run the price so low that it would hardly pay to gather it from the stalks. This also has proven only a scare, and the farmer is getting to the place where he begins to have some doubts of the accuracy of these prophets of evil who have been prolific with their prophecies but not with their proof.

When it was announced in the daily papers that the country would raise the greatest wheat crop in its history it looked as if one consolation would come to these prophets of disaster, and they said that wheat would now go down in price on account of the tariff. Hardly a man who has reached middle life, who was reared on a farm, but who can remember the days when he sold his wheat at from 35 to 45 cents per bushel and that at a time when a tariff was high on the same. I myself raised good wheat in Kansas in the year 1892 and sold it for 42 cents per bushel, and that was when the Republican Party was in power in every branch of the National Government and a high Republican tariff was on the statute books. I can also recall that, in 1890, when the Republican Party and high protection were both rampant and in their full prime, I bought good cows for $8 and $12 per head, and to-day it is not an unusual thing to read of good cows selling in my country for $75 per head, and cattle

are on the free list. With this array of evidence before us it would appear that the enemies of the administration would not be able to get very far with their plaintive cry about the way the farmer is abused by the tariff law.

The facts are, the farmer is a good deal brighter fellow than these fellows who would mislead him give him credit for being, and he has learned that the benefit that really accrues to the farmer through the agency of the tariff can be hid very readily in his eye without any great obstruction to the vision, while on the other hand it is often the cause of increasing the price of the things that he consumes, to his detriment and to the benefit of others, who are the real beneficiaries of the tariff.

In order to help the honest man who really desires to know whether or not the claims of those who pretend to believe that the produce of the farm has been lowered in price since the new tariff law went into effect and to make him ready to repudiate the contentions of those who have been loud in promises but silent in performances regarding the farmer's interest, I have, through the kindness of the gentleman from Indiana [Mr. CLINE], inserted in this speech a table furnished to him by the Department of Labor and taken from the Chicago Inter Ocean price current, showing the price of 13 leading agricultural articles for the first week in March for each of the past 10 years. A few minutes spent in studying this table will show any fair-minded man that the claim that the Underwood tariff law has been detrimental to the farming interests is a delusion and a snare, a pure fabrication with no foundation in fact. The Underwood tariff law, like the other laws passed by this Congress, has had in mind the great principle which has been the basis of all just legislation since time began, and that is "Equal rights to all and special privilege to none." Below is the table referred to:

Quotations of farm produce prices at Chicago, Ill., for first week in March for 10 years ending with 1914.
[Compiled by the United States Department of Labor and from the Chicago Inter-Ocean price current.]

Commodity.	1905	1906	1907	1908	1909	1910	1911	1912	1913	1914
Wheat, No. 2, red	$1.16	$0.83½	$0.76	$1.00	$1.25	$1.25	$0.88½	$1.02	$1.08	$0.97½
Corn, No. 3, mixed	.45	.39½	.43½	.57½	.64	.62½	.43½	.65½	.50	.64½
Hay, timothy, first	12.00	11.00	17.00	15.50	12.00	18.00	17.00	21.00	14.00	15.50
Oats	.30½	.31½	.43	.52½	.53	.46	.30½	.34½	.34½	.40
Potatoes	.35	.48	.46	.73	.93	.40	.43	1.10	.48	.70
Hogs, best fat	5.12½	6.42½	7.60	4.70	6.55	9.90	7.20	6.32½	8.55	8.75
Cattle, best fat	5.60	6.40	6.60	6.00	7.10	8.10	6.95	8.90	9.00	9.75

Out in my State Providence has been kind to my people in the way of giving us plenty of rain and sunshine, and the crops are bounteous and the farmer is happy. Go to many of the towns in my district, which is purely an agricultural district, on a Saturday afternoon, and you will find the farmer has come to town with his automobile and has brought in his wife and his family and they are dressed as well as any people need to dress, and he could dress them still better if he so desired. Kansas has raised a splendid crop, for which we are thankful to a merciful Providence, and she is shipping it to market and getting a very good price, and we are thankful for that. If Kansas would sell her wheat at the present market price, she could with the money received pay off her mortgage indebtedness and have enough left to last her for some time. Kansas is not only happy in the harvesting of a good crop, but her splendid men and women are intelligent enough to view with approval the work done by this Congress. They believe in the wisdom and the patriotism and the virtue of Woodrow Wilson, our great President. They believe that he comes nearer possessing the scholarship of a Jefferson, the rugged honesty of a Lincoln, and the indomitable courage of a Jackson, than any President that has held that office in a hundred years. They believe that he is devoting his great talent and his energy to better the conditions in this country, and I shall be very much surprised if the rank and file of the people, whom the President and Congress have served so well, do not set their seal of approval on both of them when the opportunity comes.

I realize, Mr. Speaker, that the contest between the people and the forces that have been crowded away from special favors in the country, will not be a light one. These interests have the munitions of war and they have the disposition to fight those who have attempted to stay the greedy hands which have for years enjoyed the privilege of reaping where they have not sown. These interests will not be idle, and the only hope for the success of the Republican Party in the coming November is the hope to mislead enough of the voters and again be in position to pass legislation friendly to them, or at least be able to prevent further legislation in the interest of justice and fairness.

The average man or woman wants to be fair, and they want to know the truth. It will avail no man anything who tries to play upon their prejudices for political gain. If there has been a wrong in the way that we have considered political questions in the days gone by, it has been the appealing to prejudices of long standing, when every argument should of right stand upon the foundation of reason. I hope that we are coming to the time in this country when it will not be considered a criminal offense to follow wherever an honest conviction leads in matters political. The very fact that States of the Union which have been strongly Republican for many years are now becoming debatable grounds, and States that have been overwhelmingly Democratic for long stretches of time can hope to remain so only through responding to the proper demands of the people, who are showing strong inclinations to break away and refuse longer to be bound by traditions.

Mr. Speaker, I am glad that the time is at hand when bitter partisan politics are becoming obsolete. I am sure that it is a wise provision in the great economy of thought that men and women reach different conclusions and reason by different processes. I have lived to believe that the great majority of the people desire for the right to prevail and are partisans only because they feel that one party will bring to the whole people a greater sum total of happiness than will the other.

Measured by its efforts on the part of the great common people of the country, the Democratic Party of this Nation has proven its right to continue to serve the people, and I believe that right will be conceded by a great majority of the voters of the country at the coming election. I am sure that should the Republican Party be placed again in power at some time in the future, it would no more dare to touch the great constructive legislation of this Democratic Congress than did hands profane dare to touch the Ark of the Covenant in days long gone by.

Postal and Civil-Service Laws.

SPEECH
OF
HON. S. KIRKPATRICK,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 8, 1914,

On the bill (H. R. 17042) to amend the postal and civil-service laws, and for other purposes.

Mr. KIRKPATRICK. Mr. Speaker, I very much regret the necessity for the reenactment of a law passed by this Congress not more than 90 days ago, which was in the very nature of itself an act to increase the pay of all rural mail carriers employed on standard routes, thus resulting in conflict between the Postmaster General, an executive branch of the Government, and the legislative functions thereof.

In this it is possible that both factors are in the right, provided we apply the rule of desire to the executive branch and that of intent to the legislative body. I am frank in saying that I believe the Postmaster General has studiously, earnestly, and zealously sought to bring about equitable results, as will be seen by the application of certain rules and regulations published for the guidance of all concerned; but the conclusions of Mr. Burleson do not measure up to the intent of Congress, as evidenced by the fact that appropriations were so increased

as to warrant the payment to all standard rural mail carriers the sum of $1,200 per annum. And I am sure the House so understood it at the time of the passage, and will not now recede from its former action. I am not authorized to speak for the Post Office Department, but I am sure that the manifest loyalty of Mr. Burleson to the great work now in hand will not urge or permit him to antagonize the almost unanimous desire of Congress in this matter.

The public servants, under the provisions of this bill, are not overcompensated for the services they render. They are the dispensers and distributors of human happenings. The system has come to stay, and those men who stem the tides of storm and adversity should be fully recompensed; and for this and other similar reasons I am going to stand by my first convictions in the matter and vote to give emphasis to the original bill.

Article Written by Charles W. Eliot on Wilson's Foreign Policies.

EXTENSION OF REMARKS

OF

HON. J. THOMAS HEFLIN,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 26, 1914.

Mr. HEFLIN. Mr. Speaker, I desire to extend my remarks in the RECORD by printing an article written by Charles W. Eliot on Wilson's foreign policies, and appearing in Harper's Weekly August 22, 1914.

WILSON'S FOREIGN POLICIES.

[By Charles W. Eliot.]

Within a few weeks the whole country will be ringing with denunciation by Republican and Progressive orators of the omissions, short-comings, and failures of the Democratic Party since it came into power in March, 1913. Inevitably the party has provided the orators with ample material for criticism and reproach. The task which the party and the President had set themselves was overwhelming at best; within the party there were wide differences of opinion about persons and policies; Democrats of large experience in public business were but few; and very grave troubles in and with Mexico early claimed the earnest attention of the administration to the comparative exclusion of some domestic problems of serious import to the business interests of the country, such as civil service, both at home and in the insular possessions, the crippled railroads, and the industrial warfare. Nevertheless, the achievements of the present administration are extraordinary in amount and remarkably significant and far-reaching. The principal achievements are contributions to sound international policies and conduct.

Under the guidance of President Wilson, the United States has been thoroughly committed to nonintervention by force of arms when adventurous American investors in the territory of a foreign State are threatened with loss of life, liberty, or property on the foreign soil, or have actually suffered such losses. American investors had gone into Mexico of their own accord and at their own risk, because they thought they could make more money by applying their inventive or constructive power and their capital there than they could at home. The disordered condition of the country threatened losses to these enterprising Americans; and the armed intervention of the United States might perhaps have prevented these losses, or at least have avenged them. Influential persons, corporations, newspapers, and public officers urged vehemently that American troops should at once seize northern Mexico. President Wilson's administration declined to intervene; brought the exposed Americans out of Mexico in safety; helped the citizens of other countries to leave Mexico if they desired to do so; left the care of aliens' properties to Mexicans; and induced European Governments to follow the policy of the American. In this patient but persistent process the President of the United States deliberately abandoned the policy pursued for centuries by Rome and England in their dealings with weaker foreign countries. The Roman citizen must be safe anywhere in the Mediterranean world. Great Britain has pursued the seizure, indemnity, and "punitive expedition" policy down to the present day. No European nation has ever announced or acted on the policy of nonintervention on behalf of its endangered or injured commercial or missionary adventurers. The American Republic has the honor of making first this great contribution to international peace and the progress of civilization.

It is not the first time, however, that the American Government has shown its dislike of the prevailing indemnity policy. The United States took part in the international military expedition to Pekin during the Boxer insurrection, and joined its allies in demanding heavy indemnities from China; but when the American indemnity turned out to be excessive, the excess was returned to China. Again, when riots and disorders of various kinds occurred in many parts of China after the outbreak of the revolution of 1912 in that country, President Taft ordered the American minister at Pekin to call into Pekin all the American missionaries and teachers whose lives were endangered, in order that no claims on the Chinese Government for indemnities might be established. The missionaries and teachers came in with great reluctance; but they cordially supported the view of the American administration that occasions for indemnities ought to be avoided, since the payment of indemnities was always irritating and often unjust. These incidents were remote and the threatened injuries were comparatively small. The Wilson administration has applied the doctrine of nonintervention to a disorderly next-door neighbor on whose territory large American interests were imperiled.

The present national administration has also accepted the mediation of three American Republics in a peaceful effort to reestablish good relations between itself and Mexico, and to compose the factional fighting in that unhappy country. This effort is in the highest degree creditable to the United States, no matter whether the present mediation be entirely successful or not.

President Wilson has also succeeded in procuring the repeal by Congress of the exemption of American coastwise vessels from paying tolls on the Panama Canal, and on the simple ground that the national honor required that repeal. This achievement of President Wilson, by the force of his public speech and of his legitimate influence on honorable men of all parties, has added to the self-respect of the American people, and greatly strengthened their future influence in international affairs.

The present administration has also supported the proposals of President Taft's administration to effect an amicable settlement with the weak and distracted Republic of Colombia, in spite of the protestations of some members of each of the three political parties that the United States should never express regret for any injury it may have done to a neighbor—especially if the injury were inflicted in an attempt to benefit all mankind—and should always be extremely careful not to make an exaggerated reparation, even in cases where some reparation is admittedly due. To be sure, the new treaty with Colombia has not yet been ratified by the Senate; but it is a great credit to the national administration that it laid such a treaty before the Senate. Taken together with the corresponding act of President Taft's administration, the proposal of this treaty should work a great improvement in the relations of the United States to the Central and South American Republics—relations which were seriously disturbed by the act of President Roosevelt's administration on the Isthmus of Panama.

Two other achievements of President Wilson's administration have international bearings of high importance, namely, the downward revision of the tariff and the establishment of a better currency and banking method in the United States; for both these measures will have great efficacy in the development of that international trade on which the prosperity of the American manufacturing industries clearly depends. The time has long past when the domestic market could maintain the large-scale American manufactures. All the great national industries need broad developments of their foreign trade, including American agriculture when crops are abundant. For the development of foreign trade three things are necessary: (1) The abolition of duties on raw materials and foods; (2) the abolition of protected monopolies, those hot-beds of selfishness, stagnation, and inefficiency; and (3) the provision of American banking facilities, both at home and in foreign parts, as sound and flexible as those of European nations. The Republican administrations for a dozen years past had been inquiring and talking about these beneficent measures. The present Democratic administration and Congress achieved them in 14 months.

The means by which these achievements have been accomplished are: Frank declaration by the administration of its intentions and objects; publicity through the press about events and persons as soon as the state of the business in hand permits; and direct appeals to the best thinking and feeling of the American people and its representatives. President Wilson, in

particular, has appealed directly to the people on every one of the issues mentioned above, asking on the highest grounds, before Congress had taken action, for the people's support. Some people believe him to be a reticent and mentally isolated person; but on every one of these policies he has spoken directly to the people with candor and energy, and with an admirable confidence in the ultimate intelligence and fairness of the voters.

The fact is that President Wilson's process in arriving at a decision concerning the next responsible action is just that of every resolute man who has the scientific habit of mind. While he is making up his miad he seeks all possible information and various advice and suggestion; but after he has reached a deliberate conclusion, volunteered advice does not take much hold of him, although fresh information is always welcome. He seems to possess remarkable powers of persuasion in inducing others to cooperate with him in that course of action which seems to him wise, but this is persuasion and not the imposition of his opinions.

These are great services to the Republic, and they are accomplished facts. To be sure, the political critic or opponent of the administration may easily say, "Yes; President Wilson has kept the United States out of a war with Mexico, but with how much less trouble and expense he could have accomplished that desirable result if he had recognized Huerta." Or he may say, "Can anyone suppose that such a disorderly and hopeless Government as that of Mexico can continue to exist indefinitely on the southern border of the United States? It is well that war is now postponed; but it must come." Or the critic may say, "How trivial a pretext for armed invasion was the flag incident at Tampico; how rash and how inconsistent was the forcible seizure of Vera Cruz; how unstable was the conduct of the Washington administration about the embargo on munitions of war." To all such queries, speculations, and anticipations of evil, the administration and the Democratic Party may confidently reply, "The accomplished facts speak for themselves; they are all very good, and they prophesy more public good in the future, for they will promote peace, good will, and mutually helpful intercourse among the nations."

(NOTE.—On July 13 I mailed the above article from Asticou, Me., to a friend in Massachusetts, with the request that he would cause it to be published at his discretion. On account of the absence of this friend from his summer home, the article did not reach Harper's Weekly for more than a fortnight; and there was then some delay in communicating with me. On August 5, Harper's Weekly asked me if I wished to make any changes in or additions to the article, because of the extraordinary events in Europe since the article was written. On August 6 I mailed to Harper's Weekly the following postscript.—C. W. E.)

POSTSCRIPT.—The sudden invasion of Servia by Austria, and of Luxemburg, Belgium, France, and Russian Poland by Germany, without formal declaration of war, and in great force, has proved conclusively that those two military powers are capable of using the armies they always hold in complete readiness to attack any one of their neighbors without reason or excuse. The peace of the civilized world has been broken by them in the most wanton manner; and the commerce of the world is suddenly interrupted, in utter disregard of the interests and welfare of other nations.

Compare these actions of two great military monarchies with the actions of the United States toward Mexico during the past 16 months. Every American and every republican has a right to be proud of the contrast, and to anticipate with joy that great gains for human rights and welfare will come in time out of this demonstration of the superiority of democratic institutions as regards public morality and international good will.

Some Conditions as They Have Been Pictured and as They Really Are.

EXTENSION OF REMARKS

OF

HON. DUDLEY DOOLITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 12, 1914.

Mr. DOOLITTLE. Mr. Speaker, in view of gross misrepresentations I feel constrained to address myself to a few facts and conditions. I refer to facts concerning the actual condition of the country and the alleged condition that the calamity-howling partisan press and politicians would picture it as being.

DELIBERATE ATTEMPTS TO DECEIVE.

At the beginning of this administration certain hostile and subsidized newspapers throughout the country began a systematized attack on the confidence of the people, actually insulting their intelligence, and the acts of the administration and Congress. The harping critics started their campaign of deception and villification even before the tariff bill was passed, and tried in vain to make the people think that Congress and the President were not their friends. They did all they could to produce a panic, and failing in that began a black-hand propaganda to bring about hard times. To destroy the confidence of the people was their set plan; with confidence gone, everything else would be easy for their schemes and money to accomplish and a return to the days of special privilege and favored monopolies would be upon us. But the President in the White House and the Congress in the Capitol did not become frightened by these dire predictions of manufactured calamity any more than the people did.

WOOL AND SHEEP.

I remember that certain gentlemen on the other side of this House tried to scare somebody into thinking that "free wool" would ruin the sheep industry, and I have no doubt some of their constituents, who have heretofore had more confidence in them than we have, believed what was said, really thought the panicky outcry was genuine, and proceeded to sell off their sheep and to contract in advance the sale of their wool at the then prevailing prices. But the sheep raisers and woolgrowers know more now than they did when they took these loud-mouthed confidence wreckers at their word. Wool is selling at a straight advance of 5 cents per pound over the price it brought under so-called protection. The price of sheep has also greatly advanced; and what will these misguided constituents of our crusty carpers do to these "statesmen" who permitted them to act on false outcries? Let election day answer.

"CHINA EGGS."

Failing to depress the price of sheep and wool, these muck-raking orators and newspapers turned to eggs, "China eggs" imported right square from China to compete with our own domestic eggs. The political press was full of "China eggs" and the cheap price of home eggs for about two months, just so long as our old hens were working overtime, like they do every spring when eggs get cheap; but when the hens began to curtail the supply the price began to ascend, just as it always does and always will do. Then, what became of the howl about "eggs from China"? Gone again, to return when our Leghorns and Plymouth Rocks begin another season of an egg per day average. What gets me is why these eggs from China fail to show up when the price is high. It strikes me that would be the proper time to import them. The answer is, of course, nobody would believe the China eggs had any effect on the price if eggs are selling high. So in order to get more profit—political profit, I mean—the time to import the China eggs is when we have lots of our own eggs and the price is low. That talk will not go for a minute; if importers handle eggs, they do so because of the money there is in it, and if they can ship eggs 7,000 miles and make anything on them, most surely they will sell them at the best possible price; so let us have them when eggs are high—for the consumer's benefit—but not a China egg do you hear of then. Roll out the China egg now, Mr. Politician and Mr. Political Newspaper—not an egg and not a word.

"ARGENTINE BEEF."

And then there was a protracted uproar over "Argentine beef." Political reactionaries grew blue in the face and partisan papers ran out of ink printing scare heads. A considerable number of cattlemen became honestly concerned. That was about the time, and just after a severe drouth in our State, when pastures were dried up and water was about gone. Shippers had to ship, and the cattle were not fat. The markets were glutted, and the prices were not satisfactory. Then old "Argentine beef" was trotted out like a nightmare to scare the producer. The importer wanted to get it on the market right then and there, while the market was low, because his profit would be so much more than when cattle were high. Believe that if you want to. But since then, the summer and fall of 1913, thank God our great old State of Kansas has been favored by nature, for which the Democratic Party does not claim any credit, but this is one time when our friends the Republicans can not claim the credit for the rain, the sunshine, and the prosperity. We have produced 184,000,000 bushels of wheat, an immense oat crop, excellent alfalfa crops, with a fine prospect for a good corn crop; our pastures are green and water is plentiful. We are not being forced to ship our cattle prematurely and are in no rush to sell, although the market is higher than ever before at this time of the year. Now, where is old "Argentine beef"? Seems to me it would be the proper

time, if I were an importer, to trot him onto the block again, when prices are high, not low, as when he was last being agitated. But, of course, the importing packers are in the business for their health and not for profit. Shall we believe that? And the yellow political press even find it too much for them. They can not mix the high prices and "Argentine beef"; and as we have the former, and as much of the latter as ever, they will not succeed in distorting the facts.

Let me give a couple of authentic market reports from leading livestock papers, one for last winter and another for this summer:

[From the Kansas City Daily Drovers' Telegram, February 25, 1914.]

RECORD PRICE AROUSES INTEREST—NATIVE STEERS BROUGHT $9.20 HERE—TOPS FOR 10 YEARS.

The sale of 51 head of 1,530-pound steers on the Kansas City market yesterday at $9.20, the highest price ever paid here in February, has aroused interest in the tops on beef cattle in February in preceding years. Following is a record of the top February prices the last 10 years:

1914	$9.20
1913	9.00
1912	8.15
1911	6.75
1910	7.50
1909	6.75
1908	5.85
1907	6.50
1906	5.85
1905	5.80

[From the Drovers' Journal, Chicago.]

RECORD PRICE FOR CATTLE—CHOICE BEEVES SELL FOR $10 AND $12 BEFORE CHRISTMAS, IS PREDICTED.

CHICAGO, *July 13*.

Cattle prices at the Union Stock Yards reached a record point to-day, when choice beeves sold for $10. This price was the highest ever paid here in July, and was a top point for the year. Hogs touched $9, the highest level in months.

When prices decline again, as they always do go up and down, we will find our old acquaintance "Argentine beef" running at large, chiefly in the so-called "news items" of hostile subsidized newspapers, where he is more profitable to the packers' monopoly than he is as a competitor of the native steer.

ARGENTINE CORN.

Then we had an unwarranted "scare" about "Argentine corn," that was fixed up principally for Indiana, Illinois, Iowa, and other States that produced immense corn crops last year, and where prices were expected to be low, but the shortage in Kansas, Nebraska, Oklahoma, and parts of Missouri made up the demand, and the hard-times prophets were disappointed. One car of Argentine corn did get as far as Indianapolis, Ind., but the expense of shipping, averaging 19 cents to 22 cents per bushel, and the inferior quality of the corn hushed the criticizing journals. Meanwhile the States where the corn crop was almost a failure were drawing on the other States for corn, and corn was bringing 72 cents per bushel—not a bad price at all if you have it to sell, but a bit steep if you want to buy. So "Argentine corn" was recalled from the front pages, chucked into the back for a while, and then relieved of labor entirely. Not a word do you hear about "Argentine corn." Why? The price has been too good, and of course the importers would want to wait until the price they could get for it went down, as they did not want to make any money—not at all; it was all charity with them. But if the good corn crop that we hope for and expect this year turns the market down, then, when it is cheap, out will come "Argentine corn," just like "China eggs" and "Argentine beef," and the "competition will be ruining the "American farmer"—in the pages of a hostile political press only, however. There is and has been as much coming in as at any time when prices were lower. I surmise that in the campaign this fall we will have this all rejuvenated and remodeled for the occasion, but the facts will be in possession of the people.

TRUMP CARD PLAYED.

Then there was a trump card the administration's enemies played.

"Coxey's army," that had rested itself and slept for 20 years, was suddenly revived and recruited by these confidence destroyers and hard-times promoters. A big effort was made to enroll enough unemployed men to make a showing, but small success was had except in the columns of certain antiadministration papers and in the mouths of certain politicians; there the "army numbered thousands." Coxey started at Massillon, Ohio, and marched to Washington. I saw him when he drove into the Capitol Grounds at the head of his "army." There were exactly seven people all told, Coxey, his wife, and son, dressed in fine fashion—for it must be remembered that Coxey is a well-to-do manufacturer—and four "privates," just common bums and hoboes. The "army" never did number more than 26 people at any time—this "great army of the unemployed denouncing Democratic hard times." And this scheme met the fate of all the other misrepresentations. So Coxey's army was lost in the shuffle of business activity and from the pages of the subsidized press.

WHEAT.

I think I have covered fairly most items of interest to the people I have the honor to represent here that have been the main subjects of attack. I will refer to one other item—wheat—before I close. This year we produced the largest crop in our history, and prices at the commencement of the harvest were low—about 65 cents per bushel—not so low, as I remember, under so-called protection in 1906, when it sold for 58 cents, but it was low, entirely too low for profit. Just then out trotted certain panicky political press and leather-lunged "statesmen" and partisan orators over the country denouncing "Canadian wheat"; and at the very instant wheat was selling for 3½ cents a bushel higher in Winnipeg, Canada, than in the United States, but, of course, it "was being imported in large quantities into the United States from Canada," in the columns of those papers and the imagination of those orators. The American farmer is not a fool and will not believe any such statements; he is intelligent, and so is the Canadian farmer, who will not sell his wheat in the United States for less than he can get for it at home. Here are some 1914 market quotations, just before the new wheat came on the market and afterwards:

June 4: Winnipeg, 95⅛ cents; Minneapolis, 91⅛ cents.
A month later, July 3: Winnipeg, 89⅝ cents; Minneapolis, 87⅛ cents.
Then, just before the European war jump, July 22: Winnipeg, 91⅛ cents; Minneapolis, 87⅝ cents.

Incidentally, these calamity howlers overlooked the fact that there is an import duty on wheat of 10 cents per bushel from Canada, and "Canadian wheat" took for back-page cover promptly, and then out entirely. They almost tried to use the same "ruination" argument on this so-called protected article that they did on the so-called free article, like corn. So far as the actual price was concerned, they might as well have done it.

BOARD OF TRADE INVESTIGATION.

I think it proper to mention, in passing, that malicious misrepresentation is not only the weapon used regarding prices. I have in mind a matter that this House already has had called to its attention—market manipulation, the unjust difference in the price paid for grain at loading elevators and the price for which the same grain was sold for export at export markets. It was the habit of these exporters and others on the board of trade to send out card bids for grain, and no firm could bid above the price stated. I have heretofore presented statements of wheat producers that 63 cents was what they had received on the card bid from the exporter or broker at the elevators, and that the same wheat was sold out of an export market for 82½ cents to 85 cents per bushel; and the average freight rate was less than 6 cents per bushel from the country elevator. This is what brokers call "spread" in prices. My resolution calls for the investigation of the marketing conditions and how the prices are fixed and determined. That a Federal investigation was pending became public, and the price to the producer advance the next day. A paper in the wheat belt—the Newton Republican, July 23, 1914—has this to say editorially:

While it may not have been due to the fight Congressman DOOLITTLE has been making to have an investigation as to whether there is any truth in the charge that the Kansas City grain dealers are paying the farmers a less price than they should for their wheat, it is noticeable there has been a marked advance in Kansas City wheat prices since the resolution was introduced in Congress.

And certainly it was not printed to compliment me, a Democrat.

FICTION NO MATCH FOR FACTS.

My contention is this: The "political prices" of products over the country, the "tainted-news" prices, as it were, do not coincide with the actual prices. If my word is doubted, read the market reports.

THE REAL PRICE MAKER.

Prices and the prosperity of our country are not controlled by legislation nor the theories of any political party; there is a gauge, an ever-present rule and guide, a standard of measure, genuine and true. It is the universal law of supply and demand. Attempts to change it, distort it, or to nullify it fail in their own effort. It is the same to-day as it was the first day, and ever will be. A striking example is now before us—conditions caused by the terrible struggle of the European powers. Their brave men are in the armies—their factories are closed and their fields are deserted. Those who produced now consume. Our factories and our fields must provide for the increased demands.

TRIUMPH OF AMERICAN DIPLOMACY.

And we can do it without overexertion on our part, and although the unhappy strife among European nations brings sadness to the hearts of our citizens, we can thank our Creator

that our country is at peace with the world; that we are not engaged in war, and therefore have the time and opportunity to pursue vigorously our lines of industry in factory, store, and farm; that the "amateur diplomacy" of "grape-juice diplomats"—how that mockery must burn in the ears of the enemies of this administration—have put to an end governments by assassination and all that would pattern after Huerta, have led to prosperous peace. We have come out of Mexico with a minimum death loss, and only a score of wounded of the thousands of Uncle Sam's boys who avenged the injuries and studied insults to the Flag at Vera Cruz; have escaped a second war with Mexico and its attendant pension roll; escaped a daily expense of $4,000,000—all by the "amateur diplomacy" of the once ridiculed "grape-juice diplomats," and that ever-present, ever-watchful, big, patient, intelligent, whole-hearted American, President Woodrow Wilson. Cool-headed, firm persistence has accomplished in Mexico all that war could and more. From "professional diplomacy" deliver us, if it all lead to war; give us the "amateur diplomacy" that leads to an honorable peace.

COUNTRY MOURNS DEATH OF MRS. WILSON.

And I pause to express my profound sadness and sympathy, like all other citizens of our Republic, for this great man in this his time of deepest sorrow in the death of his noble wife and helpmate. I bow before the flag as I see it solemnly and silently floating at half-mast to-day. Not one of us knew that she was seriously ill, so close was her fatal condition kept back from a sympathetic public. In all the midst of official duties at home and abroad, bearing down on him more heavily than any President since Abraham Lincoln, came this added burden of loss and sorrow. For four months the ravages of Bright's disease, always fatal, was taking the life of this tender friend, mother, and wife—and our President, mindful of the happiness of the people, keeping back the knowledge from the country that she must go, bore it in silence and alone.

Mr. Speaker, before I leave the stale subject of the tariff I want to incorporate as a part of my remarks the latest general table to be had, showing prices at one of the central markets of important products:

FARM PRODUCE PRICES AT CHICAGO, ILL.

Quotations for first week in March for 10 years ending with 1914.

[Compiled by the United States Department of Labor and from the Chicago Inter-Ocean price current.]

Commodity.	1905	1906	1907	1908	1909	1910	1911	1912	1913	1914
Wheat, No. 2, red	$1.16	$0.83½	$0.76	$1.00	$1.25	$1.25	$0.88½	$1.02	$1.08	$0.97½
Corn, No. 3, mixed	.45	.39½	.43½	.57½	.64	.62½	.43½	.65½	.50	.64½
Hay, timothy, first	12.00	11.00	17.00	15.50	12.00	18.00	17.00	21.00	14.00	15.50
Oats	.30½	.31½	.43	.52½	.53	.46	.30½	.34½	.34½	.40
Potatoes	.35	.48	.46	.73	.93	.40	.43	1.10	.48	.78
Hogs, best fat	5.12½	6.42½	7.00	4.70	6.55	9.90	7.20	6.52½	8.55	8.75
Cattle, best fat	5.60	6.40	6.60	6.00	7.10	8.10	6.95	8.90	9.00	9.75
Sheep, best fat	5.90	6.25	6.15	5.65	5.70	7.90	4.75	5.00	6.95	6.25
Lambs, best	7.75	7.10	7.50	6.90	7.85	9.25	6.00	7.00	8.75	7.85
Horses, draft, extra good	200.00	185.00	285.00	200.00	200.00	225.00	190.00	285.00	275.00	255.00
Butter, creamery	.32	.27	.33	.32	.28	.30	.26	.28	.35½	.34
Eggs, fresh, first	.27	.13½	.21	.20	.21	.22½	.17	.27	.19½	.27

During this spring and summer all prices have advanced, and of course just recently jumped on account of the war.

PASSED BY TRI-PARTY VOTE.

Those extreme partisans who would blindly condemn the Underwood tariff law should remember that Republican, Progressive, and Democratic votes together passed it, and no less a Republican than Senator LA FOLLETTE supported and voted for the bill in the Senate. Some of our people may have been misled, and it is my purpose that they shall know the truth.

THE NEW CURRENCY LAW.

And then chronic carpers commenced on the currency bill even before it was on the statute books, but it will have a chance to prove its worth now; and I would call your attention to the difference in the money situation and what it was in 1907—no bank is refusing to pay all demands in full, and the Old World is at war such as has never before been seen; their investors are dumping their securities on our markets to raise cash to pay the expense of the war, rated at about $50,000,000 a day; think of it. Would such an ability to buy everything in sight ever been possible under the old national-bank act that is giving way to the new Federal reserve act? The panic of 1907 answers the question, when a depositor at a bank had to go hat in hand to his banker and ask for enough to pay a week's board. As a matter of fact the new currency law is so good 38 Republicans and Progressives voted with the Democrats for the bill, and currency reform was a Democratic platform pledge. This Congress has done what every Congress since the Civil War tried and failed to do.

ALL PARTIES JOIN.

But the lurid misrepresentations of hostile press and politicians could not stop the trend of proper policies and honest legislation. There came later the trust measures, and on them 47 Republicans and Progressives voted with the Democrats. And the vote on the trade-commission bill was unanimous.

ONLY PARTLY DONE. FARM LOAN BILL.

The House passed a bill giving widows of Spanish War veterans a pension of $12 per month; a bill giving the States Federal aid for roads; the immigration bill; and other general constructive measures. There are pending now bills to standardize the grading of grain, and I think one will be passed this session. Another bill is pending to prohibit board of trade gambling in farm products, and it should be passed without delay. An old-age, cripples', and blind person's pension bill that should be considered, farm-loan legislation, and other good measures. This last-named subject has been urged by me from the time I first set foot in this House. Many and difficult have been our labors this session, and long have been the hours, but I say now that we should remain in session until this legislation is passed, if it takes until March 4 next. Members from the city districts will yet see that low interest rates are essential to a larger prosperity, and if you do not see it, I believe we will muster enough votes to pass in without your support. Money-loaning concerns can not throttle this bill very long.

HONEST LAWS.

There are some changes each of us would make in the tariff, currency, or any other law probably, if each were writing it for himself, but we are not and can not. No law can truthfully be called strictly perfect, but not one law that has been passed this session can truthfully be called corrupt or dishonest. As imperfections appear, let them be remedied. No insidious lobby has got its work in on these laws. Would you repeal the Underwood tariff law, in which no special interest or lobby had any hand, and which includes the income tax that raised about $85,000,000 revenue for the Government its first year, to return to the reeking, reactionary, trust-breeding Payne-Aldrich hybrid? Remember Schedule K, and what the "protected" interests were—Steel Trust and all the rest. Would you repeal the Glass currency law and take back from the Government its control over our money, to return to the days of the restricted, inadequate national-bank currency law, locking up all our surpluses in Wall Street, where we could not get them when we wanted them? Remember the panic of 1907 and the Money Trust. Would you have us at war with feeble Mexico, and possibly European nations, rather than enjoying the profits and pleasures of domestic peace? Remember Huerta and the hostile jingo press that once denounced "watchful waiting" and "amateur diplomacy." Call to mind those impatient hot-heads who would dump the country into war and strife, and recall further those inefficient ultraconservatives who would get us nowhere.

REPUDIATION OR RATIFICATION?

If you would repudiate the humane, efficient, and constructive policies of Woodrow Wilson, backed by a hard-working, patriotic Congress, you have a champion and leader who has already spoken.

He is former Speaker Joseph G. Cannon, reactionary boss, again running on the Republican ticket for Congress in Illinois. He has two opponents—a Democrat and a Progressive. At Danville, Ill., July 29, 1914, when he opened his campaign, he said:

"We are trying Wilson's Democratic policies. If you like them, choose a Democratic House next November. If you don't like them, return a Republican House that will tie the hands of the President in dictating further destructive legislation."

Who best represents your policies, President Wilson or ex-Speaker Joseph G. Cannon? I leave it to you. Shall we reverse

and go back to Cannonism? You know what it stands for. Shall we cripple the President, or will you say: "You are right, President Wilson; we are with you, not against you." America faces front. She advances. She will not turn back while the fight goes on. It is again the people's fight; the President is leading their cause. Lincoln said, "Don't trade horses in the middle of the stream."

The Federal Reserve Act.

SPEECH
OF
HON. H. ROBERT FOWLER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. FOWLER. Mr. Chairman, the President has called Congress together in extra session for the purpose of discharging a most important duty to our country—a duty which, if properly performed, will relieve the people from the embarrassing financial conditions now holding in check the business of the country and threatening our future happiness and prosperity. As the bushel is a measure for grain, and as the warehouse is a place for its convenient storage, so money is a measure of value and the bank is a place for its safe deposit. If the bushel should be either too large or too small, or should the warehouse be insecure, trade and commerce would suffer, and the result would be loss through fraud and injustice. The same is true with an imperfect system of banking and currency, and the greater the imperfections the greater the stagnation in business and the greater the loss.

Mr. Chairman, it is freely admitted by students of government, scholars of high repute, and statesmen everywhere that America has the poorest and most imperfect system of banking and currency of any of the civilized nations of the world. The great wonder is that we should have permitted it to stand so long. Under it we have frequently seen financial panics sweep over the country nation-wide, paralyzing our industries, threatening our commercial interests with ruin, and entailing upon the masses misery and want for more than a decade at a time. We have stood by like helpless children and suffered these destructive ravages to repeat themselves upon our wealth and civilization without making any substantial effort to guard against their repetition. We have constructed levees and sea walls to prevent loss by inundation. We have provided for fireproof buildings and established fireproof districts in cities to guard against loss by conflagration; but we have failed for a century and more to construct safeguards against the dreadful ravages of our most destructive enemy—financial panics. Legislation for the last 50 years has added nothing but patches to the old financial garment which at first was a misfit. The proposition now is to cast aside the old imperfect garment, with all of its clumsy and foolish patches, and establish a new monetary system, patterned after the best wisdom of the age, and so skillfully arranged and adjusted in all of its parts that when completed it will afford ample protection against the repetition of future panics and give to our people the widest latitude possible for the unrestricted development of our internal resources and the free extension of our commerce to the markets of the world without halt and without hinder.

Mr. Chairman, the present bill as it comes from the hands of the Senate, in my opinion, meets all the requirements of the pressing emergency which now confronts us. Indeed, it is a great constructive measure, providing for a system of banking and currency which is not only a vast improvement upon our present system but which, in my opinion, will prove to be the most perfect system in the world. It gives us a uniform system of banking, and at the same time it provides for a systematic increase of our money to relieve us when in financial distress, and which will keep pace with the increase of our population and the growth of the business of the country.

FEDERAL RESERVE DISTRICTS.

The bill which comes from the conference committee, and which will soon be presented to the President for his signature, provides for a "reserve bank organization committee," consisting of the Secretary of the Treasury and not less than two members of the Federal Reserve Board, whose duty it will be to select not less than 8 nor more than 12 cities in the United States, to be known as "Federal reserve cities," and to divide the territory of the United States, including Alaska, into Federal reserve districts, so that each district will have one, and only one, Federal reserve city. It is proposed to establish one Federal reserve bank in each of these Federal reserve cities for the benefit and accommodation of the people residing within the limits of such district, the title of which must include the name of the city in which it is located, as "The Federal Reserve Bank of Chicago."

ORGANIZATION OF FEDERAL RESERVE BANKS.

These Federal reserve banks will be organized much on the plan of a big corporation with many stockholders. All of the national banks, State banks, and trust companies with the requisite capital, within the limits of the Federal reserve district, may become stockholders in the Federal reserve bank. All national banks must signify their intention in writing to become members within 60 days after the establishment of the Federal reserve bank, and must become members within 1 year thereafter or surrender their charter and cease to do business as national banks, while State banks and trust companies are permitted to become members without limitation as to the time of making application, but the terms prescribed for membership apply to all alike, or nearly so.

No Federal reserve bank will be permitted to open its doors to transact business with a capital stock less than $4,000,000. Its capital stock will be divided into shares of $100 each, and before any State or National bank or trust company will be permitted to become a member it must subscribe to the capital stock of such Federal reserve bank a sum equal to one-sixth of its own capital stock and surplus, one-sixth of which sum must be paid on call of the organization committee, one-sixth within three months, one-sixth within six months, and the remainder or any part thereof must be paid when called for by the Federal Reserve Board. All of these payments must be made in gold or gold certificates.

FEDERAL RESERVE BANK STOCK MAY BE SOLD TO INDIVIDUALS OR TO THE UNITED STATES UNDER CERTAIN CONDITIONS.

Should the banks and trust companies within a Federal reserve district fail to subscribe for Federal reserve bank stock in the sum of $4,000,000, then the organization committee may offer for sale at par to the public a portion of such stock until $4,000,000 has been subscribed, to be paid for on the same terms as is done by banks and trust companies, with this limitation—no individual, company, or corporation will be permitted to purchase more than $25,000 worth of said stock. And in the event that the public should fail to subscribe for enough of such stock to bring the total up to $4,000,000, then the organization committee must allot to the United States so much of such stock as may be necessary to enable such Federal reserve bank to begin business, such stock to be held by the Secretary of the Treasury and disposed of by him at not less than par for the benefit of the Treasury.

Under the provisions of this bill the Comptroller of the Currency is required to forward the necessary blanks to all national banks and all State banks and trust companies known to be eligible, within the limits of the Federal reserve district, for stock subscription, as soon as the Federal reserve districts are established. The boards of directors of banks and trust companies desiring to become members must execute these blanks by the adoption of a resolution which will be found on such subscription blanks.

As soon as the required amount of stock has been subscribed, the organization committee will select five banks which have subscribed for stock and which are within the limits of the Federal reserve district, to prepare an organization certificate for such Federal reserve bank, which certificate shall contain the name of the Federal reserve bank, the extent of its territory, the city and State in which it is to be located, the amount of its capital stock, the number of shares into which such stock is to be divided, the name and place of business of each of the five banks executing the certificate, the names of the banks and trust companies which have subscribed for stock in such Federal reserve bank, and the number of shares subscribed for by each. Such certificate must be acknowledged by a judge of a court of record or a notary public with the seal of such court or notary public attached thereto, which certificate must then be filed with the Comptroller of the Currency for safekeeping.

On the filing of such certificate such Federal reserve bank shall become a body corporate, and as such shall have power to adopt and use a corporate seal; to continue to do business for 20 years, unless sooner dissolved; to make contracts; to sue and be sued in any court at law or equity; to appoint its subordinate officers through its board of directors and fix the terms upon which their services are to be rendered; to prescribe its own by-

laws according to law; to enjoy and exercise all powers prescribed by the provisions of this bill and such incidental powers as are necessary to its operation under the terms of this bill; and to receive circulating notes from the Comptroller of the Currency equal to the par value of all United States bonds which it may have deposited in the Treasury.

The business of each of such Federal reserve banks shall be conducted by a board of nine directors, divided into three classes of three members each, designated as classes A, B, and C, and shall hold office for a term of three years each. The directors of classes A and B will be elected by the member banks, and while the members of class A will be selected with a view of being strictly representative of the banks, yet the three members of class B must be selected from the industrial walks of men actively engaged in agricultural, commercial, or some other industrial pursuits. The three members of class C will be appointed by the Federal Reserve Board, one of whom will be named as the chairman of the board of directors of such Federal reserve bank, and shall be designated by such board of directors as Federal reserve agent. He must keep his office on the premises of the Federal reserve bank and act as the official agent of the Federal reserve bank, and must make reports of the acts and doings of such Federal reserve bank to the Federal Reserve Board.

No State bank or trust company will be permitted to become a member of such Federal reserve bank unless it has a paid-up and unimpaired capital sufficient to entitle it to become a national bank, where it is now located under the national banking laws now in existence. Any bank incorporated under any special law of any State or special law of the United States having an unimpaired capital sufficient to entitle it to become a banking association under existing laws, may, by a vote of 51 per cent of its capital stock, be changed into a national banking association when approved by the Comptroller of the Currency. All such banks and all State banks may become member banks of a Federal reserve bank by making application to the organization committee or the Federal Reserve Board for stock in the Federal reserve bank located in the Federal reserve district in which such banks are located. If such banks or trust companies are found to possess all of the qualifications necessary to become national banks under existing law, they may be permitted to take out stock and become members of a Federal reserve bank. Such stock shall be issued and paid for under the same rules and regulations as are required by this act for national banks. This act will afford an opportunity for practically all of the National banks, State banks, and trust companies to be converted into one uniform system of banking, under the control of the Federal Government.

EARNINGS OF THE FEDERAL RESERVE BANK—HOW DISPOSED OF.

The banks of the country have been much interested as to what disposition will be made of the money paid by them into the vaults of the Federal reserve banks. This money will be held by the Federal reserve banks as long as they continue to do business or as long as the member banks remain solvent and conduct their business according to the rules and regulations provided for in this act. The least amount which will authorize a Federal reserve bank to open its doors for business is $4,000,000. One-sixth of this sum must be paid in when the stock is issued, one-sixth within three months, and one-sixth within six months, and the remainder when called for by the Federal Reserve Board. It will thus be seen that at least $2,000,000 in cash must be paid in within six months after the Federal reserve bank has been established, and the remainder must be paid in whenever called for by the Federal Reserve Board. This money is the working capital of the Federal reserve bank, and will be used by it for the uses and purposes indicated under the powers of this bill, many of which I have pointed out heretofore. The member bank may or may not receive a return on this money. It will depend upon the business prosperity of the Federal reserve bank. The running expenses of the Federal reserve bank must be paid first, after which the surplus income will be used to pay the member banks a dividend on the stock purchased from the Federal reserve bank. The greatest amount which can be paid under the terms of this bill is 6 per cent per annum, and the intention is that the stockholders shall be paid this amount, as it is expected that the business of the Federal reserve bank will yield an income sufficient to do so.

After paying the running expenses and the 6 per cent dividend to the stockholders, the balance of the income, if any, will be paid to the United States as a franchise tax. In other words, it will become the property of the United States, one-half of which will be paid into a surplus fund until it equals 40 per cent of the paid-in capital stock of the Federal reserve bank. The Secretary of the Treasury may use these net earnings to supplement the gold reserve held against outstanding United States notes, or he may use it to pay off the outstanding bonded indebtedness of the United States. Should these banks become prosperous, as banking institutions usually have been in the past, we may reasonably hope that the Government will soon have an income from this source sufficient to pay off the national debt. There is still another way by which the United States may profit by this new banking system, and that is, should any of the Federal reserve banks fail or be dissolved, the surplus, after paying all debts, such as running expenses, dividends to stockholders, and par value of the stock, shall become the property of the United States and must be used to redeem United States bonds or to keep up the gold reserve required for outstanding United States notes.

Mr. Chairman, I think this provision is one of the best features of this bill. Heretofore Federal franchises have been given away to corporations without reserving any right in the Government to share in the income from the business conducted under such franchises. Vast sums have been accumulated by the few, through the advantages gained by such franchises, and yet they have paid nothing to the Government as a consideration therefor. Such rights originally belonged to the people, and they had a vested interest in them which should not have been disposed of without their consent or without adequate consideration. Valuable franchises should be used as a source of revenue in order to lift the burdens of taxation from the shoulders of the struggling many. This provision sets in motion the correct policy of conserving such rights. Neither should such rights be granted to individuals or corporations in perpetuity. All laws granting such franchises should reserve in the State the right of recovery at stated periods. The framers of this bill wisely guarded our rights by limiting the right to do business by Federal reserve banks under this act to 20 years. After the expiration of this period, they must come back to the United States for a new commission, and at that time I have no doubt but what the public will be much better prepared to act wisely, and more wisely undoubtedly, than can be done by Congress now, for the actual business experience in this system of banking will then enable the people to judge more correctly the value of this right, and if the United States is not getting an adequate consideration for it, they will then be able to guard it more accurately, and perhaps be able to secure a better and more equitable consideration for its future use. In 1912 we had 305,336 corporations, according to the records of the Commissioner of Corporations, with a capital of nearly $62,000,000,000 and a net income of nearly $4,000,000,000. Had the States been guarded in letting these rights, they could have had enough income from this source alone to defray the expenses of State government of all the States in the Union and to construct a system of hard roads in every county in all of the States of the Union. Ten per cent of the net income of these corporations for one year is nearly $4,000,000,000, which is enough to dig 10 Panama Canals. It is nearly six times as much as we spent last year for the maintenance of all our churches and foreign missions, all of our colleges, universities, and public schools in America.

All of the property of Federal reserve banks, including the capital stock and surplus, and all the income derived therefrom, is exempt from Federal, State, and local taxation, except taxes on real estate. This is another valuable right which is not enjoyed by the citizen, and it affords another reason why these banks should divide the income with the United States.

INCREASE AND DECREASE OF THE CAPITAL STOCK.

Mr. Chairman, these Federal reserve banks may increase their capital stock in two ways, one of which results in case of an increase of the capital and surplus of the member banks, and the other is caused by new banks applying for membership. In either case it will be necessary to increase the capital stock in order to supply the demand for additional stock. Should a member bank increase its capital and surplus, it is required to subscribe for an additional amount of capital stock of the Federal reserve bank equal to 6 per cent of the increase of its own capital and surplus.

The Federal reserve bank may decrease its capital stock in two ways: Should a member bank decrease its capital and surplus, the Federal reserve bank is required, on application of the member bank, to take up the surplus capital stock of such member bank. Should a member bank fail or go out of business, then the Federal reserve bank is required to take up for cancellation all of the capital stock held by such member bank. Whenever a member bank reduces its capital and surplus, it is required to surrender a proportionate amount of the capital stock of the Federal reserve bank held by it; and should it cease to do business for any cause, it must surrender all of its Federal reserve stock. In such event its liabilities to the Federal

reserve bank will be paid and the remainder, if any, will be paid to such member bank; that is, it will receive a sum equal to its cash-paid subscription on the shares of stock surrendered and one-half of 1 per cent per month since the last dividend payment, less its liabilities to the Federal reserve bank. If a member bank should default and go into the hands of a receiver, then the Federal reserve bank would retain enough to pay all the debts of the member bank due to such Federal reserve bank and pay the remainder, if any, over to the receiver.

Federal reserve stock held by a member bank can not be transferred, neither can it be hypothecated as security for loans or otherwise. This is necessary, because it is the basis or charter on which such member bank is permitted to do business; and, further, such stock represents the amount on which 6 per cent dividend will be paid annually by the Federal reserve bank. While such stock is sound in the hands of a member bank, yet it might be worthless in the hands of a third party, as in case of a failure of such member bank with large liabilities to the Federal reserve bank.

FEDERAL RESERVE BOARD AND ITS DUTIES.

Mr. Chairman, as the head is the chief organ of the human body, so the Federal Reserve Board is the supreme power over this new banking and currency system. It consists of seven members, made up of the Secretary of the Treasury, the Comptroller of the Currency, and five other members to be appointed by the President, by and with the advice and consent of the Senate, not more than one of whom shall be from the same Federal reserve district. The five appointive members are required to devote their entire time to the duties of the Federal Reserve Board, two of whom are required to be persons of experience in banking or finance before their appointment, and each will receive a salary of $12,000 per annum. The first board will hold office for terms of 2, 4, 6, 8, and 10 years, according to allotment; thereafter as such terms expire the vacancies will be filled for terms of 10 years each. None of these five members will be eligible to hold any office, position, or employment during such term of office, and for 2 years thereafter, in any member bank. The Secretary of the Treasury, the Assistant Secretary of the Treasury, and the Comptroller of the Currency are also barred from holding any such positions for the same period of time. The President has the power to remove any of these five members for cause, and it is his duty to name one of them as governor and one as vice governor of the board. The governor will be the chief officer of the board. All of the five are required to take the oath of office within 15 days after appointment. None of the members of this board will be permitted to be an officer or director of any bank, banking institution, trust company, or Federal reserve bank, nor will they be permitted to hold any stock in any bank, banking institution, or trust company, and before taking the oath of office as such member of such Federal Reserve Board each of them must certify under oath to the Secretary of the Treasury that they have complied with this provision. It is the duty of this board to make full report of its operations annually to the Speaker of the House, who must cause it to be printed for the benefit of Congress.

This board will be a very important factor, because it is possessed of large supervisory powers. It will have the right to examine at its discretion the accounts, books, and affairs of all the Federal reserve banks and all the member banks, and to require of each a report of its acts and doings as often as may be necessary. Such board is required to publish weekly a statement of each Federal reserve bank and a consolidated statement of all of the Federal reserve banks, showing in detail the assets and liabilities of the Federal reserve banks, single and combined, the character and amount of the money held as reserves, the nature and maturities of the paper and other investments owned or held by Federal reserve banks.

By an affirmative vote of not less than five members of such board it will have the power to compel a Federal reserve bank to rediscount the discounted paper of other Federal reserve banks at a rate of interest to be fixed by the Federal Reserve Board. Mr. Speaker, this is a power that ought to be exercised with great caution. If exercised arbitrarily it might result in serious loss, and that, too, without the fault and against the protest of the Federal reserve bank. It will also have the power to assess a tax semiannually against each of the Federal reserve banks, in proportion to their capital stock and surplus, sufficient to pay the estimated expenses and the salaries of its members and employees, together with any deficits which may have been carried forward from the preceding half year.

Certain reserves are required to be kept by the member banks. The Federal Reserve Board has the power to suspend such requirements for 30 days at a time and to renew such suspension for 15 days. Forty per cent in gold is required to be put up before any amount of Federal reserve notes will be issued. If at any time this reserve should fall below 40 per cent of the amount of Federal reserve notes issued the Federal Reserve Board is required to place a tax of not more than 1 per cent per annum on such deficiency until such reserve drops to 32½ per cent. Should such reserve fall below 32½ per cent, then the Federal Reserve Board is required to place a tax of not more than 1½ per cent per annum on such deficiency for every 2½ per cent or fraction thereof that such deficiency drops below 32½ per cent. Such tax must be paid by the Federal reserve bank, but such bank has the right to add it to the rate of interest and discount fixed by the Federal Reserve Board.

It will have complete power over the issue and retirement of Federal reserve notes and to prescribe rules and regulations to govern the Comptroller of the Currency in putting out such notes for circulation.

It will have the power to increase, reclassify, or discontinue reserve and central reserve cities as it may deem proper; to suspend or remove any officer or director of any Federal reserve bank and cause the reasons in writing to be forwarded at once to such officer or director and to the Federal reserve bank; to order any Federal reserve bank to check off from its books and balance sheets worthless assets; to suspend the operation of any Federal reserve bank, take charge of it, operate it during its suspension, wind up its entire business or reestablish it, as in the judgment of the Federal Reserve Board may seem wise. All of this may be done in case such bank fails to comply with the provisions of this act.

Whenever a Federal reserve bank desires to borrow from the United States Federal reserve notes, the application must be made through the Federal reserve agent. The Federal Reserve Board has the power to require bonds of such Federal reserve agent. Such board has the power to prescribe rules and regulations for safeguarding collaterals, bonds, Federal reserve notes, money, or property of any kind deposited with such Federal reserve agent. And it has the power to make all rules necessary to carry into effect all of the powers and provisions of this act. It will have general supervision of all the Federal reserve banks, and will have power to grant permits to national banks, when not prohibited by State or local laws, the right to act as trustee, executor, administrator, or register of stocks and bonds, under rules to be prescribed by such board.

Such board will also have the power to employ attorneys, experts, assistants, clerks, or any other help necessary to conduct the business of said board regardless of the civil service, but the President may place them under the classified service. The salaries of such help will be fixed in advance by such board and will be paid in the same manner as the salaries of the members of such board. It will be seen that the Federal Reserve Board is all powerful in the regulation and conduct of this new system of banking and currency. The abuse thereof might result in much danger to our free institutions, but it is hoped that all of its powers will be administered at all times for the good of a more perfect system of banking and currency.

FEDERAL ADVISORY COUNCIL.

Mr. Chairman, each of the Federal reserve banks will have the right, through its board of directors, to select from its own Federal reserve district one representative who will be a member of what is styled in this bill, "Federal advisory council." There will be as many members of this council as there are Federal reserve districts. The compensation of each of these members will be fixed by the board of directors of the respective Federal reserve banks. It will be their duty to hold at least four meetings annually in the city of Washington, D. C., and oftener if called upon by the Federal Reserve Board, and such council may hold such other meetings either in Washington, D. C., or elsewhere, as they may deem proper. It will have a right to select its own officers and adopt its own method of procedure.

Such council will have the power, either by itself or through its officers, to confer directly with the Federal Reserve Board on general business conditions, to make oral or written representations concerning matters within the jurisdiction of said board, to call for information and to make recommendations in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, the purchase and sale of gold or securities of reserve banks, open-market operations by such banks, and the general affairs of the reserve banking system. Each member will be expected to look after the immediate welfare of his own Federal reserve bank, as well as the general welfare of the whole banking system. It will certainly be a very valuable council, and, acting in connection with the

Federal Reserve Board, it is to be hoped that this new system will be well guarded.

BANK RESERVE REQUIREMENTS.

As soon as the Secretary of the Treasury shall announce that a Federal reserve bank has been established all subscribing banks in the Federal reserve district must maintain reserves as follows: If a member bank should not be located in a central reserve city or a reserve city, its reserve must be equal to 12 per cent of its aggregate demand liability and 5 per cent of its time deposits. Four-twelfths of such reserve must be kept in its own vaults for a period of 24 months after such notice; two-twelfths must be kept in the vaults of the Federal reserve bank for a period of 6 months after such notice; and for each succeeding 6 months an additional one-twelfth until five-twelfths have been so deposited, which shall be the amount permanently required. For a period of 24 months after such notice the balance of its reserve may be held in its own vaults or in the Federal reserve bank or in banks of reserve or central reserve cities. After the expiration of 24 months said reserve may be held in the vaults of the member bank or in the Federal reserve bank or both, in its own discretion.

If the member bank should be located in a reserve city, then its reserve must be a sum equal to 15 per cent of its aggregate demand liability and 5 per cent of its time deposits. Six-fifteenths thereof must be kept in its own vaults. At least three-fifteenths must be kept in the vaults of the Federal reserve bank for a period of six months after such notice; and for each succeeding six months an additional one-fifteenth must be deposited until six-fifteenths have been so deposited, which shall be the amount permanently required.

Should such member bank be located in a central reserve city, it must maintain reserves equal to 18 per cent of its aggregate damand liability and 5 per cent of its time deposits, six-eighteenths of which must be kept in its own vaults, three-eighteenths must be kept in the Federal reserve bank for six months after such notice, and permanently thereafter six-eighteenths. The balance of such reserve must be held in its own vaults, or in the Federal reserve bank, or both, at its option.

This is a smaller per cent than is now required by the present law, and will give the member banks an opportunity to lend a greater per cent of their capital than heretofore.

POWERS AND DUTIES OF FEDERAL RESERVE BANKS.

A Federal reserve bank as provided for in this bill will be very popular, in my opinion, because it offers many conveniences to the public. While its doors will not be swung open to the public for the transaction of ordinary business, yet it will be open to the member banks and to the United States for the deposit of current funds in lawful money, national-bank notes, Federal reserve notes, or checks and drafts drawn on solvent member banks payable on presentation and for exchange purposes only. The member banks may receive from the Federal reserve bank deposits of current funds in lawful money, national-bank notes, or checks and drafts on member banks or other Federal reserve banks payable on presentation.

Federal reserve banks may discount notes, drafts, and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or where the proceeds have been or are to be used for agricultural, industrial, or commercial purposes, if indorsed by one of its own member banks, with a waiver of demand, notice, and protest, provided such notes, drafts, and bills of exchange mature within 90 days; but if such notes, drafts, and bills of exchange are based on live stock, or have been drawn or issued for agricultural purposes, they may be discounted, although they do not mature for a period of six months. This is a salutary provision based upon the principles underlying agriculture, and is regarded as a victory for the farmer. It really places a premium upon all such paper based upon live stock and the products of the farm. A long and bitter struggle was waged before this provision was incorporated in the bill, and had it not been for the manly courage displayed by the Members of Congress representing agricultural districts it would not be in the bill now. It was not in the original draft of the bill, but was placed in it by way of an amendment after one of the most furious fights known to this session of Congress.

The Federal reserve bank may discount paper known as acceptances based upon importation, exportation, or domestic shipment of goods, provided that such paper is indorsed by at least one member bank and provided further that it matures within three months. The amount of such discount made for any one member bank can not exceed one-half of the paid-up capital stock and surplus of such member bank. Notes and bills of exchange, indorsed by only one person, company, firm, or corporation, when presented for rediscount by any member bank, will not be accepted by the Federal reserve bank in excess of 10 per cent of the unimpaired capital and surplus of the member bank.

FARMERS MAY BORROW ON FIVE YEARS' TIME.

Mr. Chairman, the bill provides that the farmer may borrow money from his home bank on five years' time, if he can secure the loan by improved and unincumbered farm lands. The original bill fixed the time at nine months, but it was amended by the friends of agriculture in the Democratic caucus by extending the time to one year, and the Senate extended the time to five years. This provision gives the farmer a chance to borrow money on long time, so that he may build comfortable homes or improve his lands, as he may deem proper. The only other feature necessary to meet the demands of the farmer is a low rate of interest. While the question of the rate of interest could not be handled here without endangering the bill, on account of a constitutional question, yet if the farmer does not get relief at the hands of the banks Congress will enact a rural-credit law, authorizng farm banks, primarily for the accommodation of home seekers and farmers in general. It may be that local banks will not be full handed enough to lend much money on long time; and if this should prove to be true, then it will be necessary to enact a rural-credit system. It is absolutely necessary that the farmer should be in a position to borrow money readily on long terms at a low rate of interest for the improvement of his premises and for the production and movement of his crops.

OPEN-MARKET OPERATIONS.

Federal reserve banks may, under rules prescribed by the Federal Reserve Board, go on the open market, either at home or abroad, and buy and sell cable transfers, bankers' acceptances, and bills of exchange made eligible by this act for rediscount either with or without the indorsement of member banks. They have the power under this act to go on the open market either at home or abroad for the purpose of dealing in gold coin and gold bullion. They have the right to make loans thereon, to exchange Federal reserve notes for gold, gold coin, or gold certificates, or to contract for loans of gold coin and bullion, and to hypothecate security therefor, such as United States bonds and any other securities which such banks are permitted to hold under the provisions of this act.

They also have the right to go on the open market at home or abroad and sell and buy bonds and notes of the United States and revenue bonds, notes, and warrants issued in anticipation of the collection of taxes or in anticipation of assured revenues by any State, county, district, political subdivision, or municipality of the United States. They also have a right to purchase from member banks and to sell with or without their indorsement bills of exchange arising out of certain commercial transactions.

They have the right to establish rates of discount to be charged by Federal reserve banks for all classes of paper handled by them, subject to review by the Federal Reserve Board. They have the right to establish accounts with Federal reserve banks for exchange purposes, to open and maintain banking accounts with foreign countries, appoint correspondents and establish agencies in such countries for the purpose of purchasing, selling, and collecting bills of exchange, and to buy and sell bills of exchange with or without indorsement arising out of commercial transactions with no more than 90 days to run and which bear the signature of two or more responsible parties, all of which is subject to review and consent of the Federal Reserve Board.

Mr. Chairman, under the terms of this bill the Secretary of the Treasury has the right to deposit in these Federal reserve banks any part or all of the revenue of the Government or the general funds held in the Treasury, except the 5 per cent fund held for the redemption of outstanding national-bank notes and the funds provided for in this bill for the redemption of Federal reserve notes. When so deposited it may be checked out on account of the Government, the same as money is now checked out by individuals on their bank account. This is a very wise provision and will give the Government a much-needed freedom from its present clumsy and expensive plan.

PAPER MONEY ISSUED DIRECT BY THE GOVERNMENT.

Mr. Chairman, one of the wisest provisions in the bill is that which confers upon the Government the right to issue paper money direct without the intervention of national banks. While the Constitution confers upon Congress the right to coin money and regulate the value thereof and of foreign coin, yet it has always been contended by many statesmen that the Government

should not issue paper money. Such money in this act will be known as Federal reserve notes, and must be received by all national banks, Federal reserve banks, and member banks, and for all taxes, customs, and other public dues. They must be redeemed in gold when presented to the Treasury Department in Washington, D. C., or in gold or lawful money when presented to a Federal reserve bank for redemption.

All of our bank notes are secured by the indebtedness of the country—United States bonds. But the paper money provided for under the terms of this bill will have behind it the wealth of the country, and as our wealth is unlimited our opportunity for money is equally unlimited, and justly so. As money is the yardstick of values, why should there be a scarcity of yardsticks while we are actively engaged in the measurement of the vast productions of the farm, mine, and factory? Why should the wheels of transportation be halted for a want of sufficient money to place the products of industry in transit? There is no more reason for this than there is for a shortage of cars or boats during the busy season of moving crops. The wonder is that civilization should permit a shortage of money to exist anywhere. Land values are inestimable in any country and is the most stable security in the world. Alaska is rich and worth billions of dollars. The title to most all of her land is in the Government. Suppose $1,000,000,000 in paper money were issued with the lands of Alaska pledged to redeem it, what could cause such money to depreciate? Nothing. Why? Because Alaska is rich and eternal.

During the consideration of this feature of the bill we have been confronted with the argument that asset money is unwise and certain to breed disaster, while, as a matter of fact, all of our bank notes have been secured by the indebtedness of the country, as evidenced by Government bonds; and, if such security is good, why should not the vast amount of wealth required as collateral in this bill be good? For every dollar of Federal reserve notes issued by the Government the Federal reserve bank receiving the same is required to put up with the Government $1.40, 100 cents of which must be of the best gilt-edge security and 40 cents must be in gold. The national-bank notes now have only the evidence of United States debt behind them in the sum of dollar for dollar, and yet they are good. Who doubts the stability of the Federal reserve note with 140 cents of the best security on the market behind every dollar of it?

This is not the only safeguard. It is provided that when the Federal reserve note has been placed in circulation it may remain out until it reaches a Federal reserve bank; then it must be retired, which means redeemed, and if it should be recirculated 10 per cent interest thereon must be paid. In other words, it is an emergency money for the movement of crops and to give relief in case of financial distress, whatever may be the cause. Nothing could be more sensible and nothing will inspire greater confidence. It is the beginning of a sensible method of money supply. To stop the wheels of commerce and business because of a shortage or inadequate supply of money is as foolish as to refuse to feed corn to a herd of starving cattle because of a want of a bushel measure to measure it before feeding it. Money is no more sacred than wheat or corn, and not half so much, because wheat and corn are useful to man as food for himself and his domestic animals. No such use can be made of money, and suffering and want should never be tolerated because of a shortage of money necessary for the rapid movement of all articles necessary for food, raiment, and shelter and for the ample supply of business generally. While some Members of Congress look upon this feature of the bill with some misgivings, yet I welcome it as one of the strongest and most important provisions of the bill, and regard it as a complete safeguard against future panics.

OUR STOCK OF MONEY.

Mr. Chairman, we have a very complex system of money, consisting of many kinds. We have four kinds of metallic money—gold, silver, nickel, and copper. We have four kinds of paper money—the Treasury note, or greenback, the bank note, the gold certificate, and the silver certificate. On the 1st day of November, 1913, the sum total of all of this money amounted to $3,775,994,796, divided as follows:

Gold, including gold bullion in the Treasury	$1,905,901,516
Standard silver dollars	365,685,263
Subsidiary silver coins, etc	176,289,292
Treasury notes of 1890	2,590,000
United States Treasury notes, or greenbacks	346,681,016
National-bank notes	758,899,709
Total	3,755,994,796

None of this money is a legal tender for the payment of all debts, both public and private, except our gold, which gives it rank in a class by itself. It is therefore called primary money, while all other kinds are classed as secondary money and must be redeemed in gold. While it is true that we have outstanding $480,079,731 in silver certificates, yet we also have in the Treasury standard silver dollars with which to redeem them; but as the silver dollars themselves must be redeemed in gold, it practically places gold behind the silver certificates. We also had outstanding on the same day $1,021,451,879 gold certificates, which must be redeemed in gold. If this amount should be taken from our stock of gold, it would leave $884,449,637 as our stock of primary money with which to redeem our secondary money, which amounts to $1,850,093,235. It will be seen that our stock of secondary money is more than twice as large as our stock of primary money, and yet according to law it must be redeemed in gold.

Suppose we were called upon to redeem all our outstanding secondary money, we would fail by nearly a thousand million dollars, although our wealth amounts to more than $130,000,000,000. This reveals the weakness of our monetary system and at the same time exemplifies the vast advantage hoarders of gold have during periods of financial distress. Many weak firms in primary money, yet rich in property values, have been forced to the wall in times of financial panics, and their vast holdings have been swallowed up by designing gamblers and speculators in gold, as in the case of the Tennessee Coal & Iron Co. in 1907.

Let us go a little further. It is estimated that the deposits in national banks amount to $7,000,000,000, and that the deposits in private banks, State banks, and trust companies amount to $13,000,000,000, making a total deposit in the country of $20,000,000,000. Suppose these institutions were forced to redeem their obligations in gold. They would not be able to pay 10 cents on the dollar, even though they owned all the gold coin and gold bullion in America. It is quite evident that our stock of primary money is too small, and what is true in America is true all over the world.

The civilized world has heretofore proceeded upon the theory that money should be coined out of a metal with a steady, unfluctuating intrinsic value equal to its face value. Nothing could be more misleading. No such metal ever has or ever will be discovered. Outside of the fine arts gold would have but little commercial value were it not used as a money. Its inadequacy to supply the demand for primary money increases its commercial value. Intrinsic value depends upon what use can be made of the article. Hogs and cattle, corn and wheat are very useful to man as food products. Wool, cotton, and flax are also very useful to him for raiment; so is timber useful to him for shelter. All of these articles have intrinsic value, because of the needful uses they are to mankind, but no such use can be made of gold. All money ought to be primary or uniform in value, redeemable in property values, in order to prevent fluctuation.

The idea of money is based more on theory than in fact. By theory, we agree that money has a certain fixed value for convenience in trade, while, as a matter of fact, it may not be worth anything intrinsically. To illustrate, our gold dollar is worth a hundred cents, both in theory and in fact. In theory it is worth a hundred cents because we have agreed to accept it in trade for a hundred cents. In fact, it is worth a hundred cents as long as it is kept up to its standard weight. The bank note in theory is worth as much as the gold dollar, while in fact its commercial value is nominal, not worth as much as one-tenth of 1 cent. Yet in practice it is much more desirable than gold, because of its convenience as a medium of exchange, less bulky to carry, and more easily cared for, and, as a matter of fact, it is worth more than the gold dollar, because the gold dollar is dependent upon itself alone to make good, and as it loses in weight by use it depreciates and falls below its face value, while the bank note has property value behind it many times its face value in the nature of a promise to redeem by the United States; and it does not make any difference how much use is made of it nor how ragged it may become, it always passes for its face value, and when it becomes too badly worn for use it may be replaced at a nominal cost with a new bank note.

I know this is true by experience. At Chicago, on my way to Congress, I applied to the Pennsylvania ticket office for transportation from Chicago to Washington, D. C. I offered a $20 gold coin as pay for my ticket; whereupon I was promptly informed by the ticket agent that it was no good. I demanded his reason for refusing it. He said it was too light. I threw out another $20 gold coin, and he refused it. I then hunted up the general passenger agent and told him what had happened. He went with me to the agent and inquired why he had refused

gold in pay for transportation. His reply was, "Too light." I had five $20 gold pieces with me, and to test his good faith I handed all of them to him and told him to pick out a good one. He took them and went away for a short time and returned with the report that all of them were short in weight. I then tendered him a $20 bank note, which he accepted readily, without any thought of discount.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MURDOCK. Mr. Chairman, I ask unanimous consent that the gentleman have time to conclude his story.

There was no objection.

Mr. FOWLER. Mr. Chairman, I cite this experience to illustrate the difference between money with intrinsic value and money without intrinsic value. The gold coin is based on the assumption that it has within itself a property value worth its face value and sufficient to maintain its face value, which is not true, for it grows weaker and less in value all the time. The bank note is based upon the theory that it has a property value behind it sufficient to maintain its face value as long as it may be used as a money, while in fact no property in particular has been pledged for its security, and its only security is the promise of the United States to redeem it in gold. It would be just as stable and worth just as much in trade if the promise were to redeem it in hogs and cattle or wheat and corn or land. The naked promise to redeem with or without an intention to redeem is what gives it its value as money. It is said that Venice issued a paper money at one time based upon gold locked up in her treasury vaults. Things went on all right, but in the meantime some Jewish shipping merchants quietly borrowed the gold to increase their trade, but the people of Venice were kept in ignorance of this fact. The paper money did not depreciate when the gold was taken away, and when Cæsar went down to Venice to take the treasury by force, on opening the vaults he found not a dollar in gold. This paper money served the same purpose after the gold had been loaned as it did before. Suppose the security had been land, which no invading army can carry away, how could the money have been made more secure or more stable?

Mr. Chairman, there is something radically wrong about any system of money which does not have enough strength within itself to maintain its face value. One of my gold coins was light about 30 cents, as I remember. Suppose it should change hands 50 times in a day, the loss on it would be $15 for one day, and in four days it would be $60, or three times its original value. Such a coin is a cheat and a fraud, I do not care what material it is made of. The trouble about any money with an intrinsic value is that the longer it is used the less it is worth. This is true with gold, the most popular of all metallic moneys, and sooner or later it will have to be abandoned as a circulating medium. This is practically the case now in the United States.

Mr. Chairman, one of the best features of this bill is that part which provides for a system of money based upon correct principles—a paper money secured by property values. Under it we will not be required to wait for the discovery of new gold fields before we can get relief from financial distress, but whenever we find a shortage in the supply of money we can go direct to the Federal Reserve Board for relief, and by giving the proper security required by this act we can get all the money that will be needed within a few hours. No one with property need remain long in want for money. No chance for depreciation. No cause for alarm. The most sacred thing about money, if it can be said to be sacred at all, is the certainty in maintaining its face value. The plan offered by this bill is a guaranty against depreciation in value, because it has behind it a security of 140 cents for every dollar of the new issue; and, besides, it has the promise of the United States to redeem it in gold or lawful money. This is the best assurance of stability in values. It is not only a guaranty against depreciation in value, but it is a guaranty against a shortage in the supply. It is a harbinger of a new system, safe and sound, with enough elasticity to spread out all over the country to relieve want and suffering wherever it may be found. Its attributes are stability, activity, and sufficiency. It is the dawn of a new era, with a rainbow of promise, that panics in American shall be known no more; that business shall fly on the unclipped wings of activity, regulated by greater skill and conducted on larger scales, with more certainty of a steady income; that the unknown shall be discovered and that the impossible shall be made possible by the wise use of the instrumentalities provided by this bill; that peace and prosperity shall ever be within easy reach of our people, leading steadily onward and upward to a higher civilization and a more perfect and useful life here below. [Applause.]

"My Thought Is of America"—President Wilson's Appeal for American Neutrality.

EXTENSION OF REMARKS
OF
HON. EDWARD T. TAYLOR,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 20, 1914.

Mr. TAYLOR of Colorado. Mr. Speaker, on day before yesterday President Wilson issued an earnest appeal for real American neutrality that is one of the most eloquent and patriotic appeals for self-control on the part of all American citizens that has ever been uttered in the history of this or any other country.

I thought some more distinguished Member of this House or of the Senate would insert that proclamation of neutrality and appeal to humanity in the CONGRESSIONAL RECORD and preserve it for all time; but not seeing it in the RECORD this morning I ask permission to extend my remarks by inserting in the RECORD the President's solemn words to his fellow countrymen in this critical hour to guard against any breach of neutrality.

Every patriotic citizen of this Republic ought to carefully read the President's message, and the heart of every loyal son of this Union ought to swell with pride to observe the magnificent spirit in which the press of this country has received this message, as shown by the editorials in the issues of yesterday and to-day.

I feel that it is especially appropriate that the President's earnest and sensible warning to the public should be given not only the widest publicity, but that it should go into our RECORD. Especially do I make this request because one of the greatest newspapers in referring to the President's message said:

The point of latent peril is in Congress. Reckless Members of either House, occupying positions of responsibility, where their words carry weight far beyond their intrinsic merit, because they are spoken officially, can do damage in a few minutes that could not be undone in years. If Mr. Wilson will keep Congress quiet for a while until the worst of this storm blows over, he can depend upon the people of this country to do their share. Absolute neutrality is the only course for the United States.

The tenor of the press of the country is that the American people should keep cool at this time and avoid creating internal difficulties. One newspaper says:

The patriotic words from President Wilson's appeal to the American people fall like a message from a higher and nobler sphere.

While we may think that our country is secure, owing to our position, and we are all proud that we have no entangling alliances at this time, and that America is happily safe for the present, yet this simple and sincere expression of our President, "My thought is of America," is a sentiment that should fill every American's heart with pride and remind him of his duty to our beloved country. The Washington Star of last evening aptly says:

We can not as a Nation remain aloof from the issues of the war if we work up violent factional feeling, which will quickly lead to bitter recriminations in public.

The New York World says:

While Germans and French and English and Austrians and Belgians and Russians and Serbs in Europe are slaughtering one another in the most devastating war of all time, men of those same races are living and working in peace and amity under the American flag. What higher tribute than this can be paid to the spirit of the Republic?

There is a pathetic wisdom and foresight in the President's remarks that can not help but be appreciated by all right-thinking people. He says that to stir up racial strife in this country by violent speech or editorial utterances might involve us in foreign controversy, if not in war, and every lover of his country should avoid doing anything that may in any way tend to embroil the United States in controversy with any foreign country, especially at this critical time.

President Wilson has from the day he entered the White House up to this good hour always stood for peace—for peace at home as well as peace abroad. And the American people owe him a debt of everlasting gratitude for the fact that the United States is at peace with the world to-day. If the example of our own President had been followed by the crowned heads of Europe it would have been a blessing for all humanity for all time to come.

Mr. Speaker, in presenting this remarkable and solemn warning to the American people by our President I will only say "My thought is of America."

THE PRESIDENT'S SOLEMN WARNING TO HIS FELLOW COUNTRYMEN TO GUARD AGAINST ANY BREACH OF NEUTRALITY.

Addressing the American people, the President yesterday issued a statement in connection with the European war, warning citizens of the United States against "that deepest, most subtle, most essential breach of neutrality which may spring out of partisanship, out of passionately taking sides."

The President's statement follows:

"My fellow countrymen: I suppose that every thoughtful man in America has asked himself during these last troubled weeks what influence the European war may exert upon the United States, and I take the liberty of addressing a few words to you, in order to point out that it is entirely within our own choice what its effects upon us will be, and to urge very earnestly upon you the sort of speech and conduct which will best safeguard our Nation against distress and disaster.

"The effect of the war upon the United States will depend upon what American citizens say and do. Every man who really loves America will act and speak in the true spirit of neutrality, which is the spirit of impartiality and fairness and friendliness to all concerned. The spirit of the Nation in this critical matter will be determined largely by what individuals and society and those gathered in public meetings do and say, upon what newspapers and magazines contain, upon what our ministers utter in their pulpits, and men proclaim as their opinions on the streets.

"The people of the United States are drawn from many nations, and chiefly from the nations now at war. It is natural and inevitable that there should be the utmost variety of sympathy and desire among them with regard to the issues and circumstances of the conflict. Some will wish one nation, others another, to succeed in the momentous struggle. It will be easy to excite passion and difficult to allay it. Those responsible for exciting it will assume a heavy responsibility; responsibility for no less a thing than that the people of the United States, whose love of their country and whose loyalty to its Government should unite them as Americans all, bound in honor and affection to think first of her and her interests, may be divided in camps of hostile opinions, hot against each other, involved in the war itself in impulse and opinion, if not in action. Such diversions among us would be fatal to our peace of mind, and might seriously stand in the way of the proper performance of our duty as the one great nation at peace, the one people holding itself ready to play a part of impartial mediation, and speak the counsels of peace and accommodation, not as a partisan but as a friend.

"I venture, therefore, my fellow countrymen, to speak a solemn word of warning to you against that deepest, most subtle, most essential break of neutrality which may spring out of partisanship, out of passionately taking sides. The United States must be neutral in fact as well as in name during these days that are to try men's souls. We must be impartial in thought as well as in action; must put a curb upon our sentiments as well as upon every transaction that might be construed as a preference of one party to the struggle before another.

"My thought is of America. I am speaking, I feel sure, the earnest wish and purpose of every thoughtful American, that this great country of ours, which is, of course, the first in our thoughts and in our hearts, should show herself in this time of peculiar trial a Nation fit beyond others to exhibit the fine poise of undisturbed judgment, the dignity of self-control, the efficiency of dispassionate action; a Nation that neither sits in judgment upon others nor is disturbed in her own counsels, and which keeps herself fit and free to do what is honest and disinterested and truly serviceable for the peace of the world.

"Shall we not resolve to put upon ourselves the restraint which will bring to our people the happiness and the great and lasting influence for peace we covet for them?"

American Citizens in Europe.

EXTENSION OF REMARKS
OF
HON. ANDREW J. VOLSTEAD,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 15, 1914.

Mr. VOLSTEAD. Mr. Speaker, allow me to call to the attention of this House the complaint made by the passengers on the White Star steamer, the *Celtic*, that landed in New York on Saturday, the 15th of this month. They prepared a memorial to the President, part of which was published in the Washington Post yesterday, which reads:

CRY OUT TO UNCLE SAM.

Days without food, inability to obtain funds, the canceling of steamer tickets with no refund of money, the loss of personal belongings, in some cases actual hostility from the population about them, have brought American men, and especially women and children, to a pitiable state.

Thousands are in need of transportation, which they can not supply. We should like to bear testimony to the wonderful kindness and courtesy of the English people to those Americans who have been fortunate enough to reach England. But English help is inadequate, and every week, every day, adds to the acute sufferings of those left without funds in a foreign land.

In connection with this appears a communication from Paris dated August 15, from Dr. Herman B. S. Chayes, of New York, of which I quote the following:

I share the indignation of many of my fellow countrymen on the Continent at the supine, shillyshallying attitude which the American Government presents in the present crisis. Many Americans are in dire need through no fault of their own. The situation is little short of a disgrace.

This expression of my opinion merely echoes the sentiments of hundreds of other Americans.

Has our Government been derelict in caring for our citizens abroad?

This memorial and communication clearly indicate that American citizens have been and still are in need of the actual necessaries of life, such as food and shelter, and that every week and every day add to the actual suffering of those abroad who are left without funds. What has our Government done to relieve that distress?

On the 3d day of this month Congress appropriated $250,000 for relief, and on the 5th the President asked for $2,500,000 for this same purpose, which was promptly granted. What has the State Department done with this money? On the 5th of this month there appeared in the Washington Times, in boldface type, so as to attract attention, the following statement:

HOW TO CABLE MONEY TO FRIENDS IN EUROPE.

Sending money to relatives and friends marooned by the war in Europe is a simple procedure. Explained by Wilbur J. Carr, Chief of the Consular Service, this is the "how":

"Send to the State Department a certified check, draft, or postal money order payable to 'Chief, Bureau of Accounts, State Department.' State plainly the name of the person (full name), city, and address, if any, abroad.

"The money will be cabled immediately to the nearest American consul, who will issue local currency or a draft (United States warrant) upon the State Department, payable to the payee, who calls at the consulate."

This statement appears on its face to be authorized by the State Department. The same information was republished in other papers. On the day following this publication—the 6th—I paid, as directed in this notice, a sum to be transmitted to an American, then at St. Gall, Switzerland, and was promised that the money would be transmitted by cable that day. Two or three days later I called at the State Department to inquire and was told that the money had been cabled, but that no answer had been received. Asked if they would not repeat the message, they promised to repeat it that day. I then waited until the evening of the 12th, when I called the consular office on the telephone to again inquire, when I was told that the office had no record of any payment made by me for transmission to anyone. It was too late that night to make a personal call at the office, but next morning I called and was again told that the office had no record of my payment; that the money had not been cabled; and that the office had nothing further to do in regard to the matter, as it had been arranged that the Treasurer of the United States should make these payments. I at once called on the Treasurer, and he easily convinced me that he had nothing to do about the transmission of this money abroad. He admitted that the Consular Service had turned the money over to him, and said that he had certified the receipt of it to the Secretary of the Treasury. I then called at the office of the Secretary of the Treasury and found my payment in a list of several thousand like payments which had been certified back to the Secretary of State for transmission to Europe. Armed with this information I again, on this same day, called at the consular office to see if action could not be secured. Defeated in their evident effort to get rid of me by claiming that they were not charged with the duty of transmitting this money to Europe, I was told the cables were so congested that they could not reach the consul at St. Gall; but I finally convinced them private cable messages had gone through very recently, and that this excuse could not be accepted. They then made a third promise to direct the consul at St. Gall to pay this money at once. I was further told that instead of doing what was promised in the published notice, namely, direct our foreign consuls to issue warrants payable by the United States, they had concluded to wait until the *Tennessee* could reach Europe with the money and until the money could be sent from that ship to the consuls.

It was explained that no arrangement had been made with any banking house to take care of any of these warrants, and

It was not claimed that any attempt had been made to secure any such arrangement. With this as the policy, it was evidently considered unnecessary to cable to the consuls in Europe that payments had been made for transmission until the actual money could reach the consul, though this information might be of inestimable value to those in distress. I was told that except in some special cases it was not until Saturday, the 15th, that cable messages were sent directing the payment of the deposits made for transmission since the beginning of the war. As these payments are not to be made through any bank, it is likely that considerable more delay must be expected. When I made my first payment I did so by depositing the money in the consular office, when I made a payment for another party at a later date I was directed to pay the money to the Treasurer. Between the two dates, the 6th and 8th of August, this change in policy had been adopted. I was frankly told in the consular office that this change in policy had caused a delay of a week in the transmission of this money; that this was due to some friction or misunderstanding as to what department should handle the matter and that in the meantime these payments had accumulated so rapidly that great confusion had resulted.

Thousands of our people all over this land are waiting with intense anxiety for news from their loved ones abroad. Is there not some way in which they can get prompt action instead of mere promise, mere pretense? Is the credit of this Government so poor that no one in Europe will take its promise, though the gold is hastening over the sea to redeem that promise, or must our people starve because of the indifference of our Government?

Panama Canal.

EXTENSION OF REMARKS
OF
HON. KENNETH D. McKELLAR,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 25, 1914.

Mr. McKELLAR. Mr. Speaker, the European war has completely upset the entire cotton business of the South and placed our people in a situation that is a more serious menace to their welfare than anything that has occurred since the Civil War. At least 50 per cent of our entire cotton crop is exported to the nations that are now engaged in deadly strife. This trade is not only demoralized but practically shut off entirely, leaving our people without a market for half of the probable yield of 14,000,000 bales of cotton this year. That the war will continue for an extended period is now obvious. The cotton-spinning business in this country is also demoralized. The domestic spinners do not know whether to buy or not, because they are afraid the price will go lower, and a consequent loss will occur to them. The result is that we are practically without a market for our cotton to-day.

In a radius of 150 miles from the city of Memphis, where I live, 2,000,000 bales of cotton are produced with a value in ordinary years of about $140,000,000. The prosperity of our entire people is largely dependent upon this crop. In banks, in business houses, in clubs, in exchanges, and on the streets, whenever and wherever business men meet in our city, the calamitous condition of the cotton market brought on by this war is almost the sole subject of conversation. Recently a great convention of country and city merchants, numbering nearly 3,000, was held in Memphis. This convention appointed delegates to meet the Secretary of the Treasury in conference here this week. That great good will come of this conference we all believe. That the Government will aid us in this great emergency in a way that will be practical and safe we are all confident. That Secretary McAdoo will arise to the occasion as he did last year in raising money for crop-moving purposes we have no doubt. In this connection I want to attach as a part of my remarks a telegram sent me by the Cotton States Merchants' Association, in convention at Memphis, and also letters from Mr. Leon Sternberger, Mr. Calvin Perkins, and Mr. Robert Wilkinson, all of Memphis, all referring to the present emergency situation in the cotton trade. Both Mr. Wilkinson and Mr. Sternberger are, and have been for many years, among our most active cotton men. They are familiar with the whole situation and their views are entitled to great respect, and I believe their letters will be useful in aiding us in solving the most serious proposition that we have before us, and therefore I take pleasure in putting them in the RECORD.

MEMPHIS, TENN., *August 21, 1914.*

Hon. K. D. McKELLAR,
House of Representatives, Washington, D. C.:

The following resolutions were unanimously passed by convention of 3,000 members Cotton States Merchants' Association. Please present in person to President and to House.

"*Resolved by the 3,000 delegates of the Cotton States Merchants' Association in convention assembled,* That we express our confidence in the intrinsic value of the cotton crop now about to be marketed. In our judgment, every pound of this cotton, regardless of present conditions, is worth at least the average price at which cotton has been sold during the past five years.

"The closing of the markets and the lack of immediate demand for a portion of the crop, owing to the present European war, will apparently make it necessary for a part of the crop to be carried until conditions are again normal.

"We believe that the producers of this cotton should receive such financial assistance as will enable them to hold their crops or such parts of their crops as they are not able to sell at its true value, to the end that the producer may enjoy the profits for which they have labored.

"It is our earnest conviction that the producer of the cotton should be enabled to borrow, with his crop as security, a sum sufficient to cover at least the cost of production, and in order that our banks may be enabled to make the necessary loans, be it further

"*Resolved,* That we respectfully petition the honorable President of the United States, the Senate, and the House of Representatives to promptly provide ways and means as will prevent this unusual surplus created by abnormal conditions from depressing the market until the export trade is again opened or until such time as they may think judicious and expedient."

J. R. PAINE, *Chairman.*

STERNBERGER, McKEE & Co.,
Memphis, Tenn., August 21, 1914.

Hon. K. D. McKELLAR,
Washington, D. C.

DEAR MR. McKELLAR: I am taking the liberty of addressing you in behalf and concerning the cotton situation brought about by the European war, and do so reluctantly, for I realize that you are a very busy man and have no doubt been worried no little with inquiries as to what the Government will try to do toward relieving the situation. However, the solution of the cotton problem is of vast importance to the whole country, and I feel confident that you are vitally interested in developing some plan by which the South will be aided in carrying the heavy burden imposed upon it by the troubles abroad, therefore will pardon me for intruding on your valuable time.

There seems to be a unanimity of opinion as to the Government extending financial aid to assist the South in carrying the surplus cotton in some form or another that will be caused by curtailment of our exports, and it is thought by the cotton trade that this surplus will aggregate about 3,500,000 bales. These figures are arrived at by estimating the coming crop on a basis of 14,500,000 bales. In my humble opinion, the amount of surplus cotton will depend largely upon the increased consumption in this country, also as to the ability of England to keep her mills in operation during the war; and further, if the Atlantic Ocean will be kept clear of the German fleet in order that our exports to England and France, and to countries which are neutral, will not be molested. If we can be assured that our shipping to England and France will not be disturbed and exporting facilities can be secured for our exports to countries which have declared their neutrality, we can with some degree of confidence rely upon having a considerable increase in consumption of cotton in this country, and we can with some safety estimate the surplus cotton not to greatly exceed 3,500,000 bales, of a market value of about $200,000,000, based on the close of the market in New York.

Now, if we are correct in our views as to the amount of surplus cotton, the next and most important proposition to consider is the most expedient method of financing this surplus, in order that the producer may obtain funds on this surplus to assist him in liquidating his indebtedness, carry him through the winter months, and have some means to commence his farming operations next spring without being forced to throw this surplus cotton on the market and having to sell it at destructive prices, resulting in irreparable loss, not only to the producer, but to the whole country, for the whole of the United States is so allied in commercial activities that what is detrimental to one section is felt to a certain extent by all other sections.

It occurs to me that while a great many plans have been suggested for financing the surplus cotton, all of the plans are based upon securing aid of the United States Government, without considering that when our Senators and Congressmen from the South try to secure Government aid for their section that Senators and Congressmen from other sections will try to do the same thing for their States; and I fear very much that under such conditions the South may not be successful in securing the assistance it so rightfully deserves, and I thought possibly some plan might be evolved by which each State could act independently of the other and secure such financial assistance as such State may require through the different reserve banks.

The plan which I suggest is as follows:

Let the governors of each State call an extra session of the legislature at once for the purpose of considering the situation which obtains in their respective communities; and as we are interested in the cotton situation, we will discuss the plan from that point of view and take the State of Tennessee to illustrate the plan.

After the governor has called an extra session of the legislature there should be a resolution adopted authorizing the issuance of bonds by the State in such amounts as will be needed to finance the surplus in this State. Our State will produce about 350,000 bales, and its portion of the surplus will aggregate about 90,000 bales, of a market value of about $5,000,000; this surplus cotton, together with the amount that will be necessary to take care of the cotton-seed products, will amount to about $7,000,000. If bonds can be issued for that amount, it would be desirable to have them run for a period of five years, with the option of the State to redeem them at the expiration of one year, and the bonds to bear interest at 3 per cent. The bonds after being issued could by an act of Congress or an amendment to the reserve banking laws be exchangeable for United States currency at par upon deposit of the bonds with the respective reserve banks. The State or States could then deposit the currency received from the reserve banks in the different State depository banks, subject to the State depository laws, without any agreement other than that arising from the general State bank depository law; but the banks could be relied on to loan the money on authenticated cotton warehouse receipts or bills of lading for lumber or other good securities and thereby relieve the financial stress.

The object in having the bonds run for a period of five years is that the war may be prolonged until next spring, and even longer, and in this event the loans on cotton should not be disturbed until the demand for cotton assumes nominal proportions; and perhaps conditions may be such that this surplus may have to be sold gradually covering a period of two years, but as fast as the surplus cotton is sold the banks could repay their State deposits and the State in return could redeem its bonds.

If such a plan could be formulated, it would stop all discussions in Congress about any one section being favored, for if the act permitting reserve banks to issue currency to the States could be passed, each State would have the option of securing funds to relieve the situation in its territory, and the United States Government would not have to contend with the worry and complications arising from the issuance of warehouse receipts deposited with the reserve banks, even if it was inclined to do so, for under the plan we are discussing the United States Government or reserve banks would only be doing business in relieving the situation with the different States, and would be absolutely safe in doing this without a peradventure of a doubt.

I have gone over this plan with our mutual friend, Mr. John Martin, and, while he thought the plan feasible and if adopted would relieve the situation, still he was of the opinion that article 2, section 31, of the constitution of Tennessee might prohibit our State from issuing bonds for this purpose, and he requested me to call your attention to this article. Of course, I realize the plan is extraordinary, but at the same time we are going to be confronted with extraordinary conditions during the next six months and until peace is declared, and we will be forced to meet these conditions with heroic measures in order to save our people from grave consequences resulting from the war.

I herewith hand you a letter from Mr. Calvin Perkins, giving his opinion as to whether the constitutions of Tennessee and Mississippi, respectively, prohibit the legislatures of those States from authorizing the issuance of State bonds, as suggested by me.

I desire to add, further, that it is not my purpose to appear visionary or to seek notoriety, nor do I care to be placed in the limelight by submitting this plan, for if any good can emanate from it or from any other plan that may be derived from it, or should any other plan of relief be evolved, it will be sufficient for me to know that something will be done to relieve the South and all other sections that need relief of serious conditions in these troublesome times. If you do not deem the foregoing suggestions worthy of consideration, kindly consign same to the wastebasket and oblige.

Yours, very truly,

LEON STERNBERGER.

MEMPHIS, TENN., *August 21, 1914.*

MR. LEON STERNBERGER, *Memphis, Tenn.*

DEAR SIR: I have read your letter of this date to Hon. K. D. MCKELLAR, M. C., dealing with the subject as to what can be done in the way of governmental aid in overcoming the difficulties in carrying the surplus cotton and other products arising from the curtailment of our exports occasioned by the European war.

You have asked me in this connection for my opinion as to whether there are any constitutional difficulties in the way of carrying out the scheme outlined in your said letter.

Article 2, section 31, of the constitution of Tennessee is as follows:

"The credit of the State shall not be hereafter loaned or given to or in aid of any person, association, company, corporation, or municipality."

Article 14, section 258, of the constitution of Mississippi is as follows:

"The credit of the State shall not be pledged or loaned in aid of any person, association, or corporation."

It will be seen that the two constitutional provisions, so far as they bear upon the question involved, are substantially the same, and I presume that there may be similar provisions in the constitutions of the different States of the United States.

In my opinion there is nothing in the constitution of Tennessee or Mississippi to prevent the carrying out of the scheme suggested by you. If the States should issue their bonds and pledge or sell them for the purpose of raising an emergency fund for the general welfare of all of the inhabitants of the respective States, and should deposit the money so raised in the respective State depositories, to be held by the depository banks, subject to be drawn out by the States in accordance with the provisions of their respective depository laws, it would not, in my opinion, be a pledge or loan or gift of the credit of the States "in aid of any person, association, or corporation."

There would doubtless have to be legislation by Congress on the subject, certainly for the purpose of fixing the basis, determining the amount of State bonds to be accepted by the reserve banks from the respective States, and it seems to be that a per capita basis, to be determined by the population of the respective States, as shown by the last census, would be the most just basis as between the respective States.

There would doubtless be other legislation necessary to be enacted by Congress to authorize the reserve banks or other national banks to handle the State bonds.

You will observe that in order to avoid any constitutional difficulties arising from the provisions of the constitutions of the States of Tennessee and Mississippi and other States having similar provisions, I restrict myself in approving this scheme to the moneys to be distributed among the different State depositories, to be held by them under the general depository laws of the respective States, without any restriction as to the lending of the money to any particular class of persons or upon any particular class of credits.

If in any given State there should be no State depository laws, or the laws as now existing do not fit onto the scheme as outlined by you, the legislatures of the respective States could, of course, make the necessary changes in their State depository laws.

Yours, very truly,

CALVIN PERKINS.

WILKINSON & CARROLL COTTON CO.,
Memphis, Tenn., August 22, 1914.

Hon. K. D. MCKELLAR,
House of Representatives, Washington, D. C.

DEAR SIR: Inclosed find a letter which is self-explanatory. Read it over, and if you think well of the plan suggest it. Would be glad to have you show it to Hon. JOHN SHARP WILLIAMS and Mr. Love, who is in Washington. The reason I would like for Mr. WILLIAMS to see it is that he is a large planter himself; but if you do not think there is any merit to the plan outlined, just put the letter in the wastebasket.

Had a talk with Mr. Omberg, and he suggests that cotton be put in bonded warehouses and warehouse receipts issued for same. The warehouse receipts to be used as bonds on a basis of $25 per bale, to take the place of currency, the bonds to run for a period of one to two years. Think $25 per bale would be entirely too small an amount to carry this crop, besides it is extremely doubtful about the Government doing this. If some plan could be gotten up so that cotton could be sold gradually just as there is a demand for it, and the surplus held off the market, the South ought to realize 13 cents per pound for this crop, otherwise it might sell at a price so low that it would bankrupt the entire South.

Thanking you in advance for anything that you may do along these lines, and with kindest regards, I beg to remain,

Yours, very truly,

ROBT. WILKINSON.

[Inclosure.]

Since the outbreak of the great European war the all-important question is: What will the South do with her cotton? It would be suicidal to dump it on the market and sell it for little or nothing; and, in the writer's opinion, there is only one possible way to prevent this being done, namely, let all the cotton-growing States call a convention right away to be held at some central point, like Memphis, each State to be represented by a certain number of delegates, proportioned according to the number of bales of cotton raised therein. This convention to agree upon a minimum price at which one-half of this crop, say, 7,000,000 bales, shall be sold. The balance of the crop to be held off the market without attempting to sell it until the war is over or until normal conditions prevail. The delegates to this convention to be composed of bankers, merchants, and planters, and to bind their respective States to reduce the cotton acreage next year 33⅓ per cent, which would leave twenty-four and a half million acres to be planted to cotton next year, and under normal conditions ought to produce about 10,000,000 bales. And, in our opinion, a 10,000,000-bale crop would bring more money than a 15,000,000-bale crop. Not only that, but there would be left twelve and a half million acres in the South heretofore planted to cotton that could be utilized to good advantage in diversified farming and for pasturing cattle, which ought to result in the South having an abundant supply of meat and bread next year, thereby greatly reducing the high cost of living.

It is true that the Farmers' Alliance made several unsuccessful attempts to control the price of cotton, but this organization was composed entirely of farmers and had little or no facilities for storing cotton and had small financial backing. And it would be a very different proposition for a convention representing the entire South and composed of bankers, merchants, and planters undertaking to control the price of cotton, and the Farmers' Alliance undertaking to do it. If a convention of this kind should be held and an agreement entered into as outlined above, would the people live up to it? Yes. Why? First, a great many would keep the contract because they had agreed to do it, and a great many others would keep it because self-interest and self-preservation would make them stick. Now the question is, Will the banks advance the money to carry this surplus of cotton? The prosperity of the South depending almost wholly upon agriculture, the banks are just as much interested in getting a good price for cotton as the farmers. Therefore it would be reasonable to expect their cooperation in a movement of this kind.

Revoking Leaves of Absence.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, August 25, 1914,

On House resolution 601, as follows: *"Resolved,* That all leaves of absence heretofore granted to Members are hereby revoked," etc.

Mr. BRYAN. Mr. Speaker, my vote is for this resolution. At the same time, I do not believe the adoption of the resolution accords fair treatment to those of us who have been here for all these months. I am sure I have spent as many hours on this floor since my election as any Member, with the exception of the gentleman from Illinois [Mr. MANN].

I have not been home for almost a year. I was in Washington State last September, along with my colleagues Mr. FALCONER and Mr. HUMPHREY. At that time the House was, in the main, marking time awaiting action by the Senate on administration measures. I had intended to return soon to my district. My family must return, as I intend to put my children in school in Seattle next year. My family can not remain here without breaking into my children's school year at the adjournment on March 4th next. Several personal matters and two or three items of personal business of a quasi public nature make me intensely anxious to return at this time to my home. Besides this, of course, I want to be at my own home primary and at the Progressive Party convention, which will follow the primary.

Owing to the inexcusable and continued absence of others, we find ourselves without a quorum, and this resolution is deemed necessary. I vote for the resolution and continue at my post because my first duty is here, but I certainly believe on account of these conflicting obligations I am compelled to fail in very essential duties at home. I very much regret the situation.

How the War Will Affect American Agriculture.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. COX,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 29, 1914.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following article:

[From the Indiana Farmer, Indianapolis, August 29, 1914.]

HOW THE WAR WILL AFFECT AMERICAN AGRICULTURE—UNITED STATES WILL BE CALLED UPON TO SUPPLY FOOD AND OTHER NECESSITIES.

(By Hon. RALPH W. MOSS, Member of Congress from the fifth Indiana district.)

[Editor's note.—We know of no one better qualified to discuss the above topic than Hon. RALPH W. MOSS, Member of Congress from this State. Mr. Moss is a practical farmer; he was reared upon a farm near Brazil, Ind., and now owns and successfully operates that farm himself. His service in Congress, extending over many years, has given him a broad insight into national and international affairs. Added to this equipment is his experience as chairman of a national commission, appointed by President Wilson in the spring of 1913, for the purpose of investigating farm conditions in Europe. Our readers will remember that Mr. Moss wrote some interesting and instructive articles for the Indiana Farmer while serving upon that commission. His practical acquaintance with farming in this country, his special knowledge of European farming, and his years of legislative experience, which have been devoted largely to questions affecting the interests of farmers, all combine to make him an authority on the question of the probable effects of the European war upon the farm and live-stock interests of this country. Mr. Moss gives his views in the following article.]

The war now raging in Europe, involving the principal nations, presents the greatest crisis in the history of the world. No other convulsion among civilized people can compare with it in magnitude or possible destructive results. Happily we are outside of the zone of physical combat; but our Nation can not escape being most profoundly affected by this great catastrophe. What will be its probable effect on American agriculture?

The answer will in part depend on the duration of the war, but certain tendencies are manifest and it does not require the gift of prophecy to foretell some of the results which will flow from this great struggle. The southern farmer stands to lose heavily, and it is not beyond the possibilities that this war will force the reorganization of his agriculture. All agricultural authorities have deplored the stubborn resolution of the average southern farmer to depend upon a single crop for his income. Cotton is the great agricultural staple of that section. This product must seek a foreign market, as less than 40 per cent of our crop is taken by domestic consumption. More than 60 per cent of this crop is purchased by those European nations which are now at war. Cotton is also largely produced in Egypt, India, China, and South Africa. These countries are not included in the war zone. We thus have the anomalous situation that all cotton-producing countries are in peace while the principal cotton-consuming countries are at war. The paralysis of the manufacturing industries in the war zone destroyed the market for cotton overnight. The price fell from 14 cents to 9 cents per pound in a day. Practically speaking, there has been no market for spot cotton since the first declaration of war, and the new crop, estimated at 13,000,000 bales, will start to the gin within the next 30 days. The European war has therefore produced the most serious condition which the cotton farmer has faced since the Civil War. The inevitable rise in the cost of living and other expenses incident to the production of cotton only adds to the present disadvantages of the exclusive cotton planter. The Government, in conjunction with all public-spirited men of the South, is striving to mitigate this condition, but the normal balance is so greatly disturbed and the baleful influences of the war are projected so directly against the cotton market that no agency can seemingly prevent great losses as measured with normal conditions.

THE SITUATION IN INDIANA.

Fortunately Indiana farmers face a totally different situation; every result of this war will be to increase the price of our farm products, and thereby enhance the prosperity of our farmers. I have frequently remarked in recent public addresses that the present generations of farmers are the most favored of any men since the day of Adam. I had reference, of course, to the improvement of transportation facilities, our splendid markets, good roads, improved live stock, improved strains of seed grains, improved agricultural tools, rising prices for land, and the wide diffusion of scientific knowledge of agriculture. These manifest advantages were never before placed at the command of an intelligent, self-governed people; but this European crime against the brotherhood of man has largely augmented even these wonderful advantages. The great nations now at war produce essentially the same agricultural products as do our Indiana farmers. These are the great food staples, without which nations can not sustain life.

Napoleon was the first military genius to point out that armies traveled "on their bellies," which is another way of saying that only well-fed armies can be effective in the field. The European peasant may scrimp his appetite or live on coarse food; but in this life-and-death struggle among these great nations their soldiers will be well fed. The consumption of food will be greater in war than in peace; at the same moment the withdrawal of these millions from farm as well as factory means a diminished production. This interruption to European agriculture will be greater than if similar conditions would obtain in the United States. First, we depend upon machinery to a far greater degree than does the European farmer. They produce a greater food supply from an acre than we do, but it requires the labor of many more men or women than it does with us. Thus we have the greater production per man employed, and they have the greater production per acre under cultivation. Under European agricultural methods the general mobilization of their population will mean the demoralization of their agricultural operations, though it is true that their women are more generally engaged as agricultural laborers than with us.

EUROPE MUST HAVE OUR FOODSTUFFS.

Their agriculture is more highly organized than is ours. It has been raised to its present high level during the past 30 years largely by governmental aid and activity. It is an agriculture which can be sustained only by the most perfect organization. I will venture the assertion that the agricultural population of Germany, France, and Austria were the most highly organized at the moment of this outbreak of any similar people in the history of the world. Europe is very thickly settled and every acre of ground is made to be productive. Germany and France are about the same in area. A State the size of Alabama can be taken out of Texas and leave a larger territory than now comprises the German Empire; yet Germany and France together have as large a population as does continental United States. Belgium is more thickly populated than either France or Germany. These States, including the British Islands and Holland, are the very gardens of Europe, yet their fields are to be despoiled by the invasion of millions of armed men, their crops destroyed and their herds confiscated. After such devastation their agriculture must lie prostrate, requiring years for recovery. Even in times of peace, and with their high development of agriculture, Russia is the only great nation at war that can feed its own people. The result can only be to increase very largely the demand upon American farmers for the staff of life.

But it is said that we have no American ships engaged in the oversea trade and that our export trade will be lost. Let no man fear this delusion. Food is as much a military necessity as are men or ammunition. The war can not go on without drawing on our food supplies. We have a considerable fleet of vessels which are now eligible to American registry and ample provisions have been made by Congress for additions by purchase. If one of the warring nations does not soon obtain control of the seas and open them to commerce, then we will as a nation buy merchant vessels and engage in carrying trade under our own flag. Such a venture is both possible and profitable. Therefore it will be done. Our food supplies will be carried to those who must purchase them. The same result will obtain as to our manufactured articles if the war is prolonged. The really doubtful factor is whether we will have the surplus food supplels to send away when the ships come to our wharves to load.

CROP CONDITIONS HERE AND ABROAD.

This is a bad crop year in Europe. Before the war broke out it was estimated that the Continent would be short more than 300,000,000 bushels of grain as compared with a normal yield. How great this shortage will be, now that men have been called from the fields, leaving the harvest to lie rotting under the sun, can only be conjectured. Last year our corn crop was 680,000,000 bushels below that of the previous year; our prospect is no better for this year. Here, we begin with a shortage of 1,360,000,000 bushels of grain. As an offset our present wheat crop is larger by 244,000,000 bushels than an average. This leaves us in round numbers 1,000,000,000 bushels of grain shortage to add to that of Europe. Truly, war and famine have come hand in hand. With grain prices based on peace conditions, last year we imported 2,000,000 bushels of corn more than we exported. This year under normal conditions we would not export a bushel

of our corn crop—our domestic demands would absorb our entire supply.

The world faces famine conditions in Europe, while we have but a scanty grain supply in the United States.

In meat products the world is not more fortunate. It is well known that these European countries now at war do not grow a full domestic supply of meat even under their low standard of living. The soldier will consume more meat on the battle field than he would have done in the shelter of his humble home. It is certain that breeding and milk herds will be seized for slaughter. A sustained war will so diminish brood stocks of animals that Europe can not build up a normal supply of live stock in a generation. At the same moment we have so depleted our supply of beef animals that we can barely feed our own people. In this connection, let us consider our census tables. In 1910 we had on American farms 69,080,000 beef animals; in 1911 the number had fallen to 61,225,800; in 1912 to 57,959,000; in 1913 to 56,527,0000. To confirm these figures it may be said that the number of cattle received at the 10 leading markets for the first six months of 1914 shows a reduction of nearly 8 per cent from the number received during the like period in 1913.

Turn any way you may and you will be confronted with a demand for the products of our Indiana farms, which will exceed our ability to supply for years to come. From this conclusion there is no escape. We are entering a long period of high prices for farm products which no governmental investigation can prevent. The prices of these products must rise until they reach the limit of the ability of the purchaser to pay. We are entering, for the first time in the history of our Nation, a period when the necessities of life are to be measured out to men, not in proportion to their ability to consume, but in proportion to their ability to pay the prices which the hunger of the world will place upon an inadequate food supply. This is the inevitable result of this stupendous crime against future as well as the present civilization of the world.

OUR DUTY AS FARMERS.

Now, what is our duty as farmers? Manifestly, it is to exert every effort to drive our production to the maximum limit and hold it at that point until the world is well fed. We must shorten this period of semistarvation to the lowest possible limit. This means larger activities from every active, progressive farmer. It is most fortunate that we farmers can promote our own individual fortunes and at the same time benefit mankind in the greatest degree. Large production from Indiana farms means both of these results. To do this, our farmers must avail themselves liberally of credit. The European farmer developed his splendid agriculture by using money borrowed at low rates on liberal terms. This is the crying need of the hour, and is the only way in which our farmers can rise to this great opportunity, as well as great national duty. Fortunately, our financial situation is absolutely sound. We will emerge from this crisis the leader of the world in finance. The new Federal reserve law gives us a flexible asset currency based upon the industry of our country. The power to rediscount prime paper can be made the basis to develop our new and better agriculture. There will be absolutely no excuse if any Indiana banker seeks to raise the rate of interest or declines to extend to any honest farmer ample credit. If they refuse to display this patriotic and helpful spirit, then we must organize cooperative banks and go direct to the Government for our rediscount privileges. This golden hour of opportunity has been thrust upon the American farmers, and it must be met in a broad business manner. I trust that Indiana farmers will lead the Nation in this imperative call to a better and more profitable agriculture.

In this hour of temptation of high prices let me urge you not to sacrifice your breeding herds or reduce them below the proper level. Remember that high prices are here to stay for years and not for days. It is a time to enlarge your operations, and we should not cripple our future income by selling useful breeding animals even to appease the desperate hunger of the hour. Do not hesitate to go moderately in debt if necessary to enlarge your activities. The next legislature must enact a model rural-credits law; we can, however, with perfect safety go forward under our new Federal reserve act. All legitimate demands of productive industry will be met, and there is no possibility of a money panic such as we have been familiar with in the past. We met the shock of this world crisis without a single commercial failure except among those engaged in speculative buying. The demand is here; prices are good and will grow better; financial conditions are sound; currency will be supplied in ample volume to meet every legitimate demand from industry. It is a time for every man to get busy, for he is certain to receive an ample reward for his industry.

Old Soldiers and the Present Administration.

EXTENSION OF REMARKS
OF
HON. CLARENCE B. MILLER,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, August 21, 1914.

Mr. MILLER. Mr. Speaker, it appears that the old soldier has been a very severe sufferer under the present administration. Some interesting records are being prepared, showing throughout the civil service hundreds of old soldiers demoted or expelled, and apparently in open defiance of existing law.

Dr. J. K. Gleeson, for many years a prominent physician of the city of Washington and now department commander of the Department of the Potomac, Grand Army of the Republic, sends me a communication which he has prepared with great care after extensive research. The communication contains, first, a partial list of soldiers who have recently been demoted in the United States Pension Office. There follows a commentary on these removals. Then is given a copy of the address by the newly appointed Commissioner of Pensions to the employees of his office. The communication concludes with a series of comments upon this address of the commissioner and upon the general situation.

Dr. Gleeson's statement is well worthy the serious consideration of the patriotic people of America. It appears to be popular to praise our citizen soldiers in extravagant language, honor them, almost glorify them when they enlist in their country's service, and yet there appear to be some of our citizens in official position who are willing, if they do not desire, to humiliate the citizen soldier in his declining days, curtail his means of support and cause him to die, wondering what has become of his grateful country. The statement of Dr. Gleeson is as follows:

A partial list of soldiers demoted in the United States Pension Office.

	Former salary.	Pension per month.	Present salary.	Remarks.
J. B. Algate	$1,000	$30	$900	
A. B. Bennett	2,000	19	1,600	
J. D. Bloodgood	1,400	24	1,000	Vice Arthur Vanderlip, promoted.
J. N. Culberson	1,600	25	1,200	
I. N. Everett	1,200	24	1,000	
E. D. Godfrey	1,600	24	1,200	Vice Catherine Vanderslate, promoted.
Chas. Hanback				
Jos. E. Hart	2,000		1,600	
M. B. Hayes	1,200	None.	900	Wounded twice in left arm.
A. B. Hayward	1,200	55	900	Right arm amputated at shoulder.
E. H. Holbrook	1,800	15	1,400	
W. H. Honn	1,200	30	900	
—— Howard				Son of Maj. Gen. O. O. Howard.
O. D. Kinsman	1,400	30	1,000	Vice Chas. H. Chapman, promoted.
G. C. Kniffin	2,000	30	1,600	Former chief of division. Succeeded by N. H. Halley, since dead, and was succeeded by H. C. Bell, a Democrat, who was a substitute; served 1 year and 10 days. Pensioned at $14 per month.
C. M. Matthews	1,600	23	1,000	
J. B. Robinson	1,800	55	1,400	Left arm amputated at shoulder before he was 21 years old.
E. H. Ripley	1,400	65	1,000	Left arm amputated at shoulder.
I. B. Thatcher	1,200	27	900	Four brothers in the service. He was wounded and discharged on account of wounds; afterwards raised a company, was appointed captain, and went back into the service.
E. D. Tracy	1,400	30	1,000	Vice Alvin L. Bellman, promoted. Three brothers in the service; one died in the service and one is a physical wreck from exposure and is pensioned at $21 per month.
C. S. Wilder	1,400	23	900	

The efficiency board, organized to pass upon the ratings of those who offered the full measure of devotion—their lives—to save the country and make it possible to preserve a Government under which such men can hold office, is composed as follows:

A deputy commissioner, a Democrat.

A chief clerk, holding office since 1889.

An assistant chief clerk, a son of an ex-rebel, holding office since 1884.

A law clerk (private secretary), holding office since 1884.

A chief of division, holding office since 1900.

All of these men are Democrats, and at least four of them served for years under the preceding Republican administrations, and all of them are opposed to the veteran Union soldier. The result of the reorganization of this bureau, with a force of about 1,400 employees, of which less than 200 are Union veterans—I am told there are only

about 160 of them—is that 50 or more veterans have been reduced in salary by amounts ranging from $100 to $500, and this in the face of the fact that section 4 of the act of Congress approved August 23, 1912, provides as follows:

"All promotions, demotions, or dismissals shall be governed by provisions of the civil-service rules. Copies of all records of efficiency shall be furnished by the departments and independent establishments to the Civil Service Commission for record in accordance with the provisions of this section: *Provided*, That in the event of reductions being made in the force of any of the executive departments no honorably discharged soldier or sailor whose record in said department is rated good shall be discharged or dropped or reduced in rank or salary."

In many of these cases the amount of the demotion is more than the pension received by the veteran, and in other cases all or nearly all of his pension has been sequestered or confiscated in violation of the decisions of the Supreme Court of the United States, to the effect that "Pensions are the bounties of the Government which Congress has the right to give, withhold, distribute, or recall at its discretion." The Congress only can take a pension from a man when it has been legally granted.

These pensions have been taken from the soldier under the false plea that it is a part of his income. Furthermore, his efficiency record has been cooked by a board organized for that purpose—to "make the punishment fit the crime." But as Cataline said to the Roman Senate, "If ye dare ask for justice, be answered by the lash." One of the victims said: "Admit for argument that in a very few cases the demotion would have been just and generous, yet in a majority of the cases it has been decidedly unjust and discriminatory. The old soldier has but a few years longer to live; why not let him live the remainder of his life in comfort and die in peace? I speak not alone for myself, but for others. If, however, it can be properly shown by record that I have not done as good work, as much work, and as important work as I have done any year since I entered the Pension Office, I am ready to stand or fall by the report of my efficiency." The appropriation for the fiscal year 1915 was $284,500 less than for the fiscal year 1914, and this amount could easily have been saved without disturbing the status of a single soldier or soldier's widow. Following the reorganization of the bureau the commissioner issued an address to the employees, as follows:

AN ADDRESS BY THE COMMISSIONER OF PENSIONS.

To the employees of the Pension Bureau:

The necessity for a reduction in the number of employees in the bureau has caused the officials much regret.

Our noble and kind-hearted Secretary of the Interior enjoined upon us that in effecting reductions and removals we should be guided by considerations of efficiency and humanity. These cardinal principals we have endeavored to follow, but we were well aware that there could be no exact measurement of comparative justice in making selections from the nearly 1,400 employees of the bureau. We have done the best we could. The task has been laborious, continuous, and disheartening, but our labors were made easier by manifestations of the loyalty and forbearance of the employees themselves.

The painful experience through which we have just passed should impress on our minds very seriously and forcibly at this time a few important lessons. One is that we have no certain tenure of employment; the Government is under no moral or legal obligation to keep us on the pay roll when it has no work for us to do.

Each has his own ideas about retirement laws and civil-service pensions, but these are subjects wholly within the province of, and to be determined by, the Congress. We can only deal now with the situation as it is. Other lessons are that the work of the Pension Bureau is diminishing; that the number of old soldiers and their widows is decreasing rapidly; that the act of May 11, 1912, as amended by the act of March 4, 1913, has greatly curtailed the work to be done in their behalf; that the force now in the bureau must soon be still further largely reduced. We should prepare now to be ready. Now, this is to notify you that changes may be expected at the end of this fiscal year; circumstances will imperatively require them. Therefore you should make such arrangements in the Government service, or elsewhere, as will best promote your own welfare. Frugality is commended; lay aside something for the day of need. Transfers to other branches of the public service will be encouraged.

Let us remember that our rating depends upon our own qualities.

Nature deals more generously with some than others, but all can overcome handicaps by continued effort. Let us continue true to our high ideals; let us aim to do a little better this year than ever before, and thus continue to deserve the high praise that is now given to the employees of this bureau. Let us appropriate and apply the precepts of President Wilson and regard service as an opportunity.

For your loyalty and kindness all have my heartfelt thanks.

G. M. SALTZGABER, *Commissioner.*

This letter or "address" is truly a remarkable document. It is founded in political chicanery, constructed throughout of the purest sophistry, and its obvious purpose is intimidation and forceful acquiescence of those injured by the unjust official acts of those temporarily in charge of the Pension Bureau.

The following analysis of and notes on the same are submitted:

In the first paragraph of his "address" the commissioner attempts to assuage the sorrow of the many faithful employees among the numerous Union soldiers whose salaries are materially reduced by expressions of regret; then he launches forth into a eulogy of the Secretary of the Interior, for selfish purposes, of course, quoting him as having instructed that in making reductions and removals considerations of efficiency and humanity should govern.

He then says "we (meaning his committee of five prejudiced Democrats) endeavored to follow the Secretary's instructions," but he admits that his committee found it impossible to follow instructions. He does not say why, but the reason is apparent, as his prejudiced committee discovered that they could not apply the laws of efficiency and humanity and at the same time remove and reduce capable Union soldiers, which was the ultimate object of the grand scheme. But, continuing, the commissioner said "we did the best we could." This expression was intended to give to employees the idea that they had been treated as well as they could be, but to his superiors the commissioner's statement conveys the idea that he got rid of as many Union soldiers as possible without absolutely disrupting the efficient operations of the Pension Bureau. Continuing, he says "the task has been laborious, continuous, and disheartening, but our labors were made easier by the loyalty and forbearance of the employees themselves." (It is stated that several G. A. R. men in the office and one from the outside were called into conference and the general plan of reorganization laid before them and that they approved of it, and it seems to be a fact that none of those in the office were demoted and the outsider is steadily refraining from any adverse criticism of the general onslaught made upon the rank and file of the veterans.) His use of many-syllabled generalities in attempting to show that the hardship inflicted was as great to the one who wielded the ax as upon those beheaded or seriously maimed fails to distract attention from the cowardly acts of his committee, whose efforts to cut off the means of livelihood of faithful and capable Union soldier employees was not met with resistance, as they should have been, but with loyalty and forbearance. The very attitude of these men would have actuated one who was possessed of those qualities which go to make up a real man to have recognized them as still the true soldiers and loyal patriots they had so thoroughly proven themselves to be during the country's greatest crisis, and thus appreciating them and their faithful services to have permitted them to continue to earn their livelihood as they had been doing before the advent of this wonderful commissioner; but not so with him, as he and his committee led them to the slaughter and rather congratulated themselves that their task was made easier because the victims opened not their mouths.

The fact is that these veterans, the heroes of many bloody battles, where their courage did not fail, are now in their old age so cowed by the effect of the rebel forces now in the saddle that they do not dare to make a move in defense of their rights, as distinctly provided for by the act of August 23, 1912, for fear that the Damocles sword suspended over their heads by this "address" might be let go at any time and end for all time their official life.

In the second paragraph of his "address" the commissioner, after vainly attempting to include himself among those who had passed through a painful experience, undertakes to admonish those whom he so unjustly chastised on the uncertainty of Government tenure, and there is no doubt he rightly included himself as one of those likely to be affected by the uncertainty. He says the Government is under no legal or moral obligation to keep "us" on the pay roll when it has no work for us to do, although he knew when he made this statement that section 4 of the legislative, executive, and judicial appropriation act of August 23, 1912, contained the plain, unequivocal provision that "in the event of reductions being made in the force in any of the executive departments, no honorably discharged soldier or sailor whose record in said department is rated good shall be discharged or dropped or reduced in rank or salary," and is sufficient to set aside his claim that the Government is under no legal obligation to retain Union soldiers upon the pay roll; and when it is remembered that their records for loyal, patriotic, unselfish service to their country have been not only good but excellent, the highest moral obligation on the part of the Government they preserved to protect them in their positions immediately arises, and a fair construction of the statute enacted for the specific purpose of preventing just such outrages as the commissioner has perpetrated requires that there shall be no dearth of work for the Union soldier until after all those who do not possess this honorable title have been removed from the service in order that there may continue to be work for the Union soldier.

In the third paragraph of his "address" the commissioner, after attempting to distract attention from the real issue by his reference to retirement laws, attempts to nerve himself and intimidate others for willing submission to another political slaughter. He says that because the work of the Pension Bureau is diminishing, the number of old soldiers and their widows decreasing rapidly, and the act of May 11, 1912, as amended March 4, 1913, has greatly curtailed the work to be done in behalf of the soldiers, the force now in the bureau must soon be still further greatly reduced, and he admonishes all to prepare now to be ready—a horrible prospect to hold out to the soldier employees.

It is true that in the natural course of events the old soldiers and their widows are rapidly passing away, and it is equally true that the administration of the Pension Bureau is doing much to decrease the pension list, both directly and indirectly—directly, by cutting off the means by which the soldier lives, thus taking his life, as Shakespeare puts it; and, indirectly, by reducing his salary in an amount equal to or in excess of his pension.

The acts of Congress referred to by the commissioner do not reduce the appropriation for the Pension Bureau, and had Congress contemplated any reduction in the amount of work to be performed it would have made a proportionate decrease in the appropriation. The provision in the act of March 4, 1914, referred to by the commissioner was intended to prevent the appointment of persons additional to those already in the service, but could not by any reasonable intendment be construed to justify or necessitate the removal of Union soldiers.

In paragraph 4 of his "address" the commissioner continues on the same lines. He formally notifies the employees that imperative circumstances will necessitate changes at the end of the fiscal year, and that they should therefore make arrangements, either in the service or elsewhere, to provide against the predicted adversity. The imperative circumstances, of course, arise from a demand by Democratic politicians for some places for rebel soldiers and other Democrats. The object of the admonition is twofold. First, the commissioner hopes that by instilling fear into the hearts of all he may intimidate Union soldiers, already reduced into a quiet submission; second, he hopes to so frighten any who have not yet been disturbed that they will either be contented with any minor position assigned them or will secure transfer to another department, thus relieving the sympathetic and tender-hearted commissioner of the sad task of reducing or removing them. In his extreme solicitude for the welfare of his beloved employees, particularly the Union soldiers who he thought of reducing or removing, he recommends frugality and suggests that they lay aside something for the day of need.

Here the commissioner appears to have disclosed his generous purposes toward the Union soldier, namely, that by reducing their salaries they might be taught the important lesson of economy and of not only living within their means, but saving out of their reduced salary for a rainy day.

In the fifth paragraph of his "address" the commissioner again, including himself among the unfortunates, says that "our ratings depend upon our own qualities; nature deals more generously with some than others, but all can overcome handicaps by continued effort." Investigation discloses that ratings in the Pension Bureau where the Union soldier is involved depends upon the prejudiced ratings of a so-called efficiency board, composed of five Democrats, four of whom have served many years during the Republican administration, and the dominating personality of the board is the son of an ex-rebel soldier. It is hard to conceive of a more diabolical scheme for getting rid of Union soldiers than that now in operation in the Pension Bureau. The efficiency rating of a Government employee is his stock in trade, his

all; and for those to sit in judgment of his work and capabilities who at the outset are by environment, training, heredity, and sentiments opposed to everything that makes for his welfare is to violate the inexorable law for constituting juries and tribunals. Of course the Democratic Party will be called to account for the outrage, but that will not repair the damage done to the individual soldier. The commissioner well knew that the handicaps to continuity of service on the part of the Union soldiers could not be overcome.

They could not obliterate the fact that they offered their lives, if need be, in order that the Union might be saved. They would not if they could, and so the real handicap could not be overcome, as stated by the commissioner.

His admonition to them to continue to their high ideals was uncalled for, as none of them would sacrifice one jot of their patriotism or just pride in services rendered their country in her time of need for any position or salary the Government they saved might offer.

The commissioner, not being contented with having patronized the Secretary of the Interior with a cheap eulogy, again using the pronoun "us," attempts to ingratiate himself with the President by reference to some statement the Executive made which he does not yet appear to have modified or changed.

(It might be proper at this point to state that in October, 1913, the writer had an interview with President Wilson, and informed him that demotions of the Union soldier had begun in some of the departments, and that the amount of the demotion was in some cases equal to and in others more than the amount of pension the soldier was receiving. The President expressed surprise at this statement, and asked if it was really true, and upon assurance that it was true said, "That is all wrong, as the pension a man gets has nothing to do with his salary as an employee of the Government, and should not be taken into account in connection with it at all." He said it was news to him, as he had not heard of it before, and that he would at once take it up with his Cabinet officers. Did he do so? If yes, with what result? How far did it restrain operations in the United States Pension Office? The southern contingent is boasting that they have taken from the pensioners there at least $25,000, and with a Union soldier at the head of the bureau.)

In concluding this remarkable letter the large-hearted, whole-souled commissioner expresses his heartfelt thanks for the loyalty and kindness of his employees.

While the commissioner is responsible for this effusion, to which his name is attached, it is difficult to believe that he originated it. It is so glaringly amateurish, shallow, and altogether so absurd that it would be easy to believe that he had adopted the thing after it had been framed by some underling who was ambitious to be graduated into a first-grade clerk.

Veterans have been demoted and blatant rebel women, who have held high-salaried places for many years, are retained intact in this bureau.

Progress of the Third Congressional District of Minnesota.

EXTENSION OF REMARKS

OF

HON. CHARLES R. DAVIS,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 27, 1914.

Mr. DAVIS. Mr. Speaker, the best index of the material progress of a community or district is the rate of progress of the leading and dominant industry of that community or district.

Of the total land area of the 10 counties—Carver, Dakota, Goodhue, Le Sueur, McLeod, Nicollet, Rice, Scott, Sibley, and Washington—composing the third congressional district of Minnesota, 91.1 per cent, or 2,920,767 acres, belong to farms. Therefore we may safely say that farming is the leading and dominant industry of the third Minnesota district.

According to the United States census the value of the farm property of these 10 counties increased from $118,056,962 in 1900 to the total of $210,361,362 in 1910. In other words, the farm wealth of the third district increased $92,304,400, or 78.2 per cent, in the brief 10-year period, 1900–1910. The average yearly gain in the value of the farms was $9,230,440, or 7.8 per cent, to say nothing of the value of the crops and live-stock products.

The farm acreage of this congressional district is greater than the total for the State of Massachusetts or New Jersey or Nevada or New Mexico. The value of the farm property is greater than the State totals of Maine or Wyoming or Vermont or Utah, double that of New Hampshire, three times that of Nevada, and six times that of Rhode Island.

Sixty-eight per cent of the farms of this district are mortgage free, and the mortgage total of $8,605,848 is secured by $32,707,816 of farm valuation, and represents only 4 per cent of the total farm value of the district. One-fifth of one year's product will wipe out the entire mortgage principal.

The farms are not the only index of the progress of the third district. This one congressional district contains 957 school districts, which expend $1,250,000 per annum for the education of over 42,000 pupils. The 10 counties have 750 high schools, grade schools, rural schools, and industrial schools which are entitled to and receive special State school appropriations. Enterprising school districts availing themselves of the State's liberal inducements to advance their school facilities thus earn nearly $200,000 from the State over and above the general school appropriation and local school taxes. This explains why only 3 per cent of the population is illiterate and why the ratio diminishes each year.

Taxpayers in this connection will be interested to note that every county in the third district receives from the State treasury in the shape of school, road, and bridge appropriations more money each year than the total collected in the county for all State purposes. For the calendar year 1912, according to the report of the State auditor, the total amount of State taxes collected in the 10 counties was $320,614, while the State treasury returned to these counties for schools, roads, and bridges $393,836. Thus the State actually contributed to the third district $73,222 over and above the amount levied for all State purposes.

This farm and school district is also a banking district. Although the third district has only three cities in the 10,000 population class, and none in higher population classes, it has 117 banks, 22 being National and the remainder State banks, which, according to the banking directory of 1913, had $5,526,000 of capital, including surplus and undivided profits, and aggregate deposits of $32,023,000.

Thus, in proportion to population, the people of the third congressional district carry as heavy a volume of banking deposits as the cities of St. Paul and Minneapolis, notwithstanding the fact that as national banking reserve cities the Twin Cities carry the country reserves, which, indeed, constitute a large factor in their deposit volume. The $32,000,000 carried by the 117 banks of the third district, or about $300,000 per bank, represents original savings, the saved income and working capital of the farmers, merchants, small manufacturers, and townspeople of these 10 counties.

Besides the business of the farmers and merchants handled by these banks, there are the manufacturing enterprises, the State institutions, the creameries, mills, and elevators.

At Stillwater the State binder-twine and farm-machinery plant turns out a product valued at near $1,500,000, and 38 other manufacturing industries, including shoes, clothing, and lumber, add to the total output of that manufacturing center about $3,000,000 a year.

At South St. Paul is located the principal stock-yards and packing-house industry northwest of Chicago. The Union Stock Yards Co. handles 550,000 cattle, 600,000 sheep, and 1,000,000 hogs yearly, and the packers require 2,000 cattle, 3,000 sheep, and 8,000 hogs daily. The value of live stock received annually at South St. Paul is $45,000,000. The annual pay roll is $2,000,000. The annual bank clearings of this industrial center are $65,000,000.

Red Wing has about 40 manufacturing enterprises which employ 1,400 people, with a pay roll of $600,000, but is noted specially for the operation of the leading sewer pipe and stoneware industries of the upper Mississippi. Faribault is a manufacturing center which vies with Red Wing and Stillwater in volume of output and number of people employed. Kasota has the most extensive building stone industry of this section of the Northwest. Hastings is a pioneer in flour production. Cannon Falls has a large water power for varied power purposes, while every city and town in the district has its mills, elevators, and varied manufacturing enterprises, which swell the bank deposits and pay rolls of the town, while affording a good home market for the strongly diversified agricultural industry tributary.

Among the strongest of the local industries are the creameries, 115 in number, with 11,500 patrons, or an average of 100 to the creamery. The annual butter product of third district creameries runs from 12,000,000 to 15,000,000 pounds, and the total payment to patrons usually exceeds $3,000,000 a year.

Supplementing the work of the creameries in taking care of the product of the farm, there are 10 cheese factories which make 1,200,000 pounds of cheese per annum, and as many canneries, which turn out about 3,000,000 cans of corn, beans, peas, and tomatoes, nearly one-half of the canned product of the State.

Many of these enterprises are cooperative. The Yearbook of the Department of Agriculture for 1913 credits Minnesota with 632 of the total 2,165 farmers' cooperative creameries in the United States, and about 90 of them are located in the third district. The same Government authority credits this district with 28 farmers' elevators, 30 farmers' mutual insurance companies, and 8 cooperative cheese factories. To this may be added about 50 farmers' cooperative telephone companies.

The mills and elevators take care of that part of a grain product of 32,000,000 bushels which is not converted into live-stock products on the farm. Although the 10 counties of the district pride themselves on diversified farming rather than on grain production, Dakota County in the census year yielded 2,211,000 bushels of oats; Goodhue, 1,889,000 bushels of barley and 1,678,000 of oats; Sibley, 1,667,795 of wheat and 1,229,000 of corn; McLeod, 1,416,200 of wheat and 2,000,000 of other cereals; Rice, 3,600,000 as total of four cereals; while even little old Nicollet turned over 1,000,000 each of corn and wheat.

It is plain that the rise in value of the farm property during the census decade of 1900–1910 of 78 per cent was due to value of production and investment and not to speculative influence of population growth. In the first place, there was no increase in population. On the other hand, there was a marked growth of development all along the line of diversified agriculture, with improvement in live stock and farm methods, increased investment in buildings, live stock, and machinery, and an upward trend of prices maintained by a good local as well as general market for farm produce. The short of the story is that the United States census of 1910 credited the farmers of the third district with a total farm income in crops, dairy, poultry, and live-stock products approximating $40,000,000, which is nearly 20 per cent per annum on the entire $210,000,000 valuation of the district in lands, buildings, farm implements, and live stock. An industry which returns 20 per cent gross on the investment, with very little outside expenditure for labor and materials, is surely a sound business proposition.

Crops alone, including cereals, hay, vegetables, fruit, and special corps, brought in $27,127,028, which was more than the State total of Connecticut, Utah, or New Hampshire, or of New Mexico, Nevada, Arizona, and Rhode Island combined.

Live stock and poultry brought in $6,763,702, which exceeds the State totals of a half dozen separate States, while the dairy product was valued at $4,688,596, which exceeded that of Idaho, Delaware, Florida, and Arizona combined.

Though the third district has only 10 per cent of the State's population, it is credited by the United States census with 16 per cent of the total dairy receipts of Minnesota, which is one of the leading dairy States of the Union. Its milk product of 39,000,000 gallons, butter fat sold amounting to 5,493,148 pounds, and dairy receipts of $4,688,598 exceed, according to United States census statistics, the respective State totals of these items for a dozen different States.

As showing the generally diversified character of the farming industry of the third district, the hens earn nearly $2,400,000 a year, which is twice the cost of supporting the schools. We have 340,000 apple, plum, and cherry trees in our orchards, which yield 300,000 bushels of fruit. Our vines yield 65,000 pounds of grapes, our strawberry and raspberry patches yield 900,000 quarts of fruit, and we are even credited by the census authorities with 231 peach and nectarine trees, which in the census year bore 72 bushels of peaches and nectarines.

Most important of all, with a population somewhat less than 210,000, we have 42,397 families, or a family for every 5 persons, which shows that we have very few unattached wanderers. Moreover, for these 42,397 families we have 41,297 dwellings. In other words, there is a separate home for every family except 1,100, which doubtless live in city apartments, with a few young married couples living at home on the farm with the old folks.

In short, our little 10-county district of 210,000 people prove their progress and prosperity by this solid evidence of their faith and good works:

Farm acreage of 2,920,767 acres, 91 per cent of the total land area, and greater than the farm acreage of Massachusetts.

Farm property valued at $210,000,000, $1,000 for each man, woman, and child in the district, and greater than the total for the State of Maine.

Nine hundred and fifty-seven school districts, with $1,250,000 for the education of 42,000 pupils, with 750 special high, graded, rural, and industrial schools earning State maintenance.

Appropriations netting $393,836 from the State treasury for schools, roads, and bridges, in return for $320,614 paid to the State for taxes.

One hundred and seventeen banks, carrying $32,000,000 of home deposits.

A State binder-twine and farm-machinery plant, which puts the trust out of business in Minnesota, with a $1,500,000 product at reduced prices.

A stock-yard and packing-house industry which takes $45,000,000 of live stock per annum.

Manufacturing industries which, in the aggregate, add a good many million dollars to the annual pay roll.

One hundred and fifteen creameries, which pay $3,000,000 a year to 11,500 patrons and make upward of 12,000,000 pounds of gilt-edged butter.

Ten cheese factories, which show a 1,200,000-pound product, and 10 canneries, which have a 3,000,000-can output.

Farmers' cooperative creameries, cheese factories, canneries, elevators, mutual insurance and telephone companies, over 200 in the aggregate, manned and financed by the farmers for their mutual benefit.

A 32,000,000-bushel grain crop, a 39,000,000-gallon milk product, a 300,000-bushel fruit crop, and a total farm income from crops, live stock, and dairying amounting to approximately $40,000,000 per annum, which is 20 per cent on the $210,000,000 investment and shows the cause of a 78 per cent increase in the value of the farms of the third district for the decade 1900–1910, and incidentally why this district is one of the most prosperous in the Union.

For a detailed statement, by counties, of the principal agricultural statistics summarized above, the reader is referred to the following comparative tables:

FARM ACREAGE AND VALUE OF THIRD CONGRESSIONAL DISTRICT.

The 1910 statistics of the United States Census Bureau in regard to farm acreage and value of farm property for the 10 counties of the third congressional district of Minnesota follow:

Counties.	Farm acres (1910).	Per cent of land total.	Value of farm property.		Increase.
			1910	1900	
					Per cent.
Carver	216,391	89.9	$20,370,744	$9,342,243	118
Dakota	329,801	86	22,986,004	11,793,346	94.9
Goodhue	462,052	94.1	32,266,663	18,044,617	78.8
Le Sueur	261,945	87.8	20,048,441	11,126,777	80.2
McLeod	298,961	94.2	23,120,367	12,441,951	85.8
Nicollet	262,212	92.5	15,863,289	10,156,362	56.2
Rice	297,944	94	22,753,492	14,202,328	60.2
Scott	207,884	88.7	14,610,955	8,738,720	67.2
Sibley	357,265	95.4	22,006,868	13,148,368	69.4
Washington	226,312	89.1	16,334,539	9,062,150	80.2
10 counties	2,920,767	91.1	210,361,362	118,056,962	78.2

THIRD DISTRICT VERSUS ENTIRE STATES.

The 10 counties of the third Minnesota district exceed in farm acreage the following States:

	Acres.
Massachusetts	2,875,941
Nevada	2,714,757
New Jersey	2,573,857
New Mexico	1,246,613
Delaware	1,038,866
Rhode Island	433,308

Land in farms constitutes 91.1 per cent of the total land area of the third congressional district, as compared with 75 per cent for the East North Central States, 71.2 per cent for the West North Central States, 67.5 per cent for the Middle Atlantic States, 49.7 per cent for New England, and 46.2 per cent for the United States at large.

VALUE FARM PROPERTY—THIRD DISTRICT VERSUS ENTIRE STATES.

The farm property of the 10 counties of the third Minnesota congressional district was valued by the Census Bureau in 1910 at $210,361,362, as compared with $118,056,962 in 1900, an increase of 78.2 per cent in 10 years. With only 10 per cent of the Minnesota total population, the third district compares with certain entire States in value of farm property, as follows:

Third district	$210,361,362
Maine	199,271,998
Wyoming	167,189,081
New Mexico	159,447,990
Connecticut	159,399,771
Utah	150,795,201
Vermont	145,399,728
Florida	143,183,183
New Hampshire	103,704,196
Arizona	75,123,970
Delaware	63,179,201
Nevada	60,399,365
Rhode Island	32,990,739

Third district has only 7 per cent less wealth in farm property than the State of Massachusetts, and only 15 per cent less than New Jersey. Moreover, third district farms are worth almost 25 per cent of all the farms of the six New England States. The increase in value during the 10 years, 1900–1910, was 78.2 per cent for the third district, as compared with 28.1 per cent for the Middle Atlantic States and 35.6 per cent for New England.

This increase in value was normal, being based on increased farm income. Population showed no increase, which eliminated increase in speculative value. The farmers of the district do not seek immigration or inflation of property values, being well satisfied to enjoy the benefits of prosperous farming undisturbed.

Farm buildings, implements, and live stock of third Minnesota congressional district (1910).

County.	Value buildings.	Value implements.	Value live stock.
Carver	$4,240,216	$665,282	$2,001,427
Dakota	4,135,230	783,320	2,397,794
Goodhue	6,491,836	1,120,114	3,613,070
Le Sueur	3,247,980	590,072	1,959,174
McLeod	4,204,300	819,395	2,396,522
Nicollet	2,971,489	633,312	1,842,065
Rice	4,304,725	727,941	2,520,637
Scott	2,522,625	504,736	1,548,639
Sibley	3,678,471	795,438	2,291,990
Washington	3,819,045	587,150	1,728,057
10 counties	39,665,917	7,227,261	22,299,375

THIRD DISTRICT VERSUS VARIOUS STATES.

In value of farm buildings the 10 counties of the third district excel the State total of the following States:

Third district	$39,665,917
Idaho	25,112,509
Montana	24,854,628
Florida	24,407,924
Delaware	18,217,822
Utah	18,063,168
Rhode Island	12,922,879
Wyoming	9,007,001
Arizona	4,935,573
Nevada	4,332,740
District of Columbia	1,037,393

In value of farm implements the third Minnesota district excels: North Carolina, $7,011,513; Connecticut, $6,916,648; New Hampshire, $5,877,657; Utah, $4,468,178; Florida, $4,446,007; New Mexico, $4,122,312; Delaware, $3,206,095; Wyoming, $3,668,294.

In value of domestic animals on the farms the third Minnesota district exceeds the following States:

Third district	$22,299,375
Massachusetts	20,741,366
Florida	20,591,187
Nevada	19,213,930
New Hampshire	11,910,478
Connecticut	14,163,902
Delaware	6,817,123
Rhode Island	5,276,472
District of Columbia	152,840

Value of crops, poultry, and live stock receipts.

County.	Value of crops.	Value poultry product.	Live stock sold.
Carver	$2,264,655	$249,156	$436,192
Dakota	3,177,701	263,420	535,229
Goodhue	3,997,787	320,005	661,709
Le Sueur	2,473,797	232,601	400,698
McLeod	2,894,083	280,265	371,070
Nicollet	2,349,362	167,807	330,491
Rice	2,914,736	258,297	588,087
Scott	1,807,505	182,771	318,931
Sibley	3,117,610	247,123	375,715
Washington	2,120,792	173,131	371,004
10 counties	27,127,029	2,374,576	4,389,126

In value of crops the third district exceeds the State totals of Connecticut, $22,487,999; Utah, $18,484,615; New Hampshire, $15,976,175; Wyoming, $10,022,961; Delaware, $9,121,809; New Mexico, $8,922,397; Nevada, $5,923,536; Arizona $5,498,872; Rhode Island, $3,937,077; District of Columbia, $546,479.

In value of live stock sold the third district exceeds Nevada, $4,339,040; New Hampshire, $3,482,591; New Jersey, $3,433,924; Louisiana, $2,933,052; Connecticut, $2,687,816; South Carolina, $2,430,169; Florida, $1,350,243; Delaware, $768,034; Rhode Island, $580,949.

DAIRY CENSUS OF THIRD CONGRESSIONAL DISTRICT.

The United States Census Bureau gives the following facts regarding the dairy industry of the 10 counties comprising the third Minnesota congressional district for the year 1910.

County.	Number cows.	Milk produced.	Butter fat sold.	Value product.
		Gallons.	*Pounds.*	
Carver	19,532	5,086,733	928,738	$606,016
Dakota	12,204	3,606,034	319,816	430,403
Goodhue	24,111	6,413,763	1,166,835	760,130
Le Sueur	13,068	2,201,006	112,505	303,656
McLeod	19,537	4,213,903	716,424	596,884
Nicollet	11,122	2,534,308	295,986	257,804
Rice	20,790	5,607,021	1,047,423	688,902
Scott	12,349	2,404,008	322,462	282,453
Sibley	16,611	3,061,976	464,977	374,099
Washington	10,637	3,972,611	117,982	388,161
10 counties	159,971	39,101,455	5,493,148	4,688,598

The 10 counties of the third congressional district have 208,040 people out of 2,075,708 for the State, or almost exactly 10 per cent of the total State population.

In number of dairy cows the third district has 159,971 out of the State's total of 1,035,290, or 15 per cent.

In value of dairy products the third district realized in 1910 the total sum of $4,688,598 out of a State total of $29,219,406, or 16 per cent.

In other words, as a dairying district the third district has a per capita income 60 per cent larger than the State's average.

The cows on our 20,000 farms put nearly $5,000,000 into our local banks each year, which is better than 159,971 people do in some places.

FARM MORTGAGES OF THIRD CONGRESSIONAL DISTRICT.

Statistics of farm mortgages are restricted to farms operated by owners. The 1910 returns of number of farms free of mortgage, number farms mortgaged, value of mortgaged farms, and amount of mortgage debt for the 10 counties of the third Minnesota congressional district follow:

County.	Number farms free.	Number mortgaged.	Value mortgaged farms.	Mortgage.
Carver	1,138	522	$4,037,120	$1,107,773
Dakota	1,072	503	2,764,785	682,220
Goodhue	1,423	636	3,946,439	1,096,360
Le Sueur	1,307	521	3,137,910	838,738
McLeod	1,306	575	4,313,025	1,068,372
Nicollet	688	251	1,493,324	424,805
Rice	1,139	778	4,658,930	1,216,067
Scott	899	306	2,003,930	528,185
Sibley	1,049	502	3,420,418	945,821
Washington	983	585	2,841,935	697,505
10 counties	11,004	5,169	32,707,816	8,605,848

SUMMARY.

Of 16,173 farms in the third district operated by owners, 11,004, or 68 per cent, are mortgage free; 5,169, or 32 per cent, have mortgages.

The value of the mortgaged farms is $32,707,816, and the amount of the mortgages is $8,605,848, or 26 per cent of the security.

The total real value of the farm property of the third district is $210,361,362; so that the total amount of farm mortgages, which is $8,605,848, is only a fraction over 4 per cent of the total farm valuation of the district.

The total farm income of the district for 1910 exceeded $40,000,000. Accordingly, about one-fifth of the annual production of one year will pay off all the mortgage debt.

STATE PRISON AND MANUFACTURING PLANT AT STILLWATER, MINN.

A Government committee of experts visiting the new prison and manufacturing plant at Stillwater reported to the United States War Department: "It is the finest and most modern prison in the United States, and probably in the world."

It is not difficult to build a State capitol or State university that will add credit and fame to the city in which the institution is located. All that is required is liberal appropriation by the legislature. It is a far greater achievement to build and maintain a State prison that will add to the attractiveness, business, and fame of a city which is the home of a prison; but that is what has been done in Stillwater.

It is true that the legislature has responded liberally to the enlightened demands of the State for a State prison worthy of our civilization. The legislature of 1909, which started the ball rolling for the new prison plant with an appropriation of $2,250,000, made a noble response to the demands of Minnesota. But it must be borne in mind that years of prior efficient administration had demonstrated in actual earnings turned by the

management into the State treasury that the investment was profitable as a money-maker and could prove its wisdom in dollars and cents.

Every year for the past 12 years this institution, through its splendid industrial plant and business organization, has shown an excess of earnings over expense for the maintenance of the State inmates. The average net earnings per capita, after deducting expenses from gross earnings, is over $160 for each inmate during this 12-year period. At that rate of profit the State simply exercised ordinary business sagacity in providing a modern, up-to-date, and enlarged capacity plant. The only limit to the income seems to be a slight shortage in public labor supply, namely, the application and receipt of convict inmates.

The report of the board of control and the warden to the last State legislature showed total earnings of the industrial plant for the year ending July 31, 1912, to be $305,084.54. The net earnings, after payment of all salaries and wages, provisions and clothing, fuel, light and water, traveling expenses, telegraph and telephone, stationery and printing, hospital and medical attendance, building repairs and industrial expenses, and all other incidentals, was $139,635.79. The State can borrow money at 4 per cent. The 1912 net earnings of approximately $140,000 would pay 4 per cent on an investment of $3,500,000, which is more than the total required. But this does not allow for the increase in output due to the enlarged capacity and improved machinery and methods of the new industrial plant. There is little question that the management soon will be demonstrating net earnings of $200,000 per annum, which would pay interest on double the required investment.

The industrial experiment of Minnesota with its binder-twine plant is the most notable success of the kind in this country. It is notable from three points of view: First, in its humanitarian aspect in providing a useful and healthful occupation with pleasant quarters and a business incentive to the inmates; second, in giving the farmers of Minnesota assured protection against possible extortion by twine and machinery trusts and combines; and, third, in making our State prison a self-supporting and even a revenue-producing institution instead of one that is a burden upon taxpayers.

Considering the last-named point first, it appears from the official report to the last legislature that the total net profit of the twine plant up to August 1, 1912, had been $1,786,247.27. I have no doubt that this total has grown during the two years that now have elapsed since that report to approximately $2,000,000. It should certainly be good news to State taxpayers, who since time immemorial have looked upon a State institution as a tax-eating State burden, to learn that they have one State institution that not only has supported itself but earned $2,000,000 of net profit.

To twine manufacture has been added the successful manufacture of a variety of farm machinery. This at first was experimental. New types of farm machinery had to be practically invented, because patents covered everything turned out by corporate manufacturers. The whole business, both manufacturing and jobbing, had to be built up from the bottom. In 1910 there was a start made with 80 binders and 233 mowers, with some loss on the experiment. But in 1912 the plant turned out 1,100 binders, 2,200 mowers, 1,200 hayrakes, and 1,100 wagon and transport trucks, on which the sales department showed a net profit of $21,207.10. I understand that a corn harvester and other farm implements and machines have now been added and the total output fully doubled. There is little question that with steady development on this excellent beginning the machinery department will soon duplicate the phenomenal record of the twine department, and become a powerful regulator of the agricultural-machinery market in the interests of a fair deal for the great farming industry of our State.

In this respect, the binder-twine plant has achieved a notable record. The zone of its influence has extended not only throughout Minnesota, but into Wisconsin, Iowa, North and South Dakota. The average sales now appear to be about 18,000,000 pounds of State-produced binder twine per annum. Doubtless this season the output exceeds that figure. It is estimated that the average economy to the farmer because of the production and competition of the State twine plant is about 2 cents per pound. On the 18,000,000 pounds annually sold the saving to the farms would be $360,000. But this is only a part of the story; for doubtless the lion's share of the saving is in the reduced prices which the twine and harvester combines have been compelled to make in the entire zone tributary to the twine and farm-machinery industry of the State at Stillwater. There is little question that the total economy to the agricultural industry of our State approximates $1,000,000 per annum.

Expert commissions and students of humanitarian questions have visited this institution from the various States of the Union, and from many foreign countries, and go away to report the excellent humanitarian results of the Minnesota experiment in providing an industrial occupation with well-lighted and airy surroundings, perfect sanitation, and in every respect considerate and humane treatment on a par with that of a model modern business house, which prevail at the new State prison and manufacturing plant. The average visitor who passes through the new manufacturing plant would never guess from the faces of the workers or from the busy rush of business on every hand that he was visiting a prison, unless he had been informed of the fact beforehand. The airy and roomy sleeping berths of the men have nothing in common with the narrow stone cells of the traditionary prison. The sanitary conditions would well serve for a model for many a privately owned factory. The effect on the cheerfulness and energy and health of the inmates is marked. They take interest in their work. Indeed, the institution furnishes an individual incentive to this end by offering an opportunity to each inmate to earn for himself a fund to aid his dependent relatives or as a savings fund against the day of his release. The success of this experiment is apparent in the fact that most of the inmates avail themselves of the opportunity and accumulate such savings. The net effect is shown in the comparative numbers in the three prison grades: First grade, or honor list, 657; second grade, 152; and third grade, who wear the traditional stripes, only 5—as of July 31, 1912, the date of report to the last legislature.

So that, not only as a model structure and plant, but likewise as a model of business development and management, as a revenue producer to the State, and as a humane institution conducted in the interests of the inmates as members of our common humanity, we may say with the commission which reported to the Secretary of War:

It is the finest and most modern prison in the United States, and probably in the world.

Coast-Guard Bill.

EXTENSION OF REMARKS

OF

HON. LATHROP BROWN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 8, 1914.

Mr. BROWN of New York. Mr. Speaker, before taking up in detail the merits of the Coast Guard bill, I wish to state that I began to take an interest in the Live-Saving Service at a very early age. The 1st of August was with me a date to conjure with, because on that date the life-saving crews reassemble and begin anew their work, which on the eastern coast lasts for 10 months of the year. Long before breakfast time I used to let myself out of the house, hurry over to the beach, and beg to be taken out through the breakers in the surf boat by Capt. Burnett, of the Southampton Station. A small boy can curl up in a very small space in the bow of a boat, and I doubt if the crew knew half the time if they had a passenger. Morning after morning would find me in my place, the bow of the boat rising under the spent breakers, each surfman partly in the water beside his oar, ready for the word. Then a wave greater than the others would lift itself over the outside bar, come towering toward the beach, and topple over with a roar of seething water. Instantly the boat would be shoved out toward the sea, the bow men climbing aboard first and pulling furiously at their oars—the others following immediately—to drive the heavy craft through the danger line before the next wave should capsize it. Time and again the second wave has broken under the boat, dropping it 10 feet with the noise of a cannon, but always that boat goes forward, in preparation for the time when shipwrecked sailors shall need its help on some squally winter's night.

Twice a week, as I remember, there was practice at shooting the life line over a mast. The breeches buoy would be rigged, and on those quiet summer mornings a small boy would have to serve for an exhausted frozen crew and passengers.

What urgency brings this bill before the House? It has already passed the Senate. A brief statement of the conditions of service of these men whom I may well designate as heroes of peace will, I hope, suffice.

On the Atlantic and Gulf coasts the life-saving stations are open for 10 months in the year—on the Great Lakes about 8½ months—and the surfmen receive $65 per month for the number of months during which they are on active duty. In addition, they receive 30 cents per diem for rations, as they have to live away from their families. On $65 per month for 8 or 10 months—unless they are so fortunate as to secure employment during the other months—the surfmen are supposed not only to bring up their families but to set aside a fund for their old age, which is obviously impossible. Thirty cents a day will not feed a man very well, except in great numbers; and, in additon to living expenses, the surfmen must furnish their own uniforms, rubber boots, oilskins, and other necessaries. No. 1 surfmen get $70 per month; keepers, $1,000 per annum; and district superintendents, $2,200.

The duties of the surfmen, under the direction of the keepers, are to patrol the coast by day and by night, warn vessels away from danger, and go to the rescue of any vessel, her crew and passengers, at all times with boat or life lines, or both. They must be prepared to risk and give their lives at any time in the ordinary performance of their duties. They must be expert in the handling of their boats, and must be able to work together, for a green man in a boat at night in a howling gale and raging sea is worse than none. The slightest mistake means disaster both to the life-saving crew and the mariners in distress.

They must be sound in wind and limb and very strong, in order to row their boats sometimes for 10 hours at a stretch in zero weather with the wind and snow blowing 40 miles an hour. Each year they must pass a medical examination before they can sign on for the ensuing year, and as exposure and strain become apparent in rheumatic or heart symptoms, incurred in the line of duty, they are dropped without consideration except a maximum of two years' pay to themselves or to their widows, should they be killed while on duty.

Clearly this is an extra hazardous profession, and, like all similar professions, is inclined to draw to itself the bravest of brave men, yet in competition with commercial positions fewer and fewer men can afford to enter the service for their families' sake. Something must be done.

Capt. Chapman, superintendent of the tenth district, testified before the Senate committee:

My district averages from 25 to 30 per cent of vacancies in the crews, which are filled constantly by temporary men, who, to a large extent, are unskilled. The cry to-day from the keeper is, "Give me men; give me skilled men."

The Buffalo crew last year had but one enlisted man and seven temporaries. The Cleveland crew was about the same.

Capt. Morgan, superintendent of the seventh district, testified:

We have had some trouble getting men, and a good many of them are leaving the service. They can find occupations that will pay them better.

Capt. Harding, superintendent of the first district, testified:

Our service is getting impaired. We can not get men; and why? You hold out no inducement for promotion; you hold out no reward.

Capt. Bowley, superintendent of the second district, testified:

We can not get good men to enter the service. There is nothing to care for them if they are disabled on patrol or regular work, and they simply will not come in.

Capt. Tunnell, superintendent of the sixth district, testified:

Now, I am losing good men in my district—No. 1 men; very valuable fellows—because they do not see any prospect of advancement in the future; and they are going into commercial business.

Capt. Kiah, superintendent of the eleventh district, tesified:

I have trouble in not getting enough men; we are short, and have been.

From Maine to Michigan is the same story. What relief, therefore, is provided in this bill in order to place this invaluable service on a plane of the highest efficiency?

Mr. Speaker, many of the Members of this House will remember the bill, passed during the Spanish War at the urgent request of the Secretary of the Navy, continuing the duties of the Life-Saving Service on the Atlantic coast during the months of June and July of that year for coast patrol work. It is obvious what a splendid first naval reserve would be the 4,000 trained members of the life-saving crews, combined with the Revenue-Cutter Service, during a war.

This bill combines the Life-Saving Service with the Revenue-Cutter Service in the Coast Guard, operating in times of peace under the Secretary of the Treasury, as at present, but putting the Coast Guard under the orders of the Secretary of the Navy in time of war or at the direction of the President. The benefit to the national defense from such a course is obvious, and to offset the added danger this bill makes applicable to the life savers, when combined into the Coast Guard, those provisions of the Revenue-Cutter Service act which have chiefly been responsible for its high standard of excellence and efficiency.

The officers and enlisted men of the Coast Guard as a military organization will become entitled to certain benefits due to those occupied in extra hazardous professions. The surfmen of to-day under the Coast Guard bill will be entitled to—

1. Retirement at 64 years of age, or after 30 years' service, or for disability, on a retirement allowance of 75 per cent of their active-duty pay.

2. Longevity pay amounting to $1 per month for each three seasons in the service.

3. Clothing allowance of $45 the first year and $20 each year thereafter.

4. Free treatment in the Government hospitals.

5. Rations as at present.

The No. 1 surfmen, keepers, and superintendents will receive larger longevity pay, amounting to 10 per cent for each five years of service, not to exceed 40 per cent. While I should like to see the pay of the surfmen increased in a like amount, yet the actuary of the Treasury Department estimates that the annual expense of the service under the provisions of this bill, including about $40,000 additional to the Revenue-Cutter Service, will be about $400,000 more than at present. This is, of course, a large sum in itself, and perhaps sufficient to accomplish the desired results at this time.

The men in the service are almost a unit in their approval of the Coast Guard bill. The keepers and the superintendents are for it. The Secretary of the Treasury has submitted to Congress a very favorable report on it. The Senate has passed it. The House Committee on Interstate and Foreign Commerce has favorably reported it to the House. All the preliminary work has been done, and this great measure only awaits the vote of the House.

In conclusion, Mr. Speaker, I wish to state that while the number of persons rescued in the boats of the Life-Saving Service during the past year has aggregated the high total of 4,096, averaging almost two persons for each life-saver, and the value of ships and cargoes assisted by the life-saving crews without other help amounts to $6,032,935, one feature of their work has received but little attention. On their coast-patrol duty the life-savers gave warning signals to 182 vessels which were running into danger. One hundred and forty-two of those were given at night, so that it is impossible to tell what kind of vessels were warned or how many persons they carried. Without assuming that, but for these timely warnings, all of these 182 vessels would have run ashore and that lives and property would have been lost, yet I believe that this work alone would justify the Members of this House in giving full consideration to the urgent needs of this splendid body of men, who I repeat again, may well be called "Heroes of peace."

American Subsidies to Foreign Ships Using the Panama Canal.

EXTENSION OF REMARKS

OF

HON. STANLEY E. BOWDLE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 26, 1914.

Mr. BOWDLE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following editorial and my response thereto:

AMERICAN SUBSIDIES TO FOREIGN SHIPS.

For each ton of foreign shipping using the Panama Canal its foreign owner, or the government of its foreign owner, will pay the United States an average of $1, and the taxpayers of the United States will contribute an additional $1.70 for each ton. It is estimated that the first year 10,000,000 tons of ships will use the canal, at an expense to the United States, as computed by Senator O'GORMAN, of $5,000,000 for maintenance and operation, $10,000,000 for military defense, and $12,000,000 interest cost.

It is of record that British foreign-going shipping slightly exceeds that of all the rest of the world. It is a fair estimate, therefore, that not less than 5,000,000 tons of ships using the Panama Canal will be British, and that the taxpayers of the United States will annually contribute $8,500,000 to facilitate the passage of British ships through the Panama Canal. It is estimated that 2,000,000 tons of American shipping in domestic and foreign trade will use the Panama Canal, whose owners will pay full tolls as well as their proportionate share of the $17,000,000 deficit resulting from our ownership, administration, and defense of the Panama Canal.

Article 2 of the Hay-Pauncefote treaty provides that the United States "shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and

management of the canal." Since it would be "dishonorable" for the United States to "violate" any of the terms of that treaty, American taxpayers can not escape the supreme and unalloyed enjoyment of subsidizing foreign shipping in the sum of $13,600,000 annually in their use of the canal. As that consummate wit, Ambassador Page, would say, our pleasure will be all the greater as we realize that $8,500,000 of this $13,600,000 American subsidy to foreign ships will facilitate the use of the canal by British shipping.

As a toll contributor the United States will achieve a distinction far surpassing that of a toll collector. How American taxpayers will enjoy paying $13,600,000 annual subsidies to piece out the cost of passing foreign ships through the Panama Canal as they reflect that dear old, generous, magnanimous John Bull will pocket each year the tidy $8,500,000 that his ships will save at the expense of the American people.

HOUSE OF REPRESENTATIVES,
Washington, August 19, 1914.

THE MARINE NEWS,
New York City.

GENTLEMEN: Your reprinted editorial in the current issue of your paper, entitled "American subsidies to foreign ships," is very interesting. I am, however, not entirely clear as to which of two conclusions you desire the reader to reach, for the article will support either, viz: (a) Since there will be a great deficit in the operation and maintenance of the canal under the present tollage, the rate should be raised to a point which would wipe out the deficit and possibly give us a balance, and then we would, in fact, "enjoy" the ownership, or (b) the tolls repeal law should not have been passed, and then the much greater deficit paid by the whole people would have been thoroughly "enjoyed."

I say, I don't know which of these conclusions you desire to support. As the article, skillfully written, is so critical of the present situation with respect to tolls, I take it that you did not wish free tolls disturbed; but that having been disturbed you now open up the whole question by reflecting upon the economic policy of the entire Panama situation.

That there will be a very large deficit to be made up by the American people is evident enough, but how this deficit is to be made easier to handle by increasing it by free tolls to any interest is past my ken.

Again, admitting the deficit, which I do, I should be glad to rid the country of it (the deficit); but it so happens that the Panama tollgate, like any tollgate, has a limit which can be charged without driving vessels around the Horn. Whether the present charge per ton might not be horizontally raised without hindering or suppressing traffic, I can not say, but time ought to tell. If it can be raised, there is nothing in the law which would prevent the President of the United States from doing so.

Your very decided objection to what you call the "subsidy" paid to British shipping is based on the evident idea that we should not pay for British use. But why should the whole people pay for any ship that uses? Of course I know we speak of "our ships" affectionately, but why not speak of "our Standard Oil Co." in the same terms?

But again, since the whole deficit would be greater with free coastwise tolls, would what you allege to be the "subsidy" paid to England be lessened?

You break into fine sarcasm over the use of that word "enjoy" in the Hay-Pauncefote treaty. Allow me to ask if this word is altogether misused, if the canal, at its inception, was regarded as a military necessity for the union of our widely separated coasts? If a nation, by a great work, attains for itself a great object, may it not be said to "enjoy" that work?

With my compliments, I am,
Sincerely, yours,

STANLEY E. BOWDLE.

Banking and Currency.

EXTENSION OF REMARKS

OF

HON. OSCAR W. UNDERWOOD,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 29, 1914.

Mr. UNDERWOOD. Mr. Speaker, under the unanimous consent granted to me to extend my remarks in the RECORD, I include the following statement by Secretary McAdoo:

STATEMENT OF SECRETARY M'ADOO.

Among the eligible securities to be used as a basis for the issue of currency I have decided to accept from national banks, through their respective national currency associations, notes secured by warehouse receipts for cotton or tobacco, and having not more than four months to run, at 75 per cent of their face value. The banks and the assets of all banks belonging to the currency association will be jointly and severally liable to the United States for the redemption of such additional circulation, and a lien will extend to and cover the assets of all banks belonging to the association and to the securities deposited by the banks with the association, pursuant to the provisions of law; but each bank composing such association will be liable only in proportion that its capital and surplus bear to the aggregate capital and surplus of all such banks.

This plan ought to enable the farmers to pick and market the cotton crop if the bankers, merchants, and cotton manufacturers will cooperate with each other and with the farmers and will avail of the relief offered by the Treasury within reasonable limits. Such cooperation is earnestly urged upon all these interests. The farmer can not expect as high a price for cotton this year because of the European war, yet he should not be forced to sacrifice his crop. The banker and the merchant should not exact excessive rates of interest, and the manufacturers should replenish their stocks as much as possible and pay reasonable prices for the product. If this is done, and it can be done if everyone displays a helpful spirit, a normal condition can be restored and there ought to be no serious difficulty in taking care of the cotton problem.

This is a time when the entire country expects that purely selfish interests shall be subordinated to the common good; that undue advantage shall not be taken of the necessities of each other. I am happy to say that this spirit seemed to animate those who attended the so-called cotton conference held at my request in Washington on August 24 and 25.

Since the law leaves it entirely in the discretion of the Secretary of the Treasury to issue or not to issue the currency to which I have referred, I shall not hesitate to refuse it if I am convinced that it will be used merely for speculative purposes instead of for the operation of harvesting and carrying the crop until a reasonable market can be found and for the needs of legitimate business.

It is not my purpose to prescribe the character of warehouses in which cotton and tobacco may be stored. The banks will be relied upon to see that warehouse receipts issued by responsible warehousemen or warehouse companies alone are accepted, and that the cotton and tobacco stored in such warehouses is covered by adequate fire insurance and is protected against injury by the elements.

In order to obtain such currency the following things should be observed by banks applying therefor:

First. Not less than 10 national banks in any given territory, each having an unimpaired capital and surplus of not less than 20 per cent, desiring such currency, shall form a national currency association with an aggregate capital and surplus of not less than $5,000,000, as required by the act. Full particulars and blank forms for this purpose may be had upon application to the Comptroller of the Currency, Washington, D. C.

Second. Any national currency association formed in accordance with law will receive the approval of the Secretary of the Treasury. Already 37 such associations have been organized in the various States.

Third. Under the law the Secretary of the Treasury may accept as security for currency—

(a) Bonds of any State or of any city, town, county, or other legally constituted municipality or district in the United States which has been in existence for a period of 10 years and which, for a period of 10 years previous to such deposit as security, has not defaulted in the payment of any part of either principal or interest of any funded debt authorized to be contracted by it, and whose net funded indebtedness does not exceed 10 per cent of the valuation of its taxable property, to be ascertained by the last preceding valuation of property for the assessment of taxes.

(b) Any securities, including commercial paper, approved by the Secretary of the Treasury, held by a national bank and made available through a national currency association under the direction and control of the Secretary of the Treasury, at not exceeding 75 per cent of the cash value of such securities or commercial paper.

(c) No national bank shall be permitted to issue circulating notes based on commercial paper alone in excess of 30 per cent of its unimpaired capital and surplus.

Fourth. The total amount of currency issuable to any bank, including its circulating notes issued against United States bonds, shall not be more than 125 per cent of its unimpaired capital and surplus.

Fifth. Each bank or currency association receiving currency must maintain in the Treasury at Washington a redemption fund in gold of at least 5 per cent. The Secretary of the Treasury may at any time require such additional deposits in gold as in his judgment may be sufficient for the redemption of such notes.

I am convinced that there is adequate power under existing law to issue through the national banks all the currency to meet any reasonable demand that may develop in any part of the country and that it is not necessary to extend the note-issuing privilege to State banks.

The Secretary of the Treasury already has the power to issue $1,000,000,000 of additional national-bank currency if it should be required, but I can not imagine a condition when any such need will arise.

Revoking Leaves of Absence.

EXTENSION OF REMARKS
OF
HON. CHARLES H. BURKE,
OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 25, 1914,

On House resolution 601, as follows:

"*Resolved*, That all leaves of absence heretofore granted Members are hereby revoked;

"*Resolved further*, That the Sergeant at Arms is hereby directed to notify all absent Members of the House by wire that their presence in the House of Representatives is required and that they must return without delay to Washington;

"*Resolved further*, That the Sergeant at Arms is directed to enforce the law requiring him to deduct from the salary of the Members their daily compensation when they are absent for other cause than sickness of themselves and their families."

Mr. BURKE of South Dakota. Mr. Speaker, I voted against the resolution offered yesterday by the distinguished majority leader revoking all leaves of absence heretofore granted to Members and instructing the Sergeant at Arms to notify them that their presence here is required, and further directing him to deduct from the salary of Members their daily compensation when they are absent for other causes than sickness of themselves or families; and I desire at this time to discuss the proposition, which I am sure would not have been adopted by the House if the vote upon it had been postponed until to-day.

So far as that portion of the resolution revoking leaves of absence and directing the Sergeant at Arms to notify absent Members to return is concerned, I am in full accord, though I do not believe any resolution was necessary, as the Speaker might have directed such a message to be sent to absent Members. It is the following portion of the resolution that caused me to vote as I did:

Resolved further, That the Sergeant at Arms is directed to enforce the law requiring him to deduct from the salary of the Members their daily compensation when they are absent for other cause than sickness of themselves and their families.

The statute which the Sergeant at Arms is directed to enforce is section 40 of the Revised States, which was originally enacted in 1856. It reads as follows:

SEC. 40. The Secretary of the Senate and Sergeant at Arms of the House, respectively, shall deduct from the monthly payments of each Member or Delegate the amount of his salary for each day that he has been absent from the Senate or House, respectively, unless such Member or Delegate assigns as the reason for such absence the sickness of himself or of some member of his family.

There is no doubt that the law of 1856, which was an act fixing the compensation of Members of Congress, was repealed by subsequent acts changing the compensation. It appears, however, that section 5 of the 1856 act was carried into the Revised Statutes as section 40, which I have justed cited. In 1866 Congress passed an act relating to the compensation of Members, and after it went into effect, if there had ever been any deductions of the monthly salary of each Member on account of absence, it was abandoned upon the passage of said act. The law of 1856 did not provide for paying Members monthly or that they should be paid during the recess of Congress, but only during the sessions; whatever remained unpaid at the end of the Congress of the $6,000 provided was paid to the Members. I think the statute of 1866, dealing with the same subject matter as the act of 1856, and being repugnant thereto, repealed it by implication. While it may be claimed that by the enactment of the Revised Statutes on June 22, 1874, section 5 of the act of 1856 was reenacted and continued in force, and assuming such to be the case, it is my opinion that it was repealed by the act of January 20, 1874, repealing the act increasing the salaries of Members of Congress of March 3, 1873, because the act of January 20, 1874, was passed subsequent to December 1, 1873, the date when the Revised Statutes went into effect. In Bradshaw v. United States (14 Ct. Cls. Rept., p. 81) it is held:

The Revised Statutes were passed June 22, 1874, but embraced the statutes in force December 1, 1873 (Rev. Stats., sec. 5595). Between those dates Congress passed many acts repealing and altering previous statutes which were incorporated into the revision. It is, no doubt, the correct construction that all such acts are to be taken as having to that extent altered the Revised Statutes.

If section 40 of the Revised Statutes was not repealed by the act of January 20, 1874, it clearly was repealed by the act of February 26, 1907, which is the latest law fixing the compensation of Members of Congress. Section 4 of the legislative act of 1907 fixed the compensation of Senators and Representatives in Congress at the rate of $7,500 per annum each. The next section—section 5—reads as follows:

SEC. 5. That all laws and parts of laws inconsistent with this act are repealed.

Any law that would reduce the salary of a Senator or Representative would certainly be inconsistent with the law making the salary $7,500 annually, and therefore section 5 clearly repeals section 40 of the Revised Statutes.

At the time when its enforcement was attempted in 1894 there was a situation prevailing that made the presence of a quorum necessary, there being an important tariff bill under consideration that had to be passed, and a quorum was demanded. On this occasion there was no such emergency, and besides, the roll call disclosed, on the passage of the resolution, the presence of 248 Members, 30 more than a quorum, and I have no doubt that several more were in the city who did not happen to be in the House.

Congress has been in session all of the time since the special session that began on April 7, 1913, and the business of this session, so far as the House is concerned, has been mostly transacted, and there is no occasion for the membership being here constantly. If an emergency should arise and the presence of more Members should be necessary, they could be brought here by a telegram from the majority leader or the Sergeant at Arms without any action on the part of the House such as the adoption of the drastic resolution presented by the distinguished leader of the majority.

No such resolution was ever adopted in the House of Representatives on any other occasion, although the law was enacted nearly 60 years ago. The fact that it never has been enforced, with the exception of the one month in the Fifty-third Congress, when the Sergeant at Arms attempted to enforce it by order of the Speaker, would clearly indicate that it had been repealed. In the Fifty-first Congress, when there was important legislation pending and the Republicans were in control of the House, they not only obtained a quorum but secured the attendance of every Republican Member but one when it was necessary, thereby preserving a quorum and a majority by the party that was in control. The Republicans when in control of the House have always been able to keep a quorum present whenever necessary to transact the public business and without the passage of a resolution directing the Sergeant at Arms to perform his official duty by penalizing Members by withholding any part of their salaries. The resolution adopted neither takes from nor adds to the law, and is a mere declaration that the Sergeant at Arms enforce it, which by implication suggests that he has not been doing his duty, and I submit if he can be held liable for paying out money to Members that may be absent at any time for some cause other than sickness in the future, then he can be held responsible for money that he has heretofore disbursed under such circumstances.

Section 40 of the Revised Statutes, as I have already stated, was enacted in 1856 and was a section of a law fixing the compensation of Members of Congress, and the amount was $6,000 for each Congress. Under the terms of the act the salary was paid to Members only during the session at the rate of $250 per month, and at the end of the Congress on March 4 whatever remained of $6,000 was paid to them. The Secretary of the Senate and the Sergeant at Arms of the House were required to deduct from the amount paid to the Members each month on account of absences for other causes than sickness, I assume at the rate of about $8 per day. The Senate has never paid any attention to it at any time, and yet it applied to Members of the Senate as well as to Members of the House. To enforce it now would mean that Members of the House would receive less compensation than the Senators, and I submit that the act of 1907 did not contemplate that a Member of the House should rceive less compensation than a Member of the Senate.

I think the House clearly has the right to excuse a Member for any purpose, and yet this law, if enforced, would require the Sergeant at Arms to deduct the salary of a Member for any absence, even if excused, no matter what the purpose or how brief the absence might be, unless on account of sickness. The House might by resolution appoint a special committee or delegate a standing committee to make an investigation of some subject away from Washington, such as is often done. The Committee on Labor during the present session had subcommittees in Michigan and Colorado. The Committee on the Judiciary had one or more subcommittees away making investigations, and it is the practice of the House upon the death of a Member to appoint a committee to attend the funeral of the deceased. In all such cases, under the resolution adopted yesterday, the Sergeant at Arms in the future will be required to withhold the salary of Members who may be absent under such

circumstances. It can not be said that the Underwood resolution adds anything to the law, assuming that it has not been repealed, and if the Sergeant at Arms is justified in withholding the salary of Members that may have been absent during the last month, and the law has not been repealed, it will have to be enforced hereafter. There is adequate remedy for forcing the attendance of Members, and it is quite within the power of the House, by resolution, to reprimand Members who refuse to attend when summoned, and it might be carried to the extent of expulsion.

As the distinguished minority leader, the gentleman from Illinois [Mr. MANN], remarked, in discussing the resolution, while it was a show of virtue on the part of the majority leader to offer the resolution it was certainly in bad form in view of the fact that it was not offered until the very last day of the holding of primary elections in the Southern States, and as the gentleman from Illinois stated, during the time primaries were being held throughout the South, and the business of the House was being delayed for want of a quorum, there was no suggestion of the offering of a resolution demanding that the Members return, and threatening to forfeit their pay; but now, when all the primaries have been held in the South, and everybody has been nominated, which means an election, it is proposed to penalize Members from other States where primary elections have not been held for absenting themselves during their campaign. The best thing that could happen for the good of the country would be the adjournment of this session of Congress and let the people have an opportunity to attend to their business without the fear of what Congress may or may not do, and thus afford some opportunity for a restoration of confidence, even if it is only temporary.

I was rather astonished and amused to observe the number of gentlemen on the majority side of the House that applauded the resolution offered by the gentleman from Alabama and vociferously applauded his remarks and the remarks of other gentlemen who favored the resolution and voted for the resolution in a tone that would indicate how virtuous they were in so doing—gentlemen that have been absent for weeks and weeks, and some of them who had just returned and were on the floor of the House yesterday for the first time. Their primaries are over. They have been renominated. They are now willing to support a proposition proposing to penalize their colleagues on both sides of the House by voting for a measure that requires absent Members to forfeit their salary for the few days they have been away, and if they wish to continue away until their primaries are held. The injustice and the unfairness of proposing such a resolution, giving Members no opportunity to return, is so apparent that it needs no discussion. Members of the House who have been here without losing a single day for weeks and months left Washington within 48 hours before this resolution came up, intending to return during the present week; and yet it is proposed to penalize them, while Members who have been away for weeks, and in some instances for months, and happened to get back yesterday, are allowed to escape. How such Members could vote for such a resolution and not return to the Treasury the salary for the time they were absent is beyond my comprehension. I wonder what some of these virtuous Members that have been away all of the present month, and only got back in time to vote for the resolution, will do if the Sergeant at Arms attempts to deduct their salaries for the month, as he undoubtedly will if he obeys what he is directed to do by the resolution.

I was away from Washington for a short time during this session, engaged in making a campaign for the Senate. It was with much reluctance that I absented myself even for a short period, and I proposed to my opponent, who is a Member of the Senate, that we both return and leave our contest with the people, believing that it was our duty to be here. If I had voted for the Underwood resolution, which in effect directs the Sergeant at Arms to withhold the salary from some Member who is now away because of a contest in his district, I would certainly without delay return to the Treasury the salary that accrued to my credit during the time I was away, and I can not see how any man who supported the resolution, who may have been absent at any time, can do otherwise. I have been a Member of this House nearly 14 years, and during that period I have not only been in Washington, but upon the floor of the House the greater part of the time during the sessions. It did not require any resolution to suggest to me that I ought to be here when Congress is in session, because I have too high a regard for the responsibilities of my position, so that I do not need to be told what my duty is. During the past two years I was compelled to be in a hospital on three different occasions, for a period of over one month the first time and two weeks or more at the other times, and so particular was I in wanting to be here during the sessions, I arranged it so that I did not lose a single day from attending the sessions of the House, being on the three occasions in the hospital twice between the sessions and once during a holiday recess. With the exception of an absence for a short time last winter, during my entire service I have rarely ever been absent except when away on the business of the House or on account of illness, and since my return last winter I have only missed attending two sessions of the House.

The question of how a public official ought to discharge the duties of his office, and especially a Member of Congress, is a matter for his constituency. It is not a question of just how many days he may have been absent from the sessions, or whether he may have missed a few roll calls, but it is what he accomplishes and whether he represents the sentiment of his constituency upon public questions. If he is neglectful of his duties and indifferent with regard to questions that may arise in which his constituency are interested, he will promptly be recalled, and therefore there is an adequate remedy where Members fail to perform their duty.

Enlarged Homesteads and Cheap Money for Western Farmers.

SPEECH
OF
HON. EDWARD KEATING,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 20, 1914,

On the bill (H. R. 16673) to provide for the development of water power and the use of public lands in relation thereto, and for other purposes.

Mr. KEATING. Mr. Speaker, I hope the motion of the gentleman from Illinois [Mr. MANN] will be voted down. The enemies of this legislation would like to see the gentleman's motion prevail, because they know that with section 14 eliminated this bill would not be permitted to pass the Senate, and the result might be that the proposed legislation would fail.

The men who drafted this bill had no thought of leasing the water in streams of the West. A reading of the bill will demonstrate that its sole purpose is to permit the Secretary of the Interior to lease the lands owned by the United States and bordering on the streams of the West.

To permit the Federal Government to seize upon the waters of our streams for power or any other purpose would be such a serious invasion of the rights of the West and would bring upon our people such confusion and financial loss as would justify the Representatives of the West in using every honorable means to prevent the consummation of the outrage.

The adoption of the amendment offered by the gentleman from Illinois might well cause the Water-Power Trust to chuckle, but it should cause every genuine conservationist to grieve.

This water-power bill and the other so-called conservation measures which will come before the House within a few days are of very great importance to the West, but I confess that they do not interest me to the same extent as another bill dealing with the public domain which I had hoped would be included in the Secretary of the Interior's legislative program. I refer to the enlarged homestead bill introduced by the distinguished gentleman from New Mexico [Mr. FERGUSSON].

To my mind that is the most important piece of legislation affecting the West now pending before Congress.

If the tens of millions of acres of land in the West now controlled by the Federal Government are to pass into the hands of home builders, it is absolutely necessary that we recast our homestead laws. Outside of the reclamation projects, it is practically impossible for a settler to find 160 acres of Government land which will support him and his family. Even the 320-acre homestead act is no longer sufficient. The land-hungry citizens of this country have searched the public domain from the Canadian border to the Rio Grande and have filed on practically every desirable homestead. Only the poorest of the land remains. Of this land at least 640 acres are required to support a family, and in some instances two sections, or 1,280 acres, will be required.

While Congress is safeguarding the water-power sites and the coal, oil, and asphaltum deposits in the West, it should give some thought to the necessity of giving the settler a place where he may erect his "shack" and make a home for himself and his family.

I am constitutionally opposed to landlords and landlordism. Speaking for the people of my own State, I want to say that

we are unequivocally opposed to any system which will place our grazing and agricultural lands on a lease-holding basis. On that point there is no division of sentiment among our people. We want the public domain to pass into the hands of actual settlers. We will join with you in any steps you may take to resist the encroachment of monopolies, but we insist that the national Congress can not render a greater service than to open the door of opportunity to the man who, in good faith, undertakes to build a home on the public domain.

We hear a great deal of complaint about settlers abandoning their claims or securing title and then selling out to cattle companies and others. This process will continue just so long as the Government fails to give a man sufficient land to sustain him. He can not live on 160 acres or 320 acres, but if you give him 640 acres, and where it is necessary 1,280 acres, he will make it a homestead in fact as well as in name, and you will transform a wanderer into a fixed and permanent settler.

Next in importance to the enactment of the enlarged homestead act is the passage of a proper rural credits system. I regret that the House has not been afforded an opportunity to consider this latter measure at this session. Farmers in my district are paying 10 and 12 per cent per year for the money needed to finance their operations. The same is true in practically every other State in the West, and to a great extent in the States farther East and South.

I believe the problem of furnishing the farmer with cheaper money can be easily met. If we will throw open the postal savings banks of this country and permit citizens to deposit such sums as they see fit, the Federal Government will find itself in possession of all the money required to finance a rural credits system commensurate with the size and needs of the Republic.

I have introduced a bill which will accomplish this purpose, and I beg leave to submit as a part of my remarks an article from the pen of the well-known Washington correspondent, Mr. Gilson Gardener, in which he states the scope of my bill so clearly and concisely that it can be easily understood.

Mr. Gardener's article is as follows:

WASHINGTON, D. C., *August 4, 1914.*

Farm loans made direct to the farmers of the United States by the Federal Government at 4 per cent interest out of moneys deposited in the postal savings banks is the unique plan for rural credits proposed in the bill introduced to-day by Congressman Edward Keating, of Colorado.

The bill proposes to remove all limitations on the amounts which may be deposited in postal savings banks, and that such money, instead of being turned over to private banking interests, shall hereafter be covered into the Treasury for use in making loans to farmers.

LOANS TO REAL FARMERS.

The establishment of a "farm-loan bureau in the Treasury Department, in charge of a commissioner, appointed by the President, who with the Secretary of the Treasury and the Secretary of Agriculture are to constitute the board of supervision of the farm-loan bureau," is contemplated by the bill. This board is to provide the necessary rules and regulations to carry out the purpose of the act, which is "to loan money direct to farmers upon the security of first mortgages through the agency of the postal savings banks."

Only persons actually engaged in the business of tilling the soil and raising farm products are entitled to borrow money under the bill. The terms of every loan extending for more than five years are required to contain a provision for its amortization or reduction by annual payments of 1 per cent of the principal, but the whole or any portion of the loan in multiples of $100 may be paid at any time.

NO LOAN OVER THIRTY YEARS.

No loan is to run longer than 30 years, according to this proposed legislation, and no loan is to be made for more than 50 per cent of the value of the improvements attached to the land. Whenever the improvements are offered as part of the security, the destructible property must be insured by the borrower to the satisfaction of the bureau.

Loans can be made only for the following purposes:

(1) To aid in increased production of the land.

(2) To make useful improvements upon the land to be mortgaged.

(3) To make payment of part of the purchase money of the land mortgaged, or to pay off an indebtedness already existing against the land.

It is provided, however, that 25 per cent of the loan may be used for the purpose of purchasing stock and farm necessities.

No loan under this bill could be larger than $12,000, and none is to be made for less than $500, "and loans upon single mortgages for less than $5,000 shall receive the preference." This is to give the man who most needs the money the preferential right to borrow.

Postmasters and other officials of the Government may be called upon, without additional compensation, to furnish information to the bureau as to the character and value of lands offered as security for loans, and the board of control may make the usual provisions for carefully appraising the land on the ground before loans are made. United States district attorneys are required by the bill to prosecute foreclosure proceedings where loans are foreclosed.

EXPENSE COMPARATIVELY SMALL.

Another unique feature of the bill is the provision that in making payments either of interest or principal "the person making such payment may pay the same to the postmaster designated by said commissioner of the bureau of farm lands, and such postmaster shall immediately notify the bureau of such payment, and the transmission of the money so paid."

The bureau has the right to sue and be sued, and lands obtained by the bureau under foreclosure proceedings may be disposed of at sale by it.

The bill carries an appropriation of $100,000 to start the machinery. As it seeks to utilize all the existing machinery of the Government, the cost of operating the bureau would evidently be very small.

Of course the amount of money now in the Postal Savings System would not meet a fraction of the demand for farm loans, but the Postmaster General has stated that the removal of the limitation on deposits would result in doubling the amount on deposit almost immediately.

PEOPLE LEND TO THEMSELVES.

That the amounts so deposited in the Government banks would enormously increase is evident. This bill really proposes to allow the people of the country to lend themselves money. Postal savings constitute the savings of the workers and the small farmers. If this money could be utilized to finance farmers in the work of supplying the food that the country needs, without the interposition of the private banker, with his rake-off of private profits, everybody else in the country would be the gainer.

I also desire to submit the following editorial on my bill, which appeared in the Denver Express of August 5, 1914, under the caption "Democratic banking":

Suppose you owned a small farm which was just about paying its way but needed fertilizers and improved machinery to make it yield as it should.

Why should you pay 6 or 8 per cent to a bank or private note shaver on a short-time loan to meet these needs when Uncle Sam, in his postal savings bank, where you get your mail, has money not working, on which he pays only 2 per cent interest?

At present that idle money in Uncle Sam's postal bank, when used at all, is first loaned to a banker, and he in turn takes a nice toll before he reloans it to some producer of wealth who needs it in his business. The scheme is rigged to give the banker first chance at a profit.

With due respect to the banker, what is the matter with letting Uncle Sam loan the money direct, thus cutting out the unnecessary profit of the banking middleman?

That is exactly what is proposed in the Keating bill now in Congress awaiting action, as Gilson Gardner explained the other day in detail.

KEATING would let a real farmer, for creative farming purposes, borrow up to $12,000 for not more than 30 years on his farm as security, if double the value of the loan, at 4 per cent interest, he pledging to pay not only interest every year, but also at least 1 per cent of the principal.

Of course, to make this plan workable, the present limit on what a person may deposit in a postal savings bank, a limit fixed low to appease frightened private bankers, would need to be removed. But why should there be a limit, anyhow? If a man prefers Uncle Sam's 2 per cent interest and safety to what a private banker will give him, shouldn't he be allowed his choice as far as he wants to go?

The Keating bill probably won't come up till next session, but it's none too early to be thinking about it. You can bet the bankers will be thinking about it and sitting up nights plotting to kill it.

KEATING restricts this low-interest borrowing chance to farmers, preferably those needing small loans. That makes it look like class legislation.

Come to think of it, why not let anybody in who can hock the required security? Seems to us that's the real way to pull the teeth of the Money Trust.

Splendid Record of a Democratic Congress and Administration.

EXTENSION OF REMARKS

OF

HON. MICHAEL E. BURKE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 26, 1914.

Mr. BURKE of Wisconsin. Mr. Speaker, the work of a Democratic House from April 4, 1911, to March 4, 1913, and of a Democratic Congress and administration from March 4, 1913, to this date, is and will be of the greatest importance, and is of the most statesmanlike character. More important and necessary constructive legislation has been considered and placed upon the statute books by Congress, within this short period, than has ever been considered and enacted into law in the same time, since the establishment of this Government. So rapid has been action on the numerous important subjects confronting Congress and the administration that it is necessary for even Members of Congress to pause and review the same, before being able to recall all those important matters.

A brief review of the history of Democratic legislative work during those periods may well serve as an impressive lesson to the country, and as a scale upon which to weigh the claims of the Democratic Party in the coming campaign.

REVISION AND LOWERING OF TARIFF DUTIES.

The campaign of 1908 was largely fought out upon the tariff question. The Democratic platform of that year declared squarely in favor of a downward revision of the tariff. The Republican platform of that year in a rather ambiguous way declared in favor of a revision of the tariff downward. It was successful in that campaign, but immediately proceeded to revise the tariff upward, as shown by the Aldrich-Payne tariff law. At any rate, both parties campaigned in that year upon the assumption that the people were in favor of a downward revision of the tariff. The people were deceived by the Payne-

Aldrich tariff law, and continued more vigorously than ever in their efforts to force a downward revision.

Again in 1912 the Democratic national platform declared in favor of a revision of the tariff downward, and in favor of a tariff for revenue only. The people of the country in that campaign reposed confidence in the Democratic Party by electing its candidate for President, and a majority of that party in both branches of Congress.

In accordance with the platform pledges given by the party upon that subject, and indorsed by a majority of the people of this country in the 1912 election, a Democratic Congress during this session passed a law revising the tariff downward and for revenue purposes only. This was approved by the President and became a law on the 3d of October, 1913. For many years previous to its adoption, and in fact since the Republican panic of 1907, down to the present time, there has been a world-wide depression in business. It went into operation at an unfavorable time, and under unfavorable circumstances.

Yet in spite of the adverse circumstances prevailing, not only in this country, but in all civilized countries, both before and since its passage, it has worked fairly satisfactory. The great majority of the productive industries of our country have become adjusted to the present tariff, and are prospering in a satisfactory degree, while others not yet adjusted may not do so well. Some of our industries which have not yet adjusted themselves to the new situation are unnecessarily apprehensive, and are stumblingblocks in the way of their own business prosperity.

Every new tariff in the history of our country has unsettled conditions to some extent for short spells in the beginning. It always has required, and it now requires, a reasonable length of time for business to adjust itself to the new business conditions created by the new tariff rates. It is impossible for any party to make a new tariff that will not require business to readjust itself more or less. Our new tariff may not be perfect. It is impossible to make a perfect tariff law. Every change in the tariff laws may be injurious to some industry here and there. Changes in tariff laws are justified only upon the ground that the good that is accomplished in the majority of industries far exceeds the little injury that may be done to a few industries. In other words, under present circumstances, the new tariff is working far more satisfactorily and more equitably than any tariff law placed upon the statute books since the Civil War. Patience and experience will soon demonstrate this to the minds of all impartial and observant citizens.

INCOME TAX.

In the year 1912 a sufficient number of States ratified a resolution to amend the Constitution of the United States so as to confer power upon Congress to pass a Federal income-tax law. In 1894 Congress passed such an act, providing for a Federal income tax, but the same was held unconstitutional by the Supreme Court. For over a generation the Democratic Party in its national conventions and in Congress, and on the hustings, had advocated the passage of a Federal income-tax law. Promptly upon the announcement of the ratification of the sixteenth amendment to the Constitution, authorizing the passage of an income-tax law, the Democratic Party in this Congress, as a part of the tariff law, passed a Federal income-tax law.

Such laws have been a part of the taxing system and in use in all other civilized countries for a generation. They have worked justly, equitably, and satisfactorily, and there is no reason why such a system should not be made use of in this country. This Democratic Congress had the wisdom and the courage to place the same upon the statute books, and it has produced during the 10 months for which returns and collections were made $35,000,000 from individuals and $54,000,000 from corporations, making a total of $89,000,000. With an unavoidable increase in the expenses of government this tax is, and will continue to be, absolutely necessary. It is fair, just, and is derived from a class of wealthy people who have heretofore often escaped their just share of taxes, and who can well afford to contribute to the support of the Government in this manner. It is a wise, useful, and constructive use of the taxing power. In a few years, with more experience in its operation, it is bound to produce an increased amount of revenue for the Government each year.

BANKING AND CURRENCY.

The greatest and most serious obligation resting upon the Democratic Party when this administration came into power was the framing, considering, and enacting of a sound and satisfactory banking and currency law. Repeatedly in previous campaigns both of the great political parties had recognized in their platforms this necessity and had pledged their parties to the adoption of such a law. There was sufficient necessity and demand for their platform pledges, as the people had in various ways repeatedly voiced their demands for a new and safer banking and currency law.

The fearful and expensive lessons of the disastrous financial panics of 1873, 1884, 1893, and 1907 taught the public, and especially the business men of the country, that our banking system was unsafe and inadequate to meet the demands of business in times of emergency. It had been found defective and unwieldy in many ways. Even in years free from panics the system proved faulty in not responding to the seasonal financial needs of the country. The public was exposed to and did suffer great inconvenience and loss by reason of the unwieldy financial methods of the then existing banking system.

For 16 years while the Republican Party was in power, notwithstanding that it was under platform party promises to remedy our defective banking and currency system, it failed to do so. As usual, it remained for the Democratic Party, upon being restored to full power, to promptly fulfill its pledge upon this subject to the American people. This it did by passing on the 23d of last December a modern, practical, and new system of banking and currency. The organization provided by the same has just been completed, and it is about to enter upon what everyone believes to be a most successful period of business activity and usefulness. All business interests now have confidence in the new system, and are giving it their hearty support and confidence. Its success is assured, and no longer complaints are made of a defective and dangerous banking system.

Under this new banking law such emergencies as financial panics will be unknown, for it provides such a system of checks and balances as to completely prevent the same. Its virtues are so numerous and so generally conceded that it is unnecessary at this time to dwell in detail upon the same. Thus another great national problem that has confronted the business people for years has been solved to the satisfaction of all people interested in a safe, practical, elastic, and workable banking and financial system.

POPULAR ELECTION OF UNITED STATES SENATORS.

For more than a quarter of a century there had been a widespread and growing demand among the people of our country for the election of United States Senators by vote of the people instead of by the legislatures of the several States. That there was a good and sufficient foundation or reason for this demand was proven by the numerous deadlocks in State legislatures, and by several nation-wide scandals in the election of United States Senators, and in the indifference of many Senators in legislative matters to the wishes of the people. Sentiment for this change grew so strong that at last the great political parties of the country pledged themselves to an amendment to the Federal Constitution for this purpose.

The House of Representatives on numerous occasions passed a resolution providing for the submission of this important amendment to the legislatures of the several States, but in each case, so long as the Senate remained under Republican control, this popular measure was defeated in the Senate and the will of the great majority of the people at large was defeated. It remained for a Democratic House, in the Sixty-second Congress, to originate and pass through that House and, with the assistance of public sentiment, to force through a Republican Senate a joint resolution providing for the submission to the legislatures of the several States of a proposed amendment to the United States Constitution providing for the election of United States Senators by direct vote of the people.

After such proposed amendment had been submitted by Congress, the necessary number of State legislatures in a remarkably short time adopted this proposal for the popular election of United States Senators. The people of this country, who had so long demanded this important legislation, had the proud satisfaction of hearing a Democratic Secretary of State, Hon. William J. Bryan, proclaim the ratification of this the seventeenth amendment to the Constitution by the necessary number of States on the 31st day of May, 1913. Thus at the first opportunity in returning to full power in the Nation the Democratic Party fulfilled and carried into effect its promise to provide for the election of United States Senators by vote of the people, having been prevented from so doing for 16 years by the presence in power of the Republican Party.

STATEHOOD FOR ARIZONA AND NEW MEXICO.

For more than 20 years the people of the Territories of Arizona and New Mexico had demanded the establishment of a State government for each of those Territories. For 20 years the two great political parties had promised to admit those Territories to statehood. It remained, however, for a Democratic House of Representatives in the Sixty-second Congress to originate and pass statehood bills providing for the admission of those Territories into the Union as sister States. The presence in the House and Senate of the United States of a Republican

majority for 16 years previous thereto had prevented the Democratic Party from earlier carrying out the statehood pledges of its party platform, and during all of those years had deprived the citizens of Arizona and New Mexico of the privileges and rights of statehood. Arizona was admitted on the 14th day of February, 1912, and New Mexico on the 6th day of January, 1912, thereby placing the whole continental United States under State government. Since their admission to the sisterhood of States they have proudly and loyally performed the duties of statehood and promoted the welfare of democratic institutions and liberty.

SHERWOOD PENSION BILL.

A Democratic House in December, 1911, originated and passed what is known as the Sherwood pension bill. This bill was introduced by Gen. ISAAC R. SHERWOOD, a Democratic Congressman of Ohio, on the first day of the first session of the Sixty-second Congress. The year before, when the House and Senate were both Republican, the Sulloway general pension bill, providing an increase of pensions for Civil War veterans and their widows, was defeated. The passage of this Sherwood pension bill through the House by a large majority, supported, as it was, by the general sentiment of the country, forced it through a Republican Senate, but not until after that body had amended it so as to make it less liberal and less just to the old soldiers than when it passed the Democratic House.

Official estimates place the decrease in the annual amount distributed among the old soldiers by reason of the restrictive Republican Senate amendment between $2,500,000 and $3,000,000 a year. The Democratic Party had repeatedly in its national platforms pledged itself in favor of liberal pensions to the soldiers of the late Civil War and their widows, and the party carried out its promises and proved its friendship to the Civil War veterans and their widows by passing at its first opportunity the most liberal pension bill that has ever been placed upon the statute books of the United States.

SPANISH WAR WIDOWS' PENSION BILL.

In April, 1914, a Democratic House, by an overwhelming vote, passed a general pension bill granting pensions to the widows and minor children of officers and enlisted men who served 90 days or more in the Army, Navy, or Marine Corps of the United States in the War with Spain, in the Philippine insurrection, or in the Boxer War in China. This bill is reasonably liberal in its provisions. It provides a rate of $12 per month for such widows, without the necessity of proving that the husband's death was the result of his Army or Navy service. This bill has been reported favorably by the Senate committee with a just, important, and valuable amendment.

This amendment provides for the repeal of the present harsh, arbitrary, and discriminating law in relation to pensions for widows of Civil War husbands, who married since the law of June 27, 1890. By its terms all widows of soldiers or sailors who served the requisite length of time in the Army or Navy of the Civil War, and who married previous to the passage of the proposed new law, shall receive pensions of $12 per month without proving their husbands' death to be the result of their Army or Navy services. The hardships, cares, and sorrows endured by the widows who married since June 27, 1890, and who are now prohibited by law from securing a pension at the bureau, were and are naturally more severe by reason of the old age and helplessness of their soldier or sailor husbands than were the hardships of those who married previous to that date. This will be, as it should be, according to the principle of equal rights to all and special privileges to none.

There are excellent prospects for the passage of the Spanish War widows' bill with this important amendment in the Senate before the adjournment of this session, or at the furthermost at the next December session of the Senate. These two liberal pension measures must demonstrate to the most doubtful that the Democratic Party is the friend of both the old and young soldiers and their widows.

GOVERNMENT FOR PANAMA CANAL ZONE.

With the completion of the Panama Canal it became necessary for the creation by law of a civil government for the Panama Canal and Zone. Ever eager to do its duty, the Democratic House in the Sixty-second Congress originated and passed a bill providing for an executive and judicial government for the Panama Canal Zone, which has since become a law. This is a most important piece of constructive legislation, nothing of the kind having heretofore been created or passed by our Government.

The government of that canal will attract world-wide attention, and must necessarily be adaptable not only for the government of the zone but for the transaction of the world's business which will be passing through that canal for generations to come. As an original important and constructive piece of legislation it can scarcely be overrated. It affords convincing proof, notwithstanding all idle criticism to the contrary, that the Democratic Party is capable and qualified to prepare and pass the most important constructive legislation.

TERRITORIAL GOVERNMENT FOR ALASKA.

A long-continued demand for the establishment of a Territorial form of government for Alaska has existed for years. The people and business interests of that Territory had demanded of Congress repeatedly that provisions be made for the establishment of the usual Territorial form of government. Indifference, however, on the part of a Republican majority in Congress for 16 years left the people of Alaska without self-government. One of the first acts passed by the Democratic House in the Sixty-second Congress was a bill providing for a Territorial legislative form of government for Alaska. This great area of land came into possession of the United States in 1867. Thus, for a period of 46 years it had been left without the means of self-government, until a Democratic House, realizing the justice and equity of the demands of the people of Alaska, conferred upon them the blessings of self-government.

ALASKAN RAILWAY.

Nature has stored the Territory of Alaska with a great abundance of natural wealth, in the shape of coal, minerals, timber, and other valuable natural resources. Nature's climate, however, has placed many obstacles in the way of the usual development of the great resources of that Territory. Alaska, with its many resources of wealth, is considered a great storehouse for the future. An enlightened public sentiment throughout the country has decreed that those great natural resources shall not be given away improvidently or squandered upon corporations, as was done many years ago by Congress in granting public lands with lavish hands to our western railways. It has been decreed by a Democratic House that these great natural resources shall be conserved, or kept for the benefit and use of the people, making at the same time provision for the present development and utilization of the same for the present generation.

This Democratic Congress has shown the most progressive statesmanship in the history of all Congresses by passing a public law providing for the Government contruction and ownership of an up-to-date and practical railway in that Territory as speedily as convenient, and appropriating for that purpose the sum of $35,000,000. It is intended that this sum shall build and construct at least 1,000 miles of railway. The ownership of the rolling stock and the operation of the railways constructed are to be under Government control. This is most practical, enlightened, constructive, and statesman-like legislation and is bound to result in the development of the industries and general welfare of Alaska and in the increased happiness and prosperity of its people.

LEASING OF COAL LANDS IN ALASKA.

It was not until recent years that the general public realized the importance and value of the coal mines of America. When their importance and value were realized, the public also realized that the title to nearly all the coal mines of continental United States had passed from Government to private ownership, and that that ownership was being used almost exclusively for the benefit of itself and to the disadvantage of the public. What nature had intended as a common treasury for the human family has been monopolized by the fortunate few. In order to preserve for the present and future inhabitants of Alaska the great natural stores of coal which nature has planted in the bosom of that Territory, the Democratic House during this session of Congress has prepared, and now has upon its calendar ready for passage, a bill providing for the leasing of coal lands in the Territory of Alaska.

This means that the title to these coal beds shall forever hereafter remain in the name of the United States Government; that is, the people, and those coal mines shall forever remain in the control and care of the American people, to be used for the interest of the people, and not to be used against the people, as is now the case with coal mines used by privately owned and corporate interests. A wiser provision could not be conceived for the welfare of the people of that Territory, and it is a crying shame that our legislators before us failed to pass such a wise provision for the Government ownership and control or operation of the coal mines of continental United States.

LABOR LEGISLATION.

The record of the present Democratic administration, and of the Democratic House of the Sixty-second Congress, in the consideration and passage of legislation demanded by and in the interest of labor has never been equaled in the history of our country. In the Sixty-second Congress the House, with a Democratic majority, originated and passed a bill creating a

Department of Labor, and making the head thereof a Member of the President's Cabinet. This bill subsequently became a law and is now in force.

All genuine friends of labor rejoice in knowing that a Democratic President worthily filled the newly created Cabinet position of Secretary of Labor in the true spirit in which that position was created by appointing as the first Secretary of Labor Hon. William B. Wilson, an actual and genuine representative of organized labor, who in his early days earned his living and supported his family in the sweat of his brow, handling a pick in coal mines down in the bowels of the earth. He has borne the burdens of labor, and by actual experience knows the weight of the laborer's burdens. In him all honest labor finds the sympathy of a genuine friend. A higher compliment and honor could not be paid to the dignity of labor.

In the Sixty-second Congress a Democratic House originated and passed as a part of the sundry civil appropriation bill a provision directing that no part of the money appropriated in that bill for the prosecution of trusts should be spent in the prosecution of any labor organization, agricultural or horticultural societies for entering into any combination or agreement having in view the increase of wages, shortening of hours, or bettering of conditions of labor, or for any act done in furtherance thereof not in itself unlawful. It was concurred in by the Senate and vetoed by President Taft.

In the special session, and in this regular session of the present Democratic Congress, similar amendments to similar appropriation bills were adopted and passed by Congress and approved by President Wilson.

Section 7 of the Clayton antitrust bill, passed by the House during the present Congress, contained the following labor provision:

SEC. 7. That nothing contained in the antitrust laws shall be construed to forbid the existence and operation of fraternal, labor, consumers', agricultural, or horticultural organizations, orders, or associations instituted for the purpose of mutual help, and not having capital or conducted for profit, or to forbid or restrain individual members of such organizations, orders, or associations from carrying out the legitimate objects thereof, nor shall such organizations, orders, or associations, or the members thereof, be held or construed to be an illegal corporation or a conspiracy in restraint of trade under the antitrust laws.

In several national platforms the Democratic Party pledged itself to the passage of this legal provision regarding the rights of labor unions, fraternal orders, and farm organizations. The public now must realize that the Democratic Party fulfills its promises at its first opportunity. It must not, however, be understood that this labor provision exempts labor or farm organizations or the members thereof from the consequences of any act of theirs which may otherwise be unlawful.

Labor again succeeds to its rights by two additional provisions in the Clayton antitrust bill. Both of them correct judicial abuses against which labor has long complained. One gives to everyone charged with indirect contempt the constitutional right of trial by jury, which has heretofore been denied by the Federal courts to persons so charged, and trial by court alone resorted to. The other labor provision provides rules for the issuing of injunctions in labor disputes, and forbids the promiscuous use of injunctions in such disputes except in well-defined cases.

CONVICT-MADE GOODS.

In the matter of goods, wares, and merchandise wholly or in part manufactured, mined, or produced by convict labor, or in any prison or reformatory, a bill was passed during this session of Congress by the House of Representatives and is now pending in the Senate making such goods, wares, and merchandise entering into interstate commerce subject to the operation and effect of the laws of each State and Territory to the same extent as though such goods, wares, and merchandise were manufactured, produced, or mined in such State or Territory. This is to protect free labor in each State that has laws for its protection against the cheap-made goods and products of convicts in other States. Its purpose is to prevent free labor from being exposed to the ruinous competition of convict labor.

PROHIBITION OF IMPORTATION OF CONVICT AND PAUPER MADE GOODS.

A bill of a similar nature prohibiting the importation into this country of the products of foreign countries produced, in whole or in part, by convict, pauper, or prison labor, or in the production of which such labor has been employed, directly or indirectly, has also been passed by the House during the present session of Congress and is now pending in the Senate, with good prospects of its passage. It is the purpose of this bill to protect not only American labor and American manufacturers from the ruinous competition of convict, pauper, and prison labor of foreign nations, but also to wholly exclude from importation into this country all such products, whether products of the field, quarry, mine, or factory.

It will be a genuine protection for American free labor against the actual convict, pauper, and prison labor of foreign lands. A considerable percentage of the total products imported into this country, as well as a considerable percentage of the products of this country, are made, in whole or in part, by convict, prison, or pauper labor. These products heretofore entered into competition with the products of free labor. These two last measures are designed, in the one instance, to prohibit the importation of that class of products and to deprive the products of the other class of convict labor of certain interstate-commerce rights upon their arrival in any State which has laws protecting the products of free labor from those of convict labor.

This Congress has established in the Department of Labor various divisions for the purpose of promoting the labor interests of the country. It has provided those newly created and existing divisions of the Department of Labor with liberal appropriations for carrying on the duties imposed upon them.

MEDIATION.

In the first session of the present Congress, when a widespread strike on all the eastern railways was threatened on the part of several branches of railway employees, at the suggestion of President Wilson, an important amendment was made to the arbitration and mediation laws, under which the railways and employees accepted mediation. This threatened to be one of the worst strikes in the history of the country, but the thoughtfulness and resourcefulness of a Democratic President and a Democratic Congress devised means of mediation by which that threatened disastrous strike was averted by granting an increase of pay to the railway employees and the saving of the traveling public from great embarrassment and annoyance. This was another genuine example of high constructive statesmanship on the part of the present administration.

There is now pending a threatened strike of a similar nature on railways west of the Mississippi River, and the same agencies, under the amended law above mentioned, are being employed to settle the same with every prospect of success, and to the great advantage of the public.

SEAMEN'S FREEDOM AND RIGHTS.

Last but not least we come to the promise contained in the Democratic national platform of 1912, with reference to the rights of seamen. There passed the Senate last October, and just recently passed the House, a bill known as the "seamen's bill." It contains a provision abolishing arrest and imprisonment as a punishment for the desertion of seamen from the merchant marine. At the close of the war the several States adopted an amendment to the Federal Constitution abolishing slavery and involuntary servitude. It was generally supposed that this wiped out every remnant of involuntary servitude in this country, excepting as a punishment for crime.

Our Supreme Court, however, has since held that this constitutional amendment did not extinguish or abolish the peculiar laws relating to discipline at sea. This is a freeman's country in all its parts, and no species of involuntary servitude should be permitted to exist under our flag. Hence, it is in accordance with the promises of the Democratic Party that we have passed the seamen's bill. This bill also materially promotes the general welfare of seamen in their employment, and materially promotes the safety of the traveling public at sea.

NO PRODUCTS OF CHILD LABOR IN INTERSTATE COMMERCE.

Among the important bills introduced in the House relating to the interest of labor and humanity is one to prevent interstate commerce in the products of child labor. Its purpose is to make it unlawful for any producer, manufacturer, or dealer to ship or deliver for shipment in interstate commerce the products of any mine or quarry, mill, workshop, factory, or manufacturing establishment which have been produced, in whole or in part, by the labor of children under certain ages.

The overworking of young children is one of the curses of our modern civilization. Both human and economic considerations demand that the working of young children under certain ages for gainful purposes should be prohibited. Their physical and mental development should not be dwarfed in the formative period of their lives. This bill has been favorably reported, and is now upon the House Calendar waiting its turn for consideration and passage.

MISCELLANEOUS LABOR LAWS AND MEASURES.

In the Sixty-second Congress the following labor measures became laws:

The eight-hour bill; the Children's Bureau bill; bill creating the new Department of Labor; bill creating the Commission on Industrial Relations; the Bureau of Mines bill, which extended the scope and usefulness of that bureau; resolution providing for an investigation of the Taylor system of shop management; dredge workers' eight-hour bill; provision in the Post Office ap-

propriation bill removing the so-called "gag rule," restoring to the postal employees the right to petition Congress; and the phosphorus-match bill.

The following labor measures have to date been passed and become laws in this the Sixty-third Congress:

Eight-hour law for women employees in the District of Columbia; bill creating Commission on Industrial Education; resolution providing for an investigation of industrial conditions in West Virginia; resolutions providing for investigations of industrial conditions in the coal fields of Colorado and the copper district of Michigan; and an increase of $100 per year in the salary of rural mail carriers—all Democratic work.

COMPENSATION FOR INJURED EMPLOYEES.

The last Democratic platform pledged that party, so far as Federal jurisdiction extends, to the passage of a Federal compensation law, providing adequate indemnity for injury to body or loss of life of its employees. It affords all friends of Government employees, and of labor in general, genuine satisfaction that there is now upon the House Calendar, favorably reported, H. R. 15222, otherwise known as the McGillicuddy-Kern compensation bill. This bill provides compensation for employees, or their heirs in case of loss of life, of the United States suffering injury or occupational diseases in the course of their employment, and for other purposes. It is now upon the Calendar for Unanimous Consent, and there is every prospect that it will soon be reached and passed. Thus another pledge of the party of Jefferson will be soon turned into law.

ANTITRUST LEGISLATION.

For years both the Republican and Democratic Parties have promised to strengthen the Sherman antitrust law for the purpose of wiping out and exterminating trusts and monopolies and controlling corporations and other business interests who by their evil practices have and are taking advantage of the consumers of the country and small business interests. It remained, however, for the Democratic Party at its first opportunity to carry out and fulfill this promise. The present Congress has in this session passed an interstate trade commission bill, and imposing by law upon this newly created commission certain duties to perform, and investing it with power to aid in the enforcement of the antitrust laws.

The House has also passed, and there is now pending in the Senate, a bill known as the Clayton antitrust bill, relating to the strengthening of the Sherman antitrust law, and providing for the elimination and prevention of many pernicious abuses and extortions on the part of monopolies, trusts, and combinations in restraint of trade.

Many gigantic frauds and abuses in bonds and stocks have for years been practiced by the railways of this country in the issuing and selling of so-called watered stock and bonds, until the actions of many railways have resulted in ruin to thousands of honest and innocent investors, and with great shame and disgrace to American laws and institutions and investments. A bill requiring that no stocks or bonds shall hereafter be issued or sold by railways, excepting in certain minor cases, without permission from the Interstate Commerce Commission passed the House this session almost unanimously. This bill is now pending in the Senate with every prospect of an early passage.

The interstate trade commission bill passed the House by a vote of 175 to 15. The Clayton antitrust bill passed that body by a vote of 175 to 54. The bill preventing the issuing or selling of railway stocks and bonds without permission from the Interstate Commerce Commission passed the House by a vote of 160 to 12. This shows that the representatives of the people are almost unanimously in favor of these long-demanded and much-needed measures. It also shows that the public had to depend upon a Democratic Congress to pass the same.

IN RELATION TO FARMING.

Since the Democratic Party has been returned to power it has rightfully devoted much of its time and attention to the protection and promotion of the welfare of farmers. It has legislated for and encouraged the farmer and farming interests of the country from practical standpoints.

GOOD ROADS.

At this session the House formulated and passed a practical plan for the encouragement and permanent improvement of postal routes used by rural mail carriers upon certain conditions to be complied with by each State that desires to take advantage of such Federal assistance and authorized an appropriation therefor of $25,000,000 per annum. This is the first proposed appropriation for a highway plan to meet with the approval of the House of Representatives since the beginning of the Government. This bill is now pending in the Senate, with reasonable prospects of passage. So long as the Government continues to pursue the policy of appropriating millions annually for rivers and harbors, to promote water travel, there is absolutely no reason why it should not furnish a portion of the money necessary to permanently improve the highways which its own rural mail carriers use.

AGRICULTURAL EXTENSION LAW.

True to its platform pledges upon that subject, this Congress passed a law known as the Lever cooperative agricultural extension bill. The purpose of this law is to aid in the distribution among the farming people of the United States of useful and practical information relating to agriculture, home economics, and to encourage the application of the same. This is to be done through the Agricultural Department and the colleges in each State, which under the act of 1862 received donations of public lands from the Federal Government to provide colleges for the benefit of agriculture and mechanic arts. It is, in other words, a system of practical farm instruction that can not be derived from books, magazines, or lectures. It consists in sending experienced and qualified instructors from the agricultural colleges and experiment stations out among the farming people to teach them by practical work and demonstrations many of the secrets and practical advantages of farming.

It will bring to the attention of the farmer, the farmer's wife and children—not through books, papers, and magazines, but in the most striking, practical, and instructive manner—such demonstrated truths and practices of successful farming which, if lived up to, will make farm living desirable and profitable as an occupation. It will carry out to the farmers the improved farming and practices of the agricultural colleges, experiment stations, the Department of Agriculture, and the best farmers, and demonstrate their value upon the farm itself, thus providing means by which the organized farming institutions may be made to serve all the people, as should be the case, rather than a limited and privileged few.

Earnest scientists are discovering every day useful truths which, if known by the farmer and applied by him, will mean financial independence and social progress. Much of this knowledge can not be acquired by the reading of books, papers, and magazines. But few farmers can afford to attend agricultural schools, and therefore this law has been passed for the purpose of carrying newly developed practical farming knowledge to the farmer. Under the provisions of this bill, for the first few years there will be an increasing appropriation made by the Federal Government each year for this important and useful work, until after seven years there will be permanently appropriated the sum of $4,500,000 for this purpose, annually.

MARKETING DIVISION.

Among the new forces created for the purpose of helping the farmer was a provision for the establishment of a marketing division in the Department of Agriculture. The purpose of this division is to assist the farmer in disposing of his crops as efficiently as it has assisted him in producing them. Some of the principal lines of investigation which will be undertaken in connection with this work are cooperative production and marketing, market surveys, methods and costs, market grades and standards, city marketing and distribution, transportation of farm produce, storage problems, marketing miscellaneous products, and marketing by parcel post.

It is of little benefit to farmers to improve the quality and increase the quantity of their crops if they can not learn when, where, and how to sell them to the best advantage; and both he and the consumer suffer if abundant harvests are allowed to be sold at ruinous prices in glutted markets while insufficient supply causes exorbitant prices and want at other points. The problem of distribution is equal in importance to the problem of production.

PARCEL POST.

A Democratic House, in 1911, originated and passed a country-wide Parcel Post System in connection with the Post Office Department. For more than a generation this valuable and practical means for the transportation of small packages has been a part of the postal system of nearly every civilized country. Its merits had been demonstrated by experience. During that same time there was a widespread and strenuous demand for its adoption in this country. Everyone vividly remembers the exorbitant charges exacted by express companies up to the time of the establishing of a Parcel Post System as a part of our Postal System.

For 16 long years, while the Republican Party was in power, these demands were repeatedly presented to Congress, and repeatedly Republican Congresses turned deaf ears to the appeals of the farmers and consumers of the country. In 1911, upon the restoration of the Democratic Party to power in the House, this long-continued and widespread demand on the part of the people for a Parcel Post System was passed and finally enacted into law.

So great has been the volume of business transacted by this branch of the Post Office Department that express rates on nearly all commodities, not exceeding the weight allowed to be carried by the Parcel Post System, have been reduced on the average about 60 per cent of the charges previously made by express companies. It is bound to bring the farmer and ultimate consumer into closer business relations, and enable the consumer to buy many articles of farmers' produce directly from the farmer at a lower price than that which he now pays, and at the same time bring the farmer higher prices for many articles produced and sold by him. Firm assurances are held out by the Postmaster General that in the near future, with further experiments and experience, that the usefulness and efficiency of the parcel system will be extended in every necessary direction in the promotion of the happiness and welfare of the farmers and the public at large.

INCREASE OF AGRICULTURAL APPROPRIATIONS.

This Congress has also shown its friendly disposition to the farming interests of the country by increasing the annual appropriation for the Department of Agriculture by over $2,000,000, making a total appropriation under this administration for the benefit of farmers of nearly $25,000,000 per annum.

HOG CHOLERA.

Upon the outbreak of hog cholera in the swine-raising sections of the country a year ago Congress promptly responded with an emergency appropriation of $600,000 for the purpose of aiding in controlling and exterminating that disease. In many other directions and ways the farming interests of this country have received the attention and assistance of Congress.

ENFORCEMENT OF OLEOMARGARINE LAW.

The judicial department of the administration has shown an active and practical interest in the protection of the butter interests of the country. Before this administration the enforcement of the laws controlling and regulating oleomargarine was considerable of a joke and produced insignificant results. A sample of the interest taken by this administration in the welfare of the farmer is shown by its vigorous prosecution of John F. Jelke, a millionaire oleomargarine manufacturer, who was convicted on the 4th of May last, in the United States district court at Chicago, for various violations of the oleomargarine laws. He was given the maximum penalty and sentenced to serve two years in the Federal penitentiary and pay a fine of $10,000 for conspiring to defraud the United States Government out of taxes on oleomargarine.

Nine of Jelke's associates and employees were also convicted and fined $2,500 each for conspiring with him in defrauding the Government out of oleomargarine taxes. Oleomargarine frauds had been perpetrated by the Jelke Co. to such an extent that it had deprived the Government of about $2,000,000 in oleomargarine taxes. A compromise of this vast sum due the Government for violations of the oleomargarine laws was made by Secretary of the Treasury MacVeagh, a Republican Cabinet member, for $101,000, but before it could be carried out a Democratic administration came into power and the proposed compromise was rejected and a vigorous prosecution ordered, with the result that a forcible example was taught the oleomargarine manufacturers of this country that will undoubtedly result in a permanent respect for this law and for the rights of the genuine butter manufacturers of the country. This is upon a large scale, one of the many practical demonstrations of the interest that this Democratic administration has taken in the welfare of the farmers of the country.

This Congress has also passed a law regulating the sale of cotton futures. It takes from the cotton exchanges of the country many of their gambling powers and advantages and guards the interests of the individual cotton grower. This law in a short time will undoubtedly be used as a pattern upon which all grain speculations will be regulated and controlled and the farmers protected in the sale of their grain and corn products.

LOANS ON FARM LANDS.

In the framing and passage of the banking and currency bill the Democratic Party did not lose sight of the great interest of farm owners in the money question. Before its passage and ever since the Civil War national banks were forbidden by law to under any circumstances make loans on farm lands, however valuable they might be. There were during the last years of that period and now are about 7,500 national banks in the country. Before the passage of the new banking and currency law it was impossible for any farmer, regardless of how much valuable and unencumbered land he had, to legally borrow any money upon it from any national bank. This forced the farmer when in need of money to borrow from trusts, State banks, or private individuals. This law limited the amount of money available for loans to farmers and made loans more difficult to secure and draw more interest.

The new banking and currency law, however, permits every national bank, excepting those situated in central reserve cities, of which there are only three, to make loans secured by improved and unencumbered farm land, but no such loan shall be made for a longer time than five years or for an amount exceeding 50 per cent of the actual value of the property offered as security. Such bank may not make such loans in excess of 25 per cent of its total capital stock and surplus or to more than one-third of its time deposits. This will make money for the farmer cheaper and easier to obtain. This also should be conclusive proof to the most doubtful that the Democratic Party in the consideration of the most important legislation placed by Congress upon the statute books in this country since the Civil War has paid careful attention to the interests and welfare of our farmers.

OTHER FINANCIAL MATTERS—INTEREST ON PUBLIC MONEY.

Under the Republican administrations large portions of the public funds were deposited with favored banks and no interest for the use thereof collected. Under this Democratic administration, however, public moneys in the same proportions were deposited in banks and interest thereon collected and paid into the Treasury for the benefit of the Nation. The interest thus derived for the Nation's benefit during the first year of this administration amounted to several million dollars. No such practical use of the Government's money has ever before been made by any national administration.

THREATENED BANK PANIC.

In the summer of 1913, when the banking interests of the country had quietly made arrangements to precipitate another money panic, a wide-awake and practical Secretary of the Treasury, Hon. William G. McAdoo, checked and exposed this scheme to plunge the country into a panic by publicly announcing that he would make practical use of the Vreeland currency bill, which until then had remained unused and unthought of, and under which the sum of $500,000,000 is authorized to be issued by the Government in financial emergencies. This quickly and effectively checked the proposed artificial bank and money panic. The history of the 1907 Republican panic tells a different story.

At the outbreak of the present European war, owing to the sale of American stocks and bonds and other investments held by European investors and the withdrawal of the proceeds thereof to Europe, and with European rates of interest and speculation in gold running high, there was created a great stringency in the money markets of this country, and again a widespread panic threatened this country. This time, however, it was of a bona fide nature. Again the brilliant and experienced Secretary of the Treasury came to the rescue of the country by requesting Congress to extend the provisions of the Vreeland currency bill for another year, the original provisions of that bill having expired on the 1st of July, 1914. To his request this Congress promptly responded, and the result is the restoration of confidence in the finances of the country.

NATIONAL DEFENSES—NEW LAND AND NAVAL VOLUNTEERS.

Among the many important laws passed by this Congress none are more important from the standpoint of national defenses than the law relating to the land volunteer forces and Naval Militia of the United States. It is true that laws upon this subject were upon the statute books, but they were inadequate, ineffective, obsolete, and out of date. Taking notice of such conditions, this Congress has prepared and passed a complete, up-to-date law providing for the raising of the volunteer forces of the United States in time of actual or threatened war. It has also placed upon the statute books a law to promote and increase the efficiency of the Naval Militia. Both laws were urgently needed and will greatly promote the efficiency, mobilization, and raising of troops and sailors in time of actual or threatened war.

BATTLESHIP PROGRAM.

A Democratic President and Secretary of the Navy have successfully and patriotically advocated the renewal of the two-battleship program as and for an adequate naval defense of the country. Congress, in compliance with their suggestion, has made provision in the naval appropriation bill for the construction of two more modern, up-to-date battleships and has also made provision, upon the sale of two obsolete naval vessels, to use the proceeds in building and constructing a third battleship or dreadnought, to be the largest in our Navy. The policies of the present Democratic administration aim to make and continue a naval policy which has for its object the upbuilding of an adequate Navy for the protection of the country.

PROGRESSIVE CONSERVATION LEGISLATION.

In compliance with the Democratic platform pledges, the fulfillment of which by the enactment into law has been strenu-

ously urged and advocated by the present administration, the Democratic House has considered and passed three several and distinct conservation measures, with two more reported favorably for passage. They are now pending in the Senate, with excellent prospects of passage in that body not later than at the last session of this Congress. These measures have been carefully considered and weighed in reference to the present development of the natural resources of the country, and are for the benefit of the present and for the preservation and usefulness of the same for future generations.

WATER POWERS.

Among such bills passed by the House we find one for a general water-power law applicable to the navigable streams of the United States not on public lands. Of all the country's natural resources none are as important as the water powers of the country. The welfare of the present and future generations demand that they shall not be improvidently disposed of, but that they shall be sacredly kept and controlled so that their usefulness may be utilized for the benefit of succeeding generations as well as the present. By using wisdom in this direction in future generations, when the country's supply of coal and other fuel shall have been exhausted, the people will then have ready and under their control the water powers of the country for the purpose of generating light, heat, power, and perhaps for other useful purposes. The bill passed by the House is generally considered the most up-to-date and progressive law that has ever been considered and passed in this country upon that important subject. The proposed law places the administration thereof in the hands of the Secretary of War.

A similar bill applying to water powers upon Government or public lands, including those in Alaska, is prepared and upon the House Calendar and will soon be passed. This bill places the control and execution of this law relating to water powers on public lands in the Department of the Interior.

RADIUM.

The world-wide importance of radium and its kindred ores to the medical profession and to diseased humanity has made it the part of wisdom to guard and conserve the deposits of carnotite, pitchblende, and other radium-producing ores. The efficiency and importance of radium in certain medical treatments can scarcely be overestimated, and it is wise that an adequate supply of radium for the use of the Government and people of the United States should be retained in the possession and ownership of the Government. Up to the present time nearly all of this important element has been monopolized by a few corporations and persons, and the prices thereof advanced beyond the reach of all sufferers excepting those who may be fortunate enough to be millionaires. To preserve for the use of humanity the wonderful curing effects produced by radium this House has thought it wise to place all ore deposits containing the same exclusively under the control of the Government.

Therefore the House of Representatives during the present session prepared a bill, which is now on the House Calendar ready for passage, which provides for and encourages prospective mining and treatment of radium-bearing ores upon lands belonging to the United States, in order to secure an adequate supply of radium for the Government and other hospitals in the United States. The purpose of this is to enable our people of moderate means who may be afflicted with diseases which are controlled and cured by radium to purchase and use the same at reasonable prices.

TO PROVIDE FOR LEASING COAL, OIL, ETC., PUBLIC LANDS.

To prevent any further increase in the number or size of existing monopolies, trusts, and combinations in coal, phosphate, oil, gas, potassium, or sodium, another bill has been prepared for passage during the present session by the House. The object of this bill is to encourage the development on public lands, under mineral leases, of the undeveloped mineral resources of the country. Instead of donating or selling title to mineral-bearing lands to private corporations or persons, it aims to keep the title and ownership of such lands in the public. This purpose is to accomplish by a method of leasing on a royalty basis the mineral fuels and mineral fertilizers and the public-utility minerals contained in the public lands of the United States, exclusive of coal in Alaska. It aims to preserve these great natural sources of wealth and their usefulness, to apply them to the use and benefit of the public, instead of, as has been done by Congress heretofore, giving complete title to private corporations and persons to be shortly thereafter developed into monopolies and trusts. It aims with these natural and public resources to protect and promote the welfare of this and future generations. Its importance can scarcely be overestimated.

RECLAMATION SERVICE.

Another bill of this nature passed by the present Congress that has become a law is the one relating to arid land and Reclamation Service. No more useful service to the human race can be performed than to turn the arid and unreclaimed lands of the country, which in a state of nature are useless, into fertile and productive soil, producing the crops so absolutely necessary to the sustaining of human life. The bill passed at this sesssion very materially enlarges and extends the scope of the present United States Reclamation Service. Its usefulness has been broadened and intensified to the happiness and welfare of the people, who at present and in the future will make their homes upon such lands.

MISCELLANEOUS CONGRESSIONAL AND ADMINISTRATION WORK.

The Democratic House in the Sixty-second Congress originated and passed a national campaign publicity and corrupt practices law, the first of the kind worthy of the name. This was also in compliance with the platform promises of the Democratic Party. During the present Congress, a bill to strengthen and improve the national campaign publicity and corrupt practices law has been introduced and passed and is in a fair way of receiving concurrence in the Senate. For nearly a quarter of a century the Democratic Party and the independent public press of the country demanded the enactment of such a law, but it remained for the Democratic Party to place it upon the statute books after being restored to power.

BIRD LAW.

The farmers of the country have in years past, and are at the present time, losing millions of dollars each year in crops because of crop-destroying insects. Recent experiments have shown the value of insect-devouring birds in helping to save the farmers' crops from destruction by insects. This Congress has placed upon the statute books a law prohibiting the destruction of such insect-devouring birds, and making ample provision for the enforcement of the same. If effectively enforced, it is predicted by scientists that our farmers will be saved millions of dollars annually.

ENFORCEMENT OF ANTITRUST LAWS.

One of the great pressing problems confronting this country for years has been the antitrust question. The strengthening and enforcing of the laws against trusts, monopolies, and combinations has been strongly demanded by the public. During 16 years of full power Republican administrations have failed and neglected to strengthen these laws, and to but feebly and in few instances only enforce the same.

This administration, however, has promptly and vigorously instituted and prosecuted numerous suits for the dissolution of many of the well-known, powerful, and oppressive trusts and monopolies. It has but recently successfully prosecuted to dissolution the International Harvester Trust, one of the most extensive and detestable of all trusts in the country. With threat of prosecution it has broken up and forced into reorganization within the law other notorious combinations and monopolies, such as the New York, New Haven & Hartford Railway Co.

It has broken up and dissolved the telegraph and telephone monopoly and various other minor trusts. The various divisions of the Department of Justice are busily and faithfully engaged in prosecuting to dissolution or out of existence in the courts various other trusts, monopolies, and combinations in restraint of trade. It can be depended upon at all times to make it unpleasant, unhealthy, and destructive for all concerned in violating our national antitrust laws.

WATCHFUL WAITING.

This administration inherited the troublesome, perplexing, and dangerous Mexican problem. At times it has appeared almost certain that this country would be driven into war or intervention with the Mexican nation. Conditions were such at times that war or intervention with that country was at the very threshold of this country. Our Army and Navy were prepared. Even the militia of the several States were expecting a call to arms.

The well balanced and patriotic wisdom of the President, however, directed our relations with that nation in such a manner as to avoid both intervention and war, with the result that the sunshine of peace now appears to be smiling on distracted Mexico. For months the greater portion of the Republican press and leaders sneered at the policy of the President with contempt and ridicule and dubbed it the policy of "watchful waiting." Now, when success has crowned the President's policy of watchful waiting and peace is restored in Mexico the same press and partisans are not even fair enough to give the President credit for having saved the people

of this country from the horrors and cruelties of a war with Mexico.

If it were not for the well-balanced policy of the President in the Mexican situation our troops would now probably be engaged in guerrilla warfare in that unfortunate country. A different policy would have forced this country to sacrifice upon Mexican soil thousands of useful and noble American lives and millions in money. We would have had before this time upon our hands the cruelties, barbarism, and horrors of war.

If the policy of watchful waiting, so much ridiculed and scorned by some of our public press, had prevailed in the councils of warring European nations the bloodiest war of all human history would not now be raging throughout the continent of Europe. It is said that peace has her victories as well as war. Who, then, is there among patriotic Americans who will deny that the victory of President Wilson in his policy of watchful waiting will not be considered by history greater, grander, and more sublime than any victory which crowned heads or victorious generals may finally win in the present European conflict. With the policy of watchful waiting we have, with honor, avoided war and all its attendant cruelties, horrors, and barbarism.

Federal Aid to Demonstrate the Practical Value and Uses of Denatured Alcohol.

EXTENSION OF REMARKS

OF

HON. J. A. FALCONER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 29, 1914,

On the bill (H. R. 18479) to provide the Federal aid necessary to demonstrate the practical value of the amendments to the denatured-alcohol laws of the act of October 3, 1913.

Mr. FALCONER. Mr. Speaker, I desire at this time to refer to the subject of the value and uses of denatured alcohol as a source of power on the farm.

The consensus of opinion among farm leaders is that we have the framework of an excellent denatured-alcohol law. It is further suggested, however, that the Congress should provide the means to carry development of this important industry over the experimental stage.

Powerful interests are opposed to the development, and for Congress to fail to make adequate provision to demonstrate to the farmers and liquid-fuel users of the Nation the practical value of the legislation is to breed distrust where there ought to be confidence.

It is a great agricultural proposition, Mr. Speaker, and the object of my bill H. R. 18479 is to round out the legislation by providing for the machinery and means to prove the immense practical value of the denatured-alcohol laws given to the country by this Congress in the act of October 3, 1913.

The importance of the subject and the viewpoint of the farmers, may I think, be clearly seen in a memorandum supporting the proposed legislation drafted by a committee composed of C. B. Kegley, master of the Washington State Grange; William T. Creasy, master of the Pennsylvania State Grange; and George P. Hampton, the Washington representative of these and other grange organizations. I ask, Mr. Speaker, that the memorandum or rather brief, for it is a very comprehensive argument, be printed in the RECORD as a part of my remarks.

THE FARMERS' ARGUMENT IN FAVOR OF H. R. 18479.

The object of this bill is to give the necessary aid to demonstrate the practical value of the amendments to the denatured-alcohol laws of the act of October 3, 1913.

The original denatured-alcohol law of June 7, 1906, was intended by Congress, as a review of the committee hearings and speeches in Congress will show, to be of special benefit to agriculture. But as the Bureau of Manufactures of the Department of Commerce and Labor, in special Consular Reports, No. 51, states:

> Contrary to general expectation, it did nothing toward facilitating manufacture on a small scale in such agricultural distilleries as are operated very generally in Europe. However, in the following year an amendatory act was passed (approved Mar. 2, 1907) which was intended in part to remedy this defect in the original law.

The evidence of the CONGRESSIONAL RECORD and other official documents is equally conclusive that the amendment of 1907 was claimed by Congress to have been enacted for the benefit of agriculture. Farmers generally so accepted it, and their confidence that at last they had been given a square deal in the matter was strengthened, first, by an appropriation by Congress to provide for pioneer demonstration distilleries and educational and research work, and, second, by the actual installation of an experimental plant and the opening of a school of instruction by the Department of Agriculture.

That was seven years ago, and the farmer has had absolutely no benefit from it. Either the law was defective, and the efforts to make farm denatured alcohol distilling successful not sincere, or the advantages claimed for industrial alcohol distilling on the farm did not exist or were grossly exaggerated.

A review of the facts and evidence shows:

First. That powerful monopolies are vitally interested in preventing any competition with kerosene and gasoline in supplying the liquid fuel demand for light, heat, and power, or any competition with wood alcohol in supplying the demand for solvents in the manufacturing arts.

Second. That denatured alcohol is a better liquid fuel than either kerosene or gasoline and a better solvent in the arts than wood alcohol; that an abundant supply of denatured alcohol is the one thing these monopolies have to fear; and that the supply of denatured alcohol, if farm industrial distilleries are allowed to develop, is not only unlimited but can not be monopolized.

The development of industrial alcohol distilling on the farm is a menace to the oil and wood-alcohol monopolies, and considering the enormous amounts of the monopoly profits at stake, it is natural to assume that every effort has been made and will continue to be made to prevent such development.

An examination of the amendatory act of March 2, 1907, will show that it was not only a "gold brick" for the farmers, but that it was drafted with the plain intent of benefiting the large distillers.

Section 1 was ostensibly for the benefit of chemical manufacturers, but in a final "*Provided*" its real intent is shown to have been to give the Tobacco Trust special advantages in securing tax free rum for flavoring chewing tobacco.

Section 2 provides for the establishment of central denaturing bonded warehouses, which the development of the past seven years shows have been of immense serviceability to the industrial-alcohol trust.

Section 3 provides for the simplification of the regulations for manufacturing in large distilleries and for the shipment of the alcohol in tank cars in bond to any denaturing warehouse. The development of the past seven years shows that this also has been of great benefit to the industrial alcohol trust.

Section 4 is the farmers' "gold-brick" section. Its purpose would seem to have been to fool the farmers into helping to get the other sections enacted in the belief that they were getting something of real value. But, intentionally or unintentionally, they were deceived, and it remained for this Congress, at its first session, to amend the law so that it would be of real worth to the farmers.

THE PLAN OF FARM DISTILLING PROVIDED FOR BY THE NEW LAW.

While it had become quite generally known that the farm-distillery provisions of the denatured-alcohol laws were defective and actually operated to prevent the manufacture of industrial alcohol on the farm, it was not generally understood what the defects were or what were the essentials of a practical plan for farm distilling. The defects in the old law and the far-reaching industrial importance of the new, which entirely removes them, will be better understood by noting the essential features of a practical plan for operating farm distilleries, viz:

First. Small low-proof stills on the farms, of varying capacity to meet the needs of each farm, under the lock and seal of the Internal-Revenue Service.

Second. Central plants, of not less than 300 gallons daily capacity, to which the low-proof spirits from the small stills of the surrounding farms can be sent to be redistilled and denatured. In addition to redistilling the low-proof spirits received from the small farm stills, these central plants to insure their commercial success must have the right to make alcohol direct from farm products.

Third. Tank wagons for the transferring in bond of the low-proof spirits of the small farm stills to the central redistilling plant. Denaturing is impracticable until after redistillation in the central still, and the method adopted for distilling in the small farm stills and transferring their spirits direct to the redistilling plant must be such as to insure the internal-revenue control necessary to guard against fraud.

Fourth. The manufacture of industrial alcohol from the waste products of the farm is impracticable unless such manufacture is entirely free from many of the rigid regulations that rightly

govern the production of tax-paid spirits. The taxes on distilling apparatus would be burdensome on the small industrial farm still, and the tax on the manufacture of stills, which even the repairer of a single still would have to pay, would make the cost of the repair of the farm still excessive. Farm distilling must be made as inexpensive as it is possible to make it, and the farmer must be free to operate or to discontinue operation when he chooses. Therefore the regulations rigidly defining the material to be used, the percentage of alcohol that must be derived therefrom, and the time of operation can not apply to this class of distilleries without effectually blocking their development.

These essentials were all barred under the old law, but the new law removes all restrictions; and the new regulations prescribed by the Commissioner of Internal Revenue are as broad and liberal as this new act of Congress. So far as the law is concerned, the way is now open for practical development.

FEDERAL DEMONSTRATION.

But to leave the law as it stands without providing means to demonstrate its practical value is to convince the farmer that again, as is now being asserted, he has been "gold-bricked" and fooled with more legislation of no benefit to him.

Wherever the farmer has shown a disposition to take hold to operate under the new law, he has found it impossible to get reliable information, and has met such a mass of skepticism and doubt that he has been discouraged from taking the initiative. The argument is unanswerable—that if the leaders in Congress had faith that the law would do what is claimed for it they would have provided for the necessary demonstration and educational work.

Other farmers who appreciate the practical value of the new law realize that in the face of powerful monopoly opposition and a general feeling of doubt they are powerless to do much until the pioneer demonstration work has shown conclusively that the law is all right and that the practical commercial possibilities are all that are claimed for them. They look to the Government to do this and to Congress to provide the means.

EFFECT ON GASOLINE INTERESTS.

Prior to the passage of the new law the news items and press dispatches telling of the scarcity of gasoline and the steady advance in price and deterioration in quality were frequent. But now that the law makes farm operation practical and the abundant supply of denatured alcohol liquid fuel an early possibility, thus menacing the liquid fuel monopoly, the press dispatches tell a different story. The duplication of articles in newspapers in all parts of the country, to the effect that the "gasoline output is increasing yearly" and that "there is no need to worry over a substitute for motive power for motors," shows a common origin and that a general publicity bureau is at work.

In direct contradiction to this new publicity policy of the gasoline interests is the statement of Joseph A. Anglada, chairman of the Metropolitan section of the Society of Automobile Engineers. The following quotations are taken from an address delivered by him before the automobile school of the West Side Young Men's Christian Association, of New York, on May 20 last:

The subject of motor-car fuels of late has been receiving a great deal of attention on the part of the engineering profession and, to some extent, by the public. In fact, the unsatisfactory quality of "gas" now available has become a topic of almost every-day discussion. Prof. Magruder, of the Ohio State University, stated a few months ago that if all the gasoline engines in the country now in use were to run at their rated horsepower for 10 hours a day the known gasoline supply would last about 30 days. In other words, if the gasoline engines in use were run at their maximum horsepower the amount of gasoline available would be sufficient only to run them one hour a day for about a year.

This puts to rest the popular impression that the high price and low grade of present-day gasoline is due mainly to trade combinations and artificial restrictions of output. At various meetings of engineering societies held during the past few years, at which representatives of fuel producers were present, it was authoritatively demonstrated that the grade of fuel obtainable from crude petroleum must necessarily decrease in quality and increase in price, due to the restricted amount of available crude oil suitable for the production of gasoline. It must also be considered that the increase in the number of engines using gasoline means an increase in the quantity of lubricating oil necessary for the operation not only of these engines but other machines, contrivances, and devices used for industrial and household purposes. Differently expressed, the production of lubricating oil from crude oil has also served to reduce the quantity of crude material for the manufacture of gasoline.

Experiments conducted by the United States Government as well as foreign Governments and independent laboratories are conclusive in establishing the fact that any gasoline or kerosene engine on the American market can operate with alcohol as a fuel without any structural change whatsoever.

An engine designed for gasoline or kerosene will give about 10 per cent more power when operated on alcohol, provided the necessary modifications are made. An engine specially built for alcohol will give from 20 per cent to 30 per cent more power than is obtainable from a regular gasoline engine of the same size. Because of the increased efficiency obtainable from a standard size of engine using alcohol, the cost of production per horsepower will be less than that of gasoline or kerosene engines of the same class.

Furthermore, the deposit of carbon in an alcohol engine, if the proper grade of lubricating oil be used, is impossible, while gasoline and kerosene engines can not be used without having the interior parts become "sooty," with a resultant loss of power. Another factor which counts in favor of the alcohol engine is the fact that its exhaust is not as hot as that from a gasoline or kerosene engine, thus minimizing the danger from ignition and the possibility of burning the lubricating oil, the latter being a decided advantage over gasoline and kerosene engines.

In conclusion, it will be interesting to note that the subject of alcohol as a fuel is now receiving primary consideration by some of the world's leading engineering organizations. In England the Imperial Motor Transport Council has formed an alcohol motor fuel committee, composed of internationally famous scientists, and in France the Automobile Club of France, in collaboration with the Society of Automobile Engineers in this country, has undertaken the scientific development of an engine for conducting experiments to determine the best features of construction and factors regulating an engine to operate to the greatest advantage on alcohol.

IMPORTANCE OF FARM INDUSTRIAL DISTILLING TO AGRICULTURE.

Our consul general at Berlin, in a special report, stated:

The law governing the industrial uses of alcohol was enacted in 1887, and by reason of its underlying causes and practical results is worthy of study as an example of intelligent, far-seeing fiscal legislation.

The landowning class, which included the influential nobility, urgently demanded legislation which would save the waning profits of agriculture.

It was accordingly decided to make alcohol for industrial uses as cheap as possible, and to promote by all practical means its production and consumption in this country.

And after 17 years of trial our consul general, in the same special report, states:

The wisdom of the system established by the law of 1887 has long ceased to be a question of debate. For every Reichsmark of revenue sacrificed by exempting denatured alcohol from taxation the Empire and its people have profited tenfold by the stimulus which has been given thereby to agriculture and the industrial arts.

The Commissioner of Internal Revenue, the Hon. John G. Capers, accompanied by the chief chemist of the bureau, made an official investigating trip to Europe in the summer of 1907, and in his annual report for the year ending June 30, 1908, gave a detailed report of his investigations. The report says:

There were in operation during the year 1906–7, however, 13,837 agricultural distilleries, of which 5,871 used potatoes as a raw material, and 7,966 used various kinds of grain. These distilleries produced, in round numbers, 86,000,000 gallons out of a total production of 101,000,000 gallons, of which 78,000,000 gallons were made from potatoes.

They must use exclusively as raw material grain or potatoes grown on the farm or farms of their owner or owners and must use all the residues or by-products as feeding materials or fertilizers on the same farms. They are all fairly good-sized plants, capable of producing high-proof alcohol, in continuous process, and with a daily capacity of 120 to 400 gallons proof spirit.

Speaking of the development of use in the United States, the report says:

The use of denatured alcohol for purposes of fuel, light, and power in this country is increasing, notwithstanding the relative cheapness of petroleum products, as the necessary appliances for such use are being manufactured and introduced, and the merits of alcohol as a source of energy brought to the attention of the public.

The greatest ultimate advantage to be reaped from the denatured-alcohol law, however, are its benefits to agriculture, in the shape of increased diversification of crops, enhanced productiveness of unfertile soils, and utilization of what would be otherwise waste crops or by-products of crops.

The one thing we need in our country in this matter more than anything else is the reduction of the cost of making alcohol. The Germans, after 40 years of experience and experiments, use cheap potatoes, while we are yet compelled to use high-priced grain. Our western country—the Dakotas, Nebraska, Minnesota, Montana, Iowa, and Kansas—will be the first to produce alcohol from potatoes and farm molasses, the by-products of the sugar beet.

All who have visited Germany to make a study of agricultural distilleries and the benefits which German agriculture has derived from these agricultural distilleries and the value of alcohol as a fuel and important factor in that country's manufacturing development bear the same testimony. From no disinterested source do we find a dissenting voice.

DOES NOT IMPOVERISH THE SOIL.

As to the immense advantage of alcohol manufacture as a factor in soil conservation equal unanimity of opinion exists among men of science. Dr. H. W. Wiley, formerly Chief of the Bureau of Chemistry, Department of Agriculture, in testifying before the Ways and Means Committee of Congress at the free-alcohol hearing, said:

The farmer can grow any amount of starch and sugar that may be wanted for any purpose in the world. There is no limit to the amount of starch and sugar which the farmers of this country can grow, and not a pound of starch or sugar takes one element of fertility from the soil. It is a pure gift of God, and if He had not meant it to be used, I suppose He would not have given it to the world. So there is no limit, in my opinion, upon the capacity of the farmers of this country to supply the materials for making ethyl alcohol.

Prof. S. Lawrence Bigelow, of the University of Michigan, in a paper on denatured alcohol in the Popular Science Monthly, said:

It is not too much to say that if we arrange all the liquids known to us in the order of their general usefulness water, which heads the list,

of course, will be followed immediately by ethyl alcohol. * * * Made by the growth of plants utilizing carbon dioxide and water from the atmosphere it contains nothing but carbon, hydrogen, and oxygen. All the rest of the plant may be returned to the soil, which thus is not impoverished. It is the best method known to us to-day to store the sun's energy.

So much for the scientific side of the question and the evidence of great practical success in Germany. Surely this is enough evidence to show that the legislation was wise, and that under right conditions agricultural distilleries can be and are being rapidly developed.

THE REAL BEGINNING.

State Master William T. Creasy, of the Pennsylvania Grange, speaking for the grange organizations generally to a gathering of 5,000 farmers at Chestnut Hill, Pa., on Agricultural Distilleries and Industrial Alcohol Development, in concluding his address, said:

The building and operating of the first denatured alcohol farm distillery will mark the real beginning of this great industrial development that shall bring to every farming district and every farm the full benefit of this great advance in farm betterment. Industrial alcohol farm distilleries properly established mean all modern improvements in the rural home, the lessening of the toil of the farmer's wife, the cheapest and best of all liquid fuels for light, heat, and power, and the profitable utilization of waste and otherwise unsalable crops, and, above all, the natural method of preserving soil fertility.

Those who study the possibilities of farm industrial alcohol distilleries purely from the standpoint of alcohol production fail to realize their great importance. In the big central distilleries making potable alcohol is the all-important thing, and the by-products are of minor importance. In the small farm distilleries conditions are reversed; the feed and fertilizing features are most important and the alcohol the less important product. So true is this that there are doubtless places in the United States where it would even pay to operate industrial alcohol distilleries if the denatured alcohol had to be sold at a merely nominal price. The local farm distillery, in fact, will be one of the farmer's best profit producers and a sure safeguard against loss from glutted markets and injured crops.

The industrial advance made possible by the amendment to the denatured-alcohol laws providing for industrial alcohol distilling on the farm may be summarized as follows:

The conservation of soil fertility.
The utilization of waste products of the farm.
Modern improvements in the rural home.
An abundant meat supply.
Freedom from monopoly control of liquid fuel for light, heat, and power.
An unlimited fuel supply for the automobile.
Cheaper alcohol for industrial purposes.
The development of new industries.
Natural enforcement of scientific farming, the profits of farm distilling being directly proportional to the adoption of the best methods of crop rotation in combination with stock raising and scientific soil conservation.

As long ago as 1908 the Commissioner of Internal Revenue, after a visit to Europe, showed in his annual report the requirements for farm distillery development, and urged the farmers to be patient. On this point he said:

It must necessarily require much time and work for this development, but if the farming community in different parts of the country, instead of becoming impatient for direct and immediate results, will extend earnest sympathy and cooperation to the scientific workers in the several State experimental stations and in the Federal departments engaged in the problem much greater progress will be made.

The farmers were patient, but no results came from departmental activity. Congress remained indifferent to the needed changes in the law until this Congress at its first session amended it. This constructive legislation now needs to be supplemented by an appropriation for demonstration or educational work.

In 1907, when the original law was amended, ostensibly for the benefit of the farmer, the pioneer demonstration work was undertaken by the Government, and money was appropriated therefor by Congress. But the farmers got no benefits, because the law, for them, was inoperative. Now they are told that the new law enacted at the first session of this Congress is a good law, and their reasonable expectation is that Congress at this session will provide the means to demonstrate that it is a law of genuine practical value to farmers. If Congress does not do this, why should they not believe they have been given another "gold brick"?

Congress appropriates millions and hundreds of millions of dollars to improve our waterways, to irrigate our dry areas, to reclaim marshes and deserts, to build canals, to reforest our mountains, and to aid commerce in many ways. But, in proportion to the amount, no appropriation Congress was ever called upon to make was more far-reaching in its effects or more directly affected all the people than would this appropriation for the pioneer work in farm denatured alcohol distillery development. And the amount is not millions, but only $100,000.

This Congress, after years of neglect and failure to do anything, amended the law to make it workable. Can it now afford to adjourn without making the small provision necessary to demonstrate the practical value of the new law?

Revoking Leaves of Absence.

EXTENSION OF REMARKS
OF
HON. CHARLES H. SLOAN,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 25, 1914.

On House resolution 601, as follows:

"*Resolved*, That all leaves of absence heretofore granted Members are hereby revoked;

"*Resolved further*, That the Sergeant at Arms is hereby directed to notify all absent Members of the House by wire that their presence in the House of Representatives is required and that they must return without delay to Washington;

Resolved further, That the Sergeant at Arms is directed to enforce the law requiring him to deduct from the salary of the Members their daily compensation when they are absent for other cause than sickness of themselves and their families.

Mr. SLOAN. Mr. Speaker, on the 25th of August, 1914, Majority Leader UNDERWOOD presented a resolution to the House by which all leaves of absence were canceled. Presence of all Members was demanded, and the enforcement of a penalty, to wit, the forfeiture for nonattendance of salary was threatened.

To myself and Republican colleagues, Messrs. KINKAID and BARTON, this resolution has little personal concern, because we have been present and, with few exceptions, in constant attendance upon the sessions of the House, with but few exceptions, since April 7, 1913.

Numerous civic and educational societies, as well as public associations have during that time requested our attendance in our State and respective districts to make addresses on public occasions. We have, however, recognized and obeyed the demands of public duty, and thereby disappointed our constituents and friends.

Constant attendance of the membership of the House and reasonable application by those in authority could have very easily finished all our work, save and except a few emergency matters incident to the European war by the 1st of June this year, or, at the latest, the 1st of July. Yet one of the annual appropriation bills, which should have been completed months ago, has not become a law.

A great many of us believe that the period from December 1, 1913, up to July 1, 1914, should have been the time for special activity on the part of the House of Representatives and the enforcement of attendance. Because the same power existed then which is being exerted now to compel attendance and the passage of the resolution, except for publicity purposes, is a mere vain thing. The law fixes a Congressman's salary at $7,500 a year, in 12 equal payments. I do not believe that his salary can be reduced by resolution of the House, as the question of his attendance or nonattendance and the manner of the performance of his duty is largely a question between him and his constituents, except, of course, the summary process of the House will compel attendance.

It is well known that the primaries and conventions in the solid Democratic States of the South settle the congressional successions, and the constitutional elections are then regarded as a mere matter of form, depending alone on the advance of the calendar.

The gentleman from Alabama [Mr. UNDERWOOD] stated in answer to the minority leader, Mr. MANN, as follows:

Now, I want to say to the gentleman from Illinois [Mr. MANN] that what he says about the membership of the House leaving here to go home and attend to their primary elections is not warranted by the facts, only in exceptional cases. I know that when the primary election in Alabama took place, with one exception, the Alabama delegation was on the floor of the House attending to its duties. [Applause on the Democratic side.] And I know that is true in most of the other Southern States.

And Mr. HEFLIN, his colleague from Alabama, stated as follows:

The Alabama delegation, the most of it, remained here. I had no opposition. * * * The Mississippi delegation did not go home. Others who had opposition did not go home except for a day or two before the primary in order to vote. * * * Democrats, regardless of North, East, West, and South, are demanding that the Republicans stay here and perform their duty. * * * We propose to keep you here and make you attend to your duty. * * * [Applause on the Democratic side.]

The foregoing remarkable statements seemed to be authoritative, as no Member from the States referred to submitted either criticism or correction. Members from those States can not complain if the challenge of the Alabama gentleman is accepted and the record appealed to.

This resolution was being considered when the last Democratic primary was being held in the South. That was in South

Carolina. The resolution, of course, if it had any vitality, could not become operative until the next day. Meanwhile South Carolina Members could return, but Michigan and California Members, whose primaries were held the same day, could not reach Washington, nor could Congressmen engaged in the Maine campaign, where the election takes place on the 14th of September, reach Washington on the 26th.

The gentlemen's statements as to the nonattendance of Members at certain primaries or campaigns leading up thereto would have been more convincing if they had shown where these gentlemen actually were prior to their respective primaries, because the CONGRESSIONAL RECORD reveals the following facts:

ALABAMA.

(Primary April 6, 1914; 10 Representatives.)

There were 8 roll calls between March 9 and March 31 when there were 10 Representatives (1 of these being seriously ill).

At each of these roll calls not more than 6 were present.

At 6 roll calls only 4 out of 10 were present.

At 1 roll call only 3 out of 10 were present.

Six roll calls between March 31 and April 7 when there were 9 Representatives.

At 5 of these roll calls only 5 out of the 9 were present.

At one roll call only 1 out of the 9 was present.

Three Members were absent at every one of the 14 roll calls.

One other Member was absent at all except 1 roll call; 1 other Member was absent at 7 out of 14 roll calls. Making 5 Members who were absent at more roll calls than they were present.

ARKANSAS.

(Primary March 27; 7 Representatives.)

Thirteen roll calls between March 2 and March 27.

At 5 of these roll calls only 4 out of 7 were present.

At 6 of these roll calls only 5 out of 7 were present.

At 1 roll call 6 out of 7 were present.

One Member was absent at all 13 roll calls.

Two Members were absent 6 out of 13 roll calls and 1 Member was absent 4 out of 13 roll calls.

FLORIDA.

(Primary June 2; 4 Representatives.)

Twenty-two roll calls from May 6 to June 3.

At none of these roll calls were more than 2 of the Members present.

At 14 of these roll calls 3 out of the 4 Members were absent.

At 2 roll calls all 4 of the Members were absent.

GEORGIA.

(Primary August 19, 1914; 12 Representatives.)

Thirty-six roll calls between July 31 and August 21.

At none of these were more than 6 out of 12 Members present.

At 11 roll calls only 5 out of 12 were present.

At 17 roll calls only 4 out of 12 were present.

At 3 roll calls only 3 out of 12 were present.

Five Members were absent at each one of the 36 roll calls.

One Member was absent at 33 out of the 36.

One Member was absent at 23 out of the 36 roll calls.

Seven out of 12 Members were absent at more roll calls than they were present.

It should be said that 2 Members of this delegation were seriously ill during this time.

LOUISIANA.

(Conventions August 27 and September 21; 8 Representatives.)

Forty roll calls from July 27 to August 27.

At none of these roll calls were more than 4 out of 8 Members present.

At 4 roll calls only 3 out of 8 were present.

At 12 roll calls only 2 out of 8 were present.

At 9 roll calls only 1 out of 8 was present.

At 12 roll calls no member of the delegation was present.

Four Members were absent at each one of the 40 roll calls.

One Member was absent at 32 out of the 40 roll calls.

One Member was absent at 29 out of the 40 roll calls.

One Member was absent at 26 of the 40 roll calls, making 7 out of 8 Members absent at more roll calls than they were present.

SOUTH CAROLINA.

(Primary, August 25; 7 Representatives.)

Thirty-three roll calls between July 27 and August 26.

At 1 roll call 6 out of 7 Members were present.

At 2 roll calls 5 out of 7 Members were present.

At 6 roll calls 4 out of 7 were present.

At 3 roll calls only 3 out of 7 were present.

At 10 roll calls only 2 out of 7 were present.

At 3 roll calls only 1 out of 7 was present.

At 8 roll calls all 7 Members were absent, making 24 roll calls at which more Members of the delegation were absent than present.

One Member was absent at 31 out of 33 roll calls.

One Member was absent at 29 out of 33 roll calls.

Two Members absent at 25 out of 33 roll calls.

Three Members absent 17 out of 33 roll calls.

Each of the 7 Members was absent at more roll calls than he was present.

TEXAS.

(Primary July 25; 18 Representatives.)

Thirty-two roll calls from June 25 to July 23.

At none of these was more than 11 out of the 18 Members present.

At 5 of the roll calls there were 10 of the 18 Members present.

At 3 of the roll calls there were only 9 of the 18 Members present.

At 7 of the roll calls there were only 8 of the 18 Members present.

At 10 of the roll calls there were only 7 out of the 18 present.

At 4 of the roll calls there were only 6 out of the 18 present.

At 1 roll call only 5 out of the 18 were present.

At 1 roll call only 1 out of the 18 was present.

Making 26 out of 32 roll calls at which one-half or more of the Members of the delegation were absent.

Six Members were absent at all 32 roll calls.

One Member was absent at 31 out of 32 roll calls.

One Member was absent at 27 out of 32 roll calls.

One Member was absent at 24 out of 32 roll calls.

One Member was absent at 22 out of 32 roll calls.

One Member was absent at 18 out of 32 roll calls.

Making 11 Members who were absent at more roll calls than they were present.

Notwithstanding the above statements in the RECORD, Messrs. UNDERWOOD and HEFLIN charge the minority with being sectional in its opposition to this resolution. With this primary record and the particular time of presentation of this resolution, it is not difficult to see who brings in sectionalism and attempts to thus control the Maine election and prevent discussion of national issues throughout the North.

The charge of Messrs. UNDERWOOD and HEFLIN against Mr. MANN for springing sectionalism reminds one of the outlaw in the oriental desert meeting the pilgrim, and, drawing his sword, demanded "Art thou a follower of the true faith or a Christian dog?" The pilgrim said: "Stranger, I am a Christian." The outlaw, swinging the sword of Mosiem, said: "Then, by the beard of the Prophet, thy purse and life are forfeit to his sword. Thou shouldst not have sprung the religious question."

Moreover, there are, barring temporary vacancies, 435 Members of the House of Representatives. The Democrats have 288. The remaining 147 belong to the minority divisions. It requires 218 Members present to constitute a quorum. There have been in this session of the Sixty-third Congress up to August 25 197 roll calls. At only 37 of these have there been as many as 218 Democrats present. Since the 5th of June, 1914, the Democrats have not had enough for a majority of the House present at any roll call. Since that time and up to and including this resolution there were 100 roll calls. On the passage of this resolution on August 25, 1914, there were absent 111 Democrats, 41 short of a quorum. This resolution was opposed by 6 Democrats, most of whom were quite regular attendants. This resolution was favored by many Democrats, varying in their nonattendance from the casual and infrequent attendant to the mysterious stranger whom their colleagues had had little opportunity to see or know. I expect and have expected to remain in attendance upon Congress while it will be in session and my presence needed. This resolution will have nothing to do with my attendance, absence, or drawing of salary. I do object, however, to this resolution as being a mere spasm of virtue and a paroxysm of patriotism entirely uncalled for, out of season, and out of place.

The Sergeant at Arms' duty is now precisely what it was at the beginning of his term of office, April 7, 1913. If the law is in force authorizing him to enforce the penalty referred to in the resolution, he should have enforced it from that day without any direction from this House. If he enforces it now, he certainly should enforce it as from April 7, 1913.

There is presented in this unusual procedure a remarkable confession of the breaking down of the obnoxious caucus rule, which has declined so much from its former vigor that it now either has not the force or efficacy to compel its own Members to attend the sessions of the House or it has become recognized as so inefficient that it was not resorted to.

Criticism is not leveled against the Members of the Southern State delegations for spending such reasonable time as they saw fit in presenting their claims to their constituents. They should not have fathered or stood for a move that practically prohibits a northern Member from doing a similar turn.

Railway Mail Pay.

EXTENSION OF REMARKS
OF
HON. JEFFERSON M. LEVY,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 22, 1914.

Mr. LEVY. Mr. Speaker, it is to be assumed that in enacting new laws regarding railway mail pay or any other subject Congress will always seek the guidance of the fullest information obtainable and will take advantage of every source of illumination upon any question concerning which legislation is proposed. This is so obviously the duty of the law-making branch of the Government that there should properly be no necessity for asserting it or occasion for urging its observance.

But the necessity and the occasion nevertheless do exist. This bill, H. R. 17042, which would completely reconstruct the entire system of railway mail pay, introducing new and wholly untried features and subjecting the railroads to a degree of arbitrary control for which no parallel exists or has hitherto been proposed, can not be passed unless Congress not only chooses deliberately to disregard the earnest and honorable labors of one of its own committees, but also closes its eyes to the most important body of facts concerning this long-disputed question that has ever been collected.

A joint bipartisan committee of Congress has spent two years in studying the railway mail pay problem. The committee held repeated hearings, at which a large number of railroad officers and Post Office Department officials were examined. Both sides presented elaborate statistical studies bearing upon the question, partly on their own initiative and partly in response to specific requests by the committee for information upon certain points.

It is safe to say that every recognized authority on railway mail pay in the United States, whether in the service of the railroads or of the Government, appeared before the committee and, orally or in writing, told all he knew about the matter. Furthermore, the committee had the advantage of the independent advice of a representative of the Interstate Commerce Commission and other disinterested experts on the science of transportation.

The committee concluded its hearings last spring, the termination of the inquiry having been delayed by the submission on the part of the Post Office Department of voluminous additional exhibits after it had been informally understood that both sides had finished their presentations.

Since the termination of the hearings the committee has been at work coordinating the immense mass of facts, figures, comments, and opinions that have been laid before it in order to present the whole in systematized and understandable form to Congress in its report. The committee has not yet been able to work this report into final form for submission, but it is generally known that this labor is nearly completed.

Enough has been said to indicate that this report may reasonably be expected to be the most valuable contribution to the solution of the railway mail pay problem ever compiled. To take hasty action upon mail-pay legislation prior to the appearance of this report would be nothing short of the choice to act in darkness instead of in light; yet if the efforts to rush through this bill, H. R. 17042, prevail, that is the position in which the House of Representatives will be placed.

If it is said that the Post Office Department officials, whose views are embodied in this bill, attended the committee hearings, and that the facts collected are available for their consideration, the answer is that it can not in common sense be supposed that they have made an absolutely impartial study of these facts, with only the object of abstract justice in mind, or that they have analyzed the whole situation and coordinated and systematized the whole mass of complicated information from a purely disinterested viewpoint.

The officials of the Post Office Department are interested parties. Their personal advantage, political and otherwise, is bound up in keeping the expense of the Post Office Department as low as possible. They have the right to present their case before a disinterested tribunal; but to allow them to decide the controversy, which is what the passage of this bill would accomplish, would be equivalent to allowing a party to a lawsuit to act as the judge.

Moreover, the rates named in this bill are entirely too low, and of this fact abundant evidence was given before the joint congressional committee. The base rate named in this measure is 21 cents per mile for the movement of a 60-foot mail car. The rate first named was only 20 cents, but the trifling concession of another cent was later allowed, and appears in the amended form of the bill.

The mails are transported in passenger trains. Furthermore, the bulk of them move in the fastest trains, those that are the most expensive to operate. It was shown in the hearings before the joint committee that the average earnings from passenger trains throughout the country were at the rate of substantially 25½ cents per car mile. This included the revenue from the mail and express moved in the same trains.

It was shown also that in a typical mixed passenger train the space devoted wholly to passengers yielded relatively the highest return, although concededly passenger traffic is not generally remunerative to the railroads. The space devoted to express came next in yield, and the mail space was the least productive of all.

The evidence indicated that express space is 19 per cent and passenger 37 per cent more productive relatively than mail space. Considering only the actual transportation service rendered, the railroads, on the average, do as much to earn $5 from the mails as to earn $6 from express service, yet the latter is far less expensive and burdensome to the railroads by reason of the fact that many extra and wholly unpaid services are rendered the Government in connection with the mail service, while nothing but the bare transportation is furnished the express companies under their contracts. Anything extra in the way of services or accommodations the express companies pay for, while the Government does not.

The rates named in this bill would accentuate and perpetuate these inequalities. The bill would not only enact maximum rates for carrying the mails, which, on a car-mile basis, are 4½ cents lower than the dead level average of car-mile earnings in passenger trains throughout the country, but would establish a basis considerably lower than the most disinterested advice received by the joint congressional committee indicated would be the least that could possibly be fair.

Dr. M. O. Lorenz, associate statistician of the Interstate Commerce Commission, made an independent study of the mail pay problem for the joint congressional committee and reported that in his opinion the railroads were entitled to an advance of at least 10 per cent in their total payments for carrying the mails, and named 22½ cents per car-mile as a base rate at which they certainly would not be overpaid. This is 1½ cents higher than the maximum rate which this bill now before the House authorizes.

Dr. Lorenz, moreover, suggested that the 22½-cent base rate be regarded as merely experimental, with the understanding that the railroads should have recourse to the Interstate Commerce Commission if, after trial, they believed it failed to provide them adequate remuneration.

This bill now before the House would not only establish a maximum scale of rates much too low to be fairly remunerative, but would also inaugurate a system of determining the actual payments which is condemned not only as being unscientific and unfair, but also as being objectionable on the grounds of public policy.

Under the present system about 90 per cent of the mail pay of the railroads is derived from a simple ton-mile basis; that is, the railroads are paid in proportion to the average weight of the mails hauled daily on each route multiplied by the number of miles in the route. The wholesale and retail principle is recognized by the fact that the rates of pay decrease sharply as the average weight on a given route increases.

The other 10 per cent of railway mail pay consists of allowances made for the use of the traveling post offices, or railway post-office cars, which are constructed and furnished especially by the railroads for the accommodation of mail clerks in sorting mails en route and which are not available for any other form of transportation service when not used for carrying the mails.

The system which this bill proposes to establish is based on the car space required, or supposed to be required, for the transportation of the mails on every route. The fundamental rate is the one already named, a maximum allowance of 21 cents per mile for the movement of a full 60-foot traveling post-office car, with proportionate allowances for 30-foot and 15-foot compartments and with an allowance for mail-storage cars 1 cent less per car mile than that for the traveling post-office cars.

The first objection that can be raised to this system is that weight times distance, or the ton-mile, is the universally recognized and entirely logical measure of the service of transporting goods or freight of any kind. In a broad sense, although not technically, the mails are a kind of exceedingly high-class freight. When the Government pays for the actual weight of the mails in proportion to the distance they are transported,

it is paying for a definite and specific service rendered, which is capable of exact determination and about which there can be no dispute. When it is paying on any other basis it is paying by estimate or opinion.

The bill leaves it wholly to the judgment of the Postmaster General to say what space is required for the different routes. The pay to the railroads will be based entirely on that space as designated, irrespective of the actual extent of the service rendered. The designation of space is a matter of opinion, and both the railroads and the Government would be deprived, by the terms of this bill, of the protection which is given by a system under which the service really rendered may be ascertained by ordinary physical measurements.

The Postmaster General could not, of course, personally exercise his judgment in the case of every route. He would be compelled to rely on the reports of subordinates and merely place the stamp of official approval on their actions.

It is almost self-evident that, according as the currents of politics might change, a Post Office administration, under the terms of this proposed law, could unduly favor or harshly discriminate against the railroads. The possibilities for corruption among minor officials and employees on both sides which would be opened up by a system of paying by opinion, instead of by actual service rendered, hardly need pointing out.

There is one other feature of this bill that is of a most serious character, and that alone should insure its defeat, even were this an appropriate time for mail-pay legislation and the measure otherwise apparently most fair and admirable. This is the feature of the measure by which no specific or definite rates are named at all, but merely maximum limits to the exercise of the Postmaster General's discretion.

It is nowhere stated in the bill that the Postmaster General "shall" pay the railroads anything for carrying the mails. It is merely specified that he "may allow" them for their different services "not exceeding" certain rates.

It is left wholly to his personal discretion to make the actual payments, in practice, as much less than these maximum amounts as he chooses or thinks wise or expedient. So the railroads would not even be sure of a level of compensation based on the 21 cents per mile rate for a full 60-foot railway post-office car, inadequate as that allowance itself might be. For all that this bill says the Postmaster General could cut the allowance to 18 cents, 15 cents, or anything else he might decide upon.

He could make discriminatory rates between different roads and could throw upon the railroads the burden of any loss that might be sustained elsewhere in the administration of the Post Office Department. As in the case of the discretionary powers conferred in regard to designating space, this feature of the bill would create the possibility of almost unlimited corruption, in addition to presenting to the head of the Post Office Department a most powerful temptation to make political capital at the cost of the railroads by unfairly cutting down the cost of operation of the Post Office Department at their expense.

This provision of the bill, combined with the clause making the carriage of the mails compulsory, under penalty of $5,000 for each refusal, would make it perfectly possible, as far as this measure is concerned, for the Postmaster General to dictate to the railroads any terms he might please for the performance of this most invaluable public service.

Hitherto the railroads have theoretically acted as free agents in accepting the mail contracts. While probably in practice no large system would refuse to carry the mails, merely because of what they felt to be a moderate degree of injustice in the existing system, there is no doubt there has been material protection against palpably confiscatory practices.

But with mail transportation made compulsory, and the power to name the terms placed in the hands of the Postmaster General, who is representative of the shipper, it would appear that Congress by passing this bill would intentionally throw the railroads upon the protection of the constitutional guaranty against confiscation.

There is no necessity before Congress for immediate or even very early legislation concerning railway mail pay, and this applies with redoubled force to favorable action upon any measure so vulnerable to criticism as the bill now before the House.

The appropriations for the current fiscal year covering railway mail pay have already been made, and the transportation of the mails under the present system is financed until the 30th of next June. Congress is burdened with a legislative program of the most diversified and important character to early action, on much of which it is definitely committed. Furthermore, foreign problems of a most serious character demand the consideration of the Government.

Under such circumstances mail pay would hardly receive the careful, judicial attention which it merits at the hands of Congress, even were the report of the joint committee on this subject immediately available. Fairness and practical expediency demand that consideration of the matter be postponed. At the next session of the Congress time will doubtless be available for the proper consideration of the mail-pay problem in an orderly and judicial manner in the light of the forthcoming report of the joint committee.

Revoking Leaves of Absence.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 25, 1914,

On House resolution 601, as follows: "*Resolved*, That all leaves of absence heretofore granted to Members are hereby revoked," etc.

Mr. MONDELL. Mr. Speaker, on yesterday the gentleman from Alabama [Mr. UNDERWOOD] introduced the following resolution:

Resolved, That all leaves of absence heretofore granted to Members are hereby revoked.

Resolved further, That the Sergeant at Arms is hereby directed to notify all absent Members of the House by wire that their presence in the House of Representatives is required, and that they must return without delay to Washington.

Resolved further, That the Sergeant at Arms is directed to enforce the law requiring him to deduct from the salary of the Members their daily compensation when they are absent for other cause than sickness of themselves and their families.

Mr. Speaker, no Member of the House will be less affected by this resolution than I; no Member of the House would be less affected than I if it were made retroactive, so as to apply to the past as well as the future. I have never asked for a leave of absence; I do not expect to do so, but I voted against the resolution, because I consider it embodies a breach of faith to the Members who have been granted leaves of absence by the House, and because I consider it a reflection on the House and its membership. It is based on the assumption that Members value their salaries more than they consider their sworn duty to be here and help transact business.

In 18 years of service in the House I have been absent from the Capitol but three days when the House was transacting business, and my absence on one of those three days was due to a railroad wreck. On two occasions during the period of my service when the House was only nominally in session, adjourning three days at a time, waiting on the Senate to complete consideration of legislation, I was absent at home for 10 days. With these exceptions I have been here constantly and continuously.

I do not refer to this record of uninterrupted service, which I think few, if any, Members of the House can match, for the purpose of claiming any especial credit for it. I have considered it my duty to be here. Having no colleague from my State in the House with whom to leave pending questions of importance to the people I represent, it has, in my opinion, been but the performance of my duty to be present at all times. I could therefore have voted for the resolution without a reflection on my past conduct or apprehension that the enforcement of its provisions would affect me in the future.

While I have not asked for leave of absence and do not anticipate doing so, I think the House does itself little credit when, without notice, it revokes leaves of absence which have already been granted. I have no disposition to cast any reflections on Democratic Members notorious for their absenteeism, Members who have been away most of the time for months who happening to be here now, assume an air of superior virtue, propose for the future to treat Members as though they were a lot of hired hands, who could only be kept here by docking their pay. If what they have done squares with their ideas of good faith, they are welcome to whatever consolation they can get out of it.

It is notorious that for months past, while the House has been endeavoring to maintain a quorum, the majority of the southern Members have been away attending their primaries. The southern primaries are now over; those Members have no contests in the election. They are more comfortable and content in Washington than anywhere else; hence this resolution. In the North, and particularly in the far West, Republicans,

Progressives, and Democrats alike have contests in the elections as well as in the primaries, which in many places have not yet been held, and southern Democrats, having gotten through with their contests, are perfectly willing to sacrifice the Democrats from the North and Northwest, as well as the Progressives and the Republicans, by denying them the opportunity to go home for even a day.

This resolution is the final and complete confession of the incompetency of the Democratic majority. With a majority in the House of more than 2 to 1 they can not maintain a quorum without resorting to the most unusual methods of procedure, thus repeating the history of the Democratic Fifty-third Congress in Cleveland's time, which resorted to similar measures. The Republican Fifty-first Congress had a majority of three only, and yet kept a quorum constantly for the transaction of business.

Of course, Members ought to be here; it is their duty to be here, and while I never have and never expect while I am a Member of this House to be an absentee, as many Members are, I realize that it is sometimes necessary for Members to be away for brief periods, and I do not desire to go on record as being opposed to grant brief and necessary leaves of absence, though I have not asked such privileges for myself.

The fact is, the House has dawdled along, consuming months of time unnecessarily to no real useful purpose, and if the majority insists on doing this it ought to be able to secure a quorum without resorting to the unusual method now employed. Republican Congresses have always done so. The law deducting the salary of absentees is on the statute books; why has not the Sergeant at Arms enforced it against the chronic absentees, gentlemen mostly on the Democratic side, who, instead of being here, have been adding to their salaries by Chautauqua lectures, lingering at seaside resorts, or home looking after their personal and political fortunes? Instead of doing that, a resolution is brought in reflecting on the entire membership of the House, and revealing the incompetency of the majority in control.

Seamen and Safety at Sea.

EXTENSION OF REMARKS

OF

HON. MICHAEL E. BURKE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 27, 1914,

On the bill (S. 136) to promote the welfare of American seamen in the merchant marine of the United States, to abolish arrest and imprisonment as a penalty for desertion and to secure the abrogation of treaty provisions in relation thereto, and to promote safety at sea.

Mr. BURKE of Wisconsin. Mr. Speaker, for about 20 years the American seaman has been rapping at the doors of Congress and appealing for the passage of better, more modern, and safer navigation laws. For about 20 years his appeals have gone unanswered. At last the attention of the great mass of the traveling public has been focused upon this matter. A long series of world-shocking horrors and disasters at sea have now reached the ear and attention of Congress, and command it to pause long enough to consider the pending bill, designed as a remedy for some of the existing abuses and evils in the merchant marine of our Nation. It is, then, high time that serious consideration be given to the complaints of American seamen and to the demands for promotion of safety for the traveling public at sea.

DEMOCRATIC NATIONAL PLATFORM.

The Democratic Party, in its 1912 national platform, took notice of the serious and dangerous conditions under which seamen work and the public travel on vessels at sea, and joined in the demand for the passage of this or similar legislation. It incorporated in its last national platform the following plank:

> We urge upon Congress the speedy enactment of laws for the greater security of life and property at sea, and we favor the repeal of all laws and the abrogation of so much of our treaties with other nations as provide for the arrest and imprisonment of seamen charged with desertion or with violation of their contract of service. Such laws and treaties are un-American, and violate the spirit, if not the letter, of the Constitution of the United States.

Consideration and passage of this bill therefore is a duty imposed upon this side of the Chamber by its national platform. It is but fair, however, to state that our friends on the other side of the Chamber, in their national platform of 1912, also promised similar legislation.

EXPLANATION.

For some months past a portion of the public press, and especially some journals devoted to the interests of the seamen, have seen fit to indulge in criticism of your Committee on the Merchant Marine and Fisheries for what they have regarded as an inexcusable delay in reporting this bill to the House. They have even seen fit, without any foundation whatsoever, to attribute the delay to the alleged insidious operations of shipowners whose representatives appeared before your committee in opposition to certain features of the bill. Those who have known the facts know that there is no foundation whatsoever for these insinuations and criticisms.

It is true that the reporting of this bill has been delayed, but it has been an excusable delay. We as a committee have no apology to offer for this delay. A decent respect for the judgment of an interested and intelligent public and an impartial public press may require an explanation from us.

HISTORY OF THE BILL.

This bill passed the Senate on October 23, 1913. It is true that the House remained formally in session until the 1st of last December. Its committees, however, during the extra session were not organized nor permitted to work, except the Committees on Ways and Means and on Banking and Currency. When the December session came we were without the chairman of the committee, Judge ALEXANDER, who, having been honored by an appointment as a member of the International Safety at Sea Conference, held in London, was necessarily absent on that duty. Your committee held hearings upon various features of the bill during December and the early part of January. When we finished the London conference was still in session, and we waited until the return of Judge ALEXANDER and for the purpose of ascertaining the result of that convention.

It will be remembered that in accordance with custom the convention agreement was not made public at once, and no one was at liberty to make its contents public until after it was filed with the United States Senate and that body saw fit to do so. This took time and caused delay. After it was filed with the Senate we met with the request from the Senate Committee on Foreign Relations that action on this bill be deferred until the Senate ratified or rejected that agreement. We did wait a few weeks, and then finally decided to proceed with the consideration of this bill, regardless of the fate of the agreement for international safety at sea in the Senate. More time was required for the careful consideration of the bill, and finally it was reported to the House with an amendment by way of a substitute on June 19, 1914.

OBJECTS OF BILL.

The first object of this bill is to promote safety at sea.

The second object is to give freedom to the seaman, to better his condition, and by so doing induce a better class of men to seek the sea.

The third object is to abolish the differential in favor of foreign vessels in wage cost of operation, when competing with domestic vessels in taking passengers and cargo from American ports to foreign ports. In other words, to endeavor to place the American shipowner, in the matter of wages, upon an equal basis in competing with foreign ships. Let it be understood from the beginning that your committee does not pretend that this bill covers all the remedial legislation necessary for promoting and maintaining safety at sea. It is merely a step in one or two directions for that purpose, but there are other directions in which there is plenty of room for the passage of remedial legislation to promote and maintain safety at sea, which we have not had the time to examine or peruse. There is a pressing demand for the preparation and passage of remedial legislation in other directions relating to safety at sea, and it is imperative that something in those other lines should be done as soon as possible.

DEMANDS OF SEA-DISASTER VICTIMS.

Let no one for a moment think that the widespread and strenuous demands for the passage of this seamen's bill and for other improvements in the navigation of the merchant marine are due to the righteous appeals of the humble seamen. Let no one think that this agitation for the improvement in the seamen's conditions is due entirely to an enlightened public demand. A more comprehensive and imperative demand to go forward and improve the laws of navigation has never been witnessed. It is a serious and melancholy demand; it is a most solemn and impressive demand. A yearly train of world shocking, life destroying, and indescribably horrible disasters at sea make this demand of us.

One thousand five hundred and ninety-five victims went to a watery grave on April 14, 1912, when the *Titanic*, in all her pride and glory, went swiftly and suddenly to an ocean grave 400 miles from the nearest shore. The moans and shrieks of

those unfortunate victims of that tremendous disaster of the sea ring in our ears and urge this Congress forward to its duty. One thousand victims, mostly children, of the *General Slocum*, whose lives were negligently sacrificed when that vessel went down on June 15, 1904, while going through Hell Gate on the East River in New York appeal solemnly to us. Their sad spirits and agonizing cries urge us on to our duty.

Impatient with our procrastination upon this subject, it seems as if the Lord were trying to drive us to the performance of our duty, when a sacrifice of 1,036 lives on board the *Empress of Ireland* was made, on May 29, 1914, in the St. Lawrence River.

To arouse the public to a realizing sense of its obligations, it would seem that a supernatural warning was staged a few days ago when the burning steamer *Massachusetts*, with 900 lives on board, in New York Harbor, in the presence of one-half million people, and when this magnificent ship, with its precious lives on board in broad daylight drifted down the Hudson to the harbor, in plain view of this human mass, surrounded by scores of fire boats, but fortunately saved with all on board. This great near catastrophe should be a solemn warning to the traveling public and to Congress to pass this legislation, which has been demanded for the last 20 years.

Let no one think these three ship disasters are all the solemn and imperative warnings that have occurred in recent years. Here is a partial list of the great sea disasters since 1891, but the records are filled with hundreds of sea disasters of lesser dimensions.

ADDITIONAL LIST OF GREAT SEA DISASTERS.

March 17, 1891, Anchor liner *Utopia* sank in collision with British steamer *Anson*, off Gibraltar; 574 lives lost.

January 13, 1892, steamer *Nanchow* wrecked in China Sea; 414 lives lost.

In 1894 the steamer *Horn Head* was sunk by an iceberg; 62 lives lost.

On January 30, 1895, the German steamer *Elbe*, in collision with the British steamer *Crathie*, in North Sea; 335 lives lost.

On May 27, 1895, the steamer *Colima*, bound to Panama from San Francisco, capsized at sea; 198 lives lost.

In 1896 steamer *Copernicus* sunk; 152 lives lost.

In 1896 steamer *Drummond Castle* sunk off Ushant, France; 250 lives lost.

On February 27, 1897, the French liner *Ville de St. Nazaire* sprunk a leak and foundered off Cape Hatteras; 62 lives lost.

On July 4, 1898, steamer *La Bourgogne* collided with the British sailing vessel *Cromartyshire;* 571 lives lost.

In 1898 the steamer *Clara Nevada* sunk in the Lynn Canal, Alaska; 110 lives lost.

In 1898 the bark *Helen W. Almy*, bound from San Francisco to Alaska, foundered off Golden Gate, San Francisco; 46 lives lost.

On October 14, 1898, the steamer *Mohegan* ran on rocks in the English Channel; 116 lives lost.

In 1904 steamer *Norge* wrecked on reef; 750 lives lost.

On January 8, 1904, steamer *Clallam* foundered in the Straits of Juan de Fuca; 54 lives lost.

On November 18, 1905, steamer *Hilda* sunk off of the northern coast of France; 128 lives lost.

January 22, 1906, steamer *Valencia* ran ashore near Cape Beale, Vancouver Island, British Columbia; 117 lives lost.

August 4, 1906, Italian emigrant ship *Sirio* struck a rock off Cape Palos; 350 lives lost.

February 11, 1907, steamer *Larchmont* sunk in collision with the schooner *Harry Knowlton* in Long Island Sound; 185 lives lost.

February 21, 1907, steamer *Berlin* wrecked near the Hook of Holland, on voyage from Harwich, England, to Rotterdam; 128 lives lost.

June 24, 1907, steamer *La Roche* struck a reef off Corunna; more than 100 lives lost.

November 24, 1907, steamer *Kaplan* foundered in Mediterranean; 115 lives lost.

March 23, 1908, Japanese steamer *Matsu Maru* sunk in collision near Hakodate; 300 lives lost.

August 23, 1909, steamer *Nicholaus Castania* wrecked on the south coast of Cuba, near Hells Cove; 31 lives lost.

October 25, 1909, steamer *Hestia* went ashore off Grand Manan Island, Me.; 36 lives lost.

May 23, 1911, steamer *Taboga* struck a rock off Punta Mala, Panama; 60 lives lost.

In 1913, the German steamer *Acillia* left Corral, Chile, on October 27, with 98 persons on board and was never heard from after leaving port.

October 11, 1913, steamer *Volturno* burned and sunk in mid-Atlantic; 136 lives lost.

January 30, 1914, steamer *Monroe*, of the Old Dominion Steamship Co., sank following a collision with the steamer *Nantucket*, while bound from Norfolk to New York; 43 lives lost.

FILLING VACANCIES IN THE CREW.

The first section of the substitute is nearly the same in its provisions as the present section 4516, Revised Statutes, the only difference being that in the substitute this section contains, in line 11, page 22, the words "or higher grade or," not found in present law, and the final sentence, exempting fishing and whaling vessels and yachts from this section. It conforms in all its language with the first paragraph of the Senate bill, excepting the final sentence exempting the vessels and yachts aforesaid. It is important in that the requirements for the filling of vacancies in the crew in all ports outside of the home port, caused by desertion or otherwise, are made somewhat stronger than in the present law.

SECTION 2 RELATES TO THE DIVISION OF WORK AMONG SAILORS.

Section 2 of the substitute is an entirely new provision. There is at present no corresponding provision in existing law. In Senate bill 136, and in the Wilson bill, H. R. 23673, passed by the House in the second session and by the Senate in the third session of the Sixty-second Congress, the provisions of the present section 2 constituted part of section 1 of those bills.

In those bills, including the Alexander bill, H. R. 4616, second session, Sixty-second Congress, the provisions of what is now section 2 of the substitute applied to the sailors on all merchant vessels of the United States only while at sea. The phrase "while at sea," I am reliably informed by no less an authority than the United States inspector general, means the high seas, so that in the so-called La Follette bill, and all other bills except in this substitute, the provisions of section 2 applied only to sailors while at sea, and did not apply to sailors while engaged in navigating the Great Lakes, bays, sounds, rivers, or harbors.

Section 2 of the substitute applies not only to sailors while at sea, but in certain instances it applies in a certain manner to sailors on rivers, harbors, bays, sounds, and the Great Lakes. In other words, this section 2 applies as far as the provisions in any other bill did upon this subject, and goes further. Its scope of application in the substitute must be measured by the language of that section, which in substance is as follows:

SEC. 2. That on all merchant vessels of the United States of more than 100 tons gross, excepting those navigating the rivers, harbors, bays, and sounds exclusively, the sailors shall while at sea be divided into at least two and the firemen, oilers, and water tenders into at least three watches, which shall be kept on duty successively for the performance of ordinary work incident to the sailing and management of the vessel.

Where the word "successively" is used in section 2 the word "alternately" is used in the other bills, the expression "successively" being more expressive and to the point than the word "alternately" used in previous bills.

PROVISO.

From the foregoing language it is apparent that unless there is something further in this section of the bill that all vessels of over 100 tons navigating rivers, harbors, bays, or sounds are without any provisions governing them as to the division of work among sailors, firemen, oilers, and water tenders into watches. It must not be considered for one minute that if there were no further language governing or controlling in this section of the bill that all vessels of over 100 tons upon such excepted waters would go without any rules or regulations. Such would not be the case. A general statute exists which authorizes the Board of Steamboat Inspectors to in such cases make the regulations and rules in their judgment necessary for the proper protection of sailors on boats navigating on such waters. It is in the power of that board to say whether there shall be one, two, or three watches upon the vessels navigating the excepted waters. This should do away with the criticisms to which some of the friends of the seamen have subjected the provisions of section 2 of the substitute.

The language of section 2 upon this subject gives to the law the utmost elasticity for the promotion of the welfare of sailors, firemen, oilers, and water tenders on vessels in such waters, and they may be extended the utmost consideration and protection. It is not fair, on the other hand, owing to the varying conditions of navigation on rivers, harbors, bays, and sounds, to establish arbitrary laws with relation to the division of such employees into watches.

In order to avoid any and all ambiguity, the committee will, in my belief and as I am informed, offer an amendment after the word "sea," in the phrase "while at sea," by adding the words "or navigating the Great Lakes." Gen. Uhler is of the opinion that the words in the phrase "while at sea" applies only to the high seas, and he advises that in order to avoid all ambiguity over that language that the Great Lakes be specifically included in the language here used. He has advised

that the phrase "or navigating the waters of the Great Lakes" should be added by way of amendment.

I have read the criticism of the representatives of the Seamen's Union on the language of this section, excepting certain waters from its provisions, and have carefully considered their objections, and I am firmly of the opinion that there is no foundation to such objections and criticism. I not only believe but I know that the provisions of section 2 in regard to the division of sailors into watches is broader, better, and an improvement over the same provisions in the Senate bill.

FURTHER PROVISIONS OF SECTION 2.

Considerable complaint exists and has been made in the past on the part of the representatives of the seamen of the abuses that have grown up in the employment of men who had been shipped aboard a vessel for work thereon. The abuses consist in shipping seamen for one purpose on board a vessel, and then compelling such men, when in the power and discipline of the shipowner beyond the reach of civil authorities, to compel those men to do other work. For instance, seamen shipped to do deck duty have in many instances, according to the complaint of the seamen, been compelled to do work in the fireroom, and vice versa.

It requires but little reflection to see the great injustice of this practice, and in my opinion the seamen are amply justified in their complaint against this practice, and they are entitled to a remedy to prevent the same. When on land men are employed for one purpose, and it is sought to drive them to perform duties of an entirely different character, they have a means of escaping from the burdens which it is attempted to force upon them. But it is not so on board a ship, where, under its peculiar discipline, failure to obey the orders of the master authorizes him to imprison and even flog a sailor if he refuses to do as he is commanded. This is a species of slavery which has existed for the last 50 years on board American ships, notwithstanding the emancipation of slaves by the passage of the thirteenth amendment to the Constitution of the United States.

To limit the authority and to prevent such abuses hereafter your committee has seen fit to incorporate among the various provisions of the pending seamen's bill a provision that seamen shall not be shipped for work alternately in the fireroom and on deck, nor shall those shipped for deck duty be required to do work in the fireroom, or vice versa. Upon the slightest reflection on the part of anyone who has ever had an opportunity of noticing the difference in the positions and services of firemen, engineers, oilers, and water tenders, on the one hand, and a deck man on the other, it will be readily seen that to compel a fireman to alternately do the duty of a fireman and a deck man is not only an inhuman practice but borders on slavery.

Much complaint, however, has been made on the part of the representatives of the vessel owners that this provision is detrimental to the safety of the vessel and the lives of passengers and crew in the event of a wreck, collision, or emergency. It has even been contended that this section would prevent the firemen or the stewards from being compelled in times of emergency to give their services to the lowering and manning of lifeboats. Such critics, however, have overlooked a further provision in this section, which says:

> But these provisions shall not limit either the authority of the master or other officer or the obedience of the seamen when, in the judgment of the master or other officer, all the sailors or all the firemen or the whole crew are needed for the maneuvering of the vessel or the performance of work necessary for the safety of the vessel or her cargo or for the saving of life aboard other vessels in jeopardy, or when in port or at sea from requiring all the sailors or all the firemen or the whole crew to participate in the performance of fire, lifeboat, and other drills.

These last provisions are specifically and expressly designed to give the master, and those lower in authority in his absence, power to compel the whole crew, or any part of the crew, if necessary, to do the labor of life saving. A comparison between this provision in the substitute bill and a similar provision in the Senate bill discloses the fact to be that this provision in the substitute bill is broader than a similar provision in the Senate bill. In fact, the corresponding section of the Senate bill contains no requirement in relation to the drilling of all firemen or the whole crew in fire, lifeboat, and other drills. It contains no language corresponding to the same.

It is only in the committee's substitute that power is given the master and officers to require all sailors and all firemen, or the whole crew, no matter for what purpose shipped, to participate in fire, lifeboat, and other drills. Notwithstanding this improvement, which must be apparent to the mind of every intelligent and impartial person, yet there are those who charge that the committee spent its time in the consideration of this bill not for the purpose of improving it, but for the purpose of weakening it. The committee calls upon those who can read and think to judge for themselves.

SUNDAYS AND HOLIDAYS.

Further on in this same section there is found a new humanitarian provision prohibiting seamen while the vessel is in a safe harbor from being required to do any unnecessary work on Sundays, on New Year's Day, the Fourth of July, Labor Day, Thanksgiving Day, and Christmas. Here again we have an improvement over the Senate bill, for the latter bill, instead of naming the specific days of rest, referred to the same as legal holidays, a term which is very indefinite and ambiguous. If the phrase "legal holiday" had become a part of the law, there would have been a continued dispute between the crew and the masters as to what constituted legal holidays. In some cases the crew might contend that they were entitled to a holiday on Good Friday when in port in Louisiana, because in that State that day is a legal holiday.

Holidays are different in different States and in different countries. To avoid this misunderstanding and ambiguity your committee has named the holidays, the same corresponding to what are commonly used as holidays throughout the Nation, whether established by law or not.

But the provision in relation to requiring no unnecessary work to be done on Sundays and certain named holidays shall not interfere with the dispatch of the vessel on her schedule or when ready to proceed on her voyage.

In conformity with the strong demands of organized labor, a provision has been incorporated providing that while the vessel is in a safe harbor that nine hours, inclusive of the anchor watch, shall constitute a day's work. Failure on the part of the master of any vessel to comply with the provisions of section 2 entitles the seaman to be discharged from such vessel, and upon demand he shall then be paid the wages then earned. It is expressly provided that this section shall not apply to fishing or whaling vessels or yachts.

SECTION 3 OF THE SUBSTITUTE.

Section 3 of the substitute corresponds to and is identical in its provisions with section 2 of the Senate bill. It is amendatory and revisory of section 4529 of the present Revised Statutes of the United States. In substance it requires that the master or owner of every vessel making coasting voyages pay his seaman within two days after the termination of the agreement under which he was shipped or at the time such seaman may be discharged. It further provides that in the case of vessels making foreign voyages or from a port on the Atlantic to a port on the Pacific, or vice versa, that such seaman shall be paid within 24 hours after the cargo has been discharged, or within 4 days after the seaman has been discharged, with a further provision that in all cases the seaman at the time of his discharge, regardless of the cause, shall be entitled to be paid on account of wages in a sum equal to one-third part of the balance due him, and provides a penalty for every master or owner who fails to comply with such pay requirements. This section, however, is made inapplicable to the masters or owners of vessels or seamen who are entitled to a share in the profits of the cruise or voyage. The changes proposed in the existing law by this section are but slight, but in the interest of the seamen.

INVALIDATING CERTAIN SHIPPING STIPULATIONS.

Section 4 of the committee's substitute corresponds with section 3 of the Senate bill, and is amendatory and revisory of section 4530 of the present statutes of the United States. The main idea contained in this section is to create a legal pay provision for the protection of the sailor, which can not be waived, annulled, or avoided by agreements, stipulations, or contracts between the master and the seaman. It provides that every seaman on a vessel of the United States shall be entitled to receive, on demand, from the master of the vessel to which he belongs, one-half part of the wages which he shall have then earned, at every port where such vessel, after the voyage has been commenced, shall load or deliver cargo, before the voyage is ended, and all stipulations in the contract to the contrary shall be void.

In the present law, which has been on the statute books in its present form since December 21, 1898, the language, "All stipulations in the contract to the contrary," is not to be found. On the contrary, the reverse of it is to be found in the present law, and the language of the reverse provision in the present law is as follows: "Unless the contrary be expressly stipulated in the contract." The law as it now stands upon our statute books has in practice proven a fraud and a snare, and the seamen are fully justified to use the strong words of condemnation of the present law which they did in the hearings upon this subject.

The present law holds the cup of hope to the lips, only to have its contents dashed to the ground, by the masters and shipowners compelling every seaman entering their employment to sign a contract expressly stipulating that during the voyage no part of the wages earned shall be paid to the seamen. This the masters and shipowners have done by reason of their advantageous positions in dictating to the seamen the conditions under which they shall work, and the wages that they shall receive. The masters and shipowners have laughed at this provision of the present law and smiled with contempt at the feeble efforts of the poor seamen who have tried and insisted upon enjoying the advantages and conveniences of obtaining part payment of their wages during a voyage to use for their personal comforts or convenience, or to send to their families.

In order to prevent abuses by the master of the ship, and to prevent those unthrifty seamen who may be addicted to the spending of their wages at the first opportunity, provision is made in this section of the substitute bill against such abuses. It is provided that demands for the payment of one-half part of the seamen's wages which shall have been earned at every port shall not be made oftener than once in five days. To show the abuse of this provision for payment which is invited by the Senate bill, I call your attention to the fact that this section in the Senate bill contained a provision whereby every seamen on a vessel of the United States should be entitled to receive within 48 hours after demand therefor, from the master of the vessel to which he belongs, one-half part of the wages which was then due at every port where such vessel, after the voyage has been commenced, shall load or discharge cargo, and that all stipulations to the contrary are void. Under this provision of the Senate bill, if it became a law, it was sought to provide that the sailor shall be paid one-half part of his wages at every port the vessel entered to load or unload when demand therefor had been made more than 48 hours previously.

Under this provision of the Senate bill the master of the vessel might be required to make as many as three, four, and five payments to the seamen in 24 hours. Under such a provision unthrifty and undisciplined seamen might spend their time in making demands for payment of their wages and keeping a record of the same, instead of performing the duty for which they were shipped. It would be an embarrassment and an annoyance to the master, and in a majority of the cases it would be to the disadvantage of the seamen. Oftentimes the seamen would abuse the privilege, and the vessel would lay at its port until new seamen could be secured, thereby often breaking its schedules. It would be of no advantage to either seamen or masters, but a source of abuse and disadvantage to the seamen and annoyance to the shipowner.

Your committee has stricken out from the Senate bill in this section the words "which shall be due him," and have inserted in lieu thereof the words "which he shall have then earned," the purpose of the change of language being to avoid the ambiguity contained in the language "which shall be due him," as used in this section of the Senate bill. The provision of the committee's substitute providing that a demand for one-half of the wages earned shall not be made oftener than once in five days gives the American sailor when in foreign ports an opportunity to draw one-half of his wages and send it, or so much thereof as he wishes, to his family by mail or to use it for his own convenience, or to purchase or invest it in such articles as he may prefer and bring the same home with him.

It enables the foreign sailor when in American ports to draw one-half of the wages he has then earned and to send it to his family or spend it for his convenience or to purchase such articles as he prefers to take home to his family. It will enable him to enjoy the life of a freeman while in port. Without any part of his wages he would be tied to his boat as firmly and securely as if bound with ties of cord or wire. It is a provision of humanity and of freedom that will be cherished and enjoyed by sailors and applauded by all lovers of liberty.

This section also contains a provision giving every court having jurisdiction power to set aside any releases that the seamen may carelessly or tacitly sign off of their right to collect one-half of their wages under this section and to take such action as the court may think justice requires.

It contains another provision of the greatest importance, and that provision is in this language:

Provided further, That this section shall apply to seamen on foreign vessels while in harbors of the United States, and the courts of the United States shall be open to such seamen for its enforcement.

We are aware, and have considered the arguments advanced by the representatives of the seamen, that the purpose of this unqualified provision is to equalize the wages of American and foreign seamen. We have listened with deep and sincere interest and sympathy to their eloquent and earnest arguments to this effect. We have considered and weighed the same from every point of view, with the greatest of care and seriousness. We have finally convinced ourselves that this change will result in the benefits claimed to them and to the American merchant marine. The provision as it stands in the substitute bill, in our opinion, will tend to equalize the wage cost of operation of domestic and foreign ships.

Your committee agreed to give the seamen on foreign vessels in our ports the right to enter our courts to enforce this law in all cases where there are, as well as where there are not, conflicting treaty provisions between the United States and the foreign nations to which they belong. We have such treaties with many nations, and with others we have not. The nations with which we have treaties or consular conventions on the subject of wages on foreign ships in American ports are Austria, Belgium, Denmark, France, Germany, Greece, Italy, Holland, Spain, Norway, and Sweden. This provision, however, as it is written in the committee's substitute, will not violate any treaties upon this subject with Great Britain, Canada, Australia, New Zealand, Russia, Portugal, Japan, Argentina, Brazil, Chile, and Cuba. None of these last-named nations have a merchant marine of any consequence or importance, excepting Great Britain, Canada, and Japan. The British clearances, in round numbers, from American ports amount to about 15,000 annually; all other foreign clearances to about 5,000.

It is claimed by the representatives of the seamen's union and others who have given thought and consideration to this important subject that by making the provisions of section 3 of the Senate bill, or section 4 of the committee's substitute, apply to seamen on foreign ships that it would tend to equalize the operating wage expenses of both domestic and foreign vessels. It is also claimed that without this provision being made applicable to foreign seamen in American ports that the provisions of this bill abolishing arrest and punishment for desertion will be rendered nugatory and of no avail nor advantage, because the foreign shipowner would then be at liberty, by reason of his contract, to deny his seamen in our ports any part of the wages earned by them. It is pointed out that foreign seamen, desiring to desert, although not subject to arrest, would be compelled by financial reasons to cling to their ships. To desert under such circumstances would be to do so without a dime in hand to buy a meal or secure a night's lodging, or even to buy a stamp and paper to write his family.

If American ships and seamen are to be subject to this law, and foreign ships and seamen not subject to it, then, of course, the final result will be that the American shipowner will place his ship under a foreign flag to avoid this law.

In the report accompanying H. R. 23673, known as the seamen's bill, made in the House of Representatives in the Sixty-second Congress, second session, May 2, 1912, the following explanations of the objects and reasons for this provision are to be found. It states concisely the position of the seamen, of organized labor, and the views of students of this problem:

Under existing laws men may be and are employed at the ports where the lowest standard of living and wages obtain. The wages in foreign ports are lower than they are in the ports of the United States; hence the operating expenses of a foreign vessel are lower than the operating expenses of an American vessel. It is not proposed to prevent vessels from employing seamen in ports where they can secure them cheapest, but it is proposed by this bill to give the seamen the right to leave the ship when in a safe harbor, and in time this will result in foreign seamen engaged on vessels coming into ports of the United States being paid the same wages as obtain here, as a means of retaining their crews for the return voyage. That will equalize the cost of operation, so that vessels of the United States will not be placed at a disadvantage.

It will, however, give a greater freedom to the seamen, and it is claimed will operate not only to equalize wages but to elevate the conditions and service of the seamen, which is its purpose, and then the provision will justify itself and be of benefit to the American merchant marine in equalizing the cost of transportation between our ships and those of other nations. In fairness to the committee it should be stated that we were not unanimous in making this provision apply to foreign ships.

I do not believe in lightly breaking our international treaty obligations. On the other hand, my heart is full of sympathy for the struggling seamen and their cause. In common with all patriotic Americans I hope for a revival of the American merchant marine upon the oceans. I am, therefore, willing to give the benefit of the doubt to the claims of the seamen and the claims of those patriotic American students of merchant marine, who contend that this is one of the ways in which the welfare of the American merchant marine can be substantially promoted. I am not wholly satisfied that it will justify itself, yet I believe that there can be no substantial harm in a real experiment, and if it proves satisfactory, well and good, and if it proves unsatisfactory it will not take another Congress long

to repeal it. It can do our foreign merchant marine at the utmost but little damage, because it is so insignificant at present.

COMPLAINT OF UNSUITABLE CONDITION OF THE VESSEL.

Section 5 of the substitute is the same as section 4 of the Senate bill. The language of this section is exactly the same as that now found in section 4559 of the Revised Statutes of the United States, with a slight exception. The present law requires that a complaint of the unsuitable condition of the vessel must be signed by the first or second officer and a majority of the crew of any vessel. Under the proposed law, as set forth in this section of the substitute, a complaint of the unsuitable or unsafe condition of the vessel is only required to be signed by the first and second officers or by a majority of the crew of any vessel. The difference between the present and proposed law is slight but important. Such difference is based upon sufficient and justifiable reasons. Under the proposed law a bare majority of the crew is all that is necessary to sign the complaint, or instead of a majority of the crew signing the same it may be signed by the first and second officers. It gives more liberty of action and judgment to the crew in making a complaint of the unsuitable conditions of the vessel on which they are employed. It is not necessary for any officer to join with them. The sympathies of the officers are often against or indifferent to the welfare and safety of the crew. Under this bill the crew will be free and independent, whereas under the present law no such complaint can be made without being signed by either the first or second officer. The change is in the interest, welfare, and protection of the crew, the ship, its cargo and passengers.

ACCOMMODATIONS FOR THE CREW.

Section 6 of the substitute corresponds with section 5 of the Senate bill, and slightly revises section 2 of an act to amend the laws relating to navigation, approved March 3, 1897, relating to accommodations for the crew. The present law requires that every place set aside for the lodging of the crew shall have a space of not less than 100 cubic feet, and not less than 16 square feet measured on the deck or floor of that space for each seaman or apprentice lodged therein. Section 6 of the substitute changes this by requiring that every such place set aside for the lodging of any member of the crew shall have a space of not less than 120 cubic feet, and not less than 16 square feet measured on the floor deck of that place for each seaman or apprentice.

Another new provision requires that each seaman shall have a separate berth, and that not more than one berth shall be placed one above another, and that every such crew space shall be kept free from goods or stores, not being the personal property of the crew occupying such space in use during the voyage.

The second paragraph of this section relating to steamboats of the United States plying upon the Mississippi River or its tributaries is the same as the second paragraph of section 5 of the Senate bill, and the same as the present law upon this subject.

The third paragraph of section 6 is entirely new, and is devoted solely to the sanitation of the quarters of the crew. It is designed to promote their health and preserve their strength while on the voyage. Its provisions are as follows:

All merchant vessels of the United States the construction of which shall be begun after the passage of this act having more than 10 men on deck must have at least one light, clean, and properly ventilated washing place. There shall be provided at least one washing outfit for every two men in the watch. The washing place shall be properly heated. A separate washing place shall be provided for the fireroom and engine-room men, if their number exceed 10, which shall be large enough to accommodate at least one-sixth of them at the same time, and have hot and cold water supply and a sufficient number of wash basins, sinks, and shower baths.

The fourth paragraph of this section provides a sufficient penalty for any violation of this section by the owner or owners of vessels. The penalty is the same as provided in the Senate bill upon this subject, and is identical with that the present law provides.

PUNISHMENT FOR DESERTION.

Section 7 of the substitute corresponds with section 6 of the Senate bill, and is a revision of section 4596 of the existing Revised Statutes of the United States, relating to punishment for desertion by a seaman. Under the present law any seaman deserting may be arrested and punished, at the discretion of the masters' court, by imprisonment for violation of seven of the eight different offenses defined by section 4596.

The present section retains imprisonment as a punishment in no case where the seaman has been merely guilty of desertion. It retains such punishment, however, for other well-known violations of discipline, so that those who fear that the abolition of arrest for desertion will destroy the discipline on vessels may have assurance that the masters of vessels will still have the power to enforce discipline while at sea. Such power to enforce discipline has been possessed by the masters of vessels since time immemorial, and by reason of the great dangers at times to shipping interests while at sea they ought to continue to possess power to enforce the same.

DESERTION OF SEAMEN ABROAD.

Section 8 of the substitute is the same as section 7 of the Senate bill, and is a revision of section 4600 of the present statutes. The only change made by this section of the proposed law is the depriving of all consular officers of the power and duty of reclaiming deserters from American ships in foreign ports. So long as it is proposed to abolish arrest and imprisonment for desertion it is only consistent and right that consular officers should no longer be invested with the power to arrest and reclaim such deserters. It is simply making this section consistent with the previous section, from which the power to arrest and imprison deserters is intended to be eliminated.

CORPORAL PUNISHMENT PROHIBITED.

Section 9 of the substitute is identical with section 8 of the Senate bill and is a revision of section 4611 of the present statutes relating to corporal punishment. This section prohibits flogging and all other forms of corporal punishment on board any vessel and provides that no form of corporal punishment on board of any vessel shall be deemed justifiable. Any master or other officer who shall violate any of the provisions of this section shall be guilty of a misdemeanor, punishable by imprisonment for not less than three months nor more than two years, and when any other officer, other than the master of the vessel, shall violate any of the provisions of this section it is made the duty of the master to surrender such officer to the proper authorities, providing he has actual knowledge of the misdemeanor or complaint thereof is made within three days after reaching port. Any failure on the part of the master to use due diligence to comply with this section which may result in the escape of such officer, may render the master or owner of such vessel liable in damages for such flogging or other corporal punishment to the person so punished. The terms of this section are made sharp and positive in order to make certain that neither flogging or any other form of corporal punishment shall be administered to seamen on board vessels.

INVOLUNTARY SERVITUDE.

By the thirteenth amendment to the Constitution of the United States, which became a part thereof on December 18, 1865, it is provided that—

Neither slavery nor involuntary servitude, excepting as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.

This language seems to be plain, positive, and without possible exception. The Supreme Court of the United States, however, in a decision rendered since the adoption of that amendment, held that the forcible arresting and punishing of a deserter from a ship was not included within the amendment prohibiting involuntary servitude. The exception made by this decision of the Supreme Court has continued as a part of the law down to the present time, with the exception of deserters from ships engaged in the coastwise trade and with near-by ports of Canada. It is plainly to be seen, however, that when a sailor is arrested and imprisoned for merely deserting his ship or breaking an expressed contract that he is no more deserving and that there is no more reason for punishing him criminally than there is to punish by imprisonment a man who engages to work for another for six months or any prescribed time but leaves without cause before the end of the contract period.

For the purpose of the discussion of this bill it is useless to go into the reasons assigned for this decision by the Supreme Court. Suffice it to say that the law thus interpreted by the Supreme Court has continued down to this day and is the existing law upon that subject. It is probably one of those decisions which inspired the leader of the Bull Moose Party to invent and advocate the recall of judicial decisions. If there are many more cases in which such strange exceptions are engrafted upon the Constitution, the recall of such decisions may become popular and justifiable.

The law for arrest and imprisonment for deserters, I am glad to say, was abolished by Congress in our coastwise trade and to near-by Canadian ports in 1898. Then, as now, it was freely predicted that the prohibition of arrest and punishment for mere desertion would destroy necessary discipline on board ships and greatly impair the safety of the traveling public and property upon the merchant marine while at sea. Happily, experience has since demonstrated that when given freedom from this enslaving and humiliating law the American seaman has proven himself to be a man of honor, honesty, and well worthy

of having this stigma, disgrace, and relic of barbarism and slavery removed forever from this ancient and honorable calling.

The representatives of the shipowners, with the exception of one or two, who appeared before the committee made no protest against the removal of the present penalty for desertion. It is but fair at this point to say that in all of the voluminous evidence produced before our committee there appears no case of arrest or imprisonment for desertion or flogging in the American merchant marine for a number of years last past. Notwithstanding that in the case of American seamen the existing law in relation to desertion and punishment by imprisonment or flogging is no longer imposed, yet it is a humiliation to and a stigma upon the fair name of our seamen while laws legalizing such punishment are upon our statute books.

All liberty-loving Americans will rejoice when this bill becomes a law, and this last remnant of law authorizing involuntary servitude and slavery shall both upon the land and waters of our beloved country be abolished and consigned to oblivion forever.

REPEAL FAVORED BY 1912 DEMOCRATIC PLATFORM.

The importance of this provision attracted the attention of both the Democratic and Republican national conventions in 1912. The Democratic platform declared:

> And we favor the repeal of all laws and the abrogation of so much of our treaties with other nations as provide for the arrest and imprisonment of seamen charged with desertion or with violation of their contracts of service.

A similar provision appears in the Republican national platform of that year; but as in a dozen other cases this bill when passed will be the fulfillment of another platform promise by the Democratic Party. In this, as in other promises, it may be depended upon to fulfill the same.

INCREASE OF PROVISIONS ALLOWED SEAMEN.

Section 10 of the substitute is identical with section 9 of the Senate bill. The present law provides a scale of provisions to be allowed to be served out to the crew of each vessel during its voyage.

This scale is to be found in section 4612 of the Revised Statutes. By this section, in the pending bill, it is proposed to increase the items of water and butter with which the members of the crew are supplied. Instead of 4 quarts of water daily, as now provided by law, the shipowner is required to furnish the seaman with 5 quarts, and in lieu of a daily requirement of 1 ounce of butter, as now provided by law, the seaman shall be provided with 2 ounces of butter daily.

PAYMENT OF SEAMEN'S WAGES.

Section 11 of the substitute is practically the same as section 10 of the Senate bill, and is a revision of the present law upon the subject of seamen's wages being paid in advance. Experience has shown that many abuses have grown up in the securing of positions for seamen. Many unscrupulous persons running lodging and boarding houses have taken advantage of the seamen's indebtedness to them by securing orders or assignment of wages to be earned, upon the masters of vessels for the payment of wages in advance to reimburse them for some trifling loan or favor. This abuse has grown to such proportions that it has become a nuisance to shipowners, as well as practically keeping the seaman in slavery. Many times the seaman is confronted at the end of his voyage with an assignment of his wages, which leaves him without a dollar for either himself or his family. While existing laws apply to this subject, yet they have been found insufficient and wanting. For the purpose of strengthening them and for the further protection of the seamen it is considered advisable to revise and improve this section for the welfare of all seamen.

WAGES NOT SUBJECT TO ATTACHMENT.

Section 12 of the substitute corresponds with section 11 of the Senate bill and is a revision of the present section 4536 of the Revised Statutes. It provides in substance that the wages of a seaman shall not be subject to attachment, and prevents the sale or assignment of wages by seamen before being earned. No assignment or sale of wages made prior to the accruing thereof shall bind the party making the same, excepting such advances and allotments as are authorized by this section. Permission, however, is given by this section for the advancement or assignment of a portion or the whole of the seaman's wages to be made to his wife or minor children. This section protects the seamen from the unscrupulous boarding and lodging house keepers, otherwise known as "crimps." Part of this section is also applicable to fishermen, who are represented to be in dire need of such protection. It also permits a court by order to apply any part of a seaman's wages to the support of the seaman's wife and minor children. This is new and is designed for the protection of the seaman's family, and will prove to be a gratifying humane provision.

LANGUAGE TEST.

Section 13 of the substitute bill, in so far as it relates to the language test, is the same as in the Senate bill upon that subject. It provides that no vessel of over 100 tons gross, excepting those navigating rivers and the smaller inland lakes where the line of travel is at no point more than 3½ miles from land, and except as provided in section 1 of the bill, shall be permitted to depart from any port of the United States unless she has on board a crew 75 per cent of which, in each department of such vessel, must be able to understand any order given by the officers thereof.

This language test has been the bone of vigorous contention between the representatives of the seamen's unions and the representatives of vessel owners. On the one hand the labor unions insist that this provision is necessary for two reasons—one to encourage the going to sea of the white man, and the other to promote the safety of the traveling public. It is contended that the perils of the sea are increased by reason of the failure of the crew to understand the language in which the officers' orders may be given. On the other hand, the vessel owners claim that this provision will be extremely burdensome to them and will result in driving the American merchant marine off of the ocean. It is claimed that this will be particularly true on the Pacific Ocean.

To my mind, there does not seem to be in this provision the virtues claimed for it by the American seamen for themselves. On the other hand, I am unable, in view of the testimony given at the hearings, to see the destruction and danger which the vessel owners claim will be the result of this language test.

At the hearings the vessel owners from the Pacific coast reiterated time and again that if they were compelled to use a crew speaking and understanding the language of the officers, that it would necessarily mean the employment of a white crew. It is necessary to pay American white seamen so much higher wages that it is contended it would be impossible for American vessels employing such labor to compete in the Pacific trade with the vessels of Japan, which employ cheap Japanese, Chinese and Lascar labor; that the result would be that they would have to place their ships under the flag of some foreign nation in order to avail themselves of the cheaper labor.

But these same vessel owners at the hearings repeatedly stated in trying to force upon the committee their views of the injurious financial effects to them of paying white seamen greater wages, that the labor of Chinese, Japanese, and Lascar seamen could be secured for four or five times less than they are obliged to pay white American seamen. If this be true, then I see nothing in this bill which will prevent such vessel owner from hiring this cheap labor, and before placing them on their vessels, school this labor in the language of the officers. It is a poor and dull Japanese, Chinese, or Lascar who could not in a month or two learn to understand all orders necessary to be given on American vessels by the officers thereof.

The reason why your committee deemed it wise to insert and require this language test is that where the crew is unable to understand the orders of the officers, the crew is thereby in emergencies rendered inefficient. Certainly when a crew is inefficient, the safety of the traveling public and property is imperiled. This language test is a provision primarily designed to promote the safety of the traveling public, but the selfishness of both the vessel owners and the seamen prevent them from but faintly seeing the primary purpose designed by this language provision. The seamen honestly think that with this language in the law they will drive the Chinese, Japanese, and Lascar from off of the American merchant marine on the Pacific. The vessel owners think that they will be forced to abandon the American flag, and be driven into carrying the flag of some other nation. The truth of the matter, however, is that by virtue of this legal requirement the safety of the traveling public at sea will be guarded and promoted to a great extent, without any further detriment to the welfare of seamen or of shipowners.

HISTORICAL ILLUSTRATIONS.

The importance of requiring a language qualification on the part of at least 75 per cent of the crew of every vessel, passenger or cargo, of over 100 tons gross is plainly and forcibly illustrated in some of the sea disasters of recent years. The most widely known wreck occurring by reason of the crew not understanding the orders of the ship's officers was the wreck of the ship *City of Rio de Janeiro*, of the Pacific Mail Steamship Co., which sank at the entrance of San Francisco Bay on February 22, 1901, with a loss of 122 lives. A suit growing out of this wreck was decided by the United States Supreme Court, in which that court said among other things:

> The ship was insufficiently manned for the reason that the Chinese sailors were unable to understand and execute the orders made impera-

tive by the exigency that unhappily arose and resulted so disastrously to lives.

At that time great public indignation arose because of this great loss of lives by reason of a Chinese crew that was unable to understand the language in which the orders of the ship's officers were given. At once a widespread demand requiring the crew, or the greater portion of the crew, to be composed of those sailors who were able to understand the orders of their officers arose. No change has been made in this respect from that time to this in any vessels of the Pacific Mail Steamship Co. There are other examples of sea disasters occurring from the same causes of nearly equal proportions.

QUALIFICATIONS OF ABLE SEAMEN.

There is an apparent difference between the qualifications required for an able seaman by the Senate bill and this substitute, but no difference in effectiveness. Both the substitute and the Senate bill require after the fourth year from the passage of this bill into a law that the deck crew, exclusive of licensed officers, shall be composed of 65 per cent of able seamen.

The Senate bill defines an able seaman as follows:

No person shall be rated as an able seaman unless he is 19 years of age or upward and has had at least three years' service on deck at sea or on the Great Lakes.

This is the only qualification to be found anywhere in the Senate bill relating to the rating of an able seaman. To be sure, it contains a provision for ascertaining the facts upon which the qualifications of an able seaman are based. Under the wording of the Senate bill an able seaman on Chesapeake Bay, on Long Island Sound, on Puget Sound, on any Pacific, Atlantic, or Gulf coast sounds, or on the Great Lakes and on ocean routes can only be one who has had three years' service on deck at sea or on the Great Lakes. It requires but brief consideration and reflection to see, on the one hand, that this definition of an able seaman is too narrow to be applied to all the navigable waters plied by the United States merchant marine, outside of those excepted in the section. A seaman may serve not only for 3 years, but for 10 years, on such bays, sounds, and harbors, and he will not possess the qualifications necessary for an able seaman as defined in the Senate bill.

It is a well-known fact that the shipping season on the Great Lakes does not exceed on the average eight months per year. This is all the experience that a lake sailor obtains in a year. Yet under the Senate bill a lake sailor who has served but 24 months, for he only gets 24 months' sailing experience in three years, is qualified to make an able seaman on the high seas or on the Great Lakes, but a sailor who has been 24 months on the high seas is disqualified from becoming a seaman on the Great Lakes or on the high seas. An ocean sailor can only qualify himself as an able seaman for service on those waters of the Great Lakes after spending at least three years' service on deck at sea. No matter how long such sailor may have served on the bays, sounds, harbors, and lakes where the routes are less than 3 miles offshore, he can not become in less than three years an able seaman for service on the Great Lakes or on the ocean.

To do that he must have served on those particular waters for three years. This application and comparison of the provisions of the Senate bill is pointed out at this time for the inspection and consideration of the Members of this House and for the inspection and consideration of the country, for the purpose of showing that the Senate bill, at least in this section, was not perfect or reasonably so when it reached the House committee. Your Committee on the Merchant Marine and Fisheries has delved deep into this matter, and they have come to the conclusion that in reference to lakes, bays, harbors, sounds, and other minor bodies of water the Senate bill is unreasonable and arbitrary in its provisions for the qualifications of able seamen. We have therefore taken the liberty of presenting qualifications for able seamen that we consider efficient and sufficient, by way of a substitute, and more reasonable and just in their application.

QUALIFICATIONS OF ABLE SEAMEN ON DIFFERENT BODIES OF WATER.

The House committee's substitute in section 13 provides, among other things, for the qualifications necessary to be rated as an able seaman. These qualifications are divided into classes, according to the bodies of water upon which the seamen are to serve.

In all classifications of an able seaman, no person can be rated as an able seaman unless he has attained the age of 19 years or upward.

ABLE SEAMEN ON THE HIGH SEAS.

It is provided by section 13 of the committee's substitute that no person shall be rated as an able seaman and qualified for service as such on the seas—meaning the ocean or high seas—unless he has had at least three years' service on deck at sea. This means three years' service on deck at sea, and not on the Great Lakes. It will probably include three years' service on deck on bays and sounds, and it will also probably include any person who has had three years' service on deck on bays and sounds attached to the Atlantic and Pacific Oceans or the Gulf of Mexico.

QUALIFICATIONS OF ABLE SEAMEN ON THE GREAT LAKES.

To be an able seaman and qualified as such to serve on the Great Lakes it is necessary that the seaman shall have had at least 24 months' service on deck at sea or on the Great Lakes. The Senate bill requires that the qualifications of an able seaman for service on the Great Lakes shall be the same as required for service of such seaman on the high seas.

QUALIFICATIONS OF SEAMEN ON BAYS, SOUNDS, ETC.

By the committee's substitute the qualifications for an able seaman to serve as such on bays and sounds, and on lakes other than the Great Lakes, shall be at least 24 months' service on deck at sea, on the Great Lakes, or on the bays and sounds. It will be noticed that able seamen upon all vessels in all navigable waters, excepting those in the class exempt, are governed by one and the same rule as to their qualifications as a seaman in the Senate bill. Yet it is apparent to every intelligent and impartial person that the qualifications necessary for an able seaman on smaller bodies of water are not naturally required to be as great and as effective as those required to discharge the duties of an able seaman on the high seas.

Our conclusion as to the qualifications necessary for an able seaman on bays, sounds, and the Great Lakes are founded not upon guess or speculation, but upon the testimony of both the representatives of the seamen and the vessel owners on the Great Lakes and on the bays and sounds. Of course, no objection could or would be found or justified on the part of the traveling public, on the part of the representatives of the seamen, or on the part of your committee to require an able seaman, qualified for service on the Great Lakes, bays, and sounds, to possess the same qualifications as required on the high seas. Such qualifications, however, we considered unnecessary and unreasonable upon water routes other than on the high seas, and if adopted would, in our opinion, work a hardship on both sailors ambitious to become able seamen and upon the vessel owners. While the storms may be as fierce and oftentimes produce as great disasters on the Great Lakes, bays, and sounds as on the high seas, yet the opportunities of rescue on those bodies of water are far greater and more numerous than in case of the high seas; the voyages of vessels are shorter; they are nearer to shore; the passing of other vessels is more frequent; the aid summoned by wireless more promptly comes to hand; and in various other ways the risks of travel upon these lesser bodies of water are far less dangerous and less treacherous and not as numerous as upon ocean-going voyages.

It is also provided by this section that for services on deck, at sea or on the Great Lakes, bays, or sounds, no one even possessing the required length of service on deck shall be rated as an able seaman unless he, upon examination, under rules prescribed by the Department of Commerce, as to sight, hearing, and physical condition, may be found to be competent. This excludes seamen who may have spent the required number of years on deck at sea but who are defective in sight, hearing, or in any other physical condition. It is a requirement that able seamen should possess as a qualification more than service alone. He must be in proper physical condition. He must have had proper boat, fire, and other drills. No such method of discrimination for weeding out the defective seamen is provided for by the Senate bill.

ENCOURAGEMENT OF AMBITIOUS SEAMEN.

Section 13 of the committee's substitute, in addition, contains a provision for the encouragement of ambitious seamen. Oftentimes men are found who by natural adaptation and equipment are able to perform the duties of an able seaman with far less experience at sea than the average sailor and are anxious to be advanced. These ambitious seamen are given an opportunity to do so under a provision found in this section. It provides that upon examination, under rules prescribed by the Department of Commerce as to eyesight, hearing, physical condition, and knowledge of the duties of a seaman, men found competent may be rated as able seamen after having served on deck 12 months at sea. We all know that there are to be found men naturally adapted for this or that work, and oftentimes that is the case with men having a proneness for the sea. Men naturally inclined to the sea rapidly acquire the knowledge necessary for a seaman in a short time, whereas others may require two, three, or four times as much experience in order to be equally qualified. It is to encourage such ambitious individuals that this provision was inserted in the committee's substitute.

To prevent any misuse of this last provision, the committee has considered it wise to attach a provision guarding it against any possible abuse. It was apparent to us that unscrupulous local inspectors, masters, or vessel owners might at times attempt to secure a complete list of the required number of seamen from that class of competent seamen who have been found to be so by examination, and thus fill the quota of able seamen required by law for their vessel with a whole crew having an experience of only 12 months at sea. To prevent this possible abuse, a further provision has been attached to the first paragraph of section 13 to prohibit seamen examined and rated as competent under this last provision from composing more than one-quarter of the number of able seamen required by this section to be shipped or employed upon any vessel.

This provision for the encouragement of ambitious men inclined to a seafaring life is not to be found anywhere in the Senate bill. A wise administration of this provision will undoubtedly tend to open an opportunity for all those who are prone to sea life and make rapid their advancement. It will attract the attention of those naturally inclined to the sea and make an opening for them without requiring them to go through what to them is unnecessary and get three years' experience at sea in order to make an able seaman.

EXAMINATIONS FOR CERTIFICATE OF ABLE SEAMANSHIP.

The second paragraph of section 13 provides the method of examination by which any person making application for a certificate of qualification as an able seaman may be made. The application is to be made to the board of local inspectors, which under the law is composed of men appointed by the United States district judge and collector of customs. The examination is to be conducted by the local board of inspectors under oath and under rules approved by the Secretary of Commerce, showing the nationality and age of the applicant, the vessel or vessels upon which he has had service, and the waters upon which such service was rendered. If he is found competent, a certificate of service is to be issued by the board to him, and this is to be accepted as prima facie evidence as to his rating as an able seaman. Each board of local inspectors is required to keep a complete record of all examinations and certificates of able seamanship issued by them and to whom issued, and shall keep on file the evidence upon which the examination was conducted and the certificate granted.

ENFORCEMENT OF THIS SECTION.

The fourth paragraph of section 13 of the substitute bill provides means for the enforcement of the provisions of this section. It requires that the collector of customs may, upon his own motion, and shall upon the sworn information of any reputable citizen of the United States complaining that this section is not being complied with, cause a muster—that is, a roll call—of the crew of the vessel complained against to be made to ascertain the fact. The clearance of any vessel failing to comply with this section is prohibited. To prevent interference with the scheduled movement of the vessel, and to afford time for investigation, it is provided that every such complaint in order to hold the vessel must be filed at least six hours before it is scheduled to depart. The making of any false affidavit under this section is made perjury and punishable by a heavy penalty. A violation of any of the provisions of this section subjects the owner, master, or officer in charge of the vessel to a penalty of from $100 to $500.

NO PRESENT ABLE-SEAMEN REGULATIONS.

The importance of shipping a sufficient number of able seamen must be apparent to everyone. Their duties are among the most responsible to be performed by any part of the crew. Their position with reference to the lowering of boats and the handling of the same when lowered, in times of collisions, wrecks, or emergencies, is of the first magnitude. Their services in the saving of lives under such circumstances are indispensable and their training and experience are most important and valuable in the saving of living and helpless human beings. On them depends the rescuing of the lives of passengers and crew.

Notwithstanding the importance of their duties and position, yet, strange to say, up to the present time there has been no law upon the statute books of the United States defining the qualifications of an able seaman nor requiring service on deck of any vessel at sea for such seamen. Strange, yet no such provision is to be found among the rules and regulations adopted and promulgated by the board of steamboat inspectors for the guidance of our merchant marine. Failure to ship and carry a proper number of able seamen by any vessel is not punishable under any law or rule of our land. Is it, then, any wonder that when at this late date it is proposed by this bill to define by statute the qualifications of an able seaman the masters and vessel owners should strenuously object? Vessels have been at liberty to carry as many or as few able seamen as suited their pleasure and convenience and as did not lessen their dividends. Under this section, however, from the fourth year after the passage of this bill at least 65 per cent of the sailors on deck must be able seamen.

A STRANGE FACT.

It is said that truth at times is stranger than fiction. In the case of sailors we have a forcible illustration of this saying. The average person naturally thinks that those familiar with and employed about water will necessarily become familiar with the art of swimming. In the minds of most people the sailor is supposed to swim with the ease and grace of a duck or other aquatic bird. From extensive hearings held before the committee, however, we learn that there is but a small percentage of even able seamen who are able to swim. There is no law, rule, or regulation of the board of steamboat inspectors requiring them to acquire this art. One would think they would voluntarily, unconsciously, or instinctively acquire it for their own safety, if for no other purpose. I for one hope that the board of inspectors will consider this feature and in the near future establish a rule requiring every so-called able and ordinary sailor or seaman to become proficient in the art of swimming.

LIFEBOAT EQUIPMENT AND LIFE RAFTS.

Section 14 of the substitute is an amendment to section 4488 of the present Revised Statutes. This new part of the section makes provision for every steam vessel navigating the oceans, lakes, bays, or sounds to carry a sufficient number of lifeboats, floats, rafts, life preservers, and other life-saving appliances and equipment, and the means of propelling and handling the same as will best secure the safety of all passengers and crew on board such vessels in case of disaster; and every sea-going vessel carrying passengers and every such vessel navigating any of the northern or northwestern lakes is required to have the lifeboats provided by law, and also be provided with suitable boats and davits, so arranged as to allow the same to be safely launched while such vessels are under speed or otherwise.

The committee has deemed it advisable that the provision with reference to lifeboats, life rafts, davits, embarkation of the passengers in lifeboats and rafts, the manning of the boats, muster rolls, and drills should be incorporated in an amendment to section 4488 of the Navigation Laws, because of its relationship and germaneness to the subjects treated. Hereafter such important subjects as lifeboats, floats, rafts, life preservers, and other life-saving appliances and equipment, and the requirements as to davits, embarkation of passengers, and lifeboats and rafts, the manning of lifeboats and rafts, musters, drills of the crews on steamers navigating the oceans, lakes, bays, or sounds of the United States after July 1, 1915, will be subject to the provisions, limitations, and minimum requirements herein set forth, and such vessels will at all times hereafter be required to comply in every respect therewith. The requirements for such purposes established in this section will hereafter remain the statutory requirements until changed by Congress, and will not be subject to modification or repeal by the Board of Inspectors.

This section classifies lifeboats and sets forth how they shall be constructed, the strength of boats, buoyancy, the manner of their construction, and the type of pontoon life rafts that may be approved; the capacity limits and the number of persons who may be embarked in each lifeboat or life raft; also the equipment of lifeboats and life rafts; storage of the boats and launching of the same, and the number and strength of the davits and gear and the manner of manning each lifeboat.

LIFEBOATS REQUIRED BY THE SENATE BILL.

The language of the Senate bill in relation to lifeboats is as follows:

Provided, That no vessel carrying passengers, except those navigating rivers and harbors and the smaller inland lakes, as hereinbefore specified, exclusively, shall be permitted to depart from any port of the United States unless she is provided and equipped with a sufficient number of seaworthy lifeboats to carry and transport at one time every passenger and every member of the crew licensed to be carried on board such vessel and unless she shall have a sufficient crew to man each lifeboat with not less than two men of the rating of able seaman or higher, who shall be drilled in the handling and lowering of lifeboats under rules and regulations to be prescribed by the Board of Supervising Inspectors with the approval of the Secretary of Commerce: *Provided further*, That the Board of Supervising Inspectors be, and are hereby, authorized and directed to prescribe rules and regulations, to be approved by the Secretary of Commerce, to provide, in harbor and at sea, for lifeboat drill and fire drill to be held for the training of the crew in fighting fire, in abandoning the vessel, and in caring for the passengers, and to provide for the assignment of each passenger to a particular place in the lifeboats, said assignment to be made at the time the person is taken aboard the vessel as a passenger, who shall thereupon be informed of such assignment.

CERTIFICATED LIFEBOAT MEN AND MANNING OF LIFEBOATS BY SUBSTITUTE BILL.

Section 14 provides for certificated lifeboat men and the manning of lifeboats and rafts, as follows:

CERTIFICATED LIFEBOAT MEN—MANNING OF THE BOATS.

There shall be for each boat or raft a number of lifeboat men at least equal to that specified, as follows: If the boat or raft carries less than 61 persons, the minimum number of certificated lifeboat men shall be 3; if the boat or raft carries from 61 to 85 persons, the minimum number of certificated lifeboat men shall be 4; if the boat or raft carries from 86 to 110 persons, the minimum number of certificated lifeboat men shall be 5; if the boat or raft carries from 111 to 160 persons, the minimum number of certificated lifeboat men shall be 6; if the boat or raft carries from 161 to 210 persons, the minimum number of certificated lifeboat men shall be 7; and, thereafter, 1 additional certificated lifeboat man for each additional 50 persons.

The allocation of the certificated lifeboat men to each boat and raft remains within the discretion of the master, according to the circumstances.

By "certificated lifeboat men" is meant any number of the crew who holds a certificate of efficiency issued under the authority of the Secretary of Commerce, who is hereby directed to provide for the issue of such certificates.

In order to obtain the special lifeboat man's certificate the applicant must prove to the satisfaction of an officer designated by the Secretary of Commerce that he has been trained in all the operations connected with launching lifeboats and the use of oars; that he is acquainted with the practical handling of the boats themselves; and, further, that he is capable of understanding and answering the orders relative to lifeboat service.

Section 4463 of the Revised Statutes, as amended, is hereby amended by adding the words "including certificated lifeboat men, separately stated," to the word "crew" wherever it occurs.

MANNING OF BOATS.

An officer or able seaman shall be placed in charge of each boat or pontoon raft. He shall have a list of its crew, and shall see that the men placed under his orders are acquainted with their several duties and stations.

A man capable of working the motor shall be assigned to each motor boat.

The duty of seeing that the boats, pontoon rafts, and other life-saving appliances are at all times ready for use shall be assigned to one or more officers.

MUSTER ROLL AND DRILLS.

Special duties for the event of an emergency shall be allotted to each member of the crew.

The muster list shows all these special duties and indicates in particular the station to which each man must go and the duties that he has to perform.

Before the vessel sails the muster list shall be drawn up and exhibited, and the proper authority, to be designated by the Secretary of Commerce, shall be satisfied that the muster list has been prepared for the vessel. It shall be posted in several parts of the vessel and in particular in the crew's quarters.

MUSTER LIST.

The muster list shall assign duties to the different members of the crew in connection with—

(a) The closing of the water-tight doors, valves, etc.
(b) The equipment of the boats and rafts generally.
(c) The launching of the boats attached to davits.
(d) The general preparation of the other boats and the pontoon rafts.
(e) The muster of the passengers.
(f) The extinction of fire.

The muster list shall assign to the members of the steward's department their several duties in relation to the passengers at a time of emergency. These duties shall include—

(a) Warning the passengers.
(b) Seeing that they are dressed and have put on their life jackets in a proper manner.
(c) Assembling the passengers.
(d) Keeping order in the passages and on the stairways, and generally controlling the movements of the passengers.

The muster list shall specify definite alarm signals for calling all the crew to their boat and fire stations and shall give full particulars of these signals.

MUSTERS AND DRILLS.

Musters of the crews at their boat and fire stations, followed by boat and fire drills, respectively, shall be held at least once a fortnight, either in port or at sea. An entry shall be made in the official log book of these drills or of the reasons why they could not be held.

Different groups of boats shall be used in turn at successive boat drills. The drills and inspections shall be so arranged that the crew thoroughly understand and are practiced in the duties they have to perform, and that all the boats and pontoon rafts on the ship, with the gear appertaining to them, are always ready for immediate use.

LIFE JACKETS AND LIFE BUOYS.

A life jacket of an approved type, or other appliance of equal buoyancy and capable of being fitted on the body, shall be carried for every person on board, and, in addition, a sufficient number of life jackets or other equivalent appliances suitable for children.

It must not be inferred from the foregoing that there will only be one licensed officer or one able seaman in each lifeboat. The foregoing provision really only provides an able seaman, or licensed officer, for the officering of each lifeboat in lowering and when lowered, and who has charge of the boat or raft while upon the water.

CERTIFICATED LIFEBOAT MEN, WHERE FROM?

The question naturally arises, From what part of the vessel are these certificated lifeboat men to come? Another question is, Why not have enough able seamen among the deck crew to furnish at least two able seamen for each lifeboat, as required in the Senate bill?

Under the operation of the provisions of this section for certificated lifeboat men there is absolutely no question but what every able seaman on deck, as defined by section 13, will be included among the certificated lifeboat men. It was shown by the testimony of every master and vessel owner who appeared before the committee that it is not necessary or essential for the modern steamer to carry a number of able seamen sufficient to furnish two for each lifeboat where a lifeboat accommodation for all the passengers and crew is required. It was shown to the satisfaction of the committee that if a sufficient number of able seamen were required to provide two for each lifeboat that the additional able seamen which the boats would, under such rules, be required to procure and carry, would have nothing to do aboard the vessels while at sea but to wait for emergencies calling for the use of the lifeboats and equipment. Of course additional help, whether necessary or unnecessary, imposes additional burdens on vessel owners.

This committee has no sympathy for any argument which has for its sole purpose the increasing of the present high dividends of the vessel owners. On the other hand, we do not consider it our duty to create additional positions solely for the sake of increasing the number of jobs for persons seeking employment. We acknowledge the wisdom and necessity of having at least two efficient and qualified lifeboat men for each boat or raft. We consider it necessary for the safety of passengers and crew on every such lifeboat that there should be at least two qualified and efficient lifeboat men, capable of handling, managing, and guiding in an expert manner these lifeboats and rafts.

If there were no other reasonable way in which to provide two efficient and qualified lifeboat men for each lifeboat and raft, we would have gladly and unanimously recommended that the vessel owners maintain enough of able seamen on each vessel to furnish at least two efficient and qualified lifeboat men for each boat and raft. We found from the evidence before us, to our satisfaction, that it is not necessary to compel the vessel owners to employ any more lifeboat men than this proposed law requires for the purpose of taking care of and manning the lifeboats, if we make provision for the purpose of using other efficient and qualified members of the crew for that purpose.

Witness after witness came before the committee and testified that there were always to be found among the members of the steward's and firemen's departments, stewards, firemen, and others with as much skill and experience in handling and steering lifeboats in cases of emergency and necessity as is possessed by the average able seaman. It will be remembered that under the rules and regulations of the board of inspectors that the crew of every vessel is now required, and will be required under this proposed law, both in and out of port, to attend and participate in fire, boat, and other drills which under rules of said board are held once a week. In these drills the members of the steward's and firemen's department are required to participate with the able seamen, and it is the testimony of impartial witnesses that the skill, bravery, and efficiency shown by many of the members of those departments are equal to and even excel in many instances the records of the best able seamen in lowering, in embarkation, and in the handling and steering of lifeboats and rafts.

Members of the steward's and firemen's department are to be found in great numbers on every vessel, who have followed the sea not only for the length of time that is required by this bill for the making of an able seamen, but for much longer periods. Some of the longest sea-experienced members of the crew are always to be found in the steward's and firemen's department. Why should the services of such men be discarded in times of emergency? There is only one possible answer that can be made why they should not be pressed into service when there is an impending disaster. It may be urged by those without experience or study of the situation that they will be needed in alarming, assisting, and guiding the passengers from their rooms to the decks in emergencies and disasters. Such, however, are the duties of a large number of the members of those departments, but it must be remembered that frequently there are as many stewards and firemen as there are passengers, and it is seldom that there is not at least one steward for every four or five passengers aboard. It is by rules made the duty of members of the steward's department to arouse and alarm the passengers, and to assist them in dressing and putting on the life preservers, and guiding them to the decks, but in every case there is a great sufficiency of such help, and there are plenty of such members of the crew experienced and qualified to assist in the embarkation and launching of lifeboats and steering them when lowered.

To this committee it did not seem sensible or reasonable to require an additional and unnecessary force to be employed on the deck of the vessel, when there was plenty of efficient and qualified help already on board to properly man the lifeboats.

Equal and joint participation in all required boat and other drills has shown that the members of the steward's and firemen's department equal, and in many instances excell, the regular so-called able seamen in the manning and handling of lifeboats. Why should not such be the case when many of them have had as much, or longer, experience at sea than the so-called able seamen? Why should not they have the qualifications necessary for manning the lifeboats when for years they have participated in all the same prescribed drills and exercises with the able seamen?

The only difference in their experience is that the able seamen naturally acquire a little more of the swinging and motion of the vessel, because they are necessarily more of the time on deck, where the vessel's motion is greater, than are the members of the stewards' and firemen's department, whose time is spent more in the center and interior of the vessel. The testimony before us shows that the stewards and firemen are as expert on the average as the able seamen in swimming, rowing, and handling the life boats and rafts. I admit that the more ideal condition would be to have a crew of able seamen sufficient to furnish at least two seamen for each lifeboat; but as it is, there will be at least one able seaman or licensed officer in each lifeboat, and in a majority of the lifeboats there will be at least two such officers or able seamen, the balance only being supplied by certificated lifeboat men from members of the stewards' and firemen's department. If it were my humble opinion that for the safety of the traveling public able seamen only possessed sufficient qualifications for the proper manning of lifeboats, I should be the last one to support the provisions and requirements for certificated lifeboat men as reported by the committee.

RESCUERS OF "VOLTURNO'S" PASSENGERS.

A most forcible and practical illustration of the value of members of the stewards', firemen's, and other departments of the vessel as lifeboat men was shown in the work of rescuing passengers from the *Volturno*, which burned in the mid-Atlantic last October.

According to the statement of Capt. Kreibohm, of the *Kroonland*, an American vessel flying the American flag, at the time of rescue the winds were so terrific and the sea was so high and dangerous that in the judgment of Capt. Kreibohm it would have been criminal on his part to order the lifeboats lowered and manned. In accordance with the custom prevailing in the merchant marine in such appalling emergencies, he called for volunteers, and many from all departments of the vessel responded and engaged in the work of rescue. Here is what Capt. Kreibohm said in part in his report to the managers of the corporation to which his vessel belonged. In speaking of the rescue work he said:

When my ship rescued 88 people from the burning *Volturno*, there was a heavy gale blowing and a terrific sea running. Many volunteers from all departments of my crew offered to go in the boats. All were eligible for the work of handling the lifeboats. I selected a crew composed of sailors, firemen, and stewards; in my judgment, the said firemen and stewards being more competent than some of the deck hands, due to their frequent training in boat drills, and I launched three boats.

The German steamship *Grosser Kurfurst* was also engaged in rescue work at the time of the *Volturno* disaster. Capt. Moeller of that steamship in his report to his superiors concerning the same said:

Besides sailors, also stewards, scullery men, and coal trimmers volunteered, and were picked to man the lifeboats of the *Kurfurst*.

The first lifeboat was sent out under the second officer, and the crew was made up as follows:

One quartermaster, one sailmaker, four sailors, one boilermaker, one coal trimmer.

So there were three who were not sailors in this crew.

Second lifeboat under third officer, six sailors, three stewards, one trimmer.

Making six sailors and four others of the crew.

Third lifeboat under fourth officer, two quartermasters, two sailors, two stewards, one scullery man, two trimmers.

Two quartermasters and two sailors would make four, and there were five others—two stewards, one scullery man, and two trimmers.

The last boat was manned by a majority of nonsailors:

These three lifeboats went to rescue at night, during heavy storm and high sea, and saved 32 persons from *Volturno* before daybreak. Rescue after daybreak comparatively easy on account of moderated weather.

I repeat that not only our sailors, but all the men employed in the different departments on board are constantly drilled in handling lifeboats.

In the face of this recent and awful experience, in which when a call for volunteers was made to man the lifeboats in a sea so dangerous, that the captains of the vessels considered it criminal to order the lifeboats lowered into the sea; when in some instances more than a majority of the men manning the lifeboats who volunteered, were from the stewards, firemen, and other departments, risked their lives and successfully succeeded in manning the lifeboats and in rescuing human lives, who can reasonably contend that able seamen are the only members of the crew qualified to act as lifeboat men? Experience has thus demonstrated the fallacy of such claims.

EMBARKATION OF PASSENGERS IN LIFEBOATS AND LIFE RAFTS.

Section 14 also contains a provision requiring that suitable arrangements shall be made for embarking passengers in lifeboats and rafts, in accordance with regulations made by the board of supervising inspectors, with the approval of the Secretary of Commerce.

The Senate bill requires that there shall be a sufficient number of seaworthy lifeboats to carry and transport at one time every passenger and every member of the crew licensed to be carried on board such vessel. The Senate bill includes all waters and all boats in the same class. It makes no distinction in the dangers of navigating the different bodies of water. It does not take into consideration the different conditions upon the different bodies of water for rescuing those in distress. It proceeds upon the theory that the dangers of all waters, oceans, lakes, bays, and sounds are equal and alike and requires the same provisions for lifeboats in all waters and in all seasons. It contains no provisions for life rafts. As a general proposition life rafts are not as efficient and serviceable as lifeboats. The testimony in the hearings before your committee disclosed beyond dispute that in many instances in marine disasters in all bodies of water that situations and emergencies for life saving arise in which the lifeboats can not be used at all or not to as much advantage as life rafts. The testimony showed that in some instances, owing to the character of the disaster and the surroundings of the vessel, that it was impossible to lower or use lifeboats but that life rafts could be used in such cases for the purpose of saving lives.

The committee's substitute upon this subject has taken into consideration the actual and natural conditions in the navigation of vessels on the different waters. It makes a difference in the number of lifeboats and rafts required, but no difference in the number and qualifications of the men required to man the lifeboats, except in the source from which drawn. For the purpose of showing in full the provisions of the committee's substitute upon this subject I herewith take the liberty of setting forth in full the requirements in lifeboats and rafts which section 14 of the substitute requires for every vessel on the different bodies of water that are navigated:

EMBARKATION OF THE PASSENGERS IN THE LIFEBOATS AND RAFTS.

Suitable arrangements shall be made for embarking the passengers in the boats, in accord with regulations by the board of supervising inspectors, with the approval of the Secretary of Commerce.

In vessels which carry rafts there shall be a number of rope ladders always available for use in embarking the persons on to the rafts.

At no moment of its voyage shall any passenger steam vessel of the United States on ocean routes have on board a total number of persons greater than that for whom accommodation is provided in the lifeboats and pontoon life rafts on board.

If the lifeboats attached to davits do not provide sufficient accommodation for all persons on board, additional lifeboats of one of the standard types shall be provided. This addition shall bring the total capacity of the boats on the vessel at least up to the greater of the two following amounts:

(a) The minimum capacity required by these regulations;

(b) A capacity sufficient to accommodate 75 per cent of the persons on board.

The remainder of the accommodation required shall be provided, under regulations of the board of supervising inspectors, approved by the Secretary of Commerce, either in boats of class 1 or class 2, or in pontoon rafts of an approved type: *Provided*, That during the interval from May 15 to September 15, inclusive, any passenger steam vessel of the United States, on ocean routes less than 20 nautical miles offshore, shall be required to carry accommodation for not less than 70 per cent of the total number of persons on board in lifeboats and pontoon life rafts, of which accommodation not less than 50 per cent shall be in lifeboats and 50 per cent may be in collapsible boats or rafts, under regulations of the board of supervising inspectors, approved by the Secretary of Commerce.

At no moment of its voyage may any ocean-cargo steam vessel of the United States have on board a total number of persons greater than that for whom accommodation is provided in the lifeboats on board. The number and types of such boats shall be determined by regulations of the board of supervising inspectors, approved by the Secretary of Commerce.

At no moment of its voyage may any passenger steam vessel of the United States on the Great Lakes, on routes more than 3 miles offshore, have on board a total number of persons, including passengers and crew, greater than that for whom accommodation is provided in the lifeboats and pontoon life rafts on board. The accommodation provided in lifeboats shall in every case be sufficient to accommodate at least 75 per cent of the persons on board. The number and types of such lifeboats and life rafts shall be determined by regulations of the board of supervising inspectors, approved by the Secretary of Commerce: *Provided*, That during the interval from May 15 to September 15, inclusive, any such steamer shall be required to carry accommodation for not less than 50 per centum of persons on board in lifeboats and pontoon life rafts, of which accommodation not less than two-fifths shall be in lifeboats and three-fifths may be in collapsible boats or rafts, under regulations of the board of supervising inspectors, ap-

proved by the Secretary of Commerce: *Provided further*, That all passenger steam vessels of the United States, the keels of which are laid after the 1st of July, 1915, for service on ocean routes and on the Great Lakes, on routes more than 3 miles offshore, shall be built to carry, and shall carry, enough lifeboats and life rafts to accommodate all persons on board, including passengers and crew: *And provided further*, That not more than 25 per cent of such equipment may be in pontoon life rafts or collapsible lifeboats.

At no moment of its voyage may any cargo steam vessel of the United States on the Great Lakes have on board a total number of persons greater than that for whom accommodation is provided in the lifeboats on board. The number and types of such boats shall be determined by regulations of the Board of Supervising Inspectors, approved by the Secretary of Commerce.

The number, types, and capacity of lifeboats and life rafts, together with the proportion of such accommodation to the number of persons on board which shall be carried on steam vessels on the Great Lakes, on routes 3 miles or less offshore, and on all other lakes, and on rivers, bays, and sounds, shall be determined by regulations of the Board of Supervising Inspectors, approved by the Secretary of Commerce.

All regulations by the Board of Supervising Inspectors, approved by the Secretary of Commerce, authorized by this act, shall be transmitted to Congress as soon as practicable after they are made.

The Secretary of Commerce is authorized in specific cases to exempt existing vessels from the requirements of this section that the davits shall be of such strength and shall be fitted with a gear of sufficient power to insure that the boats can be lowered with their full complement of persons and equipment, the vessel being assumed to have a list of 15 degrees, where their strict application would not be practicable or reasonable.

From the above provisions it will be seen that all passenger and cargo steam vessels of the United States on ocean routes are required to have on board at all times and seasons sufficient lifeboats and pontoon life rafts to accommodate all passengers aboard of each vessel, as well as all members of the crew. There are no exceptions to this provision of any name, nature, or description. Neither is there any question of sufficiency of accommodation for all passengers and crew in lifeboats and rafts. This provision is complete and ought to be satisfactory to every impartial and fair-minded person who is posted upon this subject.

From the remainder of the provisions, relating to the embarkation of passengers and crew in lifeboats and rafts, it appears that under this bill, when it becomes a law, all passenger steam vessels of the United States operating on ocean routes not less than 20 nautical miles off shore are required to carry sufficient boats to accommodate all on board, excepting during the summer season, from May 15 to September 15, a period of four months. During this period such vessels shall carry accommodations for not less than 70 per cent of the total number of passengers and crew on board in lifeboats and pontoon life rafts.

Passenger and cargo steam vessels of the United States on the Great Lakes are required to carry throughout the year accommodations in lifeboats and pontoon life rafts for the total number of persons, passengers and crew, on board such vessel the year around, excepting during the period from May 15 to September 15, where the route is more than 3 miles off shore.

During the summer season, from May 15 to September 15, inclusive, such vessels upon the Great Lakes shall be required to carry accommodations for not less than 50 per cent of all persons on board in lifeboats and life rafts; not less than two-fifths of such accommodations shall be in lifeboats, and three-fifths may be in collapsible boats or rafts, in accordance with the rules of the Board of Supervising Inspectors, approved by the Secretary of Commerce.

It thus will be seen, and it should, in weighing this bill, be constantly held in mind, that accommodations are required by this bill for all persons on board of each passenger or cargo steam vessel of the United States on ocean routes all the time, and on ocean routes less than 20 miles off shore eight months of the year, and on the Great Lakes eight months of the year.

LIFEBOAT ACCOMMODATIONS UNDER PRESENT REGULATIONS.

In pursuance of a duty imposed upon the Board of Supervising Inspectors by authority of law that board heretofore made and promulgated general rules and regulations affecting navigation. Among such rules and regulations is a provision relating to lifeboat accommodations to be carried by passenger steam vessels of the United States while navigating different bodies of water. Complaint has been made that the present regulations are in some respects insufficient and inefficient. The terms of this substitute show that it is the opinion of your committee that the present regulations with regard to lifeboat accommodations are a proper subject for improvement. To show the improvements in lifeboat accommodations in the substitute bill as compared with the present rules and regulations upon that subject adopted by the Board of Supervising Inspectors I invite your attention to a comparison of the present and proposed lifeboat accommodations.

We find under the present rules and regulations of the Board of Steamboat Inspectors that lifeboat accommodations are required as follows upon the following bodies of water:

PRESENT RULES AND REGULATIONS.

All American ocean steamers carrying passengers to and from foreign ports shall be equipped with lifeboats of sufficient capacity to accommodate at one time all persons on board, including passengers and crew. One-half of such lifeboat equipment may be in approved life rafts or approved collapsible boats.

On all coastwise passenger steamers there shall be accommodations at one time for all persons on board, excepting during the summer season from May 15 to December 15.

From May 15 to September 15 such coastwise steamers shall carry lifeboat accommodations for 30 per cent of all persons on board.

Two-thirds of all lifeboat accommodations required of such steamers in coastwise trade throughout the year excepting four months of the summer may be in approved life rafts or collapsible boats.

Steamers carrying passengers on routes more than 5 miles offshore on the Great Lakes, other lakes, bays, and sounds are required under the present regulations to have lifeboat accommodations for all persons on board at one time, excepting during the summer season from May 15 to October 15, during which period such passenger boats on lakes, bays, and sounds are required to carry accommodations at one time for at least 30 per cent of all persons on board.

Passenger steamers on lakes, bays, and sounds, navigation routes lying at all points within 5 miles from land or only on waters whose depth is not sufficient to entirely submerge the vessel in case of disaster, during the summer season from May 15 to October 15, are required under the present regulations to only carry lifeboat accommodations at one time for not less than 10 per cent of all persons on board.

Lifeboat accommodations are required of vessels on lakes, bays, and sounds tributary to the Pacific coast, Atlantic coast, south of the 33d parallel, or on the Gulf of Mexico for at least 30 per cent of all persons on board without any exception in the summer season. But passenger steamers upon the last-named waters whose routes are within a distance of 5 miles from land, or only upon waters whose depth is not sufficient to entirely submerge the vessel in case of disaster, shall carry accommodations sufficient to accommodate at all times at least 10 per cent of all persons on board.

Steamers navigating the bodies of water last named may have three-fourths of the required lifeboats in approved rafts or approved collapsible lifeboats.

Passenger steamers equipped with wireless telegraphy navigating in daylight only and whose routes are at all times within 10 miles from land or over waters whose depth is not deep enough to entirely submerge the vessel in case of disaster, during the period from May 15 to October 15, are required to be equipped with lifeboat accommodations sufficient to accommodate at one time at least 15 per cent of all persons on board, but three-fourths of this lifeboat capacity may be in approved rafts or approved collapsible lifeboats.

The present regulations also apply to passenger vessels upon rivers and harbors and to smaller steamers of less than 100 tons gross, with local regulations in a number of other places.

COMPARISON.

For the purpose of fairly and pointedly showing the improvement in the substitute bill over the present rules and regulations prescribed by the Board of Supervising Inspectors, I desire to call your attention to the increase in lifeboat accommodations required by the provisions of the substitute bill. This comparison applies solely to passenger steamboats of the United States and to lifeboats proper.

INCREASE IN LIFEBOAT ACCOMMODATIONS.

A comparison of the lifeboat accommodations required by the substitute bill, with such accommodations as required by the present rules and regulations, show the following increase under the substitute bill:

	Per cent.
On ocean routes, increase in lifeboats	50
On coastwise steamers, increase in lifeboats excepting between May 15 and September 15	125
Coastwise steamers, increase from May 15 to September 15	50
On lakes, bays, and sounds on passenger steamers on routes more than 3 miles offshore, excepting from May 15 to October 15	200
On such lakes, bays, and sounds, steamers from May 15 to October 15, not more than 3 miles offshore, increase	60

Under the present rules and regulations such passenger steamers on lakes, bays, and sounds, with routes within 5 miles of shore, need carry in the summer season, from May 15 to September 15, lifeboat and raft accommodations at one time for only 10 per cent of all persons on board; only one-quarter of this 10 per cent accommodation need be in lifeboats.

Under the provisions of this substitute bill the accommodations for lifeboats on vessels whose routes are within 3 miles from shore, instead of 5 miles, as under the present rules and regulations, are left to the discretion of the board of steamboat inspectors; but there is a change in the present substitute for the greater safety of life by confining the scope of this last provision respecting near-shore routes to distances within 3 miles from shore instead of 5, as under the present rules and regulations. It is safe for us to assume that the board of steamboat inspectors, in view of the fact that in all other respects this bill requires an increase in lifeboat accommodations, will take notice and require an increase in lifeboat accommodations required to be carried by passenger steamers on lakes, bays, and sounds within 3 miles from shore. Public sentiment, in my humble opinion, will force the board to do this.

ACCOMMODATIONS ON GREAT LAKES—PERSONAL OPINION.

Notwithstanding that I shall support the provisions of the substitute bill in relation to the lifeboat accommodations required of vessels on the Great Lakes, yet I do so merely for committee purposes. I deem it but justice to myself at this time to say that in the committee I did my utmost to persuade my colleagues to insert a provision requiring all passenger steamers on the Great Lakes, without regard to the distances of their routes off shore, to carry lifeboat accommodations for 75 per cent of all on board during the excursion season, from May 15 to the 15th of September, exclusive, and that of such 75 per cent two-thirds of such accommodations should be lifeboats proper and the balance in life rafts or collapsible lifeboats. My views upon this subject were, however, contrary to the majority view of the committee. I considered it my duty to promote as best I could the reporting and passage of this bill at this session. For that purpose, and for that purpose only, I consented to surrender for the time being my personal views upon this subject, and have consented, for the purpose of making some progress with this important legislation, to the views of the majority of the committee. I desire that it should not be overlooked that my contention is that there should be no lessening of the amount of lifeboat accommodations required of boats on the Great Lakes because of the nearness of their routes to shore.

EQUIPMENT OF NEW VESSELS.

In section 14, page 63, the bill requires that all passenger steam vessels of the United States, the keels of which are laid after July 1, 1915, for service on ocean routes and on the Great Lakes more than 3 miles offshore, shall be built to carry, and shall carry, enough lifeboats and life rafts to accommodate all persons on board, including passengers and crews, and that all of these accommodations shall be in lifeboats, excepting that not more than 25 per cent of the same may be in pontoon life rafts or collapsible lifeboats. Experience and statistics show that the average life of a merchant marine vessel is but 20 years. Without requiring existing vessels to carry any accommodations beyond those provided for in this bill it will be but a short period of 20 years before all vessels afloat, if this bill becomes a law and remains on the statute books, will be carrying full accommodations in lifeboats and rafts for all on board all the time and in all seasons. But I believe that with the passage of this bill and a few short years' experience under it that there will be increased additional accommodations in lifeboats and rafts required and imposed upon existing passenger steam vessels.

LICENSED PASSENGER CAPACITY SHOULD BE MEASURE FOR LIFEBOAT ACCOMMODATIONS.

In my humble opinion the provisions of the substitute bill requiring lifeboat accommodations should not be based on the number of passengers and crew on board. The number of passengers on the same vessel in different voyages may and do differ greatly. Accommodations for 50 per cent of all on board on voyages, when the vessel is carrying the greatest number of passengers it is licensed to carry, will provide more than full lifeboat accommodations for all on board on the average trip of such vessel. Under the lifeboat-accommodation provision in the proposed law the vessel owner must of necessity be provided with at least lifeboat accommodations for 50 per cent of the highest number of passengers which the boat is licensed to carry.

It is plain to be seen therefore that so long as the owner is obliged on some voyages to have lifeboat accommodations for 50 per cent of all persons it is licensed to carry that it will not harm or cause any additional burden to the vessel owner to compel him to carry at all times lifeboat accommodations to the amount of 50 per cent of the highest number of persons it is licensed to carry on every trip that such vessel makes. It will require no more help, and it will not make one additional dollar of expense, if this 50 per cent of lifeboat accommodations to be carried on lake routes required in this bill was amended so as to make it apply to 50 per cent of all the persons that the vessel was licensed to carry. Then the passenger vessels affected by such a rule would have during the summer months lifeboat accommodations sufficient to provide for all passengers and crew on board on all voyages made by the vessel excepting a few during those four summer months.

It was shown in the evidence before the committee that the *Christopher Columbus*, a steel passenger steamboat plying between Chicago and Milwaukee, with a capacity of 3,800 passengers, carried on only about five or six trips in the summer season passengers in excess of 2,100 or 2,200 persons. It was admitted by the representatives of the company owning the *Christopher Columbus* that there was sufficient room on this vessel to store away lifeboats without additional room or expense for them, sufficient to accommodate 2,100 to 2,200 persons on board. Such accommodations would afford lifeboats for all on board during every voyage that the vessel made during the excursion season except some five or six. Therefore I am firmly of the opinion that the law should base the lifeboat accommodations which the vessel is required to carry on the number of passengers which the vessel is licensed to carry instead of on the number of passengers and crew on board.

There is absolutely no question but where both lifeboats and life rafts can be used that everyone prefers lifeboats, and every experienced sailor will so testify, and that is the reason, as I understand it, that the present up-to-date leviathan passenger ocean steamships provide accommodations in three or four times more lifeboats than life rafts.

A good illustration of the superiority of the usefulness of lifeboats was afforded in the wreck of the steamer *Oklahoma* at sea in the North Atlantic some time in January, 1914. One of her lifeboats which embarked and was launched in the ocean, hundreds of miles from shore, with 17 persons on board, drifted and endured over heavy wintry seas for two weeks, and when found 11 of the 17 persons on board were still living. It is inconceivable that any such record of life preserving could be accomplished by means of life rafts. The opportunities for the use of lifeboats are far more numerous than for the use of life rafts. As said before, however, there are some emergencies and positions in which a lifeboat can not be used at all or efficiently, but where the life rafts can and are successfully used.

WHY NOT NOW?

Immediately the advocates of requirements imposing complete accommodations for all to be carried by existing steam passenger vessels ask, why not now impose such requirements upon existing passenger steam vessels? This is where the rub comes. It is the dividing line. It is where a plain and natural distinction is drawn between the Senate bill and this substitute. This is where we find that this portion of the Senate bill was not based upon any hearings or evidence. This shows why your House Committee on the Merchant Marine and Fisheries has spent the necessary time in taking and considering hearings. This is where the House committee draws a natural distinction between this unconsidered provision of the Senate bill and certain indisputable and uncontrollable facts in the navigation of the most valuable, largest, and majestice existing ships afloat.

The representatives of the seamen's unions have strenuously demanded that accommodations be provided on each passenger steamboat vessel of the United States for all persons on board, regardless of the consequence. The unthinking portion of the public, unversed in the arts or even simple facts of navigation, have added their hue and cry to the demands of the seamen's representatives. Yet undisputed facts show that if we were to require all such ships on the Great Lakes to carry full lifeboat accommodations for all on board at all time, that we would be doing that which would render public travel upon a large portion of those vessels far more unsafe, dangerous, and unreliable than it is now. This class of people do not seem to be able to see beyond an able seaman and a lifeboat. Undisputed evidence was produced before the committee showing that a great number of the passenger steamboats on the Great Lakes, bays, and sounds can not comply with such a requirement without rehauling and reconstructing their vessels from almost their bottoms at a cost in many instances nearly as great as the original cost of the ship. The increased number of lifeboats that they would be required to carry in order to provide such accommodations would in many instances be two or three times as many as they are carrying now.

It must be remembered that lifeboats necessarily weigh more than a market basket, for many lifeboats weigh from 3 to 4 tons. If these vessels were required to comply with such a lifeboat requirement, their lifeboats would have to be stored away on the center and upper decks, not only displacing passenger room, which I for one would not give a moment's consideration to in hearing the claims of the vessel owners, but

by such additional lifeboats an unprovided-for weight would be placed on the top of the vessel, making the same unseaworthy, top-heavy, unsteady, and unreliable; making them easy in even light storms or with swift movements of the vessel to be capsized and sunk; making them, in common parlance, unreliable, unsteady, top-heavy, easily unbalanced and capsized, in spite of all able seamen, and necessarily and naturally unsafe and unmanageable and easily to be capsized. By such requirements we would be making one means of safety to the public the cause of providing a danger many times greater than that likely to occur where there is a mere insufficiency of lifeboats.

This is the reason that your committee has drawn a distinction in the matter of lifeboat equipment between existing passenger steam vessels and those to be hereafter constructed. I for one would gladly impose upon existing vessels the additional burdens of complete lifeboat accommodations, if it were not that by so doing an avenue of safety was provided for on the one hand and troubles and dangers a hundredfold greater to the safety of the traveling public made on the other hand. My belief is that if this bill is passed that a little further experience will show how these boats may safely be required to carry more than herein required, and when this bill shall have become a law and experience shall have demonstrated its value in relation to the new steam vessels to be built, the demand on the part of the traveling public for the most improved vessels will drive existing passenger steamboats, without full accommodations in lifeboats, out of business, and as time goes by they will be more rapidly replaced with the modern constructed passenger steam vessels than otherwise.

MY PERSONAL OPINION OF LIFEBOATS.

With respect to two or three important provisions in this important bill I entertain two different opinions. On those particular subjects I have a private opinion, and also a committee opinion. It is my private opinion that every existing passenger steam vessel of the United States so built as to be conveniently prepared to do so, regardless of the waters upon which its routes may be, and regardless of the seasons of the year, should be required by law to maintain and carry at all times lifeboats sufficient to afford accommodations for all passengers on board, including all members of the crew. I believe in the usefulness of life rafts. In many emergencies and on many occasions they can be used conveniently and efficiently where and when lifeboats can not be used at all. Those emergencies and occasions, in my opinion, are but few. Therefore, in addition to a full accommodation of lifeboats for all, I believe that each such passenger steam vessel shall at all times be required to carry a supply of life rafts to supplement the lifeboat accommodations to be used only under certain conditions or circumstances where it is impossible or inconvenient to use lifeboats. There is absolutely no question but where both lifeboats and life rafts can be used that every one prefers lifeboats, and every experienced sailor will so testify, and, as I understand it, such is the actual preparation and practice of the present up-to-date leviathan passenger ocean steamboats.

THIS IS AN AMBULANCE PROVISION.

I regret to say that by reason of the nature and scope of this bill it does not contain those broad protective measures for the safety of travel at sea, that are so desirable and are so generally believed to be contained in the bill, except as to increase the efficiency of the seamen. This bill is not intended to be an absolute guaranty and protection against shipwrecks, collisions, or disasters. There is not a single line in it relating to the construction of future vessels, except to make room for lifeboats for all. There is not a single line of it relating to the storing of the cargo so as to prevent the breaking out of fire; there is nothing of a preventative nature in it, unless it can be said that the requirements necessary for able seamen and lifeboats on future vessels be such. All other provisions, outside of lifeboats, are merely remedial of the seaman's sanitary, physical, and financial conditions.

This bill, so far as it relates to the safety of public travel at sea, is simply an ambulance bill. Complete accommodations by way of lifeboats and rafts do not prevent collisions, do not prevent fires, and do not prevent other disasters at sea. Able seamanship, it is true, may reduce the number of disasters that are due to the controllable elements of human nature. No increase in the efficiency or number of able seamen would have prevented the *Titanic* disaster. No increase in efficiency or number of able seamen would have prevented the catastrophe of the *Empress of Ireland*. No increased efficiency or more able seamen would have rescued more lives from the burning *Volturno*. No increase in efficiency of seamen or in their numbers would have prevented the collision between the *Nantucket* and the *Monroe*. All these disasters—outside of the *Volturno*, which was due to fire—were due to human elements which had nothing to do with the seamanship, or number of sailors, or with the supply of lifeboats. If the fire, in one instance, had not broken out; if the ambition to make a world's record-breaking trip had not existed on the part of the officers and owners of the *Titanic;* if a weak streak in a petty officer, who made a slight mistake in moving a screw in the machinery of the *Empress of Ireland*, had not existed; and if better discipline had been exercised by the officers of the *Nantucket*, none of these gigantic disasters would have happened. On the other hand, every one of them would have happened if there had been twice as many improvements in seamanship and lifeboat accommodations as called for by this bill.

I say again, this bill is but an ambulance bill. The safety of public travel at sea must be taken care of in the improved construction of vessels so as to render them unsinkable, or as nearly so as it is possible for human ingenuity to devise in the way of construction. Greater discipline and greater assistance to those in authority with the actual navigation, aided by improvement in the crew, will go further to stop preventable disasters than if there were a lifeboat for each passenger and half a dozen lifeboat men to handle it. Let it be borne in mind that, in the matter of safety of travel at sea, the truth of the old proverb is again forcibly illustrated: "An ounce of prevention is worth a pound of cure." So with disasters of ships at sea, an ounce of reliable construction is worth a thousand lifeboats or a thousand able seamen.

LAWS TO AVOID SHIP DISASTERS AT SEA.

The virtues of the Senate or so-called La Follette seamen's bill have been boasted much of by the press and persons directly interested in the bill. The measure is deserving of a great deal of praise, but the committee's substitute is deserving of greater praise and virtues, for it is an improvement upon the La Follette seamen's bill. I regret, however, that neither the so-called La Follette seamen's bill nor the committee's substitute are as broad or far-reaching as they ought to be. This is necessarily so, however, because the scope of both bills has been limited so as to carry matters of an ambulance character and not to serve to prevent disasters. We are dealing with disasters and wrecks; instead of that we should be dealing with preventives. But neither this committee nor any other Committee on the Merchant Marine of this House will ever have the time, technical knowledge, and experience to frame and present to this House navigation laws that are best adjusted to the prevention of ship disasters at sea. Your committee has worked hard, long, faithfully, and loyally upon this bill. It has given it more consideration than any bill of this character has received at the hands of its predecessors in the last 20 years, and yet we have only scratched the surface. The La Follette bill does no better. It even does not scratch as much surface as the committee substitute.

While the members of this committee have as much experience in law, and perhaps legislation, as the average Representative, yet there is not one among us that ever worked upon the construction of a passenger or cargo steam vessel. Not one of us owns an interest of any nature, manner, or description in any such vessel. Every member upon the committee, excepting four of us, are serving our first term upon that committee. We consider ourselves as capable as any other equal number of men of this House to consider the evidence and law that was brought before us. We flatter ourselves with the assumption that our work upon this bill has been well done. We feel that if we were to continue upon this committee until there shall have been four or five years' experience under this bill as a law we would have but little desire to subtract from this bill, but that there would no doubt be many things which experience would show us to be wise to add to it. But you can not reasonably expect this committee or any ordinary committee of this House to frame and devise a set of scientific, expert, and practical navigation laws relating to the construction of the great modern passenger steamships which will avoid all preventable disasters at sea by rendering them unsinkable or fireproof.

Here is a broad field in which Congress may well appoint a select investigating committee, composed of practical experts, to thoroughly investigate the great problems of producing by improved construction nonsinkable and fireproof steamships, and advancing the arts of navigation and the means necessary to obtain the utmost safety to the traveling public, and report the same to Congress; or to study, analyze, frame, and present proposed laws expressly designed to be a preventive of ship disaster at sea. For this purpose a commission of experts should be appointed to take the testimony of practical marine engineers upon this question of the construction of ocean and other steamships. Let them, then, simplify the language and terms used, and let it then be turned over to a committee of Congress. Then such committee will have on its hands a fund of practical

knowledge with which to frame these important laws, and we will not be dependent upon the selfish interests of either the representatives of labor on the one hand nor the vessel owners on the other, nor the ignorance of the public upon this important subject. For years too little serious attention has been paid to the subject of preventing sea disasters, and our national merchant marine as a whole has been treated by Congress and the people with criminal neglect.

ENFORCEMENT OF VIGILANCE AT SEA.

One of the most important forces in promoting the safety of passengers and crew while traveling at sea is vigilance. Eternal vigilance is not only the price of liberty, but it is the price of the greatest safety at sea for the traveling public. Whatever promotes vigilance in the navigation of vessels at sea promotes safety. Whatever promotes self-interest promotes vigilance. Whatever promotes the shipowners' financial responsibilities for accidents and ship disasters promotes vigilance. Therefore let the financial reponsibilities of shipowners be increased.

CHANGE SHIPOWNERS' LIMITED LIABILITIES.

Our laws limiting the liability of shipowners have done as much as any one cause to lessen the shipowners' vigilance, by reducing his financial responsibilities for personal injury and loss of life at sea. With his financial responsibilities reduced to a minimum, and in many cases to nothing, the shipowner becomes disinterested and negligent in the navigating of his ships. Place upon him a financial responsibility for these injuries and losses of life, and he will exercise the utmost diligence in the navigation of his ships to prevent such injury and losses.

A simple case forcibly illustrating this proposition is found in the American litigation growing out of the *Titanic* catastrophe. That vessel cost when it put to sea on its fatal voyage in round numbers $10,000,000. In the litigation brought in the courts of the United States and finally passed upon by our Supreme Court it was held that under our liability law the company owning the *Titanic* was subject to a liability only of $90,000. Why? Because our law limits the liability of the vessel owner to the pending freight money and to whatever value is left of the wrecked vessel, and in the majority of cases the wreck goes to the bottom of the ocean and there is nothing left to pay the claims of those who were injured and the heirs of those who were lost, but whatever money may be due that vessel's owners for freight carried by that vessel upon its fatal voyage.

Under the English law the liabilities of the owners of the *Titanic* amount to fully $3,000,000. This is bad enough. Under our law even the insurance money derived from the destruction of the ship can not be reached to pay claimants for damages. Both the English and American rules of liability are unjust and inequitable. There is no reason in justice and equity why under proper circumstances, where the vessel is lost through the negligence of the shipowners or the vessel's officers, that the company should not be liable to claimants entitled to damages to the full value of the ship before the wreck. Then justice and equity can be done to those having legal claims arising out of the wreck or destruction of the vessel.

In addition shipowners should be compelled by law to insure their ships for the average or usual percentage of the ship's value. In case of loss by wreck, fire, or otherwise such insurance should be subject to be applied in the payment of any judgment which any claimant may obtain against such vessel owner for loss or injury to property or person. In addition there should be Federal legislation fixing the liability of the shipowner for injury to or the death of a member of his crew. At the present time the extent to which a seaman or his dependents may recover for injury to himself is extremely limited and includes merely maintenance and care, at least during continuance of the voyage. Here again our law amounts to a license to the shipowner to neglect and overlook the selection of proper members for the vessel's crew and to be indifferent to the manning and discipline of the same.

Let us change our laws upon this question and attach such liabilities to shipowners, and we will thereby enforce upon the part of shipowners eternal vigilance in the navigation of their ships and for the protection of their own and shipper's property, and passengers' lives. They will then exercise the utmost care and caution to provide sufficient and efficient manning and equipment for their ships. Self-interest will then prompt them to take a lively interest at all times in the safety of the traveling public at sea. When this is done, then the traveling public may safely repose confidence in the glittering promises of navigation companies with reference to the safety of their vessels while being navigated at sea. Financial responsibility of the shipowners to the full value of their ships before the accidents will be the fountain from which their eternal vigilance will flow.

Absenteeism.

SPEECH

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 25, 1914,

On House resolution 601, as follows:

"*Resolved*, That all leaves of absence heretofore granted to Members are hereby revoked.

"*Resolved further*, That the Sergeant at Arms is hereby directed to notify all absent Members of the House by wire that their presence in the House of Representatives is required, and that they must return without delay to Washington.

"*Resolved further*, That the Sergeant at Arms is directed to enforce the law requiring him to deduct from the salary of the Members their daily compensation when they are absent for other cause than sickness of themselves and their families."

Mr. BARTON. Mr Speaker, lawmakers should studiously obey the law. If a law is bad, it should not be nullified by custom, but should be stricken from the statutes by a vote of Congress. The test as to whether or not it is a bad or good law would be the vote to repeal it. The law reads:

SEC. 40. The Secretary of the Senate and Sergeant at Arms of the House, respectively, shall deduct from the monthly payments of each Member or Delegate the amount of his salary for each day that he has been absent from the Senate or House, respectively, unless such Member or Delegate assigns as the reason for such absence the sickness of himself or of some member of his family.

And yet it is a notorious fact that for the past 60 days, with a membership of 435, it has been almost impossible to secure a quorum—about 200 Members going their several ways, doing the thing that pleases their fancy, but not staying here on the job.

The majority leader this morning, in order to secure a quorum, brings in a resolution which says in words resolved, that we will enforce the law. It reads as follows:

House resolution 601.

Resolved, That all leaves of absence heretofore granted to Members are hereby revoked.

Resolved further, That the Sergeant at Arms is hereby directed to notify all absent Members of the House by wire that their presence in the House of Representatives is required, and that they must return without delay to Washington.

Resolved further, That the Sergeant at Arms is directed to enforce the law requiring him to deduct from the salary of the Members their daily compensation when they are absent for other cause than sickness of themselves and their families.

Think of the proposition: Resolved, that the Sergeant at Arms is directed to enforce the law. Did he not in taking his oath of office swear that he would do so, and have we come to the point in our Nation's history where we must compel an officer who has sworn to enforce the law to do so by resolution?

I take the position that the same rights and restrictions should apply equally and alike to each and every Member; that if one Member has the right to make Chautauqua lectures at so much per, adding to his income, or to attend his personal business or take a vacation, the rest of the membership should have the same privileges. If they did, and exercised the privilege, we would not only be without a quorum, but without a Congress.

There is another law greater than written law—the law of common honesty and fairness. In my opinion, common honesty demands that a man in public office should give his time and talent to the performance of that work for which the people honor and pay him. If he can not afford to do so and his personal business demands his time, then he has one right provided for in all our laws—the right to resign—and we well know that there are plenty of able men ready and willing to be our successors and give their entire time to the work.

If a farmer, merchant, or banker had an employee who devoted a great part of his time to taking pleasure trips or working somewhere else for money, said employee's place would soon be filled by another who would do the work for which he was paid.

I have marveled that the people, who now more than any period in our Nation's history are demanding honesty and square dealing from their public servants, would approve the action of Members of Congress who ought to be in their seats, but who are out, at so much per week, telling the country how Congress ought to be run instead of staying in the body and doing the business for which they were elected.

Mr. UNDERWOOD, the majority leader, on August 3 said:

I think the gentlemen who have stayed here through this long summer and have answered the roll calls and "stayed on the job" deserve great credit for it and the commendation of the country and their con-

stituents, but I want to say also that I think the gentlemen who have not been here, who have been away the greater part of the last 60 days, ought to be willing to do their turn at the wheel [applause]; and I say this in the hope that what I say will be carried by the press of the country, and that in this critical time the absentees who are with their own people will return to the roll call of the House. [Applause.]

I have been in attendance every day of this session and voted on every question considered, but do not think it a mark of honor—simply my plain duty and common honesty with my constituents. I ask again: If we who stayed had done as the Members did who were not here, how could business be transacted? And are not our rights and privileges equal to theirs?

I think to introduce and pass this resolution at this time absolutely unfair in a political sense, and is positively unfair to the North. While the primaries were on in the South we had no such rule, and the RECORD will show that southern Members were not present; they were at home among their constituency looking after their primaries. When they are nominated their fight is over, but the northern Democrats and Republicans must contest for their seats.

The majority leader knew that, and now, just at the time when the southern primaries were concluded, he brings in this resolution. The absentees' time ought, in fairness, to be deducted from the beginning of this session, or even further back.

I hope the rule will be enforced. I insist that the same privileges be granted each Member, and I believe it the duty of a Member to be present when Congress is in session doing business.

The Potato Crop.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 29, 1914.

Mr. MOORE. Mr. Speaker, what I desired to say about the potato crop is this: If you were to run through Maine as I did a week or so ago, you would think Aroostook County alone would be able to supply the American demand for potatoes for the coming winter. It is a wonderful sight, those fields of solid green, sometimes covering a hundred acres without a break, with their comfortable and well-ordered farm houses and barns. They have good roads up there, too, and electric lights and automobiles—one they say to every 49 people—so that if the potato crop is in any way responsible for it the potato crop is worthy of our consideration in Congress along with the cotton crop, or corn crop, or other products of the farm.

CARING FOR COTTON.

You know, Mr. Speaker, we have been doing a great deal for the cotton crop lately. Cotton is a natural monopoly in the profits of which Maine does not participate, although potatoes can be grown all over the South and are actually raised in Florida and other cotton-growing States from the seed potatoes of Maine. You will remember the Democratic Congress took good care of cotton in the Underwood tariff bill. It aided the dealer in raw cotton to a larger market in Germany and Great Britain by cutting down the protection given to the manufacturers of raw cotton in New England, who pay higher wages than the manufacturers of Great Britain and Germany. The price of raw cotton was thus protected, while the output of the New England mills was reduced and many workmen were laid off.

In addition to this, Mr. Speaker, all recent financial legislation has contemplated an oversight and a care of the cotton interest that has shown the present Congress to be a friend indeed to the cotton planter. We have safeguarded him against the boll weevil and the floods. We have given him Government experts a plenty; we have provided for his educational institutions, and we have afforded means by which his credit at the bank may be facilitated. And finding that he is up against the war conditions in Europe, we have arranged to purchase foreign ships and give them American registry so that he may not have to "dump" his goods, as he fears he may have to do, upon the American market. We are even going to insure the risk of sending his cargoes into belligerent territory. But that is not all. The Secretary of the Treasury is to see that his banks are financed so that his prices shall not fall; and if that is not sufficient, we still have in reserve the proposition to buy his cotton with Treasury funds to tide him over a possible fluctuation in value.

THE POTATO IS DIFFERENT.

I remind you of these things we are doing for the cotton crop, Mr. Speaker, because we are not doing these things for the potato crop. The men who went up into Maine and cut their way through the forests were pioneers of a type that delights the American heart. When they changed their mountain wilderness to fertile fields and started to develop the great industry for which they found the soil adapted, they were confronted with a competition such as cotton has never experienced in America; the competition of New York, Pennsylvania, and other States nearest the potato market, and the keener competition of the Canadian farmer, whose cheaper land and farming conditions were a terrific handicap against the Maine farmer.

What did we do to assist the pioneer potato farmer of Maine? Under the Republican system of protection we gave him a tariff of 25 cents a bushel. That kept the Canadian competition at a respectful distance. It even induced Canadians to cross the border and take up American citizenship, and some of them to-day are possessed of the best farms in the State. The protection of 25 cents a bushel enabled the Maine farmer to get to market, and now his potatoes are shipped in great quantities to all parts of the country. They are American potatoes, and they command the American price. This is what the Republican Party did for the farmer of Maine.

THE POTATO MUST FIGHT.

But, Mr. Speaker, the framers of the Democratic tariff law, whose devotion to cotton has been so steadfast, upset the Republican system of protection, which transformed the forests of Maine into marvelous potato fields, and took the duty of 25 cents a bushel away from potatoes. There was no duty on cotton. Why should there be any duty on potatoes?

The answer, Mr. Speaker, may be had by a reference to the Department of Commerce statistics. I would like to write them in big roman letters, so that all the people of Maine who were induced to assist the Democrats into power in 1912 might clearly see and understand them. Here they are:

In nine months of the Republican Payne tariff law foreign potatoes, paying a tariff duty of 25 cents a bushel, came into the United States to the extent of 308,000 bushels.

In the corresponding nine months of the Democratic Underwood law foreign potatoes come in free to the extent of 1,650,000 bushels.

In other words, Mr. Speaker, just as soon as the bars were let down Germany, Bermuda, Ireland, Canada, and other countries began to flood the American market with potatoes until in the first nine months of the operation of the new law five times as many foreign potatoes came in as were received during the corresponding Republican period. What the Democratic Party did was to threaten the very existence of the Maine potato farmer, while it did not reduce the price of potatoes to the consumer anywhere. The failure of the Democratic plan to reduce the cost of living by taking away the farmers' protection on potatoes was so evident, that if it were not for the discovery of the potato wart or scab justifying a departmental quarantine against foreign potatoes the consequences to the Maine farmers would by this time have proved disastrous.

DISCRIMINATION AGAINST THE POTATO.

In a recent address to the House, Mr. Speaker, my colleague, the gentleman from Nebraska [Mr. SLOAN], indicated that Argentine corn, which now comes in free competition with American corn, can be landed at New York for 3 cents a bushel as against a transportation cost of 12 cents a bushel from Omaha. If all other conditions were equal, which they are not, how long could the American farmer stand against that 9 cents per bushel disadvantage? We can get potatoes cheaper in Philadelphia from Germany or Bermuda than we can from Maine. How long, therefore, can the Maine farmer or any other American farmer—even our own prize farmers of Lancaster and York Counties, Pa.—stand the competition of free potatoes?

NO ADVANTAGE TO CONSUMER.

From the viewpoint of the consumer in the cities, Mr. Speaker, it would not be so bad if the removal of the duties on potatoes would reduce the cost of living, but it has not done so and it probably never will so long as the Democratic tariff law also takes away the protection accorded to the workmen in the mills and factories, whose shorter shifts and diminished pay, by reason of the competition with cheap foreign labor, reduces and destroys their power to purchase. If the men in the mills are idle it profiteth neither the cotton planter nor the potato grower.

But as to the potato crop, Mr. Speaker, it promises to be the greatest Maine has produced. The warehouses will soon be full, and the American market, in good times, is the best in the world. So far as is known, the Maine farmer has done

his own financing. He has borrowed money in the usual way and made good in the usual way. He spends generously for fertilizer and he gets no Government assistance for removing the potato-bug pest nor for eradicating the rust or the scab.

THE MAINE FARMER CHIPS IN.

The Department of Agriculture maintains an experimental farm station in Maine, and it has made an allowance of $50,000 for inspection of potatoes before they leave the State; but I am informed that to complete the inspection the farmers and shippers of Maine will have to contribute another $50,000 out of their own funds. It is a hardship and rather unusual, but they are going to stand it, for they want to get their potatoes out while the quarantine is on. For the quarantine in Maine, Mr. Speaker, is at once a blessing and a menace. So long as it continues under the present conditions the Maine farmer will have protection against foreign imports. When the department decides that the foreign potato has been cured of its malady, free trade sets in again, and the sword of Damocles falls. What, then, Mr. Speaker, shall we say of the policy of the Democratic Party? To protect cotton, which it said needed no protection, it has been put to desperate straits. To protect potatoes, which it made free, it embraces the foreign scab and declares a quarantine.

DEMOCRATIC SCHEME A FAILURE.

Inheriting a balance of $50,000,000 from a protective-tariff system, it finds itself $100,000,000 short in the brief space of nine months of free trade. Where is the burden to fall, Mr. Speaker? Shall we levy another tax upon incomes, reducing the amount to the $1,000 man? Shall we put it on rum and tobacco? Shall we make it a stamp tax, or shall we devise some other method of increasing our domestic burdens? Mr. Speaker, the potato grower of Maine is beginning to think these matters over for himself, and so are the producers in other sections of the country. And if the outcome of this independent thinking upon the part of those who are most concerned shall be to rely a little less upon foreign competition and foreign gold and a little more upon the Republican system of protection and the value of the great American market, how much stronger as a people we would be.

FOREIGNER FIXES THE PRICE.

There is another thought, Mr. Speaker, which may be advanced in connection with the Democratic method of dealing with the cotton crop and the potato crop. Under the Republican system we enable American producers to fix their own prices; under the Democratic system we permit the foreign competitor to fix the prices for us. Under the Republican system we make the foreigner pay for the privilege of doing business in the American market; under the Democratic system we give the American market away to the foreigner. When you took the duty off of sugar, did the retail price come down? Not much. To-day under the Democratic system the sugar importers are pocketing the duty that foreign sugar formerly paid, the American sugar-beet industry is silent, the Government is out a large proportion of the $60,000,000 of revenue it used to collect from foreign sugar, and the poor consumer is paying twice as much per pound for sugar as he did under the Republican system of protection.

OUR LOSS HIS GAIN.

How about lumber? The Democratic Party said it would reduce the price of lumber by taking the duty off. It took the duty off and the Canadian lumber dealer added it to his price. Therefore the Government lost the duty and the Canadian got the money. Wherein does that system aid the American lumberman or reduce the cost of living? Or, if we consider the lumberjack, wherein does it help him? Last year, under the Republican system, the lumberjack going into the forests of Maine could get all the work he wanted at $35 per month. This year, under the Democratic system of free foreign lumber, the lumberjacks of Maine are hunting work at from $26 to $30 per month.

FREE CATTLE, HIGHER PRICES.

And how about cattle? In nine months of the Republican law last year we admitted foreign cattle paying duty to the value of $5,771,000. In the corresponding nine months of the Democratic law, foreign cattle were rushed in free of duty to the value of $16,300,000. Did it reduce the price of beef, as promised by the Democrats? Not much. We are paying more for beef in the big cities than ever, and, due to the business depression and slack employment for our industrial workers, we have less money to buy beef. That the American farmer is not benefited is now generally admitted. I learned in Maine that even the cattle dealer, who thought he could make something by buying Canadian cattle free of duty, found the Canadian price had gone up to correspond with the duty we had taken off.

THE GRATEFUL FOREIGNER.

Wise, indeed, Mr. Speaker, is the foreigner who has paid the American duty under the Republican system. Is it any wonder he is grateful to the Democratic Party when it takes the duty off? The American farmer and the American consumer may suffer when the duty comes down, but the Canadian farmer, like the European manufacturer, can raise his hands to high heaven and exclaim, "Thank you, Mr. Democratic Party. You have given us the American market and we embrace it. You have removed your duties and we have put them on. You have taken $100,000,000 from your own people, and must raise it by direct taxation. The burden used to be on us, but now the joke is on you. But for the accident of the war your brilliant statesmanship would certainly have given us the world's supremacy in production and trade; and we thank you."

HOW LONG CAN WE STAND IT?

With imports of foreign oats jumping from 37,000 bushels in nine Republican months to 22,000,000 bushels in nine Democratic months, how long, Mr. Speaker, can the American farmer stand it?

With butter and substitutes jumping from $250,000 of value in nine Republican months to $1,600,000 in nine Democratic months, how long can the American farmer stand it?

With imported wool jumping from 136,000,000 pounds duty paid in nine Republican months to 223,000,000 pounds free in nine Democratic months, how long can the American farmer stand it?

WORKINGMEN ALSO WANT TO KNOW.

Mr. Speaker, the Maine farmer and every other farmer is thinking these questions over this year, and it goes without saying that in those great centers of population where workmen have been laid off because their work is being done by foreigners and where they are drawing upon the savings of Republican prosperity, they, too, are asking "How long can we stand it?"

Correspondence Between National Contract Co. and the Government of the United States.

EXTENSION OF REMARKS

OF

HON. CHARLES LIEB,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 28, 1914.

Mr. LIEB. Mr. Speaker, I ask unanimous consent to extend my remarks by inserting in the RECORD a letter from Mr. Sam L. May, president of the National Contract Co., of Evansville, Ind., to Lieut. Col. F. R. Shunk, of the Government Corps of Engineers, Pittsburgh, Pa., relating to a contract now existing between said National Contract Co. and the Government of the United States. This information is of interest to Members of the House as it gives the status of the work on locks and dams under construction on the Ohio River.

STEUBENVILLE, OHIO, *August 25, 1914.*

Lieut. Col. F. R. SHUNK,
Corps of Engineers, United States Army, Pittsburgh, Pa.

DEAR SIR: We have your favor of August 21, 1914, desiring to know the number of men of each general class that would have been employed on our contract at Dam No. 10, Ohio River, Steubenville, Ohio, on October 1, 1914, had the river and harbor bill become a law, and the number of men that will be employed should the bill not become a law.

According to our understanding, necessary appropriation for completion of our contract at Dam No. 10, Ohio River, Steubenville, Ohio, was included in the sundry civil bill passed by Congress during July, 1914, and sufficient allotment made by the Ohio River board of engineers. If such is the case, there will be no difference in the number of men employed at Dam No. 10, Ohio River, Steubenville, Ohio, on October 1, 1914, whether the river and harbor bill passes Congress or not.

If we are not correct in assuming that sufficient funds are available for completion of Dam No. 10, Ohio River, it will mean a suspension of work until necessary funds are provided by Congress.

The number of all employees at Dam No. 10, Ohio River, Steubenville, Ohio, on Saturday, August 22, 1914, was as follows:

One superintendent, 1 assistant superintendent, 1 bookkeeper, 1 stenographer, 1 timekeeper, 15 overseers or foremen, 1 blacksmith, 11 carpenters, 3 water boys, 9 machinists, 6 steamboat crew, 15 hoisting engineers, 15 firemen, 12 handy men, 1 watchman, 113 laborers. Total, 206.

With favorable river and weather conditions until December 15, 1914, and assuming that sufficient funds are available, we hope to be nearing the end of our contract at Dam No. 10, Ohio River.

However, failure of passage of the river and harbor bill at the present session of Congress would have one demoralizing effect on our organization after the end of this season. We would be in position, probably, to take up new work. We make it a point to keep our organizations together when we have work ahead for the following season.

The laborers are practically the only men not held together in the dull or winter season for the next year.

If the river and harbor bill fails to pass Congress at this session, we understand there would not be any new contracts come up for next year. We would have very little work to complete Dam No. 10, Ohio River, in every detail early next year. We could not afford to keep our organization together after the end of this season without any new work in sight for next year. It would mean that we would have to dispense with the service of practically all of our men at the end of this season.

The work of constructing a lock and dam in the Ohio River is, in our opinion, a special line of work. It requires a plant built especially for this class of work, and is really worthless without any contracts. We have an investment of approximately $150,000 in plant at Dam No. 10, Ohio River. What will this plant be worth to us if we do not have any contracts on hand to keep it busy? It will be an expensive proposition to take care of and keep up.

The work requires men especially trained for river work. It requires several seasons before a man becomes of any benefit to us above the ordinary laborer. Conditions are always arising that require special knowledge of river construction. We must always be prepared for a flood and must know exactly what to do to protect our interests and the work of the Government in such emergencies. This requires special training.

It has taken us several years to secure these organizations and feel that we are in position to carry forward this work successfully. We think we have succeeded in securing such an organization at Dam No. 10, Ohio River. Failure of passage of the river and harbor bill means that we can not afford to keep this organization together. It would certainly demoralize working conditions and make it very expensive to get the organization together again and teach new men the first season after securing new contracts.

Failure to pass the river and harbor bill at the present session to us would mean a $150,000 plant practically worthless after this season and now employed at Dam No. 10, Ohio River, and an organization of practically 100 men that would be disrupted at the end of this season. It means four years of hard work practically wasted.

The question of plant and organization does not affect this company alone. It means the same to the contractors at Dams 12, 14, 15, 16, 17, 19, 20, 24, 29, 31, 35, 41, and 48, Ohio River. Possibly some of these contractors would have work beyond this season, but they would not feel encouraged to make additional investments in plant or build larger organizations for the future. We passed through this stage of the experiment when appropriations were made in small amounts and the construction of a lock and dam was awarded in three or four contracts and required six, seven, eight, and nine years to complete and place in operation.

Since 1910 the work on the Ohio River has been placed on a business basis. Appropriations have been sufficient to allow contracts for three, four, and five Ohio River locks and dams to be awarded each year. Contractors were encouraged to build proper plants and secure necessary organizations to complete the first general contract within four years. What has been the result? Dams 7 and 9, Ohio River: Contracts awarded in September, 1910, and first general contracts completed in fall of 1913, or three seasons; will be placed in operation within four years. Dam No. 10, Ohio River: Contract awarded in November, 1912, and which might be completed and placed in operation during 1915.

Contracts placed in 1910 for Dams 7, 9, 12, and 19, Ohio River; during 1911 for Dams 29, 14, 15, 20, 41, and 48, Ohio River; during 1912 for Dams 10 and 31, Ohio River; during 1913 for Dams 16, 17, 24, and 35, Ohio River; all with four-year time limit for completion. Government hired labor completed Dam No. 26, Ohio River, during 1908, 1909, 1910, 1911; work on Dam No. 28, Ohio River, during 1911, 1912, 1913, and 1914; and understand must suspend on August 1, 1914, on account of lack of funds. Dams Nos. 21 and 22 can not be started on account of lack of funds. Dam No. 39 was started this spring and suspended on July 31, 1914, on account of lack of funds. Dam No. 43, started this spring, and understand must be suspended on September 30, 1914, on account of lack of funds.

It would certainly be a terrible calamity to the Ohio Valley if the river and harbor bill fails to pass Congress at the present session of Congress.

We feel that we have more than covered the information requested in your letter, but we are so interested in this matter that a complete presentation of this matter would not be out of place at this time.

Very respectfully,

NATIONAL CONTRACT COMPANY,
SAM L. MAY, *President*.

Remarks Made by the President at the White House, December 23, 1913, After Signing the Currency Bill.

EXTENSION OF REMARKS

OF

HON. B. P. HARRISON,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 4, 1914.

Mr. HARRISON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include remarks made by the President at the White House, December 23, 1913, after signing the currency bill.

The President, at the signing of the currency bill at the White House December 23, 1913, said:

"Gentlemen, I need not tell you that I feel a very deep gratification at being able to sign this bill, and I feel that I ought to express very heartily the admiration I have for the men who have made it possible for me to sign this bill. There have been currents and countercurrents, but the stream has moved forward. I think that we owe special admiration to the patience and the leadership and the skill and the force of the chairmen of the two committees; and behind them have stood the committees themselves, exercising a degree of scrutiny and of careful thought in this matter which undoubtedly has redounded to the benefit of the bill itself. Then there have grown, as we have advanced with this business and the great piece of business which preceded it, evidences of teamwork that, to my mind, have been very notable indeed. Only constructive action, only the action which accomplishes something, fills men with the enthusiasm of cooperation, and I think that at this session of Congress we have witnessed an accumulating pleasure and enthusiasm on the part of the membership of both Houses in seeing substantial and lasting things accomplished.

"It is a matter of real gratification to me that in the case of this bill there should have been so considerable a number of Republican votes cast for it. All great measures under our system of government are of necessity party measures, for the party of the majority is responsible for their origination and their passage; but this can not be called a partisan measure. It has been relieved of all intimation of that sort by the cordial cooperation of men on the other side of the two Houses who have acted with us and have given very substantial reasons and very intelligent reasons for acting with us. So that I think we can go home with the feeling that we are in better spirits for public service than we were even when we convened in April.

"As for the bill itself, I feel that we can say that it is the first of a series of constructive measures by which the Democratic Party will show that it knows how to serve the country. In calling it the first of a series of constructive measures, I need not say that I am not casting any reflections on the great tariff bill which preceded it. The tariff bill was meant to remove those impediments to American industry and prosperity which had so long stood in their way. It was a great piece of preparation for the achievements of American commerce and American industry which are certainly to follow. Then there came upon the heel of it this bill, which furnishes the machinery for free and elastic and uncontrolled credits, put at the disposal of the merchants and manufacturers of this country for the first time in 50 years. I was refreshing my memory on the passage of the national-bank act, which came in two pieces, as you know, in February of 1863 and in June of 1864; it is just 50 years ago since that measure, suitable for that time, was passed, and it has taken us more than a generation and a half to come to an understanding as to the readjustments which were necessary for our own time. But we have reached those readjustments. I myself have always felt when the Democratic Party was criticized as not knowing how to serve the business interests of the country that there was no use of replying to that in words. The only satisfactory reply was in action. We have written the first chapter of that reply.

"We are greatly favored by the circumstances of our time. We come at the end of a day of contest, at the end of a day when we have been scrutinizing the processes of our business, scrutinizing them with critical and sometimes with hostile eye. We have slowly been coming to this time which has now, happily, arrived when there is a common recognition of the things that it is undesirable should be done in business and the things that it is desirable should be done. What we are proceeding to do now is to organize our peace, is to make our prosperity not only stable but free to have an unimpeded momentum. It is so obvious that it ought not need to be stated that nothing can be good for the country which is not good for all of the country. Nothing can be for the interest of the country which is not in the interest of everybody; therefore the day of accommodation and of concession and of common understanding is the day of peace and achievement of necessity. We have come to the beginning of that day. Men are no longer resisting the conclusions which the Nation has arrived at as to the necessity of readjustments of its business. Business men of all sorts are showing their willingness to come into this arrangement, which I venture to characterize as the constitution of peace. So that by common counsel and by the accumulating force of cooperation we are going to seek more and more to serve the country.

"I have been surprised at the sudden acceptance of this measure by public opinion everywhere. I say surprised, because it seems as if it had suddenly become obvious to men who had looked at it with too critical an eye that it was really meant in their interest. They have opened their eyes to see a thing which they had supposed to be hostile to be friendly and serviceable; exactly what we intended it to be, and what we shall intend all our legislation to be. The men who have fought for this measure have fought nobody; they have simply fought for those accommodations which are going to secure us in prosperity and in peace. Nobody can be the friend of any class in America in the sense of being the enemy of any other

class. You can only be the friend of one class by showing it the lines by which it can accommodate itself to the other class. The lines of help are always the lines of accommodation.

"It is in this spirit, therefore, that we rejoice together to-night, and I can not say with what deep emotions of gratitude I feel that I have had a part in completing a work which I think will be of lasting benefit to the business of the country."

War Prices.

REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 28, 1914.

On the bill (S. 6357) to authorize the establishment of war-risk insurance in the Treasury Department.

Mr. JOHNSON of Washington. Mr. Speaker, the war-risk insurance bill is in connection with the plan to transfer foreign ships to American registry. The hope is to build up an American merchant marine. Unfortunately, both the war insurance and the proposed transfer are put forth on temporary measures, with a time limit, and, therefore, will not quicken the movement for a permanent American merchant marine on a large scale.

All of these measures are put forward in an effort to save us from the disastrous consequences of the terrible European war. Foreign credits and means of exchange have broken down. Business is ruined abroad and affected here. In this country a tendency to force war prices for foodstuffs has caused great alarm. In this connection I desire to present a letter from Mr. Oscar R. Redlich, a forceful citizen of Tacoma, Wash. Mr. Redlich has given profound study to economic subjects, and in the 17 years that I have known him his views, as published from time to time, have been keen cut and sensible. In this case, however, he propounds no problems, but states simply what must be in the minds of many Americans. His letter is addressed to the President of the United States, and I have the writer's permission to make it public. The letter follows:

TACOMA, WASH., *August 14, 1914.*

To His Excellency the PRESIDENT OF THE UNITED STATES.

DEAR MR. PRESIDENT: The real beginning of the infernal war now raging in Europe was August 1, 1914. On August 4 I took the liberty to wire you that if the first scoundrels who attempted to commit worse than highway robbery by boosting food prices, taking the European war as a pretext, were treated to a necktie party, much good would be accomplished. In what light you may consider the extreme measure I proposed is of no concern to me. Certain exigencies demand stern procedure.

Just now the Commission on Industrial Relations, appointed to investigate cause of "discontent," the answer my 11-year-old boy has on his tongue's end, is in session in the near-by city of Seattle. If Congress deemed it expedient to appropriate $100,000 about eight months ago to discover something that could have been acquired for 5 cents, it goes without saying that if immediate decisive steps are not taken by the powers that be to protect the American people from these buccaneers, they themselves will do the "investigating." The lesson of history is that all human endurance, all human conventions and close-knit systems will at last wear down to the bone and then suddenly collapse.

Just now it is the usurious foodmongers I have in mind who sow the wind, and if not speedily checked will reap the sirocco. On August 4, when I wired you to be on the alert against any contemplated move on the part of the villains who might attempt to strangle the very existence of an already overburdened populace, I anticipated what has come to pass, since at that time they had not marshaled their forces. To be sincere, my telegram to you was to an extent inspired by Lincoln's warning issued in 1865:

"I see in the near future,' prophetically said Lincoln, "a crisis approaching that unnerves me and causes me to tremble for the safety of my country. As a result of war, corporations have been enthroned, and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people until all the wealth is aggregated in a few hands and the Republic is destroyed. I feel at this moment more anxiety for the safety of our country than ever before, even in the midst of war. God grant that my forebodings may be groundless. Monarchy itself is sometimes hinted at as a refuge from the power of the people. In my present position I could scarcely be justified were I to omit to raise a warning voice against the approach of a returning despotism."

We have gone down to Mexico in the interest, so claimed, of the peons of that country.

Are the common people of the United States, in their plight to-day, of as much consequence?

A gold ship has been sent to Europe to assist Americans on pleasure bent and stranded for the time being. No one would object to that, but if the Democratic principle, "Equal rights to all, special privileges to none," should prevail, will like relief measures be extended without a moment's loss of time to the stranded thousands and millions in our own country, whose lot is being made harder by reason of this war and the rapacity of speculative jackals in the necessities of life?

Will any protection be immediately afforded us against this army of (in)human vampires who are sweeping down upon the Nation's food supply and capturing it in order that they may later release it at still greater ransom than they now exact?

Mr. President, whilst at variance with you politically, I am on record as having a stanch belief in your honesty of purpose. That estimate remains unimpaired.

To appoint a commission to judge by past experience of doubtful performances, to report two years after the war is over, whether prices were raised unnecessarily and what remedy, if any, could be applied will not suffice nor satisfy the clamoring of an outraged citizenship.

I am ignorant of the ethics of Government and man-made laws, but the law of common sense, which I would invoke in the last analysis, establishes the axiom that when an emergency exists Government has power and is compelled to act, and it is incumbent upon those in authority to eschew subterfuge and useless palaver.

I trust that my communication will be accepted in the spirit in which it is sent.

Within the average man's heart abides a sense of justice. Confident that you approve of and acquiesce in the plea I submit, permit me to be, sir,

Your obedient servant,

OSCAR R. REDLICH,
Corresponding Secretary German-American League,
Tacoma, Wash.

To those who are thinking about this subject I present the following dispatch from New York, which I find in the Washington Star:

EXORBITANT PRICES LEGAL, SAYS COUNSEL—DEALERS MAY HOARD FOODSTUFFS OR RAISE QUOTATIONS LAWFULLY IN NEW YORK.

NEW YORK, *August 29, 1914.*

An opinion from the corporation counsel's office that individuals can not be interfered with in hoarding their property or offering it for sale at exorbitant prices practically put an end to-day to all hope of the mayor's committee and other organizations for obtaining some measure of relief from the high prices of food through criminal prosecutions.

Some members of the committee are in favor of retiring, so that some other organization may take up the leadership of a movement for a nation-wide campaign for Government control of prices or an embargo on exports of food.

A comprehensive plan for free public markets to be opened September 1 was announced to-day. Its novel part is an arrangement made for the bringing in of produce on old trolley cars specially run for the purpose at night.

The following editorial from the Washington Post is also of interest:

THE FOOD PROBLEM.

In a comprehensive report the citizens' committee on food supply appointed by Mayor Mitchel, of New York, has made various suggestions that might well be taken to heart by the consumers of other cities. From its observations and investigations the committee, composed of some of the ablest men in New York, has found that "there is not the slightest doubt that the increase in prices has been brought about almost wholly by four important factors." Summed up, the important factors appear to be as follows:

First. The present and anticipated foreign demand for our domestic foodstuffs for future shipment.

Second. The heavy buying of household supplies by housewives against future needs.

Third. The holding back by the producer.

Fourth. The stocking up by local storekeepers and village storekeepers—the latter class having made unusually heavy demands on the producers and wholesalers throughout the country.

The ordinary remedies which have been discussed since the high trend of prices began, remedies such as prosecution of alleged conspirators and an embargo on exports, are dealt with exhaustively by the committee, but its most interesting recommendation, and one that is practicable in every household without waiting for legislative or judicial action, is the conservation of food supplies.

It is a well-known fact that Americans are a long way behind other leading nations in the knowledge of how to buy and prepare food; that in many other countries people live and thrive on smaller quantities of food than in this country; and also that they are far less wasteful in their general housekeeping methods.

The United States has always been a prodigal nation. Producing so lavishly, the people have been careless of economy. The value of educational work in connection with the present situation is perhaps best illustrated by the general appeal that the New York committee made to the citizens that they eat less meat in these summer days and more fish and vegetables. The committee learned from a great many sources that the suggestion had been followed to such an extent that meat dropped in price and fish increased in price. It is a fair deduction, therefore, that the law of supply and demand is not being disregarded altogether in the present situation.

Mr. Speaker, while war in Europe may lead to excessive prices on foodstuffs and many other commodities in the United States, it will work havoc along other lines. Note the following telegram from Vancouver, British Columbia:

LIFTS EMBARGO ON LOGS—BRITISH COLUMBIA WILL MARKET ON PUGET SOUND.

VANCOUVER, B. C., *August 27.*

The British Columbia government has decided to lift its restriction which has for several years prohibited the export of logs from this Province to the United States.

There are now approximately 125,000,000 feet of logs in the water here in excess of local demands. All these will doubtless be shipped to Tacoma, Seattle, and Everett for sale in the open market.

Just at the present there is no market in British Columbia, and the government wishes to assist the lumbermen to realize on their product so as to keep workmen busy and get in cash when it is needed in war times.

Since the date of that dispatch I am informed that 250,000,000 feet of logs have been dumped into the waters of western Washington. British Columbia gives employment to its workmen and takes it from the workmen of the lumber counties of western

Washington, all because we have no antidumping clause in the Underwood tariff bill as regards timber and lumber.

This gives a plain object lesson in the workings of the tariff.

We need great additional revenue. The Government was falling behind in income under the Underwood tariff. Those British Columbia logs should have paid a tariff tax of $1 per thousand feet. That would have given the United States Treasury $250,000 in one week.

The war has still further reduced our revenues. We are about to pass a tax bill to provide necessary funds for the United States Treasury.

Why should not any more logs which British Columbia wants to dump on us pay $1 per thousand, particularly as the tax will not add 2 cents a thousand to the retail price of dressed lumber anywhere in the United States?

Editorials Written and Published by Senator R. M. La Follette on the Subjects "The Farmer and the Tariff Bill" and "Why I Voted for the Tariff Bill."

EXTENSION OF REMARKS

OF

HON. MICHAEL E. BURKE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

September 9, 1914.

Mr. BURKE of Wisconsin. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include two editorials, one entitled "Why I voted for the tariff bill," and the other "The farmer and the tariff bill," written and published by Senator R. M. LA FOLLETTE, of Wisconsin, in La Follette's Weekly Magazine, at Madison, Wis., in September, 1913.

[From La Follette's Weekly (Vol. V, No. 37), Madison, Wis., September 13, 1913.]

("*Ye shall know the truth and the truth shall make you free.*")

THE FARMER AND THE TARIFF BILL.

The farmer has derived on the great bulk of all that he produces but little direct benefit from the protective system. The duties on wool and beet sugar have been a material aid to the limited number of farmers growing wool and sugar beets. The duty on wheat, barley, flax, poultry, vegetables, has yielded some protection to the farmers in the States contiguous to the Canadian border. The same is true to a limited extent as to meats, and animals from which they are derived. But as to all these products, excepting wool and beet sugar, the advantage has been comparatively small and severely limited to the territory so located as to be brought into competition with imported products.

For the millions of farmers distributed throughout the country the only benefit of the protective system has been that which came to them through the upbuilding of diversified industries and the near-by market which the employees of those industries created to be supplied by products of the American farms. This home market has been the basis of effective appeal to the farmers to support high protective duties on manufactured products since the days of Horace Greeley.

As a member of the Ways and Means Committee that framed the McKinley bill, speaking of the advantage to the farmer which would flow from its enactment, I said:

> The bill seeks to give the farmers of this country a much larger body of consumers for their products right here at home by multiplying the factories and adding to the millions engaged in mining and manufacturing pursuits.

More than that, we encouraged the farmer to believe that this home market, with its millions of industrial workers employed at wages so high as to reach "the American standard," would afford him the best market in the world in which to sell his products. The farmer was encouraged to believe that this was his market. He felt an honest pride in building it up.

The theory was sound. The argument was logical. The belief in it was sincere. It was effective. For years and years the farmers of this country, particularly in the Northern States, have stood solidly for the protective principle. They have gone to the polls election after election and returned to power the party pledged to this doctrine. They have had small part in the writing of the tariff schedules. It was not directly for their advantage that the tariff wall was raised higher and higher. But in the belief that they were ultimately to come into their own through the upbuilding of this great home market, for many years they consented to the maintenance of these high duties. They were not unmindful of the fact that they were thereby compelled to pay more for the manufactured products they purchased than would otherwise be the case if these products came to them untaxed. But strong in the faith that they would be rewarded in the prices paid for their products in the American market, they were content to go on paying more to the manufacturers who made their clothing, their machinery, manufactured their lumber, furniture, and all supplies which they were required to purchase. They believed that by fostering our manufacturing industries the general prosperity of the Nation would be enhanced, that a great and well-paid manufacturing population was the best guaranty of a great and well-patronized farming population.

Thus the farmer was persuaded to support the protective system. With patience and good cheer he gave long years of toil to the hardship of opening up new lands and creating new agricultural empires to afford a wider and firmer foundation for the Nation's prosperity.

What was his reward?

The home market was created, but it was not just the home market which had been the farmer's dream and for which he had sacrificed so much. Behind the protective-tariff wall which he had helped to rear the industries of the country, sheltered from foreign competition, had grown rich and powerful. They had become allied with other great and powerful interests engaged in transportation, and those in turn had formed monster organizations for the control of stockyards, packing houses, and grain elevators. In short, these interests owned and controlled the home market. They fixed the farmer's prices arbitrarily. They took the profit of his toil. Added to this, the manufacturers, protected against foreign competition, suppressed home competitors and compelled the farmer and other consumers to pay higher and higher prices for manufactured products.

The result of these conditions may be said to be somewhat reflected in the recent census report, which shows a steady increase in the proportion of farms mortgaged over those which are free from encumbrance. In 1890 the number was 28.2 per cent, in 1900 it was 31.1 per cent, in 1910 the percentage of farms mortgaged had increased to 33.6.

With the market in which he must buy all his manufactured products controlled largely, if not wholly, by combination, which has steadily increased the price of everything he buys, and with the market in which he must sell everything he produces controlled by combinations, which arbitrarily fix the price that he receives, the farmer's support of the protective system will be a constantly diminishing factor as long as these conditions exist.

ROBERT M. LA FOLLETTE.

[From La Follette's Weekly (Vol. V, No. 38), Madison, Wis., September 20, 1913.]

("*Ye shall know the truth and the truth shall make you free.*")

WHY I VOTED FOR THE TARIFF BILL.

The Republican Party four years ago established a rule by which to fix the amount of duty in each case necessary to protect American industries. That rule provided that the duties should, in all cases where any protection is required, be established at a level which would measure the difference in the cost of production at home and abroad.

Upon this declaration the Republican Party carried the presidential election of 1908 by the largest majority ever given any party in the history of the country.

Following that election, the standpat Republican bosses of the Aldrich-Cannon type, then in control of the organization in both branches of Congress, proceeded to revise the tariff. In so doing they repudiated the rule established as the measure of protective duties and increased the excessive tariff burdens under which the people had long been suffering. The break between the Progressive Republicans and the standpat Republicans came on this issue, the Progressives taking the ground that the Payne-Aldrich tariff bill was a wanton betrayal of a public trust. It merited and received the severest condemnation. It divided and defeated the Republican Party.

As a sort of concession to Progressive Republicans, Aldrich added to his tariff bill a five-line provision authorizing the President to "employ such persons as may be required to secure information to assist the President in the discharge of the duties imposed upon him * * * and the officers of the Government in the administration of the customs laws."

President Taft made this provision much more effective than was anticipated by those who framed it, and under it built up the Tariff Board. This board conducted investigations on several schedules, and made valuable reports in 1912 on the pulp-wood and print-paper industry, on cottons, on wool and manufactures of wool, and partial investigation of the iron

and steel industry, earthenware, and glassware, and the manufactures of leather, of sugar, and the agricultural products, and had accumulated valuable material preparatory to an investigation of the production cost of silk, hemp, and flax.

Believing as I do in a scientific basis for tariff revision, I asked President Wilson for the privilege of using this material. It was given. With the assistance of Tariff Board experts, whose services I was so fortunate as to secure, I made it the basis for the amendments which I offered to the bill while pending in the Senate. Although throughout the debate the framers of the Democratic tariff bill insisted that they had "not been guided in their deliberations by the investigations of the Tariff Board," and that they had "not taken cost of production into account in framing the bill," nevertheless a careful analysis of the mass of material gathered by the Tariff Board disclosed that the Democratic bill was in many important schedules a moderately protective measure, conforming to the principle of difference of production cost urged by the progressive Republicans as the basis of the Payne-Aldrich bill.

But theory is one thing, and application of theory to practical tests is quite another thing.

The makers of this tariff bill found at the beginning that they could not safely reduce the tariff to a revenue basis. To do this might let in such a vast quantity of manufactures from abroad that domestic industries would be forced to close down, labor be thrown out of employment, business depression, failures, and panic follow—a responsibility and political risk which they could not afford to incur.

They were bound to reduce the tariff. They desired to cut it so low as to take away all of it that afforded protection, or, as some of them stated in debate, to "wipe out every vestige of protection." But this they dared not do at one stroke.

How much, then, of the protective element of the tariff could they safely remove at one time?

Regardless of the interests of the manufacturers and the labor employed by them, the business stability of the country and the political success of the administration required that the duties should not be reduced below the point which would enable the American mills to continue in business.

To determine this point they were forced to consider the cost of producing in an American factory as compared with the cost of producing in a competing foreign country.

But this brought them face to face with the necessity of being obliged to resort to the difference in the cost of production at home and abroad as a means of measuring the amount of tariff which would admit the importation of only so much foreign manufacture as would hold in check the American manufacturer from unduly raising prices to the consumer, and still exclude enough of the products of foreign manufacture to keep the American mills employed.

Driven, therefore, to adopt the principle of the difference in the cost of production, they gave it another name, and announced that their bill was framed upon the principle of establishing "competitive tariff rates"; that they "would not injure legitimate American industries" but would "lower the tariff sufficiently to insure enough foreign competition to protect the American consumer from extortionate prices."

But these tariff makers found it impossible to lay down the basis for a competitive tariff without comparing the cost of producing a given article in this country with the cost of producing a corresponding article in the competing foreign country. This appears from time to time throughout the debate, when members of the Committee on Finance disclosed the plan upon which they had determined upon what rates should be fixed. An example of this was the naive statement of Chairman SIMMONS regarding pig iron, billets, and the coarser products of the metal schedule. In opening the debate he said:

> We have put pig iron and certain allied products upon the free list. There is no reason for a duty upon these products. That pig iron can be produced as cheaply in this country as anywhere in the world is abundantly established by the testimony not only of disinterested witnesses, but by the admission and sworn testimony of the leading representatives of the iron and steel industry.

This is a distinct admission that in deciding whether domestic pig iron could compete with imported pig iron the committee first ascertained the cost of producing pig iron in this country and in competing countries as well. Otherwise it would not have been assured that "pig iron can be and is produced as cheaply in this country as anywhere in the world."

It is obvious, therefore, that this "competitive tariff bill" is constructed upon a plan that is not so widely at variance with the strict application of the principle contended for by Progressive Republicans; that is, "the difference in the cost of production at home and abroad."

That the bill squares itself with this principle in all particulars is not contended. A tariff bill deals with thousands of products. Reliable data for determining the cost of production have as yet been worked out, with scientific accuracy, upon only a portion of the articles covered by the bill. As to products, the cost of producing which is not known, any committee must make the best estimates possible with the material at hand. A Progressive Republican committee would be compelled to adopt estimates on production cost for a large number of products. But a close study of this bill will convince any unbiased mind that in the main—excepting upon food products—the general plan and purpose of those who framed the bill was to lower the high and often prohibitory tariff rates of the Payne-Aldrich law to such a level as to insure enough foreign competition to prevent the combinations, formed behind the tariff wall, from continuing to exact monopoly prices from the consumer. And, on the other hand, the conclusion will be reached that it was not their purpose to admit enough foreign competition to injure American manufacturers who are dealing fairly with the American people.

Upon the products of the farm suitable for human food, those who constructed this bill abandoned the principle upon which the balance of the bill was framed and placed those articles upon the free list. The purpose of this was manifestly to reduce the cost of living. And it is their contention that as to those products the farmer derives little or no direct benefit from the protective tariff.

In large measure this is true. Aside from the influence of the world price upon agricultural products, the Packers' Trust, the grain elevator, and other combinations control with iron hand the market in which the farmer sells his products and sets at naught the influence of the protective tariff and in large measure the natural law of supply and demand. Nevertheless, the local markets are, in some degree, free from these influences, and the farmer does secure some benefit from the tariff in those markets contiguous especially to the Canadian border. In view of this fact, the bill is unjust to farmers so located.

But in this respect it does not bear upon them with the same hardship as did the reciprocity pact with Canada. That bill took away all protection on farm products, as this does on all food products, and it gave them nothing of value in exchange. But this bill makes large reductions in the tariff on cottons, woolens, and all other supplies which they must buy and thus, I believe, more than compensates them for any loss sustained by a tariff on the food products which they produce.

I believe that the duty on sugar should have been reduced, but that the provision for the entire removal of the duty in three years should have been stricken from the bill. Not that this duty directly benefits the farmer. He is compelled to sell his sugar beets at such price as the one factory which is his sole purchaser chooses to pay him. But it is reasonably certain that the manufacture of beet sugar can not meet and withstand open competition with the foreign producer. Free trade in sugar will stimulate tropical production, and as it increases domestic production will decrease. Upon broad grounds, and as a matter of public policy, I believe it wise to maintain a measure of independence in domestic sugar production against the world.

While I have never been an advocate of free wool, I am bound to say that a study of this subject since the report of the Tariff Board on wool has compelled the belief that free wool will ultimately place the sheep industry on a sounder economic basis than that upon which it rests to-day.

If the farmer raises the crossbred mutton type of sheep, he can grow wool profitably as a by-product without any tariff. If he raises the pure-bred Merino type, a prohibitory tariff could scarcely make the business profitable. With free wool we shall import coarse grades, not grown here, which will take the place, not of American wool, but of shoddy and rags, in the manufacture of cheap, coarse, but clean all-wool cloth for people who are now forced to wear a mixture of cotton and shoddy.

However, of the 600,000 farmers who have more than two hundred and thirty-two millions of money invested in sheep, thousands upon thousands are growing a type of nonmutton sheep for wool alone. This bill, in fairness to them, should not have removed all the protection at one sweep. The duty should have been removed by stages, giving them three or four years, at least, in which to crossbreed their flocks to the mutton type. I think it but just to the Democrats of the House and Senate to say that this would doubtless have been done except for the insistence of President Wilson and Secretary Bryan, who forced free wool into the bill.

In each of the schedules of this bill a few of the rates, as I have worked them out, will on trial prove lower than the industries affected can sustain without loss. In the main, however, the bill as it passed the Senate will be found fairly protective.

Added to this, the bill provides for a direct tax upon incomes which will collect upwards of a hundred million dollars from the owners of great fortunes who have heretofore so largely

escaped the payment of a fair proportion of the taxes necessary to support the Federal Government.

No tariff measure, with its thousands of rates, can attain to perfection. The question presented at this time is a choice between this bill, with its general level of duties on manufactured products, reasonably just to home industries, excepting as I have indicated, and the iniquitous rates imposed upon the American people by the Payne-Aldrich law.

On this issue, which involves the general welfare of the millions in every walk of life, partisan politics should have no place. The contest is really between the people and intrenched privilege. It is an unequal struggle, and calls for the highest service which men now in public life can render to their country.

The trusts and combinations in their relentless oppression of the public have been materially aided by the monstrous tariff law enacted four years ago. Their power will not be broken when that law is supplanted by the present bill. But its passage is significant. It marks a change. It is the winning of the first battle in the long war which must be waged against industrial monopoly. This warfare is not against legitimate business. It is against the tyranny of unlawful combinations, overprotected, overestimulated, overcapitalized. Our industries will of necessity feel the strain of readjustment to a normal healthy basis—a basis of actual values. Through this period we must pass to secure industrial peace and real industrial prosperity.

ROBERT M. LA FOLLETTE.

Leasing of Coal Lands in Alaska.

SPEECH
OF
HON. H. ROBERT FOWLER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 5, 1914,

On the bill (H. R. 14233) to provide for the leasing of coal lands in the Territory of Alaska, and for other purposes.

Mr. FOWLER. Mr. Speaker, this bill is entitled:

A bill to provide for the leasing of coal lands in the Territory of Alaska, and for other purposes.

By the terms of the bill the Secretary of the Interior is authorized to survey the coal fields of Alaska and to lease the same. He is given the right to lease the lands before the survey is made. Somebody must be anxious to obtain a lease or this provision would not have found a place in the bill. The law now provides for a survey and before any lease is made the land should be surveyed.

The bill also provides for the payment of a royalty of 2 cents a ton to the United States for these rich coal fields. This is so small that it looks like giving it away. While this provision is the minimum rate, yet it has been generally considered as the fixed rate in the past wherever the law fixes a minimum limitation. I trust that the Secretary of the Interior will not so consider this provision, but that he will diligently inquire into the actual value of the coal and see that our rights are fully protected.

These coal deposits are among the few natural resources left, yet our country was rich in them in the beginning. The great majority of them have passed into the hands of corporations long ago and have been used as a means to exploit the people. Franchise and corporate rights have been used for the same purpose, until it is now claimed that 90 per cent of the wealth of America is owned by 2 per cent of our people. Just how this has been accomplished is a mystery to the people. A few extracts from an article written in 1907 by Charles Edward Russell entitled "Where did you get it, gentlemen?" will probably shed some light upon the methods employed by shrewd manipulators of wealth. The article referred to is as follows:

WHERE DID YOU GET IT, GENTLEMEN?

Philadelphia saw the beginning of the real traction industry of America, and the Centennial Exposition of 1876 disclosed the first sure glimpse of the golden treasure. Large numbers of people must be transported about the city; the horse-hauled street car was the only vehicle for these migratory millions. The cars were slow and scarce; the service was in its infancy. * * * Slowly the fact became apparent that the business was not really to be despised, for it contained two elements that made it worth while. First, it built up suburbs and had therefore within it the power greatly and rapidly to extend itself without effort, without care, without investment on the part of its owners; for the more suburbs, the more people were to be carried. Second, it was actually possible by debauching public servants, corrupting politics, buying elections, and forming alliancies with the bosses, to secure free and unrestricted possession of the public highways not for one year nor for two, but for a hundred years or a thousand. * * *

Into this fertile and lovely field came now the men who long reaped its golden harvest. * * * To the first of them, indeed, Charles T. Yerkes, belonged a certain combination of hardihood, audacity, dexterity, and persistence that was rather out of the common. But he had served some months as a convict in a Pennsylvania prison, and that experience had doubtless, and in more than one way, resulted to his advantage. It gave him time for reflection, taught him caution, and indicated how close with safety a man might steer to the reefs of the penal code. * * *

YERKES GOES TO JAIL.

Yerkes was a daring young broker, reputed to have means, and noted for a brilliant success in juggling State bonds with the old banking house of Drexel & Co. With his prestige and magnetism he induced Joseph F. Marcer, who was then city treasurer of Philadelphia, to invest money in Chicago. Some of the money, much of it in fact, was the city's. When the fire came it cleaned out Yerkes and Marcer, and in that crash the theft of the city funds was discovered. Yerkes was indicted as accessory to the embezzlement, convicted, and sentenced to two years and four months' imprisonment; Marcer received a sentence about twice as long. * * *

You will find now in the best residence region of Philadelphia a magnificent marble palace, as grand, as imposing, as costly as any in New York or elsewhere, and surely one of the most beautiful of private residences. It contains a really wonderful art gallery and many rare books and tapestries; it is one of the show places of the city; the natives point it out with pride and strangers regard it with just admiration.

WIDENER ONCE A BUTCHER.

That house was born of the defalcation of Marcer and the plight of Charles T. Yerkes. It belongs to P. A. B. Widener. About 40 years ago he was a young butcher in Spring Garden Market, in no way distinguished from 200 other butchers there, except that he took an interest in partisan politics, belonged to the political organization of his ward, and worked at the polls on election day. As a reward for these services his party found use for him as a lieutenant and lobbyist at Harrisburg, and when Marcer was removed from the city treasury the young butcher got the vacant post. In those days the city treasurer of Philadelphia was allowed certain fat perquisites. Hence, it was a good thing, and when young Widener relinquished the office, he was legitimately the richer.

The butcher was a friend of Yerkes, who had also mixed much in the odorous pool of Philadelphia politics. Yerkes, being released from the penitentiary, looked about for something to do and stumbled upon the street railroad business. A piece of scrap iron known as the Seventeenth and Nineteenth Street line was offered to him on credit at 4 cents on the dollar. He took it. The exposition came on and traffic greatly increased. Mr. Yerkes needed money. It may be supposed that he badly needed money. Money was hard to come by. Mr. Yerkes tried a very doubtful experiment. On the rattle-track contrivance he had bought he issued a small amount of bonds—about $200,000 worth, it is said. Very likely, to his great amazement, he found that these bonds could be floated. With the proceeds he secured another link of railroad and issued more bonds on that, and thus the whole system was started on its truly wonderful career through the choicest realms of finance. Mr. Yerkes had hit upon the great truths that in normal times somebody can be found to buy a bond on anything, and that with the power to issue bonds the gathering of great fortunes is simpler than the gathering of ripe apples, for they fall from the tree into your very hand and while you sleep.

* * * Jay Gould had shown the precious potency of the agreeable formula when he watered the stock of Erie from $17,000,000 to $78,000,000 and made himself rich. Since his achievement practically every great railroad corporation had followed in his august footsteps until to overcapitalize an average railroad had become a far more important source of wealth than to operate it. Mr. Yerkes and his friends imitated Mr. Gould and then bettered their instruction. Gould loaded two or three railroads with water and then departed with the bagged proceeds. They made the loading of one railroad the means to secure a second and the loading of the second a means to secure a third, and so on until everything in sight was loaded—and theirs.

QUAY SCENTS LOOT.

How easily this good thing could be worked was demonstrated by Yerkes's Seventeenth and Nineteenth Street lines. That grimy genius, Matthew Stanley Quay, who had infallible scent for graft, succeeded Mr. Yerkes in the Seventeenth and Nineteenth Street lines, which he helped to "reorganize" into the Continental Street Railway Co. The Kemble-Widener-Elkins people "reorganized" their Seventh and Ninth Street lines into the Union Passenger Railway Co., with which, by the handy processes already referred to, they amalgamated one small line after another until their system had swollen to a portly size. In 1880 they had accumulated enough watered stock to lease Mr. Quay's company. In 1883 they took in the Tenth, and Eleventh, and Twelfth, and Sixteenth Street lines. Then they leased the Chestnut Street and Market Street roads, among the most important in the city. The next year they reorganized again, this time into the Philadelphia Traction Co.; capital, $30,000,000; nominal and ostensible cash investment, $7,000,000; actual cash investment, next to nothing.

PHILADELPHIA'S GRISLY GRAFT.

It has meant much more to Philadelphia than a mere enterprise to transport passengers or a mere enterprise to manipulate stocks and bonds. Gradually the public-utility corporations had come to own the city government of Philadelphia just as absolutely as they ever owned any acres of land or team of mules. They elected city officers and determined city policies. They maintained the most perfect system for political corruption that has ever been known among our cities. The rest of the country has heard much about the "Philadelphia ring." The very life and substance of the ring were the public-utility interests, and the foremost of these interests was the traction corporation.

Under the system the ring established there were cast every year in Philadelphia from 60,000 to 80,000 fraudulent votes, and it was by means of these votes that the public-utility interests retained their grasp upon the city government and upon the privileges that made them rich. Every criminal enterprise in the community had share in this colossal structure of fraud; the respectable stock company went into partnership with the brothel for the maintenance of existing conditions. The money that stole elections and stuffed ballot boxes and hired criminals to beat citizens, all to keep this gang in power, was supplied by the public-utility corporations. For years they systematically made of the city government in Philadelphia something before which all patriotic Americans bowed themselves in humiliation and unutterable shame; they did it, these corporations with special privileges.

WELDING THE SHACKLES.

For years dishonest aldermen, crooked public officers, election thieves, repeaters, floaters, thugs, keepers of criminal resorts, the men that falsified returns, were actively leagued with them. Every protected dive in Philadelphia, every illegal drinking place, every house of ill fame, paid a regular tribute to the ring—not in money, but in the votes that kept the grip of the ring upon the city. Each of these lawless resorts was recorded in a list, with figures representing the number of illegal votes it must furnish. So long as it furnished these votes it could continue to break the law; if it failed to furnish these votes, it must cease to do business. From these illegal votes and others was developed an autocracy practically as perfect as a satrap's. No man could ordinarily be elected to anything except by the will of the men that wielded this power. * * *

GRAFT BY SPECIAL TRAIN.

The public-utilities combination had now far progressed in its arts of municipal corruption; it could, in fact, do as it pleased with the city government. It had elected the mayor and most of the aldermen; had chosen them for reasons of its own, and knew upon whom it could depend. A dummy company was formed. It applied for a franchise covering all the remaining streets, avenues, and alleys in the city. Mr. John Wanamaker made an offer to operate the public's traction utility for the public good. The combination's mayor, with ostentatious contempt, flung the offer upon the floor. The legislature at Harrisburg met one night in extra session. The enabling act necessary to the granting of the franchise was rushed through both houses, which sat up until 3 o'clock in the morning to pass it. A special train carried it to Philadelphia. There the city council was convened in a special meeting. As soon as the enabling act was received, the necessary ordinance was introduced and passed, making to the dummy company a free gift in perpetuity of the public highways of Philadelphia. This done, the aldermen lolled back in their chairs and sang ribald songs. One of them long lingered in the memory of Philadelphia because of its chorus, which contained these significant lines:

Hail! hail! the gang's all here!
What the hell do we care! What the hell do we care!

Later, as might be expected, the dummy company sold to the Union Traction Co. the amazing franchise thus secured, and the anxiety of the company was relieved; there was no longer any question about possessing the streets; it could go on to reap forever the golden harvest; it had won a great victory.

* * * About 10 years ago, under pretense of supplying a new and better kind of gas, the United Gas Improvement Co. secured a lease for 10 years of the city gas works. Instead of furnishing better gas or cheaper, the company furnished poorer gas and dearer. By the terms of the lease a renewal for another period was possible after the expiration of eight years. The question of renewal came up in 1905, and the allied interests planned in their usual way to add to their fortunes by securing a lease monstrously to their benefit.

THE VALUE OF A HANGMAN'S NOOSE.

But the public discontent for once broke over the barriers of custom and fraudulent elections, and for once the allied interests were defeated; the force of public indignation was plainly too great to be withstood. When mobs gathered in the placid Philadelphia streets and with ropes in hand promised to hang the aldermen, there was evidently no time for gangsters considerate of their own welfare to be making further raids on the people's purses. So the precious scheme lapsed. In the height of the trouble the residences of prominent men that supported the gang were surrounded by threatening mobs, and for several days the inmates deemed it advisable not to appear on the streets, a fact that indicates the extent to which people were aroused.

This is the way the thing has gone in Philadelphia; it is the way it has gone elsewhere. Rotten business and rotten politics—the two are invariably mingled in these triumphs. Without the corrupting of politics the sudden fortune builders could never have obtained their huge privileges; without their huge privileges they could never have possessed their gleaming palaces. So, flat dweller, with $1,639 of total possessions, here is one way in which the difference in brain cells manifests itself. Rather poor, it seems, does it not, and cheap and stained and tawdry look the gleaming palaces so gained, when you think of stuffed ballot boxes, debauched public officers, and that soiled and wretched alliance with the dive keeper and the brothel. At least a man can live in a flat amid his $1,639 of possessions and die struggling hard with rent bills and butchers' bills and yet know that he has done nothing to debase public virtue nor to lower his country in the eyes of the world. * * *

THE FORMULA FOR WEALTH AS IT WAS WORKED IN CHICAGO AND NEW YORK.

Mr. Yerkes * * * came to Chicago with $20,000, said to have been borrowed money, and asked for an option on some scrap-iron street railroad on the north side. He found that some one else had an option that would expire on a certain day.

"At what time on that day?" asked Mr. Yerkes.

"At noon," said the cashier of the bank that was financing the deal.

Mr. Yerkes went away, and on the specified morning returned with his $20,000 certified check in his hand. He sat facing the clock, which he watched patiently. The instant the hands reached 12 o'clock he leaped at the cashier with his check. The option gave him the required wedge into the concern. In a short time he had hypothecated the stock, borrowed money on it, got more stock, secured control, started the printing presses on a bright new line of stocks and bonds, and possessed himself of the whole institution, gaining moreover a surplus, from which he repaid the $20,000 he had borrowed for the option.

He now proceeded to apply his Philadelphia experience, issued more securities, bought more roads, milked them with construction company and other devices, and eventually, piling one corporation upon another and one "reorganization" upon another, emerged, with the Union Traction Co. of Chicago, embracing all the lines of the city except those upon the south side. As a concrete illustration of his methods and their results I may say that the Union Traction Co. was capitalized at $120,000,000, and in the height of its prosperity it was estimated by an expert examiner to be worth as a going concern $16,000,000.

Except for legislation, aldermen, and newspapers, it cost Mr. Yerkes nothing. As a system of transportation it was the most picturesque lot of junk ever seen in this world, and furnished undoubtedly the worst service. Junk is the right word for it; Mr. Yerkes said so himself. "The secret of success in my business," he once observed, "is to buy old junk, fix it up a little, and unload it upon other fellows." I may remark in passing

that there was very little fixing up in the case of the Union Traction, of Chicago. Why there should have been any more, indeed, is not apparent, since the good people of Chicago not only endured Mr. Yerkes and his methods, but in 15 years supplied him with $40,000,000 of net profits on an investment of nothing, with the which comfortable assets he presently left them and secured control of the underground system of London.

But he had stayed long enough to make an enduring place for himself in Chicago's history. Only one cloud there obscured his success. The junk that he manipulated was operated under franchise. That is to say, that when the people of Chicago presented their streets to the street railroad companies a date was set at which the right of possession should expire. For most of the roads the date was July 1, 1903, and its approach worried Mr. Yerkes. To his ability, energy, and foresight the expiration of the franchises seemed of very great importance. * * *

The law of the State forbade the granting of any franchise for a longer term than 20 years. Mr. Yerkes went to the legislature, which he well knew how to manipulate, and secured the introduction of a bill repealing the 20-year limit and granting him a franchise for 50 years. This was the celebrated Humphrey bill. A tremendous outburst of public indignation followed its appearance and its sponsors in the legislature lost heart. The bill was quietly allowed to die in committee. Mr. Yerkes waited a little and presently the equally notorious Allen bill made its appearance, authorizing the City Council of Chicago to grant Yerkes a 50-year franchise if it should see fit to do so. This bill was passed—in haste. As there was in the State of Illinois not one human being except Mr. Yerkes that desired to have it enacted and as probably there were very few that did not fully understand the nature of the reasons for its passing, the extent of the resulting scandal is easily understood.

The battle was now transferred to the city council. Mr. Yerkes had been long and skillfully at work and had secured a clear majority of the aldermen. He looked, therefore, toward an easy victory. But the popular wrath was aroused. The thing was too palpable, the corruption was too gross. Indignation meetings began to be held. The newspapers were flooded with protests. Spontaneously men gathered and declared that so monstrous a bribery was not to be endured. The atmosphere seemed stormy. On the night the vote was to be taken an immense crowd gathered about the city hall. It was observed that many men were armed and some bore ropes and clubs. The constituents of one alderman marched down town with a band at their head, sent into the chamber, dragged out their representative, and told him in the plainest of words what would happen to him. There were cries of "Lynch them!" and "Shoot them!" Even sober-minded men advocated violence if the ordinance should go through.

The gallery of the council chamber was packed to its limits with an angry and threatening crowd. The evening newspapers issued hourly extras; the entire city was aroused. The aldermen looked at the sinister faces about them and heard the shouts of the crowd in the street, and their courage failed them. Men that had doubtless bargained away their votes refused to stay bought, and the ordinance was defeated.

It had cost Mr. Yerkes, at Springfield and in Chicago, close upon $1,000,000, and for his expenditure he had nothing to show except some indisputable evidences of public hatred. The lesson must have sunk deep. He never repeated the attempt to have his franchises extended, and when he left Chicago the question of their future was still unsolved. Those that care to consider how surely we progress in such matters may be interested to know that the thing Mr. Yerkes desired and failed to get has now, in the main, been secured by Mr. Morgan and Mr. Ryan, and without any riots, disturbances, or indications of public wrath. All of which shows that there is more than one way to pull off a rotten franchise.

With Mr. Yerkes, in the fatness of the goodly Chicago harvest, were associated his old Philadelphia friends, P. A. B. Widener and W. L. Elkins. The only thing better than to own the traction system of one city is to own the traction systems of many cities. So when Mr. Yerkes let the others into the good thing of Chicago, all fared together exceedingly well. Mr. Yerkes was faithful to his friends and, in certain ways, generous with the vast sums of money that rolled in upon him. He had a picturesque way of dealing with aldermen, and then another picturesque way of talking about his deals that rather endeared him to those that fancy cynic humor. One of his compressed comments on a certain Chicago editor has passed into local history. So have other remarks of his. He can not be said to have originated the plan of running too few cars and overcrowding these, but he certainly gave that plan most extensive usage. Under this system, the cars in Chicago customarily carried three times their normal capacity, and the suffering inflicted as a result was great and general. The people complained at last of this method of fortune building, and occasionally some one would arise to remark that, as the streets Mr. Yerkes was using for the purposes of his aggrandizement were really the people's, and as Mr. Yerkes was there by sufferance, it would be decent for him to provide tolerable accommodations to a public from which he was drawing so many millions. Some one actually suggested that Mr. Yerkes should run more cars.

"Tush," said Mr. Yerkes when these matters were called to his attention, "it is the strap hangers that pay the dividends."

Dividends, however, were a small part of his profits, the most of which were made in issuing and selling vast masses of fictitious securities and from construction companies that were supposed to do work for the traction company and really served as covers for the issue of more water. Two of these construction enterprises organized by Mr. Yerkes paid something like 500 per cent, which was cheerfully added to the load of obligations on the traction company. As Mr. Yerkes presently withdrew himself from the traction company, the extent of these obligations was a matter of no concern to him. I may add that the people of Chicago have found them of much more serious import.

Mr. Yerkes was undeniably a huge element for evil in the city, but some men liked him.

Remarks Made by the President at the White House, October 3, 1913, After Signing the Tariff Bill.

EXTENSION OF REMARKS

OF

HON. B. P. HARRISON,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 4, 1914.

Mr. HARRISON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the remarks made by the President at the White House October 3, 1913, after signing the tariff bill.

The President, at the White House, October 3, 1913, after signing the tariff bill, said:

"Gentlemen, I feel a very peculiar pleasure in what I have just done by way of taking part in the completion of a great piece of business. It is a pleasure which is very hard to express in words which are adequate to express the feeling, because the feeling that I have is that we have done the rank and file of the people of this country a great service. It is hard to speak of these things without seeming to go off into campaign eloquence, but that is not my feeling. It is one very profound, a feeling of profound gratitude that, working with the splendid men who have carried this thing through with studious attention and doing justice all 'round, I should have had part in serving the people of this country as we have been striving to serve them ever since I can remember.

"I have had the accomplishment of something like this at heart ever since I was a boy, and I know men standing around me who can say the same thing, who have been waiting to see the things done which it was necessary to do in order that there might be justice in the United States. And so it is a solemn moment that brings such a business to a conclusion, and I hope I will not be thought to be demanding too much of myself or of my colleagues when I say that this, great as it is, is the accomplishment of only half the journey. We have set the business of this country free from those conditions which have made monopoly not only possible, but in a sense easy and natural. But there is no use taking away the conditions of monopoly if we do not take away also the power to create monopoly; and that is a financial rather than a merely circumstantial and economic power. The power to control and guide and direct the credits of the country is the power to say who shall and who shall not build up the industries of the country, in which direction they shall be built, and in which direction they shall not be built. We are now about to take the second step, which will be the final step in setting the business of this country free. That is what we shall do in the currency bill, which the House has already passed and which I have the utmost confidence the Senate will pass much sooner than some pessimistic individuals believe. Because the question, now that this piece of work is done, will arise all over the country, 'For what do we wait? Why should we wait to crown ourselves with consummate honor? Are we so self-denying that we do

not wish to complete our success?' I was quoting the other day to some of my colleagues in the Senate those lines from Shakespeare's Henry V, which have always appealed to me, 'If it be a sin to covet honor, then am I the most offending soul alive,' and I am happy to say that I do not covet it for myself alone. I covet it with equal ardor for the men who are associated with me, and the honor is going to come from them. I am their associate. I can only complete the work which they do. I can only counsel when they ask for my counsel. I can come in only when the last stages of the business are reached. And I covet this honor for them quite as much as I covet it for myself; and I covet it for the great party of which I am a member, because that party is not honorable unless it redeem its name and serve the people of the United States.

"So I feel to-night like a man who is lodging happily in the inn which lies halfway along the journey, and that in the morning with a fresh impulse we shall go the rest of the journey and sleep at the journey's end like men with a quiet conscience, knowing that we have served our fellow men and have thereby tried to serve God."

Article from the Wilkes-Barre Record on Plan of Miss Genevieve Clark to Encourage the Buying of Cotton Goods.

EXTENSION OF REMARKS

OF

HON. JOHN J. CASEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 24, 1914.

Mr. CASEY. Mr. Speaker, I request unanimous consent to extend my remarks in the CONGRESSIONAL RECORD by inserting an article from the Wilkes-Barre Record on the plan started by Miss Genevieve Clark, the distinguished daughter of the Speaker of the House of Representatives, to encourage the buying of cotton goods by the people of the country, said plan having for its purpose the relief of southern cotton growers from the unfortunate conditions forced upon them by the terrible war now raging in Europe.

The article is as follows:

WOMEN TO HELP—LUZERNE COUNTY SUFFRAGE PARTY WILL HELP SELL COTTON—LOCAL LEADERS ANNOUNCE INTENTION OF SUPPORTING MOVEMENT STARTED BY CHAMP CLARK'S DAUGHTER—PLAN INSURES SALE OF COTTON AND WORK FOR TEXTILE OPERATIVES.

The Luzerne County Woman Suffrage Party has announced, through one of its leaders, that it will support the movement which has as its motive the distribution of the excess of the cotton crop created by the war in Europe. The plan is to have shoppers throughout the country purchase their cotton goods immediately instead of waiting until spring as is usual. This will insure not only a sale for the cotton growers, but work for the textile operatives also. The movement was started by Miss Genevieve Clark, daughter of CHAMP CLARK. Commenting upon it the chairman of the Luzerne County Suffrage Party said:

"A project for a nation-wide movement to buy American-made cotton goods this fall instead of in January next is so sensible, so feasible, as to deserve instant organized backing. Custom has taught housekeepers and mothers to buy cotton goods between January and July; the dressmakers have reenforced custom with fashion. But a year of world war may easily see both custom and fashion execute a right-about face when a patriotic motive demands the change.

"The Luzerne County Suffrage Party and the Wilkes-Barre League for Suffrage will give every aid in their power to the movement launched by Miss Clark for the relief of American farmers with too big a crop of cotton, and for the support of more than a million textile workers who are facing a winter of starvation. An enormous percentage of the workers in cotton manufactures are girls and women. To help women workers into a better economic position is one of the great principles of equal suffragists the world over. When a definite, practical plan for tiding these cotton workers through a bad five months is laid before the suffrage organization, it becomes their plain duty to take a hand.

"That the solid South has opposed the woman suffrage movement in the past and that the southern cotton grower is the first man to profit by the stimulation of the cotton market should not be remembered now against the project undertaken by CHAMP CLARK'S daughter. Nor is the organized help to the cotton trade to be permanent or very long sustained, for, given some time and some free money, the cotton mills of the United States will get and keep much of the South American trade which has been Germany's and will sell the last of the 1914 crop beyond Panama. But for the critical few months factories must be kept running and pay envelopes of the women workers must be filled as in a normal year."

In an effort to stimulate the cotton industry, Miss Genevieve Clark, daughter of CHAMP CLARK, proposed to-day that a national bargain day in cotton goods be held in every city and town in the country. The idea which Miss Clark will seek to carry into effect is based on suggestions of business men who believe that if the cotton trade is revived, business generally will be benefited. It is contended that if a demand for cotton goods is created, factories now without orders will be able to resume work.

The idea originated with Miss Clark, and in order to popularize cotton goods she intends to organize a big bazaar in Washington, to which no woman who does not wear a cotton gown will be admitted. She wants a week set apart in October on any one day of which each city and town will have a general bargain sale of cotton goods. All the dry-goods stores of a city are to be asked to cut prices in cottons on the day selected for the sale in that city.

Miss Callie Hoke Smith, the daughter of the senior Senator from Georgia, and Miss Lucy Burleson, the daughter of the Postmaster General, have joined with Speaker CLARK'S daughter in the movement and will be her chief lieutenants.

This nation-wide bargain sale of cotton goods is really a part of the "buy-a-bale cotton" movement that is approved by President Wilson, members of his Cabinet, and business men. In spite of the abnormally low price of raw cotton, the mills are working on part time only. They can not sell cotton goods, because the retail stores are loaded up, the war having curtailed consumption.

"In this European crisis," said Miss Clark, "women of all nationalities have given up, at a great cost to themselves, whatever they were doing and have gone into the Red Cross hospital and charitable movements of their various countries, to say nothing of carrying on whatever is done commercially in these warring countries while their husbands and the other masculine members of their households are at war.

"It seems to me that if Pavlowa, the great Russian dancer; Adelina Patti, the great singer; and various other women of international repute can return to their homes and take up these dangerous and arduous tasks in the cause of their country, it is as little as American women can do to wear for one season cotton clothes made in America in order to avert a great financial deadlock on which depends mainly the prosperity of our great South.

"It has been said that no person can live so that his life only affects himself, and so while this problem is essentially the problem of the South, it affects the northern section of our country by eliminating $400,000,000 spent annually by southern cotton growers in the North.

"It has been said by the business men of the country, who understand the financial situation, that there is no real lack of money in this country, that the trouble lies in the fact that people, anticipating a stringency, are holding on to what they have. Thus, should this idea of a great nation-wide bargain sale in cotton appeal to 10,000,000 women, each buying $1 worth of cotton materials on a certain day, it would put in circulation $10,000,000 of the hoarded gold, as most hoarded money is in gold, and to that extent alleviate the stringency.

"The cotton factories of the country are at this time putting out only about one-half of the materials that they are equipped to turn out. The reason for this is that the merchants will not buy any more cotton materials until they have sold what they have on hand.

"All the women of Europe, to meet the crisis which they have had to face, have gone in training for hospital and commercial service. If the women of America by using more cotton can avert this crisis it is certainly their patriotic duty to do so."

"I think every patriotic American woman should heartily indorse the proposal to make cotton dresses fashionable and aid the national bargain-sale idea, which will be a long step toward bringing cotton into popular use," said Miss Lucy Burleson. "American women can make any movement successful and prosperous, and surely in this unequaled opportunity for industrial expansion for our Nation we should take pride in 'made in America' goods and 'made in America' fashions. American fashions for Americans is a new idea for American women, but it is a patriotic and inspiring one, and I shall do all in my power to promote it."

It is claimed for this national bargain sale of cotton goods that it is expected to have a very material influence on the banking situation. Paul M. Warburg told the House Committee on Banking and Currency this week that the people were hoarding many millions of cash and thereby embarrassing business.

Emergency Revenue Legislation.

EXTENSION OF REMARKS
OF
HON. DENVER S. CHURCH,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. CHURCH. Mr. Speaker, there are some things that the Creator of the heavens and the earth can not do, for the Scriptures teach us that God can not lie. There are some things that the President of the United States and the Congress of the United States can not do. Congress can not pass a law which is fundamentally wrong and by so doing cause it to become fundamentally right.

In my district is manufactured one-fourth of all the sweet and dry wine that is produced in the United States. The actual cost of producing dry wine is 12 cents per gallon. The actual cost of sweet wine is 20 cents per gallon. It is proposed in our war measure to place a tax of 12 cents per gallon on dry wine and 20 cents per gallon on sweet wine. In other words, we propose to levy a tax of 100 per cent on sweet and dry wines. Such a tax is fundamentally wrong, and a thousand years of time can not make it right. It is ruinous and confiscatory. How would you like to pay a tax each year equal to the full value of your land? Suppose you had a cow worth $40 and the tax collector would collect a tax of $40 a year on her; how long would you keep your cow? You would sell her at once, would you not? No; you would not; you could not even give her away.

This war tax is supposed to be general. It is claimed that it will fall equally upon all. Such is not the case. In my district was manufactured last year 10,000,000 gallons of sweet wine, more than a third of all that is produced in this country. Based upon last year's amount of the product, this year my constituency will have to bear a $2,000,000 tax on sweet wine alone, one-third of the entire amount proposed to be raised by the tax on wine. If each of the other congressional districts of this country had to bear in this crisis a proportionate amount of revenue $868,000,000 would be raised.

A very wise man once said, "There is a time for everything." If such is the case, certainly this is not the time to place 100 per cent tax on dry and sweet wine. September 10 is when the farmer gathers his grapes. At this very hour there are hundreds of thousands of acres of grapevines in California purple with the ripened, unpicked crop. The wine makers refuse to buy the grapes. They say it is too great a risk, because this year it will cost twice as much as heretofore to manufacture wine, and they prefer to sell the old wine they have on hand rather than to take a chance. Thus the farmers' crop, if you pass the proposed bill, will rot upon the vine. If wine is to be taxed as demanded, do it after the crops are gathered, so the farmer will have time to adjust and prepare for the shock. It is no time to demand and take your neighbor's house when the winter is on. Wait until spring.

You say I do not want my constituents to bear their equal proportion of this war tax. You are mistaken. My district produces between a fourth and a fifth of the oil output of the world and many oil refineries are located there, but you have not heard me or any other man from California raise his voice against the proposed 2 cents per gallon tax on gasoline. Two cents a gallon is a reasonable tax, but if you proposed to tax gasoline 12 or 13 cents, the full cost of manufacturing it, as you propose to tax wines, you would hear a strong protest. I will say, however, it would be far more just and equitable to place a small tax per horsepower on automobiles than it would to tax gasoline. Automobiles are used in every section of the United States, while gasoline is a local production. The owner of an automobile can well afford to pay a tax, for an automobile is in the nature of a luxury, while gasoline is used for pumping, propelling machinery, and in a thousand different ways as a necessity. A flat-rate tax per horsepower on automobiles would bring immediate funds, which it is claimed are needed, while a gasoline tax will come in from day to day during the entire year.

Mr. Speaker, I notice a strong disposition on the part of some here to discriminate against California. Well, I have traveled over this country to a greater or less extent, and I have made up my mind that outside of a few garden spots in the South and a couple of hundred acres in the Mississippi Valley there is not enough of the United States east of the Sierra Nevada Mountains worth talking about.

Importations of Farm Products.

SPEECH
OF
HON. CHARLES H. SLOAN,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 11, 1914.

Mr. SLOAN. Mr. Speaker, in a speech made on the floor of the House on March 3, 1914, I submitted tables showing importations of a number of leading farm products for the first four months under the Underwood tariff law.

On the 23d of July, 1914, I submitted to the House figures showing the importations of leading farm products for an additional period of four months, running up to June 1.

At that date statistics for importations for June were not available; but I herewith submit them, together with totals, for a period of nine months ending July 1, 1914.

Imports into the United States of certain farm products for June, 1914, under the tariff law of 1913, together with the imports of the same articles for June, 1913, under the tariff law of 1909.

Articles.	June, 1914.		June, 1913.

[1] Free on and after Oct. 3, 1913.
[2] Duty reduced from $30 per head where value not over $150, 25 per cent ad valorem where value over $150 per head, to 10 per cent ad valorem on all.
[3] Live poultry reduced from 3 cents per pound to 1 cent per pound, dead from 5 cents per pound to 2 cents per pound.
[4] Either placed on the free list or duty reduced about one-half.
[5] Free on and after Oct. 3, 1913. Duty was 15 cents per bushel.
[6] Duty reduced from 15 cents per bushel to 6 cents per bushel.
[7] Free if imported from countries which impose no duties on like imports from United States, otherwise 10 cents per bushel. Duty was 25 cents per bushel.
[8] Duty reduced from $4 per ton to $2 per ton.
[9] Free on and after Oct. 3, 1913. Duty was 25 per cent ad valorem.
[10] Included in all other meat products prior to July 1, 1913.
[11] Free on and after Oct. 3, 1913. Duty was 4 cents per pound.
[12] Free under both laws.
[13] Duty reduced from 6 cents per pound to 2½ cents per pound.
[14] Duty reduced from 6 cents per pound to ad valorem duty equivalent to about 4 cents per pound.
[15] Included in all other articles prior to Oct. 3, 1913.
[16] Duty reduced from 45 cents per bushel to 25 cents per bushel.
[17] Duty decreased from 40 cents per bushel to 20 cents per bushel.
[18] Free if imported from countries which impose no duties on like imports from United States, otherwise 10 per cent ad valorem. Duty was 25 cents per bushel.
[19] Duty reduced from 25 per cent ad valorem to 15 per cent ad valorem.
[20] Practically all free of duty since Dec. 1, 1913.
[21] Total value of all meat products, except sausage, bologna, and bologna casings, for 9 months, $19,672,625; for June, 1914, $3,696,004, compared with $125,498 for June, 1913.

The increase in value of importations for the first four-month period was 140 per cent over the importations of the same articles for a similar period one year before. The tables submitted for the RECORD on March 3 did not include all of the articles submitted at the two later periods, but in arriving at the percentage just stated I have included all the articles named in the subsequent tables.

The increase for the eight-month period ending June 1 showed an increase of 149 per cent in value over the corresponding period of one year before.

The period of nine months ending with July 1 showed an increase over the corresponding nine-month period under the old law of 159 per cent. This period is significant in this, that it covers three-fourths of the fiscal year of 1914 and does not include any part of the period influenced by anticipation or actual occurrence of the European war. These figures show not only an enormous increase of farm products, but a progressive one.

Imports into the United States of certain farm products for 9 months ending June 30, 1914, under the tariff law of 1913, together with the imports of the same articles for 9 months ending June 30, 1913, under the tariff law of 1909 and the per cent of increase. Also the imports of the articles for the 9 months under the present tariff law compared with the imports of the same articles under the 1909 tariff law for the full year ending June 30, 1913.

Article.	Total imports for 9 months, October, 1913, to June, 1914, inclusive, under tariff law of 1913.		Total imports for 9 months, October, 1912, to June, 1913, inclusive, under tariff law of 1909.		Per cent of increase or decrease, 9 months under 1913 law, compared with 9 months under 1909 law.[22]	Total imports, year ending June 30, 1913, under tariff law of 1909.		Amount of increase in value for 9 months under new law over full year under old law.	Per cent of increase, 9 months over full year.[23]

[19] Duty reduced from 25 per cent ad valorem to 15 per cent ad valorem.
[20] Practically all free of duty since Dec. 1, 1913.
[21] Per cent of increase of wool for 7 months under new law over same period of last year under old law, 96 per cent.
[22] Per cent of increase figured on quantities, where quantities are given, otherwise on values.
[23] Per cents of increase figured on values.
[24] Total value of all meat products, except sausage, bologna, and bologna casings, for 9 months, $10,072,625.
[25] No figures for months under old law. Quantity and value figured as two-thirds of year.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. ARTHUR R. RUPLEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 11, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. RUPLEY. Mr. Speaker, I have been in and out of Congress a true friend of the rural free delivery carriers of my own section. I have had the pleasure during my congressional life of more than 17 months of casting my vote for every measure presented and every amendment presented and for every clause amending an amendment in the interests of the Rural Delivery Service of the United States.

I am proud of this great system which has nationalized the means of communication and which has placed that service at the front door of everyone between the Atlantic and the Pacific and between Canada and the Gulf.

I know of no words in the English language at the present time more prominent and which express and mean more to that great life of this magnificent country of ours, urban, interurban, and rural, than those grand old words "Rural Free Delivery," and those of to-day, "Rural Delivery."

I have a keen recollection of a number of carriers with their uniform and other insignia of their position in the great Government service meeting in my office in my home town and there organizing themselves in the county organization for the purpose of securing better equipment and increased salaries. I recall the gentlemen who met there taking up their many other needs and discussing them, to wit, the improvement of the public roads, securing the placing of boxes at convenient places by the patrons of the route, and in fact at this early meeting they were more concerned about public roads and the means of securing improved public highways than they were about their salaries, although at that time these salaries were much smaller than at this time.

A gentleman of my home town, Mr. George R. Traxler, of Carlisle, Pa., became sufficiently prominent by reason of these meetings held in my office and the active interest of himself and his associates that he was elected the first president of the Rural Carriers' Association of Pennsylvania.

I had the pleasure a few days ago of introducing a bill—and I was not solicited to do so—which bears the number H. R. 18279. In addition to the Finley amendment to House bill 11338, the Post Office appropriation bill, which is now before the House, I have incorporated a section in this bill providing "that all rural letter carriers shall be extended the right and privilege of engaging in any profession or occupation that will not conflict with or detract from their duties as rural letter carriers after the time required to discharge the duties of their employment."

At the time I introduced this bill I was aroused and desired to criticize the department of the Government. I know we are a great democracy, and we unhesitatingly criticize a public servant. I thought when I voted for the Post Office appropriation bill in March that I was voting for a measure which would increase the salaries of all carriers who were receiving $900 per annum to $1,000, those receiving $1,000 to $1,100, and those receiving $1,100 to $1,200—in fact, for a measure which increased the salaries of all rural carriers $100 per annum until the maximum of $1,200 was reached. Now that department head is being subjected to the criticisms which I have heard on the floor of this House, to wit, that he is attempting to legislate as a department head, that he is assuming legislative functions, and that he is changing the clear intent of the provisions of an act of Congress.

In introducing my bill, H. R. 18279, my thought was to make this as clear as crystal, so that the verbiage of the provision could not be misunderstood or misinterpreted. This bill is so plainly stated that no department head can change the crossing of a "t" or the dotting of an "i." It reads as follows:

A bill (H. R. 18279) regulating the salary of letter carriers of the Rural Delivery Service and permitting their engaging in other employment.

Be it enacted, etc., That on and after July 1, 1914, the compensation of each rural letter carrier for serving a standard route of 24 miles and over, six days in the week, shall be $1,200 per annum, payable monthly; on routes 22 miles and less than 24 miles, $1,152; on routes 20 miles and less than 22 miles, $1,080; on routes 18 miles and less than 20 miles, $960; on routes 16 miles and less than 18 miles, $840; on routes 14 miles and less than 16 miles, $720; on routes 12 miles and less than 14 miles, $672; on routes 10 miles and less than 12 miles, $624; on routes 8 miles and less than 10 miles, $576; on routes 6 miles and less than 8 miles, $528; on routes 4 miles and less than 6 miles, $480. A rural letter carrier serving one triweekly route shall be paid on the basis for a route one-half the length of the route served by him, and a carrier serving two triweekly routes shall be paid on the basis for a route one-half of the combined length of the two routes.

SEC. 2. That all rural letter carriers are hereby extended the right and privilege of engaging in any profession or occupation that will not conflict or detract from their duties as rural letter carriers after the time required to discharge the duties of their employment.

I think that section 2 of my bill is a salary raiser in itself. I feel sure there is not a Member in this House who would not emancipate the rural carrier from the hours which he is justly entitled to, and I believe that in the future when the rural carriers have employment outside of the time they devote to their routes—the time they give the Government—they will not be annoyed and harassed if they use that time for their own benefit.

There are 43,000 rural carriers in the United States. At an average of $1,000 per annum, their salaries would aggregate $43,000,000 paid annually out of the Treasury of the United States. I see great amazement here, and doubtless Members are thinking that is an enormous sum to be paid annually by the Government to the carriers. Yet only the other day a gentleman testified before a committee of Congress that, beyond any doubt, we had within the confines of the United States selling the products of this land and of manufactured industries 300,000 traveling men. And this gentleman was the president of the traveling men's association. He said that the average pay, salary, expenses, mileage, transfer of baggage, and taking care of baggage amounted to $3,000 a year, and that means the enormous sum of $900,000,000 for the middleman, for the wholesaler, or for the retailer to simply spot the goods, and nothing more. Nine hundred million dollars! If we add the amount of money paid for the transportation of mail to the railroads to the amount paid the rural carriers you will find it is but a drop in the bucket compared with the expenses of distribution of the products of our land, both of field and orchard and of manufactured industries.

I see no reason why this bill, H. R. 18279, should not be enacted into law as a specific measure by this House. If this be done, then it would not be so easy for Congress to change the enactment through an appropriation bill. We could point to specific legislation in the records and enter the plea that the act of Congress should not be changed in this hasty manner.

In conclusion permit me to express a thought—a conclusion reached after looking over the body of men constituting the rural delivery carriers and the postal clerks that this great Government, under an efficiency program, in filling the many post offices under the civil service must eventually recruit their postmasters—first, second, and third—from these two branches of the Postal Service.

Trade Commission Bill.

EXTENSION OF REMARKS
OF
HON. A. W. LAFFERTY,
OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 11, 1914.

Mr. LAFFERTY. Mr. Speaker, in extending my remarks upon the great issue involved in this bill, which is really that of control by monopoly or control by the people, I can not do better or more briefly express my views than to adopt as my remarks certain political articles written by me during the past summer. In these articles I not only favor Government control as provided for in this bill, but I also favor Government and municipal ownership. These articles, while lengthy, do not occupy as much space as would a speech necessary to cover the subject. Therefore I deem it economy to adopt the articles as my remarks, as follows:

[This article was printed as a paid advertisement in the Oregonian, August 7, 1914.]

A NATION OF SLAVES—LESS THAN 1 PER CENT OF POPULATION OWNS 70 PER CENT OF WEALTH—PUBLIC OWNERSHIP AND ASSET CURRENCY NECESSARY TO BREAK STRANGLE HOLD OF MONEY POWER, SAYS CONGRESSMAN.

The wealth of the United States is estimated at $120,000,000,000. That is $1,200 for every man, woman, and child. No other country in the world has so much wealth. But how is it divided? Seventy per cent of this wealth is owned by 200,000 men, leaving only 30 per cent for the remaining 99,800,000 people. In other words, two-tenths of 1 per cent of the population owns 70 per cent of the wealth. The plain arithmetic of the situation is that we are a nation of slaves. Our necessities make us such. Two things make slaves—necessity and fear.

THE "EMPTY DINNER PAIL."

"The empty dinner bucket" is now cited as a reason why we should withdraw further resistance to the money power. The agents of plutocracy told me before I left Washington that the people would this year yield to the "bread-and-butter argument" and return them to full control of the legislative machinery of the Government. I did not believe them then. I do not believe them yet.

There are 436 congressional districts in this Union. The Members from the other districts are watching the contest in this district. If we win here this year it will be a tremendous victory. It will be a demonstration that a Congressman can serve the public, defy the money power, and still retain the authority of the people to vote and speak for them in the National Legislature. It will mean the beginning of the end. It will mean that complete victory for the people is in sight. It will mean that the Government that our fathers suffered for at Valley Forge and fought for at Brandywine is going to be put back into the hands of their descendants.

CURSE OF OVERCAPITALIZATION.

We have been made a nation of serfs and paupers in two ways: First, by overcapitalization of public-utility corporations and the collection of millions annually from the people to pay dividends on this inflated capitalization. Second, by a system of duplicating deposits and the loaning of billions of dollars that did not exist to farmers and business men and by the collection of millions of interest annually upon the "credit" so loaned. These are the methods by which the money changers have robbed those who toil and gotten all the wealth into the hands of a few.

What is the remedy? It is simple enough, if the facts can but once be placed before the people and they will put men in Congress who will serve the public. Let the Government and the municipalities take over the public utilities at their physical value and thereafter furnish the service to the country at cost, and let the Government issue agricultural asset currency and loan it to the farmers at a very small rate of interest on first mortgages upon their farms, not exceeding 50 per cent of the unimproved value thereof, and the "money power" will no longer be able to rob our people.

METHODS OF MONEY CHANGERS.

The total amount of money in the United States to-day is $3,500,000,000, or $35 per capita. Yet the farmers alone have borrowed $8,000,000,000. In other words, the farmers alone have borrowed nearly three times as much money as there is in existence in the United States. How is it possible? The money power is simply loaning the farmers "credit"—loaning them money that is not in existence—and collecting 6 per cent interest on it. The farmers are paying interest annually amounting to $500,000,000, or more than the cost of the Panama Canal.

Give the country an honest Congress, and one that is not afraid, and every man who works will be able to make a good living, take a vacation each year, and lay by something for his old age besides. The idea of an able-bodied man in a country like this being compelled to work for his board and clothes all his life, as nine-tenths of us are

doing, is ridiculous and absurd. It is an outrage. The voters are idiots if they stand for it in this district.

I have a bill pending for agricultural asset currency. I also have a bill pending for public ownership in the District of Columbia, the only city that Congress has jurisdiction over. My bill was the first ever introduced for public ownership of the street railways in Washington. Since it was first introduced a similar bill, introduced by ROBERT CROSSER, of Cleveland, Ohio, has been favorably reported to the House and will be voted on this winter.

MUNICIPAL OWNERSHIP A SUCCESS.

The city of Cleveland has a sort of halfway city ownership of her street railways now, and the plan has proved an immense success. It proves that complete city ownership, the acquisition of title being made at actual physical value of the property, would be even more profitable than the Cleveland experiment has been, for the city of Cleveland has undertaken to run the street car system upon the basis of the full value claimed by the street car company.

When the franchise of the Cleveland Railway Co. expired in 1909—five years ago—the city council granted a new franchise for 24 years, but only upon the condition that all profits above expenses, taxes, interest on bonded indebtedness, and a 6 per cent profit to the stockholders should go to the reduction of fares and the betterment of the service. That plan has been in operation five years. The city had the right to prescribe the fares and the service and to keep an auditor in the office of the company, with a corps of assistants, to check receipts and expenditures.

TWO-AND-A-HALF-CENT FARES IN CLEVELAND.

The result has been as follows: First, a fare of 3 cents was required and 1 cent for transfer, to see if it would produce the required revenue. It not only produced all the money required, but in one year put a surplus in the treasury of $700,000. Then the fare was reduced to 3 cents and 1 cent for transfer to be rebated when transfer was taken up. And now two tickets are furnished for 5 cents. Let anyone doubting this statement cut out this article and send it to the mayor of Cleveland for verification.

The Portland Railway, Light & Power Co. last year took in $6,723,742. Its total expenses and taxes were only $3,298,319, so that over 50 per cent of its revenues were profits, to be distributed among its bondholders and stockholders as "interest and dividends." If the city would take this utility over at its physical value, as it ought to do, fares would not be over 2 cents in Portland.

The Pacific Power & Light Co., of Portland, and the Portland Gas & Coke Co. are both owned by the American Power & Light Co., of Maine. These two Portland utilities last year took in over $1,250,000 each, while their operating expenses and taxes were less than half that amount each. Telephone service under city ownership would be less than half what it is to-day.

PROFITS TO THE PUBLIC.

Government and municipal ownership of public utilities would reduce the cost of living to each person at least $50, and to each family of five at least $250.

Government ownership and operation of ocean ships, such as I have proposed, would keep in the United States the $350,000,000 which now goes annually to the Ocean Steamship Trust, would further reduce the cost of living at least $1 per capita per year, would give us the greatest auxiliary navy and greatest force of trained sailors in the world, and would enable Americans to travel around the world in safety and comfort under their own flag and at less than one-half the present cost. Senator LEWIS, of Illinois, has introduced a bill providing for 100 Government owned and operated ships since I first advocated the idea in the House a year ago.

Government ownership and agricultural asset currency combined would eliminate the dishonest profits of the money power and give to every citizen an equal opportunity. That, and nothing short of that, is what the people of this country are entitled to. Such will they receive if they stand by their guns when the forthcoming battle rages.

Respectfully,

A. W. LAFFERTY.

[This article was printed as a paid advertisement in the Portland Oregonian July 14, 1914.]

THE CONGRESSIONAL FRANK—REPRESENTATIVE LAFFERTY SHOWS HOW 1-CENT LETTER POSTAGE IS PREVENTED BY MAGAZINE MAIL SUBSIDIES.

In the House of Representatives six bills are pending for 1-cent letter postage, and two in the Senate. The Post Office Department says that if second-class mail shall be required to pay the cost of transportation, not only will 1-cent letter postage be made possible thereby, but that the entire Postal Service will be improved.

VOTERS KEPT IN IGNORANCE.

Has any voter been told anything about this situation by a daily newspaper? He has not.

On page 26, the editorial page of the Saturday Evening Post for March 7, 1914, appears this statement:

"It is pretty definitely settled that we shall grant no more ship subsidies. The notion of taxing the public for the benefit of any special interest no longer appeals."

Yet the Curtis Publishing Co., which owns the Saturday Evening Post, receives a mail subsidy amounting to more than $4,000,000 a year. These are the figures of the Post Office Department. That sum represents twice the amount involved in the question of free tolls at Panama, over which the entire Nation has been stirred for months. The total amount of tolls on coastwise vessels at Panama will be less than $2,000,000 annually, while we are donating each year to the Curtis Publishing Co. alone more than $4,000,000 in mail subsidy.

HALF LETTER POSTAGE A TAX.

Half your letter postage is a tax to pay for carrying at less than cost the merchandise of corporations publishing magazines and daily newspapers. I favor requiring all mail to pay cost of transportation, and no more. When we do that we shall have 1-cent letter postage.

Now as to the "congressional frank." I have used that frank more than most Congressmen, and I have sent out less than 4 tons of mail a year. The Journal and the Oregonian send out by mail over a ton each per day. The Journal admitted editorially August 28, 1912, that it mails 50 tons a month. Those two papers will average 600 tons each by mail per year. They pay the Government only 1 cent a pound, or $20 per ton. The Government loses on the 1,200 tons it transports annually for the Oregonian and the Journal at least $4 per ton, or $48,000. The Oregonian is making a quarter of a million clear a year and the Journal is making almost as much. Yet these papers yelp because I send out 4 tons of the people's mail per year, which is carried free, while they send out 1,200 tons per year of their private merchandise, which is carried four-fifths free.

WORK FOR DISTRICT CRITICIZED.

The garden seeds which I sent out were the property of the people themselves. Each Congressman is allotted 22,000 packages. I have sent out 52,000 packages annually, because I paid for the addressing of 30,000 extra franks each year and had them on deposit with the Agricultural Department on April 1, the day the regular distribution closes. The rule is that all seeds left over will be sent out under the direction of the Secretary of Agriculture, and by taking my chances and having the extra franks addressed and on hand I have received for my district 30,000 extra packages each year. Because I went to this extra trouble, extra work, and personal expense I have been criticized for sending out too many seeds.

SPEECHES PAID FOR OUT OF PRIVATE FUNDS.

As to the speeches I have sent out, I paid for the printing of all of them out of my personal funds. The Government Printing Office will not print a speech for a Congressman unless he puts up a check in advance against his salary account for the cost of same. My account for printing at the Government Printing Office the first year I was in Congress and the cost of addressing the speeches out to the people of Oregon was $3,700, or a little more than half my salary. I sent speeches on the railroad land grant to each voter in Oregon, whether in my congressional district or not. I was making a fight to win. That is the kind of a fight I shall continue to make.

Very sincerely,

A. W. LAFFERTY.

[This article was printed as a paid advertisement in the Oregonian and Portland News June 8, 1914.]

HIDE OF PORTLAND NEWS LIFTED—CONGRESSMAN EXPOSES FAKE "LABOR PAPER" AS THE CREATURE AND TOOL OF MULTIMILLIONAIRE E. C. SCRIPPS.

Another editorial impugning my honor and insulting my manhood appeared in the Portland News Saturday afternoon. This time I was referred to as a "demagogue" and a "liar." I had challenged Dana Sleeth, the editor, a week earlier to produce his facts to show wherein I was unfit, as he told the readers of the News during the campaign, and his only reply is to call me a "demagogue" and a "liar." People with brains will demand more than that.

I have charged, and here charge, that E. C. Scripps, a multimillionaire, is the owner of the Portland News. Has Sleeth answered that charge? He has not.

I have charged, and here charge, that E. C. Scripps owns a majority of the stock of the United Press Association. Has Sleeth answered that charge? He has not.

SCRIPPS OWNS THE NEWS.

I have charged, and here charge, that Sleeth is merely the hireling of E. C. Scripps, and that he does the dirty work ordered by his multimillionaire master. Has Sleeth answered that charge? He has not and can not.

How has Scripps made his millions? By starting penny papers in all the principal cities of the United States, by falsely pretending to be the friend of the poor man, and by collecting millions from the earnings of the poor man.

Is the Portland News an independent newspaper? It is not. It is merely one of the many newspapers owned and controlled by E. C. Scripps, and its policies are determined by its owner, of course.

Has the Portland News ever done anything for the poor people of Portland? It has not.

Has the Portland News ever said one word in favor of Government or municipal ownership of natural monopolies, to the end that the people may have the benefits of their own country? It has not.

FRIENDLY TO GRAFTERS.

Has the Portland News ever said one word in favor of the enforcement of the Southern Pacific land grant, to the end that the law shall be upheld and thousands of poor people of Oregon given homes? It has not.

Has the Portland News ever said one word in favor of agricultural asset currency, to the end that the Government and not the money power shall extend "credit" to the farmers on first mortgages, thereby saving to the people $500,000,000 in unearned interest now going annually to the Rothschilds, Morgans, and Rockefellers? It has not.

Has the Portland News ever advocated a single law which, if passed, would give to the public a fairer share of the wealth produced? It has not.

Has the Portland News ever actually opposed the money power in one single instance? It has not. The idea of E. C. Scripps opposing the money power is so absurd as to be laughable.

NEWS DECEIVES PEOPLE.

How does the Portland News fool the people? By calling them "Mutts," taking their money, and harping continually about the recall of Albee and Tom Word.

When the poor people cry for bread what does E. C. Scripps hand to them? A cold gray stone. Do you get it?

Yet your own servant, who has refused bribes of cash and bribes of newspaper support to desert your interests, does not suit Multimillionaire E. C. Scripps. Scripps asks you to retire your own public servant and turn your fortunes over to his hireling, Dana Sleeth, and such officials as Sleeth may select. Should you worry about what Sleeth or Scripps want? I should hope not.

Sleeth says the bill I introduced to make the Associated Press and the United Press common carriers is a "fool bill." And he says it would not affect the United Press because it, "alone of all press associations," now sells to all comers and on equal terms. Then why does he call it a "fool bill"? He has only told part of the truth, as you shall presently see.

PRIVATE MONOPOLY HIT.

When I introduced the bill in April, 1913, Bond P. Geddis, the agent for Scripps in Washington, came to me and said that if the bill should pass, making it possible for any paper to secure the Associated Press report, that there would no longer be so much demand for the United Press report, because the Associated Press has a wider service. He asked me to drop the fight to break up the Associated Press monopoly on the ground that it would hurt the business of Scripps, and he promised me the support of the Portland News if I would accede. I refused. I introduced the bill to break up the Associated Press monopoly because I believed then, as I do now, that it will be almost impossible to ever get laws through Congress for the benefit of the public until the press of the country is set free from the domination of

the news trust. I placed the interests of the public above those of even Mr. Scripps, and for that reason I stood by my bill. If the people stand by me, it will be a law in less than two years.

I wish every voter would go and see Sleeth, get a good square look at the cast of his countenance, and then come and see me and decide for himself who is the liar.

The last ounce of energy and the last drop of blood in my body is dedicated to this fight.

Very sincerely,

A. W. LAFFERTY.

[The Oregonian refused to print this article as a paid advertisement August 23, 1914.]

SOUTHERN PACIFIC FEARS LAFFERTY—HAND OF FENTON SEEN IN LATE EDITORIAL ATTACK—CONGRESSMAN'S DEMAND FOR RAILROAD LAND-GRANT ENFORCEMENT, NOT FORFEITURE, LOOMS IN SUPREME COURT.

Phrased in the undisguised language of William D. Fenton, chief counsel for the Southern Pacific, a vicious editorial attack upon me appeared in Saturday's Oregonian. I challenge Mr. Fenton to deny that he either wrote or was responsible for the editorial.

I am accused of being a mere "intervenor" in the land-grant case. The truth is that I started the litigation when I filed the test case of John L. Snyder, September 16, 1907. It was a year later, September 4, 1908, before the Government reluctantly "intervened" in the suits that I had begun and filed its claim of forfeiture.

LAFFERTY DEMANDS ENFORCEMENT.

The case is now soon to be argued and decided in the Supreme Court, after a seven years' bitter fight. Three theories are to be presented: My demand for enforcement of the law to the letter, the Government's demand for a forfeiture, and the railroad's claim to the land.

Mr. Fenton wants the issue in the Supreme Court to be "forfeiture or nothing." If the court be limited to that harsh remedy, it will probably let the railroad keep the land.

From the start the Government proceedings have been of the most halting and dilatory character. And the special assistants to the Attorney General have fought my enforcement theory quite as vigorously as has Mr. Fenton. If I can be eliminated, it will leave the issue just as the railroad wants it, and it will win.

PUBLIC WARNED AGAINST FORFEITURE HOPE.

I warn the public now that there was never a chance to secure a forfeiture in this case. No one knows that better than the railroad. But if the enforcement theory shall be properly presented to the Supreme Court, it is certain that the railroad will be required to live up to the law in the sale of the remaining lands.

The test suits which I filed for 65 settlers in advance of the Government's intervention were brought upon the theory that the law means just what it says. I am confident the Supreme Court will hold with me, provided I shall not be repudiated and hamstrung by my own district before the case is reached.

RECEIVERS TO SELL TO SETTLERS.

If a decree of enforcement be entered, receivers will be appointed to take charge of the lands and sell them according to the terms of the granting acts. These terms are that sales shall be made to actual settlers only, in quantities not greater than a quarter section, and for prices not exceeding $2.50 per acre. The receivers would formulate rules, and would doubtless provide for a drawing system. They might also sell the more valuable lands in tracts of 40 acres.

Two million three hundred thousand acres are involved. This body of land would furnish 160-acre homes for 15,000 families, or 40-acre homes for 60,000 families. The lands embrace the most fertile and picturesque portion of western Oregon. Water power is present to run trolley lines into every township. If opened up, this area will become the paradise of America.

Less than 100 settlers are on the land. Only a portion of the 65 for whom I filed the test cases without fee are sticking it out. A few have remained in the face of every discouragement, chief of which has been the wet blanket the Department of Justice has continually thrown upon the enforcement theory.

LAW MEANS WHAT IT SAYS.

The thousands of applications that have been filed for these lands by nonsettlers amount to nothing. These applicants have been swindled. The law says the lands must be sold to "actual settlers," not to "nonsettlers."

I argued this case for three days before Judge Wolverton. I wrote every word of pages 640 to 672 of the record. I appeared and argued the case in San Francisco, urging haste above all things, and I filed a printed brief of my argument. Previously, on September 30, 1913, I had introduced a bill in Congress (H. R. 8703) directing the San Francisco court to certify the case to the Supreme Court at once, without decision, in order to expedite final determination. The court did exactly what I wanted done.

POLITICAL TRICKSTERS FIGHTING LAFFERTY.

It is also complained that I am absent from Washington, and that I am running for reelection. I admit both of these charges, and I expect to be elected by the largest majority I have ever received. No crowd of professional politicians, and special-interest men, need put fake advertisements in the papers on me, stack the newspapers against me, and then expect me to supinely abide by any primary decision secured in that way.

Besides, it does not lie in the mouth of the Oregonian, Mr. Fenton, or any of the old Republican machine to complain that I am running regardless of the late primary. Two years ago, when I had the primary nomination, that whole crowd refused to support me, and attempted to defeat me with Thomas McCusker. The Republican State committee two years ago, headed by Charles B. Moores, passed a formal resolution indorsing McCusker. What fealty does any Republican voter owe to that same machine now? None whatever.

Very respectfully,

A. W. LAFFERTY.

The following is the Oregonian editorial of August 22, 1914, which Mr. LAFFERTY charges was written by W. D. Fenton, chief counsel for the Southern Pacific, and which charge stands undenied either by Fenton or the Oregonian:

[From the Oregonian of August 22, 1914.]

LAFFERTY AND THE RECORD.

Mr. LAFFERTY, Representative in Congress for Oregon (third district), has now been absent from his post of duty at Washington continuously for more than 100 days, or about 4 months. He has been for the greater part of that time in Portland and vicinity publicly carrying on his campaign for reelection, although he was beaten in the primary. But he repudiates the verdict of the people in the primary. The explanation for his absenteeism, given by Mr. LAFFERTY, is twofold: That he is here to carry on his campaign, and he is also here to represent the public in the Oregon & California land-grant case. The substance of his contention as to the land-grant suit is as follows (from his self-signed advertisements):

More than two-thirds of my time since my arrival here in May has been devoted to the Oregon & California Railroad land-grant suit. I was three weeks in California preparing and arguing the case in the circuit court of appeals. The transcript of the record of the trial, as had before Judge Wolverton, amounts to 17 printed volumes. The case is now in the Supreme Court, where we must argue it again about January next. Any lawyer, in order to make an intelligent presentation of the case in the Supreme Court, must have mastered those 17 printed volumes of the record.

Mr. LAFFERTY says also that he will, if successful in this suit, accomplish more than the entire Oregon delegation in 20 years, and that he will break up a great land monopoly.

The Oregonian believes it has a duty to correct the continuous LAFFERTY misrepresentations in this important litigation, and it therefore gives the exact facts with regard to his recent so-called public service:

The land-grant suit is between the United States Government and the Southern Pacific Railroad (Oregon & California Railroad Co.). LAFFERTY appears as intervenor, representing private clients who are seeking to get possession for their own benefit of certain parcels of the land.

Mr. LAFFERTY did not prepare a word of the voluminous record of 17 volumes. The Lafferty brief consisted of two pages, excluding title and cover. He never appeared before the examiner who took the testimony in this case, consisting of 11 typewritten volumes. The demurrers to his cross-complaints and bills of intervention were sustained by Judge Wolverton.

The three weeks Mr. LAFFERTY spent in California narrow down to 1 hour and 15 minutes, spent by him in oral argument before the circuit court of appeals.

The circuit court of appeals, upon its own motion and not upon Lafferty's motion, nor any lawyer's, decided to certify the case to the United States Supreme Court to decide certain questions of law. As a matter of fact, the case has not yet been so certified, and it is not now in the United States Supreme Court. But it will be.

Mr. LAFFERTY says he has entered this case to break up a "land monopoly." But it is clear that the ultimate judgment of the Supreme Court will be to decide for the railroad company or for the Government—one or the other.

If the railroad company wins, it will be the owner of the land grant and will sell the lands on its own terms.

If the Government wins, the lands will be withdrawn under the act of Congress August 20, 1912, and the terms and conditions upon which they will be opened for settlement will be determined only by subsequent legislation. The only possible chance for the Lafferty intervenors to get anything will be to have the court give them a status as actual settlers and to award them title to lands which they claim to occupy as bona fide claimants.

It becomes plain, therefore, that the Lafferty contention that he is performing a public service in this litigation has no basis in fact. He is appearing for private clients. No citizen other than his clients, and perhaps some unknown others who may be able to show that they sought to take up lands prior to this litigation, will be benefited by their success.

[The Oregonian refused to print this article as a paid advertisement August 27, 1914, although it had printed the article by Garrigus on August 26 which follows this.]

GARRIGUS EXCORIATED—LAFFERTY'S DEFAMER ONCE RESIGNED BAR UNDER EMBEZZLEMENT CHARGE—WAS DENOUNCED IN SAN FRANCISCO BY LAFFERTY FOR TAKING "FEES" FROM DUPED "ACTUAL APPLICANTS."

The Oregonian accepted from Lewis C. Garrigus, and printed on the editorial page of Wednesday's paper, a scurrilous article, pronouncing as "brazenly false" my printed statements touching my service to the people of this State in the land-grant case.

ATTORNEY FOR "ACTUAL APPLICANTS."

Recently, at San Francisco, I denounced Garrigus for having appeared there as "attorney" for duped "actual applicants" for railroad lands, when the law is as plain as the noonday sun that the lands must be sold only to actual settlers. I stated then, and I state now, that those applicants have been defrauded and swindled. Garrigus has received thousands of dollars from these ignorant people. I have not received one cent for my services in trying to have these lands sold to the people of Oregon who may be willing to make actual settlement upon them. Two men, Logan and Minard, are now in jail for accepting fees from "actual applicants," but Garrigus is at large, and is given free space by the Oregonian to defame the Representative of this State while serving the people.

The following copy of the order of the Supreme Court of Oregon (vol. 28, Sup. Ct. Repts., p. 587) in the disbarment case of this same Lewis C. Garrigus, will show who he is:

"EX PARTE GARRIGUS."

"On September 5, 1895, the attorney general, at the request of the grievance committee of the Oregon State Bar Association, filed a complaint in the supreme court charging Lewis C. Garrigus, an attorney duly admitted to practice in 1890, with embezzling funds that had been intrusted to him by certain clients, and praying that he be disbarred from practice. It was afterwards discovered that after an investigation by the committee of the bar association and before the charges had been filed by the attorney general, Mr. Garrigus had filed his resignation as an attorney with the clerk of the county court of Multnomah County. This resignation was forwarded to and filed with the clerk of the supreme court on September 6, 1895. Afterwards, on motion of the attorney general, the complaint was withdrawn."

Very respectfully,

A. W. LAFFERTY.

[The letter from Garrigus printed in the Oregonian of August 26, 1914.]

"BRAZENLY FALSE," SAYS LAWYER—LAFFERTY'S PROFESSED CHAMPIONSHIP OF PEOPLE IS BUNCOMBE.

PORTLAND, *August 25.*

To the EDITOR:

Is it not passing strange that honorable men will see a question of honor from such different angles? For instance, a great many men who had submitted their claims to the arbitrament of the people at a

primary election would feel themselves in honor bound to abide the result; but there are some honorable exceptions to this way of looking at it. Now, we all know that Hon. A. W. LAFFERTY is an honorable man, and he seems to think it all right to disregard the voice of the people, as declared at the primary election in April. He does not seem to think that his honor is at stake; and he may be right, but many differ from his way of looking at it.

A great many people know that the Hon. Mr. LAFFERTY is a Member of Congress. I know it because I heard him declare the fact to the United States circuit court of appeals at San Francisco when the appeal of the Oregon & California land-grant case was up for argument in May last. Mr. LAFFERTY opened his remarks to the court by the declaration, "I am a Member of Congress." Those who heard this declaration thought that two members of the court looked a little bit incredulous, but the presiding judge, though he might have been chagrined, could not deny that it was true.

Mr. LAFFERTY followed up his declaration aforesaid by giving the court a history of what he had done in the matter of the land-grant controversy, and amongst other things told the court that if Mr. Townsend, the special assistant to the Attorney General of the United States, had taken his (LAFFERTY'S) advice the controversy over these granted lands would have been settled long since. The fact is that Mr. LAFFERTY took up more than three-fourths of the time allotted him for argument in reciting a laudatory history of Mr. LAFFERTY'S connection with the matter, to all of which the court gave respectful attention, but from which it received no aid in the settlement of the questions involved.

Mr. LAFFERTY, in a communication to the newspapers about that time, brazenly asserted that it was upon his motion that the court acted in deciding to certify the questions involved up to the Supreme Court of the United States. The truth is that neither Mr. LAFFERTY nor any other attorney engaged in the matter made any suggestion to the court as to what it should do in the premises. There was not another attorney engaged in the case who would have had the unlimited gall to make such a claim, and every other attorney engaged in the argument of the case knows the utter falsity of the claim made by the honorable gentleman.

In other published statements Mr. LAFFERTY has made the claim that he is the only attorney originally connected with the land-grant matter who has stuck to it and is still fighting for the rights of the people. This statement is as brazenly false as the other. As soon as Representative HAWLEY called the attention of the country to the status of this land grant I went to Washington City to try to get permission to sue in the name of the Government for a large number of clients whom I represented. I was there informed that the Government was preparing to proceed in the matter and that permission could not be granted to individuals to sue in the Government's name; that we would have to bide our time and become parties to the litigation by petitions in intervention. The late Daniel J. Haynes and myself were partners at the time, and we were no doubt the first lawyers with whom Mr. Townsend conferred upon his arrival here to look into the matter.

I have been steadily and persistently following the matter up since its inception, and there are other attorneys representing other parties who applied to the railroad company to purchase bonds under the terms of the grant who have done the same thing, hence the untruth of Mr. LAFFERTY'S claim must be apparent. The fact is that but for my efforts in their behalf Mr. LAFFERTY'S clients would not have been heard upon the appeal of the case.

Mr. LAFFERTY'S claim for support in his candidacy for reelection to Congress upon his alleged championship of the people's interests in the Oregon and California land litigation, like his claim that he was swindled out of the nomination at the April primary election, is brazenly false, and should be rebuked by the people at the November election. No man should be permitted to ride into public office upon false pretenses. "Let justice be done though the heavens fall."

LEWIS C. GARRIGUS.

[The Oregonian refused to print this article as a paid advertisement Aug. 16, 1914. It was printed Aug. 16 in the Journal and on Aug. 17 in the Telegram as a paid adverisement.]

MCARTHUR'S RECORD ANALYZED.

Any man who runs for office submits his entire record to the scrutiny of his opponents and of the public. The people are entitled to know the truth touching the past and present of each candidate.

Clifton Nesmith McArthur is a grandson of James W. Nesmith, who was a United States Senator and Congressman from this State; he is a graduate of the Oregon State University, late speaker of the Oregon Legislature, and a gentleman of pleasing appearance and many good qualities. But when this much is said, praise must cease and honest criticism must begin.

"PAT M'ARTHUR, PIPER'S FRIEND."

On the very threshold of his career Mr. McArthur, then a reporter on the Oregonian, allied himself with Edgar B. Piper, managing editor of that paper. While employed on the Oregonian in 1905 McArthur was hired by Detective W. J. Burns to aid in securing jurors in the land-fraud cases. Notes made by Burns at the time, and now on file at Washington, show that he repeatedly referred to "Pat McArthur, Piper's friend," as having aided him in selecting the names of jurors from Polk and other counties to go into the original box of 600. Burns recites that McArthur was a reporter on the Oregonian. The Oregonian was for conviction and hostile to the Mitchell faction. Throughout the record Burns refers to McArthur as his trusted agent and as "Piper's friend."

That McArthur well knew that what he did in helping to fill the original jury box with the names of prejudiced men was wrong is conclusively shown by his own sworn admissions. Recently one of the defendants who was convicted by the jury so selected, Willard N. Jones, applied for and received a pardon on the ground that he could not possibly have had a fair trial before such a jury. McArthur was called upon for an explanation of the part he took in the selection of the jury, and his affidavit, now a public record at Washington, admits his connection with the transaction, but pleads that he participated in it with great reluctance and under duress and after much persuasion.

THE ATTORNEY GENERAL'S LETTER.

The letter of the Attorney General to President Taft, dated May 10, 1912, contains this language:

"Mr. McArthur, it is to be remembered, was one of Burns's agents, and furnished many of the reports which are on file in the department. He claims, however, that he did so with great reluctance and under duress and after much persuasion. He does not state the nature of the duress, but, I am informed, is willing to do so if you insist.

"Respectfully,

"GEO. W. WICKERSHAM,
"Attorney General."

To understand exactly what Burns did, with the aid of McArthur, it is necessary to know what the original box of 600 was. The law required that two men of opposite political faith, to wit, a jury commissioner named by the court and the clerk of the court, should select the names of several hundred citizens from the body of the State and put them into a box. These jurors were supposed to represent all shades of opinion, and were not supposed to be tampered with, interrogated, or investigated in any manner whatsoever. From the box in question the law required that the clerk of the court should draw out the names of jurors to be summoned into court as needed.

Not until the jurors arrived in court was either the prosecution or defense entitled to question them on any subject. For each case some 60 jurors were to be summoned, and when they arrived in court each side then had ample opportunity to interrogate them in the presence of the judge, to ascertain whether or not they were duly qualified. The law had provided these safeguards so as to insure the trial of each defendant by a jury of his peers, summoned without discrimination from the body of the State. The right, when accused of crime, to be tried before a fair and impartial jury is the most sacred heritage of English-speaking people.

HOW JURY WAS SELECTED.

But Mr. Burns, with the aid of McArthur, "Piper's friend," deliberately set this right at naught. Burns and his confederates secretly took advantage of the defendants by having placed in the original box of 600 only the names of men known to be hostile to the accused and predisposed to convict. This gave the prosecution a tremendous advantage, which was illegal, and left the defendants no reasonable chance to be acquitted. Evidence is nearly always conflicting, and when the jury is biased they usually decide according to their preconceived notions.

In order to fill the original jury box with the names of prejudiced men, Burns secured typewritten copies of the lists of proposed jurors which the various county clerks had sent in to the jury commissioner and the clerk of the United States court. Burns then sent McArthur and his other agents into the several counties to investigate the men whose names appeared on these lists. The names of all men found to be prejudiced against the accused were allowed to go into the original box, while the names of all men found to be fair, or friendly to the accused were not allowed to go into the original box.

The jury commissioner and the clerk of the Federal court should not have allowed Burns and his agents to dictate the names which went into the original box, and it is possible that they did not know it. The Attorney General, in his letter to the President, says that Burns probably got in his work by having a deputy in the United States court strike off the names of the jurors not desired by him before the lists were turned in to the jury commissioner and the clerk of the court. In any event, the records show that every name favorably reported on by Burns and his agents went into the original box, while every name adversely reported on by them was excluded.

McArthur not only checked the entire Polk County list for Burns, but he aided in checking the lists of several other counties. He received a good salary from the Government for his work. McArthur's reports, still on file at Washington, do not bear out his present contention that he acted under "duress," but, on the contrary, show that he acted with great enthusiasm and took keen delight in his work.

"WILL VOTE TO CONVICT."

The following are verbatim extracts from official reports made by McArthur. The names of the men reported on are left blank solely because it is not desired to expose them to the humiliation that would attach to the publication of their names in connection with these reports. The names of these men are in my possession, and will be shown to any citizen desiring to verify this statement. McArthur reported on Linn, Washington, and Columbia Counties, as follows:

"Linn County.

"_____ _____, merchant, Halsey: Regular yellow-dog Democrat. Will vote to convict any Republican on sight.

"Washington County.

"_____ _____, Gales Creek: This man is a Republican, a cheap shyster; always for sale.
"_____ _____: A Mitchell-Hermann-Huston man.
"_____ _____, Gales Creek: A Mitchell man; ferninst the Government.
"_____ _____, Forest Grove: A boozerino.
"_____ _____: An old soldier; a Republican; a crank.
"_____ _____: Merchant, schools; a Mitchell man.
"_____ _____, Hillsdale: Republican; for sale.

"Columbia County.

"I don't know anybody in Columbia County except members of the Mitchell-McBride-Williamson-Fulton push; this push is very strong in Columbia County, which is McBride's home county. For this reason I would recommend that the county be thrown out."

McArthur recommended that a certain merchant of Halsey go into the box, because he was a "regular yellow-dog Democrat," who would "vote to convict any Republican on sight," but he wanted the entire citizenship of Columbia County excluded from service on the jury, because that was "McBride's home county," and McBride was friendly to Senators Mitchell and Fulton and Congressman Williamson. Accordingly the Columbia County list was thrown out. The McBride referred to by McArthur is Judge Thomas A. McBride, present Chief Justice of Oregon, and one of the grand old men of this State.

"I need not go further in a recital of the high-handed outrageous conduct on the part of the officers of the prosecution," concludes the letter of the attorney general. McArthur now claims that he acted under "duress." Let him state just what kind of duress could possibly have induced him to aid in packing a jury against a fellow citizen, whose liberty and reputation were at stake. No duress could justify such an act.

FERDINAND REED M'ARTHUR'S BOOSTER.

This is the same Mr. McArthur who joined hands with Mr. Piper and Ferdinand Reed in the late primary to defeat me for the regular nomination of my party for reelection to Congress. Mr. McArthur's past record and present affiliations show beyond the peradventure of a doubt that he would, if elected, stand with the corporations and the millionaires.

In 1910 Mr. McArthur was not only one of the prime movers in the holding of the "assembly" in Portland, but he received the nomination of that assembly for State senator. Mr. McArthur was defeated by George W. Joseph, the direct-primary nominee.

Between the years 1910 and 1912 Mr. McArthur was out of office, and whom did he serve in private life? He served as president of the Hood River Gas & Electric Co., organized by the Pacific Power & Light Co., of Portland, for the purpose of freezing out an independent at Hood River.

M'ARTHUR'S CORPORATION CONNECTIONS.

The Pacific Power & Light Co., of Portland, is a large holding corporation. Guy W. Talbot is its president and Lewis A. McArthur, brother of the candidate for Congress, is its assistant general manager. The Pacific Power & Light Co. is a $16,000,000 corporation, organized under the laws of the State of Maine. It, in turn, is owned by the American Power & Light Co., also organized under the laws of the State of Maine.

Although only a subsidiary of the American Power & Light Co., the Pacific Power & Light Co. owns the electric light companies at The Dalles, Pendleton, Dayton, Wash., Pasco, and Vancouver, and it is rapidly acquiring other holdings. It also owns water works and gas plants in Oregon, Washington, and Idaho. It owns the street railway at Walla Walla and the interurban line from that place to Freewater, Oreg.

MANY FRANCHISES GRABBED.

This corporation has acquired franchises at Richland, Toppenish, Waitsburg, Lewiston, Touchet, Prosser, Underwood, Dufur, Attalia, Benton City, Clarkson, Grandview, Lowden, Moxee City, Outlook, Parker, Prescott, Wallula Junction, and numerous other towns and cities in Oregon, Washington, and Idaho. The New York advertisements of the Pacific Power & Light Co. boastingly assert that all of its franchises are "free from objectionable restrictions," and that some of them extend as far into the future as 1981. How encouraging to the public! The gross earnings of this company for 1913 were $1,288,059. Its expenses and taxes were only $663,674, leaving its net earnings $624,385. In other words, nearly 50 per cent of its income was clear profit, to be distributed as "interest and dividends" among its bondholders and shareholders. This company was organized January 10, 1910, and has since been very active in acquiring its holdings. The American Power & Light Co., which owns the Pacific Power & Light Co., also owns the Portland Gas & Coke Co.

M'ARTHUR AT HOOD RIVER.

In 1911 the Pacific Power & Light Co. bought the electric light company at Hood River. A citizen up there, Neil C. Evans, now residing at 315 East Thirtieth Street, Portland, organized an independent company and began cutting rates. The original company did not wish to bring its rates down, because, in order to make things look right, it would have to do the same in other towns in Oregon, where it did not have competition. But the Pacific Power & Light Co. hit upon the scheme of organizing the "Hood River Gas & Electric Co." as a subsidiary with which to fight the independent, and it put in C. N. McArthur as president of this subsidiary company. That McArthur served as its president as late as 1912 is proved by the annual report of the corporation on file at Salem. The independent company made terms with the subsidiary company, and the Pacific Power & Light Co. now controls the situation at Hood River.

Not only do I have the right to give to the public Mr. McArthur's record but I would be unworthy to hold the position of United States Congressman if I did not do so unflinchingly. I have undertaken certain work for the common people, and I do not propose to be sidetracked by any combination made up of Mr. McArthur, Mr. Piper, Ferdinand Reed, and the multimillionaires and special-privilege corporations whom they are serving.

PUBLIC OWNERSHIP NEEDED.

If reelected, as I expect to be, I shall be able to secure the passage of some, if not all, of the laws I am advocating. Among these are Government and municipal ownership of all public utilities, agricultural asset currency, and power to the interstate trade commission to control industrial monopolies, like the Sugar Trust, the Steel Trust, the Oil Trust, the Coal Trust, and the Harvester Trust, even to the extent of fixing maximum prices, pending a restoration of competitive conditions. I shall also continue to work for the enforcement of the railroad land grant and for the conveyance of the forest reserves in trust to the States wherein located, giving to the States all the profits from the sale of ripe timber, but not allowing any of the lands to be sold, holding them permanently in public ownership.

This latter law would reduce taxes in Oregon one-half, as this State has 16,000,000 acres in the forest reserves worth $400,000,000. The profits from the sale of ripe timber would net the State at least 2 per cent a year on the value of the standing timber, or $8,000,000, and that amount is equal to one-half of all the taxes now collected annually in Oregon. And as only the ripe trees would be cut, giving the young timber a chance to grow up and replace the old, the present stand of timber would be preserved permanently.

Very respectfully,

A. W. LAFFERTY.

[This article was printed as a paid advertisement in the Oregonian August 22, 1914.]

SHIP PURCHASE FAVORED—WILSON LAUDED BY LAFFERTY FOR STEP TOWARD PUBLIC OWNERSHIP—MORGAN OPPOSITION SHOWN—NATION SHOULD ALSO OWN RAILROADS AND CITIES THEIR PUBLIC UTILITIES, SAYS CONGRESSMAN.

"President Wilson's advocacy of the bill to be introduced in Congress to-morrow for Government purchase of merchant ships belonging to belligerents has aroused the jealous attention of the maritime nations at war.

"Besides the international aspect of the question, there is another and serious one, which is brought to the attention of Secretary McAdoo to-day by J. Pierpont Morgan, the New York banker. Mr. Morgan offered objections to the plan for Government purchase of the Hamburg-American steamers on the ground that it is likely to lead to embarrassment to the Government in the end and be disadvantageous to the existing steamship lines."

The foregoing is from a Washington dispatch by John Callan O'Laughlin, printed on the first page of the Oregonian yesterday.

NEWS COLORED TO INFLUENCE PUBLIC.

This kind of "news" is intended to defeat Government ownership of merchant vessels.

Uncle Sam, being a neutral power, has the right to buy merchant vessels, if he so desires. No nation would have the right to capture or sink such vessels, unless at the time aiding an opposing belligerent by carrying to them arms or munitions of war.

The three big steamship companies crossing the Atlantic are the White Star, the Cunard, and the Hamburg-American Line. The first two are English and the last is German. We now have a chance to buy the vessels of the Hamburg-American line in our ports, and the President favors the idea. I stand with the President, and have wired the Clerk of the House to pair me for the passage of the bill if it comes to a vote before I arrive back in Washington.

FAVORS BUILDING GOVERNMENT SHIPS.

A year ago I delivered a carefully prepared speech on the floor of the House advocating the building and operation of a fleet of 200 large merchant vessels. Our exports being $2,000,000,000 a year and our imports $1,500,000,000, practically all of which is now carried both ways by foreign ships, we could well afford to build a fleet of our own. Such a fleet as I suggest would cost $800,000,000, or twice the amount of the Panama Canal.

I estimated the cost of each vessel at $4,000,000. At that price the ships would be the largest and finest in the world. It would require 60,000 bluejackets to man the 200 vessels, thus giving us the largest force of trained sailors in the world. The fleet would be auxiliary to our Navy, and would give to us such power on the high seas as has never been dreamed of by any nation heretofore.

But, at the same time, this fleet would pay for itself in less than 12 years, provided we carried only half our own outgoing and incoming commerce. We now pay ocean freights amounting to $350,000,000 a year on our over-the-seas trade. Should our fleet carry only half our commerce (and it would have the capacity to carry it all) our income would be $175,000,000 a year from freights. The mails and the passenger fares would meet the cost of operating the ships.

SEE WORLD UNDER AMERICAN FLAG.

Ownership by the Nation of such a fleet as I have proposed would enable Americans to travel anywhere under our own flag. It would give to our Republic the influence and power that it justly should have in shaping the destinies of nations. Napoleon had an ambition to be emperor of the world. My ambition is to see America republicanize the world by the force of her example.

Not only should we own the ships, but we should own all natural monopolies on land. The Government should own and operate the railroads, telegraphs, and telephones, and the parcel post should be made to supersede the express companies. The various cities should own their own water works, gas and electric light plants, street car systems, and local telephones.

COST OF LIVING WOULD BE REDUCED.

The American people now pay $30.57 each to the railroads per year. This is $152.85 that each family of five pays yearly. This transportation bill would be cut down at least one-half under Government ownership. We could buy the railroads to-day at their physical value if Congress would pass a law to that effect, and authorizing the sale of the bonds to pay for same. The roads would pay for themselves in less than 15 years at present rates, and in 30 years with the rates reduced one-half. No employees would be discharged. The Government now owns the Panama Railroad and steamship line, and it is paying over 30 per cent annual profits on its capitalization of $7,000,000.

Savings to the people through public ownership of telephones, telegraphs, gas and electric light works, and street car systems would be even greater in proportion than on the railroads, and would bring the total annual savings to each citizen up to at least $40 annually, or at least $200 a year to each family of five.

NATION ENSLAVED TO WEALTH.

To-day 200,000 men own 70 per cent of the wealth of the United States, leaving 99,800,000 people owning only 30 per cent. This condition has come about solely through private ownership of public monopolies, and resulting exorbitant charges exacted under cover of overcapitalization. That is why I favor taking over monopolies at their physical value for the public use, as our Constitution provides may be done. Otherwise we shall continue a Nation of slaves. There is no alternative. Commissions to "regulate" natural monopolies have failed. The monopolies have "regulated" the commissions.

The time has come to act. You elected me to Congress as an "Insurgent" against present conditions. I have kept the faith and grown stronger in it. If reelected, I shall return to Washington able to accomplish what you desire accomplished, and other Congressmen and aspirants for Congress will make the same fight I am making.

Very respectfully,

A. W. LAFFERTY.

[This article was printed as a paid advertisement in the Oregonian July 6, 1914.]

PUBLIC OWNERSHIP CHEERED BY 3,000.

Fully 3,000 people heard the Fourth of July address of Congressman LAFFERTY at the Lents picnic July 4, 1914. It required Mr. LAFFERTY only seven minutes to deliver his address. He was frequently interrupted by cheers, and at the conclusion the applause lasted several minutes. Mr. LAFFERTY said:

"Mr. Chairman, ladies, and gentlemen: After all, conditions have not changed so much in the last 138 years. July 4, 1776, found 3,000,000 Americans scattered along our Atlantic seaboard, all subjects of the money power of London, and nominally ruled by a King and a Parliament. King George was merely a tool of the money power then, just as our Government is a tool of the money power now. That power then desired to keep Americans under subjection indefinitely. It expected to reap untold wealth from the toil of the poor who had fled from England, Ireland, France, Germany, and Holland to make homes in a new world.

PEOPLE MORTGAGED TO MONEY POWER.

"The patriots of 1776 refused to stand for what they knew to be outrageous. They refused to be enslaved. They declined to stand idly by and see the chains forged for their children's children. So it happened that on July 4, 138 years ago to-day, the American patriots, through their representatives in Continental Congress declared their independence, and they made good that declaration upon the field of battle.

"Only a short time has passed since that—less than a century and a half—and while a great Republic has been filled with people, and these people have created tremendous wealth and made many inventions, the same money power is with us still, and it has received nearly all the financial benefits of our progress and invention. It has accomplished by bribery and corruption what its hirelings were unable to do upon the field of battle. It has completely enslaved the American people. Sev-

enty per cent of the wealth of America to-day is owned by 200,000 men, and many of them residents of London.

"To-day each of the 48 States of this Union are mortgaged to the money power, through public-utility corporations which are overcapitalized billions of dollars. Our farm lands alone are mortgaged to the manipulators of credit for $8,000,000,000, while our total stock of money in the United States is only one-third of that amount. Unless these mortgages be removed by fair legislation, providing for Government and municipal ownership of public utilities, and for agricultural asset currency, it is my opinion that our children and our children's children will remain enslaved to the money power for all the long future.

DEFINITE RELIEF PROPOSED.

"Representing the people of Multnomah County in the American Congress I have proposed laws for Government ownership, agricultural asset currency, and for an interstate trade commission with power to control industrial monopolies, even to the extent of fixing maximum prices. I have proposed a law giving to Oregon all the profits from her forest reserves which would reduce taxes in this State one-half, as one-half of the taxable wealth of the State is now kept off the tax rolls by being included in the forest reserves. I have started and pushed to the Supreme Court the railroad land-grant suit, which, if won in that high tribunal, as I believe it will be inside of the next year, will result in opening up to actual settlers 2,300,000 acres of the best lands in western Oregon. No plainer law was ever passed than the one making this land grant, and, if it can not be enforced, there is no use for Congress to pass any laws in the future. And now that the interests have found that I am in dead earnest and that I can not be bribed, they propose to retire me and put in my place one of their tools or a nonentity.

"The same blood that coursed hot through the veins of American patriots in 1776 is now beginning again to boil in the Americans of to-day. A new declaration of independence is long overdue. Multnomah County has sounded the battle cry in this new revolution. The eyes of Congress and of the Nation are upon the pending struggle in this district. The issues involved are clear cut. Let the battle of Concord be refought and won in Multnomah County November 3 next, and victory will follow in the entire Nation inside of five years."

[This article was printed as a paid advertisement in the Oregonian June 1, 1914.]

A PLATFORM THAT SPECIFIES.

I hereby declare myself a candidate before all the people, regardless of party affiliations, for reelection to the office in which I am now, and for 3½ years last past have been, serving all the people, and in which I expect to serve all the people for some years to come.

My name will be printed on the ballot in the regular way. Each voter on November 3 will be given an opportunity to cast a ballot either approving or disapproving my record in Congress.

SHOULD DEFEAT REWARD FAITHFUL SERVICE?

Between now and election day I shall make such a campaign as I have never made before. It is my candid belief that my defeat would postpone for at least 10 years a realization of national laws giving to the general public the prosperity and share of wealth produced which it deserves. If defeat should be my reward for drafting and fighting for such laws, no Congressman in the future could be expected to take up the same fight.

These are some of the things I am fighting for:

1. The enforcement of the Oregon & California Railroad land grant, that the majesty of a solemn act of Congress may be upheld and that thousands of poor people in Oregon may have homes. I started this litigation September 16, 1907, pushed it to a favorable decision before Judge Wolverton, in Portland, July 1, 1913, and, while I am writing this announcement, I am in San Francisco fighting the case in the United States circuit court of appeals. Ex-Senators Spooner and Gearin and Hon. W. D. Fenton and Mr. Peter F. Dunne are here representing the railroad. Mr. B. D. Townsend, who has represented the Attorney General since 1907, withdrew six weeks ago, and the Attorney General is represented by Mr. C. J. Smyth, of Omaha, and young Mr. Rabb, of Indiana, lately a special agent of the Land Office at Portland. I am the only man originally in the case against the railroad who is sticking to it, and I shall stick to the end.

GOVERNMENT UTILITIES TO PREVENT EXTORTION.

2. For Government ownership of railroads and Government or municipal ownership of all other public monopolies, to the end that the per capita charge for public utility service may be reduced in this country to cost, which would mean a saving annually to each citizen of at least $50.

3. For agricultural asset currency of exactly the same tenor and effect as the commercial asset currency provided for in the recent currency law, except that first mortgages on farms, not exceeding 50 per cent of the unimproved value thereof, shall be taken as security by the Government in place of personal notes, to the end that the $500,000,000 annual interest which our people are now paying to the money power, through the farmers, shall go to the Government—to the people—and not to the Rothschilds, Morgans, and Rockefellers. This bill alone would save the American people $5 a year each. Nobody would be hurt except the money power, which is now loaning "credit" to the farmers. The farmers have borrowed $8,000,000,000, while there are only $3,500,000,000 in existence in the United States, or but little more than a third of the amount the farmers alone have borrowed. The Government is better equipped to act as fiscal agent, hold the securities, and extend the credit than is any private bank. No wonder the Associated Press and the United Press and their newspapers are fighting me. The money power controls the news channels of this country. It would be idiotic not to do so, since it has the price.

WOULD ELIMINATE MONOPOLIES.

4. For a law making all press associations common carriers, to the end that any person or corporation may start a daily newspaper and compel the press associations to furnish their out-of-town service, and at a reasonable price, just as any citizen may now compel a railroad to carry him as a passenger if he tenders the fare. When I introduced this law Mr. Bond P. Geddis, agent at Washington for Mr. E. C. Scripps, asked me to let up on my fight for the bill, and to apologize for my statement in the CONGRESSIONAL RECORD that the press associations were controlled by the money power. Mr. Geddis told me that Mr. Scripps owned the Portland News; that Scripps also owned the United Press, or the majority of it, which serves both the News and the Journal in Portland; and that if I did not apologize and drop my fight Scripps would have his paper, the Portland News, fight me for reelection. I refused to surrender.

5. For an interstate trade commission, with powers to control private trusts, like the Steel Trust, the Tobacco Trust, the Oil Trust, the Harvester Trust, and all other trusts, even to the extent of fixing maximum prices to be charged for any commodity when found to be controlled by an absolute monopoly, pending the elimination of the monopolistic conditions and the restoration of free competition.

These are not empty promises. I have put all these propositions into the form of specific laws. All that would be required to realize them would be to elect 219 Congressmen—a majority—willing to serve the public. I have taken my office seriously; have worked like a slave the last 3½ years, and of course the interests will try to defeat me and put in a standpatter or a nonentity.

REFUSED BRIBE TO BETRAY PEOPLE.

I had not been in office six months until I was approached and offered a bribe to serve the "interests." I was offered a salary to serve as "attorney" for the "Coos Bay & Eastern Electric Co." I refused to be bought, and have kept the faith. I shall keep it hereafter, let come what will.

Had any fair presentation of the tremendous issues involved in this fight been made to the voters by the newspapers in the late primary I should regard the result as binding. But such was not done. Early in my congressional career the newspapers ridiculed me, and later, when I had been recognized by my colleagues at Washington and placed on the Committee on Interstate and Foreign Commerce, one of the most important committees of the House and the most important on which any Oregon Member serves, the newspapers then absolutely ignored me. The newspapers are impressed with a public interest, as has been held by the Supreme Court, and they have no right to close their columns to news concerning a public officer. But that is what the Portland papers did. And at the same time the public is helping to support the newspapers by carrying their papers through the mails for $20 per ton postage—almost free. The same papers complained bitterly because I sent a few speeches, not over 2 tons in three years, through the mails.

The newspapers did worse than to ignore the work I am doing in Congress and in the courts for the public. They actually tried to poison the minds of the public against me as an individual, well knowing that they could not attack my public record. The Oregonian closed an editorial supporting McArthur, Sunday before the primary, with the statement that "there are excellent reasons why LAFFERTY should be left at home." The Portland News, favoring McArthur's nomination, habitually followed the lead of the Oregonian and would close its editorials supporting McArthur and opposing me with the statement that "there are other reasons not necessary to mention why LAFFERTY should be defeated."

HURLS DEFIANCE AT NEWSPAPERS.

I refuse to be killed off politically by any such blank cartridges. I challenge these newspapers to produce leaden bullets, and show wherein I am unfit. If any person can show where I have ever been immoral, or committed any offense against any law of any country, I will resign from office.

As a capsheaf to the campaign of newspaper infamy, on the afternoon before the primary, large and glaring paid advertisements were inserted in all the afternoon papers, when it was too late for me to expose the fraud, headed: "Congressman LAFFERTY for prohibition." That piece of trickery alone cost me at least 3,000 votes. Every reader of the advertisements supposed I put them in the papers, and, of course, those who are against prohibition were incensed that I was using the influence of my political office in that fight. The advertisements were inserted by my political enemies, who well knew the head thereon was false, and who well knew that the printing of such advertisements, supposedly coming from me, would put me in a false light and cost me thousands of votes. I have taken no personal public stand for or against prohibition, and shall not try to influence the people either way on that subject. I shall vote for the resolution submitting the question to the States, if it comes to a vote before the November election, and if it comes to a vote after that, I shall vote as Multnomah County votes on the subject in November. No Congressman has any right to vote otherwise than as desired by a majority of his constituents, when that desire has been clearly expressed with notice in advance that the referendum vote of the people will be followed. That was the very principle of statement 1.

I want every voter to call to see me. I shall be home in a few days, and shall be engaged in the campaign every day until November 3, except such time as I may find it necessary to be in Washington.

Very sincerely,

A. W. LAFFERTY.

[This article was printed in the Oregonian as a paid advertisement August 19, 1914.]

LIST OF BILLS PASSED.

"LAFFERTY unblushingly claims to have a record of achievement. He has none."

The foregoing is from an editorial in The Oregonian of August 18.

LAFFERTY'S BILLS PASSED DURING SIXTY-SECOND CONGRESS.

The following is a list of my bills which were passed during the Sixty-second Congress, my first term:

H. R. 7690. To authorize the construction of a bridge across the Snake River at Nyssa, Oreg.

H. R. 14588. Granting a pension to Hattie Fordyce, $12 per month.

H. R. 15181. For the relief of Harry S. Wade, injured at Celilo Canal, appropriating $2,500.

H. R. 15182. Granting an increase of pension to George P. Walling, $30 per month.

H. R. 20956. Granting an increase of pension to Edmond Bonneau, $30 per month.

H. R. 26156. Granting an increase of pension to Daniel J. Haynes, $40 per month.

H. R. 22002. Innocent-purchaser act, relating to Oregon & California Railroad land grant. Under same $1,000,000, approximately, has been turned into the United States Treasury and the decks cleared to win the case against the railroad in the main case for the 2,300,000 acres of unsold lands.

H. R. 25971. For acquisition of a site and erection of a post-office building at St. Johns. Passed, appropriating $5,000 for site.

H. R. 17355. For the relief of Robert F. Scott. Passed House, appropriating $487.07. Did not pass Senate.

H. J. Res. 108. Loaning Army tents to Astoria Centennial.

H. R. 17838, 14675, 14699, 17840, 17841, 17842, and 17843, appropriating a total of $66,000 for final settlement with seven Indian tribes in Oregon and Washington, were favorably reported by the House Indian Affairs Committee, included in Indian appropriation bill and passed.

RECORD FOR PRESENT CONGRESS.

The following is a list of my bills so far passed during the present Congress:

H. R. 4380. Granting an increase of pension to Edward D. Hamilton, $40 per month.

H. R. 4961. Granting an increase of pension to Regina F. Palmer, $30 per month. Has not passed the Senate.

H. R. 9626. Granting an increase of pension to Joseph R. Brown, $30 per month.

H. R. 9627. Granting an increase of pension to Chester W. Lynds, $24 per month.

H. R. 11149. Granting an increase of pension to Frederick H. Rix. Passed House March 17, 1914. Rix died June 14, 1914, before Senate had acted on bill.

H. R. 8212. Granting pension to Susan R. Benson, $12 per month.

H. R. 1797. To authorize the establishment of fish-culture stations on the Columbia River or its tributaries in the State of Oregon, appropriating $50,000 for that purpose. Favorably reported by the House Committee on the Merchant Marine and Fisheries April 9, 1914, and included in omnibus fish-culture bill, H. R. 15505. Now on calendar.

H. R. 1234. Granting a pension to Nancy E. Tate, $12 per month.

H. R. 1242. Granting a pension to Mary Dager, $12 per month.

H. R. 1243. Granting a pension to Rebecca Crawford, $12 per month.

H. R. 1246. Granting an increase of pension to Rachel I. Holliway, $20 per month.

H. R. 1247. Granting an increase of pension to John Beazen, $40 per month.

H. R. 1249. Granting an increase of pension to Samuel W. McLean, $24 per month.

H. R. 1250. Granting an increase of pension to Robert D. Rector, $40 per month.

BENEFICIARIES RESIDE IN PORTLAND.

All of the persons mentioned in the foregoing private bills are residents of Multnomah County and most of them reside in Portland. A tremendous amount of work was connected with the securing of the passage of so many relief bills. Hundreds of affidavits were written and presented to the examiners of the committees. The granting of a pension by special act of Congress is never done except where the circumstances show that the applicant is deserving and that justice can not be done under the general law. As I have stated before, my private secretary, Richard L. Merrick, is entitled to the credit for my having secured the passage of so many private bills. He looked after the details of the cases and appeared with me before the Committee on Pensions.

INTRODUCED MANY OTHER MEASURES.

The foregoing list of 31 bills passed is only a small percentage of the bills I drafted and introduced. My bill providing for an eight-hour day for women in the District of Columbia was the first ever offered in Congress. The same is true of my bill for public ownership of the street railways in the Capital. LA FOLLETTE followed me six months in offering the eight-hour bill, and his bill became the law. CROSSER, of Ohio, followed me a year in offering a bill for public ownership of the street railways, and his bill has just been favorably reported to the House. I was first to introduce a bill providing for the loaning of Treasury notes direct to the farmers. The plan is now being seriously considered, but mine is the only bill pending which provides for agricultural assets currency.

I secured the first vote ever had in the House on the parcel-post law, when I offered an amendment to the Post Office appropriation bill in May, 1912, providing for a parcel post. It failed in the House, but was a law inside of three months.

HAS STOOD FOR THE PUBLIC.

The fact is that I have performed my simple duty and stood for the folks at home on all occasions. That is why I have shocked those who are in the habit of using Congressmen as mere tools of the various special interests, whose lobbyists infest our National Capitol. The interests also use the newspapers and magazines as powerful weapons with which to bludgeon timid Congressmen into line. I was either fool enough, or courageous enough, whichever you choose to call it, to tell all those in the habit of misusing your agents at Washington to go straight to the hot regions, and that will be my course hereafter if continued in office. November 3 will tell whether it pays to serve the folks at home or the greedy special interests present around the Capitol.

Very respectfully,

A. W. LAFFERTY.

[This article was printed as a paid advertisement in the Oregonian June 15, 1914.]

THREE YEARS IN CONGRESS REVIEWED.

The daily newspapers have for two years absolutely refused to print anything I was doing at Washington and have deliberately tried to deceive the people into the belief that I was not taken seriously in the National Capital and was not accomplishing anything there.

Let the public records speak for themselves:

At the beginning of my second term I was promoted from membership on the Committee on Irrigation of Arid Lands to the Committee on Interstate and Foreign Commerce. The latter is the highest committee on which any Oregon Member of Congress serves.

MODERN RULES PROPOSED.

On the first day of this Congress I was selected by the Progressives and progressive Republicans to present for adoption a complete new set of rules of procedure in the House, requiring, among other things, record votes in committees and in the Committee of the Whole House, so that the public may place responsibility for failure to report bills or to adopt them in Committee of the Whole. My motion to substitute these rules failed, but it received 6 votes more than the combined strength of the Progressives and progressive Republicans.

When the bill to repeal free tolls was reported to the House, I submitted a minority report. This report was copied in full in many eastern papers, but was not mentioned in a single Portland paper. By a vote of the House I was given control of a part of the time in the tolls debate. I parceled this time out among my colleagues opposed to the repeal, yielding first to one and then to another. Members get time to speak on a given bill by securing it from the one having control of it.

SENATE ADOPTS PROPOSALS.

When the interstate trade commission bill was reported to the House—also from my committee—I made a minority report recommending that the number of commissioners be raised from 3 to 7, and that the commission be given power to control monopolies as well as to "investigate" them. The House turned down my recommendations, but the Senate committee, where the bill is now pending, has adopted many of them. The Progressives and progressive Republicans voted for my proposed amendments in the House. During the present session of Congress I have secured the passage of 12 private pension bills, the largest number secured by any of the five Members of the Oregon delegation.

During my three years in Congress the appropriations for river and harbor work on the Columbia and Willamette Rivers have averaged $2,000,000 a year, the largest in the history of Oregon. Two years ago the river and harbor bill carried a larger appropriation for my congressional district, at that time taking in eastern Oregon as well as Portland, than for any other district in the United States. Yet they say I have done nothing in Washington but talk.

RECLAMATION FUND RETURNED.

My bill has been introduced at each session to compel the return to Oregon of the $7,000,000 she has contributed to the reclamation fund in excess of the amount she has received. The department has fought it and made adverse recommendations to the House committee, preventing favorable report. But I have kept at it, and only recently Secretary Lane, recognizing the justice of Oregon's claim, has ordered the building of the West Umatilla project, to cost $4,000,000.

I helped secure the passage of the Borah three-year homestead bill through the House. The department opposed it and finally succeeded in having an amendment added requiring that one-eighth be cultivated the third year—20 acres on a 160-acre homestead—which practically nullified the act as to western Oregon. The cultivation of 2 acres would be enough in a timbered country, and I have a bill pending to reduce the amount to 2 acres. I have a bill pending to eliminate all agricultural lands from the forest reserves and open them to homestead settlers only. The department opposes this bill also, and I shall not be able to secure favorable action unless the President comes to the aid of western settlers, which we expect him to do at the December session.

RAILROAD LANDS FOR SETTLERS.

For seven years I have worked on the railroad land-grant case without pay. The opening of that tract of 2,300,000 acres to settlers will be accomplished inside of two years if the people will back me up, and the result will be an increase in the value of every dollar's worth of property in western Oregon. June 1 the circuit court of appeals at San Francisco made an order certifying the case to the Supreme Court, thus saving at least three years of delay. I started this litigation September 16, 1907, and I appeared and argued the case at San Francisco. I shall appear in the case without pay in the Supreme Court at Washington this winter. I shall keep after this case, whether defeated or elected, but if I am repudiated by the very people I am working for it will probably mean the death knell of the case.

REDUCE OREGON'S TAXES.

My bill to convey the forest reserves in trust to the States wherein they are located would, if adopted, reduce the taxes of Oregon one-half for all time to come. Oregon has 16,000,000 acres in the forest reserves, worth $400,000,000. The taxes on that amount at 20 mills, the average rate in Oregon, would amount to $8,000,000 a year. These lands are kept off the tax rolls, so Oregon loses $8,000,000 in taxes annually thereby. My plan is to have the Government convey the forest reserves in trust to the States, not absolutely, but upon condition that the States shall not sell any of the lands, but shall hold them forever for forestry purposes, and shall only market the ripe timber from time to time, thereby keeping up the present average stand forever.

But the sale of ripe timber would net Oregon at least $8,000,000 a year and reduce her taxes one-half, thereby compensating the State for taxes lost, and, besides, would give Oregon people employment, and give us home rule. The department is against my bill. If Portland repudiates me, Congress will say that Oregon is also against the plan. I invented the plan, and am the only man who has such a bill pending.

Besides what I have done to bring about the consideration of laws for the benefit of Oregon, I have voted in the interest of the people on every question that has come up, and even my enemies do not deny this. The five big bills which I have helped to pass are the parcel-post, income-tax, direct election of Senators, currency law, and Alaska railway bill.

FOUGHT FOR PARCEL POST.

I secured the first vote ever had in the House on the parcel post, offering it as an amendment to the Post Office appropriation bill of 1912. My amendment was defeated, and the bill went to the Senate carrying no parcel-post provision. It was there that Senator Bourne secured the adoption of the amendment, giving to this country its first parcel post.

Senator CHAMBERLAIN'S bill appropriating $35,000,000 for the building of 1,000 miles of railway in Alaska is the most important bill of the Wilson administration, outside of the currency bill. I worked hard for the Alaska railway bill, having introduced the bill in the House as early as 1911, and I aided Delegate WICKERSHAM, of Alaska, the past winter in presenting the facts to the Committee on Territories, and on the floor of the House. Not one word concerning my work was mentioned in any Portland paper. This bill is bound to be of great benefit to Portland and the entire Northwest, as well as to Alaska.

During the consideration of CHAMBERLAIN'S bill Senator NORRIS offered an amendment for the building of 20 Government ships connecting the railroad with the States. The amendment received 9 votes and the promise of others when the matter shall come up as a separate bill.

GOVERNMENT UTILITIES NECESSARY.

This brings me to a brief consideration of Government and municipal ownership of public utilities, including steamships, railways, telegraphs, telephones, electric lights, gas works, and street car systems.

I am absolutely convinced that the cost of living will never come down to the average citizen until the Government shall take over all natural monopolies and furnish public-utility service to the country at cost. I am also convinced that no man or set of men has any right to own a public monopoly, upon which the public must depend for its very existence, and through which individuals can, and do invariably, charge the public exorbitant profits.

I am not in favor of confiscating the property of monopolies. I favor taking them over at their actual physical value, and thereafter furnishing the service to the country at cost. No one would be hurt thereby. Everyone owning stock in any public monopoly would receive all his property was worth. He would not be entitled to the speculative profits of the future.

PROFIT FROM GOVERNMENT SHIPS.

Recently I made a speech pointing out how the Government could build a fleet of 200 great ocean liners, the largest and finest in the world, to cost $4,000,000 each, making the total cost $800,000,000, or twice the cost of the Panama Canal, and could yet pay for same in less than 12 years by carrying only half our outgoing and incoming commerce, at the rates at which it is now carried by the Ocean Steamship Trust. This fleet would have the capacity to carry all our commerce.

Since I made that speech Senator LEWIS, of Illinois, has introduced a bill in the Senate providing for 100 Government ships. His bill also provides for Government acquisition of the railroads. We could take over the railroads at the price they claim they are worth, increase the wages they are paying, and then pay for the railroads in 15 years. But if we take them over it will be at their physical value, which is about half their claimed value, and it is upon the latter that they are now charging the American people freight and passenger tariffs to the tune of $30.57 per capita per year.

BUSINESS REVIVAL DUE.

The Glass-Owen currency bill will soon be in operation, and it will revive business and give to our people as much prosperity as we have ever enjoyed. But even then they will not be getting what they are entitled to, nor will they get their full dues till the measures I herein advocate are passed. But the currency law is a great measure, and it is by far the biggest bill of the present administration.

By the new currency law the country is divided into 12 regional reserve banks. San Francisco is headquarters for this district. Each bank within the district subscribes to the regional reserve association's stock to an amount equal to 20 per cent of the stock of the local bank. When the 12 regional reserve banks are so organized, which will be within a very few weeks now, the Government is going to loan to the regional reserve banks all the currency they desire on collateral security. The modus operandi will be this: A local business man wanting to borrow $10,000 or any other amount will go to the local bank and deposit his note for 90 days for the amount he borrows. The local bank will indorse the note and forward it to San Francisco to the regional reserve bank where it will be again indorsed. Then the Federal reserve agent, one of whom will be stationed at each regional reserve bank, will accept the note as collateral security for the loan to the regional reserve bank of Treasury notes of the United States for the full amount of the note so deposited as security. The Government is only going to charge one-half of 1 per cent interest for the loan of the Treasury notes. The Treasury notes purport on their face to be obligations of the United States, and are redeemable in gold at the Treasury of the United States on demand.

Interest rates, even on short-time loans, ought to come down to 4 or 5 per cent under the new law. One London writer says that America's new currency law will have a greater effect on the business of the world than will the opening of the Panama Canal. Certain it is that we shall have no more artificial panics, as men can hereafter get money so long as they have property. This is what we call "asset currency."

SHOULD LOAN TO FARMERS.

My bill for the loaning of Treasury notes of the same tenor and effect to the farmers upon first mortgages not exceeding 50 per cent of the unimproved value of their farms, and at 2 or 3 per cent interest—much more than we are to charge the banks—has received favorable comment from farm journals all over the country, but has not been mentioned in Portland. Of all the rural credit bills pending, mine is the only one which proposes loans of Treasury notes direct to the farmers. The other bills authorize the farmers to "organize" for the purpose of borrowing money. They can do that without an act of Congress. My agricultural asset currency bill, if passed, would be the greatest stimulus to farming ever enacted in the way of law. It would save to the people the $500,000,000 in interest which the farmers are now paying yearly to the money power for the loan of "credit."

Are you surprised that I am hard fought? Look out for real war between now and November 3.

Very sincerely,

A. W. LAFFERTY.

Clayton Antitrust Bill.

EXTENSION OF REMARKS

OF

HON. MARTIN B. MADDEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 28, 1914.

Mr. MADDEN. Mr. Speaker, the Clayton bill, so called, has now reached the final form in which it is about to go on the statute books among the laws of the Nation, and the time is ripe for some one to show that what are claimed in this bill to be safeguards to labor's rights, and beneficial to workingmen, are, when not mere Democratic shams and subterfuges, a great deal worse for labor than no legislation at all. I have confidence that intelligent men of labor, throughout the country, are tired of empty platitudes and glittering generalities, and are eager when interested politicians are trying to convince them that things have been done for them to have the record shown, and to see what has been done to them.

A great deal of mere cant and empty platitude vaguely bearing on this bill has been placed in the CONGRESSIONAL RECORD and sent broadcast through the country; but in it all you will find little that even purports to point out and specify what the bill contains or to explain its real effect upon the status and rights of labor. All of it has been thus far designed to make the false impression that great service has been performed for workingmen and that the Democratic Party has performed its platform pledges; but not one Democratic Member of this House, when the bill was being debated, dared attempt a specific statement of its legal effect, and even the special labor representatives, elected on that party ticket, sat speechless when amendments were being proposed by Republicans, who were merely endeavoring to see that justice was done. Not only so, but these special labor Democrats united with the other Democrats in voting down and speaking against important amendments which would have removed some features of the bill which the heads of labor organizations now realize are exceedingly vicious and vastly prejudicial to labor's interests.

A comparison of Democratic promise and Democratic performance nessitates a brief review of party history. I presume I need not emphasize the enormity of the wrong done when a great political party deliberately violates the solemn pledge contained in its platform, whether the pledge be to a class or to the entire electorate. In our country, and necessarily in a representative government, such betrayal has been regarded as peculiarly odious and unforgivable.

I will say at the outset that I am not to be understood as advocating any particular measure for labor's benefit, because, owing to political conditions in Congress, it would be a waste of time for me to do so. I may also say that since I have been a Representative I have never failed to support a measure calculated to promote the real interests of labor.

Without exploiting political history in detail it should be stated that prior to the last presidential election the important demands of labor's representatives for congressional action were these: First, believing themselves menaced in their organized relation by the application of remedies under the Sherman Antitrust Act they sought a clear and explicit declaration which would leave their status no longer doubtful and would free them from the menace of proceedings against them. Second, believing themselves to be unequally and unjustly dealt with in injunctive proceedings they demanded that jurisdiction to issue injunctions and restraining orders should be better defined or limtied. Third, as an additional safeguard against injustice they demanded provisions in the law which would allow jury trials in contempt cases.

Upon each of these propositions declarations were made in the Democratic platform of 1912. The pledge of exemption from prosecution under the antitrust act was in these words:

> The expanding organization of industry makes it essential that there should be no abridgment of the right of the wage earners and producers to organize for the protection of wages and the improvement of labor conditions, to the end that such labor organizations and their members shall not be regarded as illegal and combinations in restraint of trade.

In sober truth all the clamor about an application of the Sherman Act to labor unions, contrary to the intentions of its authors, was due to a wild vagary or hallucination. It was much ado about nothing, and often took the form of willful distortion and perversion of truth. The authors of the Sherman Act did not, as has been repeatedly shown, expressly exempt labor unions, because they well knew that no such exemption was needed. But assuming, without debating the question, that labor's demand for an express exemption, as promised in the Democratic platform, was meritorious we come directly to a comparison of promise and performance. The so-called exemption in this act, formerly section 7, reads as follows:

> SEC. 6. That the labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purposes of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws.

The sentence with which it begins, "That the labor of a human being is not a commodity or article of commerce," is a mere truism, never seriously controverted by anybody; but it conspicuously omits to include the wages of labor, and for that reason may work mischief hereafter when labor organizations, in combination, attempt to have their wages increased. While it is true that labor is not a commodity or an article of commerce, it is only true in the abstract. Nearly all contracts create merely a personal relation, and confining our attention to that phase of contracts, the same declaration as in this section might be made as to all contracts; but the view that labor contracts are things of value in the world's commerce and industry has often served labor well. Upon any other theory it is doubtful if Congress would have the power to come to labor's aid, even as is attempted in this section; and if the courts should seriously accept that declaration as sound law, it may work to labor's prejudice; but when Democrats were catering to the delusion of some supersensitive but misguided

leader of labor and putting in that expression, why did they omit its equivalent as affecting the relation of the employer to his avocation? For years labor has contended that the mere right to do business is not property or a property right. Here was an excellent opportunity to have the whole idea rather than part of it given recognition. The skillful phraseologist appears to have had much to do with this as with other parts of the bill.

Now, there are two fatal defects in the exemption section which need only to be mentioned to be clearly seen—first, by leaving absolutely to the courts the determination of what are the legitimate objects of labor organizations, all the decisions which have been the subjects of persistent complaints by leaders of labor are left unaffected and in full force, and these decisions and precedents, rather than any views of Democratic or labor leaders, will control future decisions; secondly, the entire section was given a form which renders it obviously and conspicuously unconstitutional. How easily might the legislative declaration have been made, such as labor desired that it should be, in plain, direct, and unambiguous language, which is the usual and normal form of statutes passed by Congress. That was clearly involved in the carrying out in good faith of the Democratic Party pledge. But a stilted, sinister form of expression was employed, because apparently the large employing interests of the country would not be entirely satisfied with the legislative abortion unless the stamp of unconstitutionality was deeply and indelibly stamped upon it. Of course, no lawyer need be told that a direction to a court that it shall construe a statute so and so is of no more force or effect than so much blank space on the printed page. The courts, coordinately created by the Constitution, will not allow their proper domain to be thus invaded by the legislative department. And thus the only substantial provisions of section 6 are studiously placed under the nullifying formulas "shall not be construed to forbid" and "nor shall such organizations or the members thereof be held or construed," and so forth. But in order to even more strongly guarantee the employing interests against the danger that some remnant of vitality might remain in the exemption clause, the right conceded in the bill that the unions may carry out their "legitimate" objects is skillfully qualified by the insertion, before the words "carrying out," of the word "lawfully." The effect of this is to unequivocally confirm to the courts the power already possessed to determine, as heretofore, the legality or legitimacy not only of their purposes but of the means employed to accomplish them. Thus Congress again invites the attention of the courts to and fixes their attention upon the fact that the legislation, aside from any constitutional question, is a mere faux pas, innocuous and farcical in substance as well as in form.

Next I come to the matter of injunctions in labor cases, and here I also will compare party pledge and party performance. I will at this point limit myself to the most recent declarations by the national conventions of the Democratic Party, and further along will review briefly its serpentine trail on the subject, ending at this session of Congress in a shameful betrayal and ignominious surrender to opposing interests.

In the Democratic platform of 1912, among other declarations, was the following:

RIGHTS OF LABOR.

We repeat our declarations of the platform of 1908, as follows:

* * * * * * *

"Questions of judicial practice have arisen, especially in connection with industrial disputes. We believe that the parties to all judicial proceedings should be treated with rigid impartiality, and that injunctions should not be issued in any case in which an injunction would not issue if no industrial dispute were involved."

Conspicuously appears the fact that this is literally copied from the platform of 1908, and the meaning annexed to it by the leaders of the party and accepted by the leadership of labor organizations as well as by large numbers of the rank and file of labor, in the prior campaign as well as in that of 1912, is of undoubted importance on the question of performance or nonperformance.

We must go back to the Fifty-ninth Congress for a clear understanding of the obligation assumed by the Democratic Party. Labor organizations had prior thereto advocated various anti-injunction bills, so called, not one of which was entirely acceptable to either political party represented in Congress or entirely acceptable to labor organizations themselves. But in April, 1906, a bill was introduced by Hon. George A. Pearre, a Republican, upon which labor at once united and succeeded in enlisting in its support the entire Democratic minority in the Judiciary Committee of the House. It would be well worth while for those desiring complete information on this subject to read the Pearre bill, because it embodies the full measure of labor's demands upon Congress for legislation during several years and four political campaigns. I will insert it here, so as to preserve it for reference:

A bill to regulate the issuance of restraining orders and injunctions and procedure thereon, and to limit the meaning of "conspiracy" in certain cases.

Be it enacted, etc., That no restraining order or injunction shall be granted by any court of the United States, or a judge or the judges thereof, in any case between an employer and an employee, or between employers and employees, or between employees, or between persons employed to labor and persons seeking employment as laborers, or between persons seeking employment as laborers, or involving or growing out of a dispute concerning terms or conditions of employment unless necessary to prevent irreparable injury to property or to a property right of the party making the application, for which injury there is no adequate remedy at law; and such property or property right must be particularly described in the application, which must be in writing and sworn to by the applicant or by his, her, or its agent or attorney. And for the purposes of this act no right to continue the relation of employer and employee or to assume or create such relation with any particular person or persons, or at all, or to carry on business of any particular kind or at any particular place, or at all, shall be construed, held, considered, or treated as property or as constituting a property right.

SEC. 2. That in cases arising in the courts of the United States or coming before said courts, or before any judge or the judges thereof, no agreement between two or more persons concerning the terms or conditions of employment of labor, or the assumption or creation or termination of any relation between employer and employee, or concerning any act or thing to be done or not to be done with reference to or involving or growing out of a labor dispute shall constitute a conspiracy or other criminal offense or be punished or prosecuted as such unless the act or thing agreed to be done or not to be done would be unlawful if done by a single individual, nor shall the entering into or the carrying out of any such agreement be restrained or enjoined unless such act or thing agreed to be done would be subject to be restrained or enjoined under the provisions, limitations, and definition contained in the first section of this act.

SEC. 3. That all acts and parts of acts in conflict with the provisions of this act are hereby repealed.

Now that, by the force of the majority, directed by a Democratic hierarchy, having its seat of power in the White House, the Clayton Act has passed it may be at least a decade or much longer before labor can recover its lost ground and stand in the progressive position occupied by it when it stood behind and urged the enactment of the Pearre bill.

The moment that Democratic Representatives learned that the Pearre bill was satisfactory to the labor organizations they assumed sponsorship for it. Many speeches in its favor were made by them in the closing hours of the first session of the Fifty-ninth Congress, and used in the campaign of 1906. In the short session of the Fifty-ninth Congress a motion in the committee to report it was only defeated by one vote, the committee being two to one Republican; and in the closing hours of the Sixtieth Congress, in the spring of 1908, a motion to make its enactment part of the Republican program of legislation was defeated in a Republican conference by only seven votes. Nevertheless, as is well known, in that year the Democratic platform adopted at Denver was penned by William J. Bryan. He was visited by the officers of labor organizations at his home just prior to the convention, and the platform declaration on the subject of injunctions, which I have already read, was agreed upon and accepted as entirely satisfactory and as amounting to a party pledge to enact the provisions of the Pearre bill in case of Democratic success. The proofs that such was the understanding between Mr. Gompers, Mr. Bryan, and Democratic leaders generally are overwhelming. The principal advocacy of that plank devolved on Mr. Gompers and other labor leaders, who entered into the contest heartily and actively supported Mr. Bryan for President and Democratic candidates generally. Mr. Bryan carefully avoided that part of the platform, and in so far as he referred to labor and capital at all in his speeches indulged in glittering generalities. But the labor leaders openly and confidently asserted that Democratic success meant the enactment of the Pearre bill. Their assertions went uncontradicted during that campaign and were reiterated and uncontradicted during the entire campaign of 1912.

About two weeks prior to the election in 1908 President Roosevelt published a statement calling attention to the statements which were being made by Gompers and others, denouncing the policy of the Pearre bill, and insisting that Mr. Bryan either admit or deny that there was such an understanding as that claimed by Gompers and others. Mr. Gompers promptly volunteered to answer, reaffirming his previous statements; but Mr. Bryan was silent. At the end of three or four days, however, Bryan, upon urgent demands of labor leaders, as well as of the press and public, put out a statement the substance of which was that Gompers had already correctly answered Roosevelt.

At the 1910 election the Democrats got control of the House by a good working majority, and Mr. Gompers promptly put in an appearance, full of confidence. Mr. William B. Wilson, the new chairman of the Committee on Labor, promptly introduced a bill which naturally became known as the Wilson bill. With an

immaterial variation, it was an exact reproduction of the Pearre bill. Mr. Gompers took charge of his own fight, and felt so confident that he went against the opposition before the Judiciary Committee single handed. Others had made the fight for it when difficulties were great and the whole situation discouraging. Now, since the Democrats on the committee had stood for the Pearre bill; now that the committee was two-thirds Democratic; now that Mr. Bryan, the party leader, had during the 1908 campaign fully obligated himself, Gompers felt that the fight could be won by his own unaided efforts. But he soon found that Democrats with only the power to promise what they will do when given the opportunity are not the same Democrats, even if the same individuals, when possessing the power of performance. The Wilson bill was cut and slashed, reintroduced, reconsidered, put into the junk heap, dug out, revamped, and then introduced a third time. It was even then a pretty fair measure, as compared with the Clayton bill of the same session, though falling far short of what labor had demanded. There was a general understanding that in its final form it would be reported. But in an evil moment the attorneys for the National Manufacturers' Association and American Antiboycott Association got a peep at it, and from that hour its fate was sealed.

The next step taken by Mr. Gompers was to secure the introduction of the Bartlett bill. The Labor Committee promptly reported it, and a struggle began for a special rule which would permit its consideration. But, though the strategy of Mr. Gompers and his associates was fine, they soon discovered that their influence with the Democratic House organization was nil. No rule could be obtained, and the Bartlett bill went to keep the company of the Wilson bill, into the congressional wastebasket.

The Clayton injunction bill of the Sixty-second Congress was then reported and passed by the House and smothered in due course by the Judiciary Committee of the Senate. Among the minor objections to it were that it was unconstitutional, ambiguous, incongruous, and unintelligible. The session was coming to a close, and Mr. Gompers realized that he had lost his fight.

But the national Democratic convention was about to meet, and to that Gompers turned his eyes; to that he riveted his faith. Naturally he felt encouraged upon finding his old-time yokemate and coworker, Bryan, in full control of the platform committee. And his confidence was fully restored when he found the 1908 declaration in the platform, word for word.

Now, in all seriousness, Mr. Gompers and his organization were justified in voicing a sense of security when at the election in 1912 they saw a Democrat—well, anyhow, Mr. Woodrow Wilson—elected to the Presidency, with a Democratic House, and a result otherwise assuring a Democratic Senate. And a fuller confidence was, no doubt, felt by them when, on the day of Mr. Wilson's inauguration they saw that same old-time ally, Mr. Bryan, sworn into the office of Secretary of State, with all the incidental authority and influence. And those who have been interested in all this spectacular farce of legislation, with its tragical sequel, so far as labor is involved, have marveled at the attitude of cool indifference and the sphinxlike silence of Mr. Bryan when he was appealed to, according to circumstantial statements published at the time, to come to their aid in behalf of amendments they were endeavoring to have inserted in the Clayton House bill. But whether appealed to or not would seem to be immaterial in view of his past relations and continuing obligations. Possibly he looked upon this as public business which should not be allowed to interfere with his private business as a Chautauqua lecturer.

The Bartlett bill, of the Sixty-second Congress, was reintroduced at the first session of this Congress immediately upon the inauguration of Mr. Wilson and organization of the House, and referred to the Judiciary Committee. The members of that committee had scarcely taken their seats at their first meeting in the regular session when Mr. Gompers appeared, affable and confident, to ask that the Bartlett bill be promptly reported. Surely, considering all that had gone before, he had only to ask in order to receive, "in full, heaped, and rounded measure."

The Bartlett bill was promptly and unceremoniously laid aside, and all labor legislation was hotchpotched with trust legislation and legislation of several other kinds—all find lodgment in the bowels of that wonderful document known to fame and otherwise as the Clayton bill. When it came into the House, six months of the session were gone. Nobody knew what the bill meant or has ever been able to find out; but all could readily see the freakish and gruesome phase of the so-called labor provisions; all except those who were hypocritically playing the rôles of special friends of labor among the Democrats. These, by some strange perversity, had lost their tongues or been gagged in the party conference held during the period of the bill's incubation.

But even the most friendless culprit excites a certain interest and becomes an object of pity even among strangers when deserted by all his former friends. The unfriendliness to labor of the provisions bearing on labor and the wide divergence between them and what labor had persistently demanded excited comment and drew expressions of condemnation from unexpected sources even after it had developed in debate on this floor that those provisions had been accepted by the heads of the labor organization, and even after it was admitted by Mr. HENRY, chairman of the Rules Committee, and other Democratic leaders in the House that they had been submitted to and approved by President Wilson.

After the worst phases and most pernicious legal effects of the labor sections had been called to the attention of the official heads of the American Federation of Labor, the O. K. which had been previously placed on them by Mr. LEWIS, chairman of the Labor Committee, was repudiated by them, and several radical changes were submitted by them to the President and promptly rejected. And yet these special representatives sat silent and indifferent while provisions were being enacted which placed the labor of the country more completely at the mercy of the courts and in a much worse condition generally, from a legal standpoint, than if there had been no attempt at legislation whatever.

And so, with formal and colorless amendments—not real amendments at all, but mere sops—the bill passed the House containing these and all its other abortions and abominations.

I wish now, with as much skill as is possible for one making no pretentions to technical legal learning, to point out, with due attention to all important details, the parts of this act bearing on injunctions and to state their legal effect in order that it may be clearly seen that my criticisms are based on the record and are not mere assertions of my own views. I exposed the shortcomings of the bill before it went to the Senate, but although I then thought it impossible that it could be made worse, the bill comes back with various expurgations and several new twists in its phraseology, making it necessary to go over much of the ground previously covered by me, but with new adaptations. Much time and space would be required to discuss all of these. One of them I need only refer to for a complete understanding of its effects by labor organizations and their members, who are familiar with the uses of "blanket" injunctions and restraining orders. In section 19 of the final print of the bill the words "or participating" were inserted after the words "in active concert." The effect of this is to make persons liable to contempt proceedings for violating an injunction or restraining order, though they may have acted without knowledge thereof, and though their only specific intent in the action which they took was to carry out what they honestly and innocently believed to be the legitimate purposes of their organization.

I stated on the former occasion, and now repeat, that if the labor leaders believed the matter of injunctions as important as they professed to believe, and believed that the Democratic Party on coming into power would live up to its pledges and pretenses on the subject, they were justified in supporting the candidates of that party; and now that its pledges have been outrightly and flagrantly violated, I am justified by the same logic in warning labor of the folly of retaining a continuing trust with it, or of again trusting it or any of its candidates for a legislative or an executive office. I have already quoted the Pearre bill, and the Wilson and Bartlett bills contained substantially the same provisions. Section 20 of the Clayton Act is paraded by Democrats as a fulfillment of the pledge given to labor to enact the provisions of the Pearre bill, and the only way to compare the two enactments within any reasonable space of time is to state what they respectively provide or declare. Section 1 of the Pearre bill would have prevented the issuance of injunctive process of any kind between parties holding the relations mentioned in said section "or in any case involving or growing out of a dispute," and so forth. If the application to the court stated a case which involved or grew out of a labor dispute, however remotely, the court was forbidden to enjoin the impending act or conduct, even though it consisted in a boycott or involved forcible coercion, "unless necessary to prevent irreparable injury to property, or to a property right, of the party making the application for which injury there is no adequate remedy at law"; but the more effective force of the Pearre bill remains to be stated. As a complete forestallment of any court when asked to issue an injunction in cases involving or growing out of labor disputes, it also contained in the first section these words:

And for the purposes of this act, no right to continue the relation of employer and employee, or to assume or create such relation with

any particular person or persons, or at all, or to carry on business of any particular kind or at any particular place, or at all, shall be construed, held, considered, or treated as property or as constituting a property right.

Labor's representatives argued with enough force to almost convince a majority of a Republican committee, and afterwards its propaganda almost won a majority of a Republican caucus to this principle as one founded in justice and equity. The declaration in the Pearre bill dealt with the relation of the wage earner to his employment as being the same as that of the business man to his business, and as having the same status with reference to injunctive processes, and it must be admitted that if Congress assumes to deal with the one it should also deal with the other. Referring now to the first sentence of the so-called exemption section a gross injustice is seen to result from denying any value to a contract of employment and leaving the employers' avocation to be still treated by the courts as a property right entitled to protection by injunction. Surely no sane friend of labor's cause ever suggested the discriminating first sentence of that section.

Section 2 of the Pearre bill gave labor just what it has always claimed it was entitled to, no more nor less, and gave it in plain, direct, and unambiguous language. If labor had stood by that bill and been able to procure its enactment, there never could have been a dispute or quibble over the question of whether the antitrust act still applied to labor organizations or their aitivities. If any such theory could ever be advanced as that acts done to carry out their objects were within that statute, the second section would, if enacted, have stood like a stone wall against such theory. And it would have accomplished the purpose without expressly changing the Sherman Act or even mentioning it. One only has to read as I have quoted it in order to see that my statement is absolutely true.

Section 20 of the Clayton Act reads thus:

SEC. 20. That no restraining order or injunction shall be granted by any court of the United States or a judge or the judges thereof in any case between an employer and employees, or between employers and employees, or between employees, or between persons employed and persons seeking employment, involving or growing out of a dispute concerning terms or conditions of employment, unless necessary to prevent irreparable injury to property or to a property right of the party making the application, for which injury there is no adequate remedy at law, and such property or property right must be described with particularity in the application, which must be in writing and sworn to by the applicant or by his agent or attorney.

And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from terminating any relation of employment or from ceasing to perform any work or labor or from recommending, advising, or persuading others by peaceful means so to do; or from attending at any place where any such person or persons may lawfully be for the purpose of peacefully obtaining or communicating information; or from peacefully persuading any person to work or to abstain from working; or from ceasing to patronize or to employ any party to such dispute; or from recommending, advising, or persuading others by peaceful and lawful means so to do; or from paying or giving to or withholding from any person engaged in such dispute any strike benefits or other moneys or things of value; or from peaceably assembling in a lawful manner and for lawful purposes; or from doing any act or thing which might lawfully be done in the absence of such dispute by any party thereto; nor shall any of the acts specified in this paragraph be considered or held to be violations of any law of the United States.

The first paragraph of the section is put forth as a fair substitute for section 1 of the Pearre bill, but the substitution is a cruel mockery. The words in the Pearre bill "between an employer and employee, or between employers, or between persons employed to labor and persons seeking employment as laborers, or between persons seeking employment," are really superfluous, as they are also in section 20 of the Clayton Act. The clause just quoted was probably used in the Pearre bill to cover some case that might possibly arise but which seldom could arise. But anyone can see the wide range of cases covered by the clause "or involving or growing out of a dispute," and so forth, and can also see the far-reaching effect of omitting in this section 20 the word "or," with which it is introduced. The effect is to change the clause from a provision creating an almost limitless class of cases which the exemption from injunction process would have embraced to a clause qualifying a class of cases which was already almost purely theoretical and speculative. The section as enacted can never be available or afford any relief after the relation of employer and employee has been severed or terminated by a strike or lockout, and it is then, if ever, that protection against arbitrary injunctive and restraining orders is needed. No one ever heard of the power of the court being invoked to protect by injunction anyone against another prior to the severance of relations, nor did anyone ever hear of employers or persons out of employment, or seeking employment, applying for an injunction against each other. Much less are any of those holding such relations or seeking employment ever likely to apply for an injunction to protect property or property rights, and each of these phases or elements must be present as conditions precedent to the operation of the prohibition against use of injunctive process as found in section 20.

In other words, no area or space of jurisdiction is covered by it for any practicable purpose when the limitations are considered and given effect. The section is a mere string of words, meaningless and nugatory. They were obviously intended to be so.

And we find any conceivable value or utility that might otherwise have attached to section 20 destroyed because of the fact that its second paragraph is tied to its first by the word "such," appearing in the first line of the second paragraph. Supposing, however, that any court might ever be called upon to consider this section at all, it would have to make note of the words "lawful," "peaceable," "lawfully," and "peaceably," studiously and frequently interjected. The use of these words throws the whole of any such case as might be brought before a court wide open to general principles, and would compel the court to resort to the whole body of the law in reaching a decision, regardless of anything contained in this section. In other words, the court must apply its independent views of jurisprudence to the case in determining the legality of the conduct of the party or whether his conduct was peaceable, just as if Congress had not spoken at all. And for these reasons it may well be doubted whether even the primary boycott will hereafter be held to be lawful and exempt from injunction.

Great stress has been laid by those responsible for this section upon the words "nor shall any of the acts specified in this paragraph be considered or held to be violations of any law of the United States," which are found at the end of the section. In view of the studious insertion of the qualifying terms which I have just now discussed, the addition of the clause does not appear to affect the meaning of the section in the slightest degree.

When the Clayton bill was brought into the House by the Judiciary Committee this section ended with the word "thereto," where we now see the semicolon. The representatives of labor were very much dissatisfied with the section as reported; in fact, they were furious. They went to the Judiciary Committee with a proposed amendment, which would have added, after the word "thereto," the substance of section 2 of the Pearre bill. A conference was held between them and the Democratic members of the committee, the upshot of which was a visit to the White House. President Wilson flatly refused to approve the proposed addition. Then occurred one of those strange and mysterious compromises which tend largely to discredit legislation and destroy public confidence in the good faith and integrity of their Representatives. With all the gravity and solemnity that might characterize the christening of a prince of the royal blood or a state funeral this tail was strung to the section, on motion of the chairman of the Judiciary Committee, its adoption being secured by sheer numerical voting strength of the Democratic majority. The amazing announcement was then made by him that the amendment made the section and the bill satisfactory to labor, as represented by the American Federation of Labor and the special labor Members of the House. And it is one of the things beyond human wit and wisdom that such a coup, so patent and, I fear, so fateful in its results, could come off in broad daylight and receive the approval of all the Democratic Members of the House who claim to be the special champions of labor's cause. Upon that occasion the chairman of the Judiciary Committee used these words:

Mr. Chairman, we are frank to say, in our opinion, everything set forth in section 18—

That being then the section number of what is now section 20—

is the law to-day.

That was equivalent to an admission that the whole subject was being trifled with for a sinister and unavowed purpose; and I know of nothing more reprehensible than for the majority party in a legislative body to consume days, weeks, and months, at enormous public cost, in the enactment of futile statutes, in the passage of bills which neither change nor add anything to existing laws, with no other purpose than to gain a temporary political advantage by misleading and bamboozling part of the electorate. There can be no stronger exemplification of unscrupulous, unconscionable, accursed party rule. In this instance, however, we shall not only see a miscarriage of the shameful intrigue but a reprisal.

Owing to a widespread misunderstanding among employers, a flood of protests came to Congress and to the White House against the section, and the President and Democratic leaders were so apprehensive that the employing interests would become prejudiced against them that they were profuse in conciliatory declarations contained in interviews given to the press, to the uniform effect that the legislation was really colorless and that the law would remain as before. Indeed, there were ample grounds for all these assurances and reassurances, though complete candor would have required admissions that the law as changed was much worse for labor than no legislation at all.

I have already shown that almost the entire field of jurisdiction to use injunctive process is left untouched by the section which I have been discussing. It is doubtful if a case will ever arise in which the provisions of that section can be invoked in labor's interest. But conceding that there may be some little margin or aperture of jurisdiction in which it may become operative, then it must be admitted that all the jurisdictional field not so included is excluded according to a well-known canon of construction. But section 17—formerly 15—is a confirmation of the entire field of jurisdiction outside section 20; that is to say nearly the whole area of jurisdiction in labor cases will be covered and controlled by section 17, unmodified and unaffected by the provisions of section 20.

As finally amended and passed, all of section 17 necessary to be here discussed reads as follows:

SEC. 17. That no preliminary injunction shall be issued without notice to the opposite party

No temporary restraining order shall be granted without notice to the opposite party unless it shall clearly appear from specific facts shown by affidavit or by the verified bill that immediate and irreparable injury, loss, or damage will result to the applicant before notice can be served and a hearing had thereon.

Very little attention has been given to the substance and real effect of this provision because contained in a part of the act having notices in injunction cases for its subject matter. But its actual result is concealed or disguised by cunning phraseology and arrangement. It crystallizes as statutory law the exact reverse of labor's contentions of many years past and gives to opposing interests more than they have ever dared demand at the hands of Congress. Although dealing nominally with the subject of notice, the section also deals with conditions under which injunctions may be granted, thereby regulating and fixing boundaries of jurisdiction. And jurisdiction, its nature, scope, and limitations, have been the very matters in controversy during all the years that the subject of anti-injunction legislation has been before Congress.

In the closing days of the Fifty-ninth Congress some 15 or 20 speeches were made by Democratic Representatives in advocacy of the principle of the Pearre bill and in defense of the proposition that the jurisdiction to grant injunctions could only be exercised to protect property or property rights, and that mere personal rights could not be protected; that for infractions of personal rights legal remedies were adequate. The proposition as thus stated is one the soundness of which was never, until the passage of this act, assailed from any source, the disputed point having always been as to what rights were included within the one class or the other; and it was the main purpose of the Pearre bill to exclude the mere right to do business from the category of property rights. But with the enactment of this section as read it is wholly immaterial whether the right to do business be considered as of the one class or the other, because the language completely wipes out the dividing line between personal rights and rights of property. And after the passage and presidential approval of this act, containing section 17 as read, if the courts see fit to use the injunctive process to the extent here authorized, no legal reason can be interposed, as might have been heretofore, when they enjoin or restrain workingmen from marching on the street in front of the applicant's store, or even from striking for a reason which does not commend itself to the court as "lawful," if he be only willing to swear to a complaint charging that the act being done or about to be done will cause him to suffer loss in some way in his business, for which he has no adequate remedy by an action at law.

The first sentence, constituting a separate paragraph of section 17, and reading, "That no preliminary injunction shall be issued without notice to the opposite party," is superfluous and wholly abortive, because rendered entirely nugatory by what follows it. The part following that just quoted merely changes the description or name of the thing designated by the term "preliminary injunction," calling it a restraining order, and proceeds to lay down an entirely new rule governing its use. A restraining order may be just as broad in its commands and requirements and accomplishes exactly the same results as a preliminary injunction. Both are in the same sense and with like effect forerunners of permanent injunctions if at the hearing which follows the alleged grounds therefor be found to exist. And all intelligent men of labor in the country know, as is shown by the records at committee hearings, that temporary restraining orders are the forms usually resorted to and mostly complained of in labor cases.

It says:

No temporary restraining order shall be granted without notice to the opposite party, unless—

If the condition which I am about to read be complied with, the restraining order issues without notice, and of course the implication is irresistible that if notice be given a restraining order may be issued in the absence of a compliance with the condition. But what is the condition? In the bill as it passed the House the condition read thus:

Unless it shall clearly appear from specific facts shown by affidavit or by verified bill that immediate and irreparable injury, loss, or damage will result to property or a property right of the applicant—

And so forth.

In the Senate the words "property or a property right of" were stricken out. So that now only personal rights need be described in the affidavit or bill—as, for instance, that the men are assembling in a public place and making untrue statements about the applicant for an injunction, or are carrying banners on the street, whereby the applicant's customers are kept away from his store or factory and his profits diminished.

It will be observed that not the slightest check or limitation remains where any court or judge whimsically, capriciously, maliciously, or corruptly issues an injunction, provided he merely goes through the form of requiring a notice to be given, which may be just as short a notice as he cares to make it. And the extraordinary power thus given, this complete reversal of every previous conception of judicial authority, was clearly and forcibly shown by Republican Senators and Representatives. No Republican Congress has ever gone so far as to claim or admit that the limitation to the protection of property or property rights should be removed, however much they may have differed from Mr. Gompers and others as to what were on the one hand property, and on the other personal rights. Of course, I am not to be understood as believing that the courts will misuse powers thus conferred upon them, but rather the contrary. Nevertheless, the leaders of labor believe otherwise, and I fully recognize their right to a differing belief.

The Democratic Party also explicitly pledged itself to labor to provide for jury trials in contempt cases. The Clayton Act contains four sections on the subject, mostly devoted to matters of practice and procedure. After making broad provision for jury trial in contempt cases a section is inserted reading as follows:

SEC. 24. That nothing herein contained shall be construed to relate to contempts committed in the presence of the court, or so near thereto as to obstruct the administration of justice, nor to contempts committed in disobedience of any lawful writ, process, order, rule, decree, or command entered in any suit or action brought or prosecuted in the name of or on behalf of the United States, but the same, and all other cases of contempt not specifically embraced within section 21 of this act, may be punished in conformity to the usages at law and in equity now prevailing.

This section removed from the operation of the act not only contempts in Government cases, which is a matter of no importance, in view of what I am about to show to be an exemption or exception as broad as the right itself. It is provided, as shown in the section just quoted, that nothing contained in the act shall be construed to relate to contempts committed in the presence of the court, or so near thereto as to obstruct the administration of justice. Now, it has been as thoroughly and firmly settled as any rule or principle that could be mentioned that, as regards contempts, the presence of the court has no geographical limits, and that remoteness from the place where the court sits or transacts business is of no importance. A contempt of the District Court of Maine committed in Oregon or Florida is committed constructively so near the court as to obstruct the administration of justice. Therefore this pretense of allowing jury trials in cases of contempt is sham, farcical, and wholly abortive. So we have here another instance of solemn marching up the hill and down again; and so the Democratic Party has as utterly failed to fulfill its pledge with reference to jury trials in contempt cases as in carrying out its other pledges.

What I have said to-day may be denounced as a partisan attack, but I have merely performed a duty to those mostly interested in such legislation, and empty and shallow disapproval, without argument, is the only answer that can be returned, because I have used the record and notoriously admitted facts as a basis for all I have spoken. The whole matter stands of record so clearly and convincingly as not to be refuted. I have refrained from citing judicial authority, but I throw out the invitation to any and all to produce a decision complained of by labor the rendition of which would have been prevented by this legislation had it been passed prior to such decision; and not only so, but there are several decisions against labor the soundness of which is doubted by lawyers and bitterly condemned by the leaders of labor's cause which find sanction and support in the provisions of this act. For instance, there is the case of Neal against Lumber Co., in the District Court of the Southern District of New York, in which it was held that the court might investigate the motives for a strike, and if it found that it had been set on foot in order to keep out of New York builders' supplies furnished by nonunion producers outside of the State, that constituted an illegal

conspiracy, and the court was warranted in issuing an injunction against the members of the union as strikers. Without attempting a discussion of the merits or demerits of the decision, I call attention to the fact that for aught that this act contains any number of such decisions may be again rendered and enforced, and for confirmation I refer to language found in the report of the Judiciary Committee on this bill, with special reference to its labor sections, where it said, "The bill does not interfere with the Sherman Antitrust Act at all; it leaves the law of conspiracy untouched."

During the debates in the two Houses long laborious speeches were made by supporters of the bill. Of course any bill on these subjects can be made the text for effusive protestations of everlasting friendship for and loyalty to labor's cause; but very little of the debate bore any relation to what was really in the bill. Laborers, of course, have many rights, as have individuals of other callings; but it is nonsensical and deceptive to take the most obvious of their rights, embody them in an act of Congress, and then orate profusely and voluminously about it as containing "Labor's Bill of Rights," or by any such deceptive title; and in exposing the fraudulent and prejudicial nature of this legislation I know I am doing a great service to labor and am actuated by the friendliest of motives. So much, it seems proper to say in conclusion, as to my personal relation to what I have said for the benefit of any who may not be familiar with my private and political record. Among those who know me best even this I need not have said.

Antitrust Bill.

EXTENSION OF REMARKS
OF
HON. MARTIN B. MADDEN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Monday, September 14, 1914.

On the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. MADDEN. Mr. Speaker, the Clayton bill, so called for no conceivable good reason, has been the nightmare of Congress and the country for several months. What originally appeared as such was sprung on the public as unexpectedly as were the developments resulting in the outbreak of the war in Europe. No account of its legislative history, no discussion of its legal and economic effects, would be complete, or even intelligible, without a description of the conduct and attitude and professions of the Democratic Party responsible for it, and of the utterances of its leaders prior to its advent and while it has been pending. Unfortunately, I can not go into those with any attention to detail in a 15-minute speech.

For years the candidates of that party, from the highest to the lowest, condemned everything done or attempted by opposing parties, without regard to whether it was good, bad, or indifferent, not sparing or hesitating to assail the courts wherever they could find a court, like the Supreme Federal Court, a majority of whose judges were appointed by a Republican President. In the course of procedure two great cases reached the Supreme Court and were decided on appeal in April, 1911. Did Democratic politicians and leaders attempt any analytical or logical discussion of the soundness or unsoundness of the conclusions reached, or the grounds of decision? They did nothing of the kind, because, for their partisan purposes, that was not necessary. It was enough for them that they saw in the changed or modified views of the court an opportunity to create a widespread prejudice against judicial authority which could be capitalized to their political advantage, and they did capitalize it in the form of an insidious or inferential declaration found in the Democratic national platform in 1912 in these words:

> We regret that the Sherman antitrust law has received a judicial construction depriving it of much of its efficacy, and we favor the enactment of legislation which will restore to the statute the strength of which it has been deprived by such interpretation.

Now, I have only to remind you that the single point of criticism of the decision, the only peg upon which to hang their platform declaration, was the fact then dwelt upon by many Members of Congress and others that the introduction of the words "unreasonable or undue" before the word "restraint" created so great an uncertainty as to produce the want of efficacy mentioned in that plank of their platform. There is but one way known, but one way that human wit or wisdom can devise, for removing uncertainty or inefficiency from a statute, and that is by direct amendment. But that is not the Democratic way. Its leaders have been so long accustomed to doing their legislative and partisan work by indirection that direct open and straightforward approaches to the little legislative work they do is tabooed as old-fashioned or too Jeffersonian. So when at the beginning of this session Democratic Senators and Representatives introduced bills designed to honestly do what the platform clearly indicated was to be done, in case of Democratic success, such bills were, figuratively speaking, knocked on the head and kicked under the table. In lieu of these there has been engineered through both Houses and is now in the hands of conferees that stage play act, that freak of Democratic blundering incapacity, that economic and political monstrosity which I have already mentioned. Nobody knows what obsession or obfuscation possessed the draftsman of the platform, Mr. Bryan, and caused him to think the antitrust act had been deprived of its efficacy by the decisions in the Standard Oil and Tobacco cases. But the purpose of the time-serving and misleading party pledge is clearly discernible. It was to capitalize and turn to political account a popular error and hallucination. Mr. Wilson, nominated on the Democratic platform, preserved a sphynxlike silence as to its meaning until he had been inaugurated. But among his first presidential utterances was one that he did not believe the certainty which the platform pledged the party to attain by legislation should be sought by direct amendment, but by "supplementation," and it is strange that the absurdity of the idea was not seen by the public.

Now, it is just as absurd and impracticable to remove the ambiguity or uncertainty of language by the subsequent use of other language as it would be to alter the momentum or direction of a stream by altering its channel below the point where the change is suggested. We might as well talk of straightening a crooked stick by placing beside it a straight stick. In this instance, conceding that any straightening was needed, it is attempted by supplementing it with something so crooked that any attempt to follow its bends, curves, and sinuosities would be vain. Can anyone point out a word or a hint in its several pages which would stand in the way of the courts rendering a hundred or a thousand such decisions as those referred to in the platform? I have seen a dog chasing his tail by the hour to amuse himself or to catch a flea; I have seen a crazy wheel invented to amuse little boys and girls turn on a pin at a speed of a thousand revolutions a minute, and then come to rest with no other result than a flare and splutter and without ever changing position relatively to other objects; and hereafter when I see those things it will remind me of the farce set on the legislative boards by the Democrats and culminating in this so-called Clayton bill. But what I have just said refers only to its alleged effect on actual restraints and monopolies of interstate commerce, such commerce alone being within our power to protect and regulate. Not one of its provisions will seriously embarrass any trust whose exactions or oppressions have been the subject of complaint. Not one abuse of the privilege of carrying on interstate commerce is corrected by it which is not already prohibited and fully provided for by the Sherman antitrust law. The other provisions are mere annoyances and inflictions upon the country's business. So many forms of intermeddling with, crippling, or robbing the small manufacturer and dealer. No gigantic or overcapitalized corporation will be disturbed in either its control or operations, but all small and moderately successful corporations will be subjected to serious embarrassments and heavy losses. For one thing, they will have to employ lawyers to tell them how this act can be obeyed, and even then they will not certainly know until possibly in the dim and distant future the courts have discovered its meaning. Some of its provisions, however, if valid for any purpose, are so drastic and disintegrating as applying to particular legitimate businesses that those now in control of them will conclude that the only way of safety lies in winding up and quitting. Of course I can not in such limited time take up more than one or two sections. I will first notice section 2, affecting the ownership and use of patents. I discussed it as section 4 when the bill was pending in the House, its number having been changed. As section 2 and in its final form, it reads as follows:

> SEC. 2. That it shall not be lawful to insert or incorporate a condition in any contract relating to the sale or lease of or license to use any article or process protected by a patent or patents the effect of which will be to prohibit or restrict the purchaser, lessee, or licensee from using any article or class of articles, whether patented or not, or any patented process, supplied or owned by any person other than the seller, lessor, or licensor, or his nominees, or the effect of which will be to require the purchaser, lessee, or licensee to acquire from the seller, lessor, or licensor, or his nominees any article or class of articles not protected by the patent; and any such conditions shall be null and void, as being in restraint of trade and contrary to public policy. Any person violating the provisions of this section shall be guilty of a misde-

meanor, and upon conviction thereof shall be punished by a fine not exceeding $5,000 or by imprisonment not exceeding one year, or by both, in the discretion of the court.

It was shown before the Judiciary Committee at its hearings in 1912 that the business in this country which would be affected by such legislation amounts to the enormous annual sum of $25,000,000,000. A loss of even 1 per cent of that vast sum inflicted "by act of Congress" would be $250,000,000. How would that loss be compensated? Who would be the gainers? Suppose such great patent-owning establishments as those manufacturing storage batteries and the great automobile factories were broken up and put out of business, who would profit by it? It would be found unprofitable for their successors, even if any would be found possessed of sufficient capital and brains to do the business in any other way and survive. In such institutions you must have cooperation and coordination of many departments and machines, and if only one company in the country has had the brains, enterprise, and foresight to assemble them into effective working relations, then that company will have a monopoly. The question is not at all whether a monopoly is desirable. If that were the question, no one would be readier with a negative answer than I. But the question is whether it is not better to endure a few monopolies, especially when it is not shown that their charges for service are unreasonable, than make a disastrous attempt to put them out of business at the behest of disgruntled agitators and wreckers.

One of the first labor strikes of which history gives an account was caused by the invention and installation of the spinning wheel, and the introduction of the steam hoist in coal mining was one of the grievances of the Molly Maguires in Pennsylvania. So we have in certain Southern States a deep-seated prejudice against all patents. Their Representatives here, spurred on by certain intellectual corkscrews and wielders of the monkey wrench, seek to destroy all the rewards of inventors and designers and the value of patented machinery, worth not mere millions, but billions. The same destructive and predatory instinct will impel them to take the next step, and the next. And why should they not raid the art galleries and convert the paintings, to which artists have given their lives, into wallpapers for their houses. And how about copyrights? Why should not those priceless works of ancient and modern literature, the productions of great authors, in vellum de luxe, be taken and placed in their hearth jambs? It is the same barbaric spirit displayed by the cannibals in the Sandwich Islands as described by Mark Twain. After having dined on missionaries, they were strutting around wearing the victims' plug hats and just one other garment. I do not of course compare our short-sighted friends to savages, but they exemplify the same spirit. I think it impossible that any great number of people want such legislation and that very few wish to destroy the prosperity created by and based on the arts and sciences. There is no sadder delusion than that about patents and their relation to industry and to profitable production. It is said that nearly every man you meet thinks he could run a hotel or edit a newspaper. So the uninformed think that with a certificate of novelty and utility from the Patent Office covering a new idea the patentee is thereby enriched and can safely go on a vacation and depend on capital to pursue and tempt him. But of over a million patents granted by our Government only a few patentees have become rich, a few hundred have enjoyed liberal incomes, and a few thousand have received moderate sums by selling their inventions, while the others have been financially disappointed.

Time and patience are required to attract capital to the best patents and the capitalist assumes the difficult task of changing the habits of the people, combating prejudice and educating with respect to the new method of doing things previously done otherwise. There always is a risk and large expenditures are absolutely necessary before a dollar of profit can be realized. Few patented articles can be produced without the construction and installation of special machinery. Then the manufacturer must find or create his market, requiring further expenditures. Is it not too obvious for argument that all sensible and just men should and will condemn a campaign of destruction against the men who have devoted their lives and fortunes to discover and perfect labor-saving devices and machines, as well as those who took the risk, invested their capital and patiently waited for profits and by so investing and waiting made this Nation great and prosperous? Are they not entitled to protection, encouragement, and praise? Nevertheless we find abroad in the land or quartered or camped at Washington a few economic theorists who teach and possibly believe that anybody who has realized a profit by owning and using a patent is a public enemy to be punished by discriminatory, confiscatory, and penal statutes. On a former occasion I discussed several other conspicuous vagaries and revolutionary provisions then contained in this act. But having tasted the blood of capitalism the legislative socialists have succeeded as they at first desired to do, in adding a section reading as follows:

SEC. 25. That whenever a corporation shall acquire or consolidate the ownership or control of the plants, franchises, or property of other corporations, copartnerships, or individuals, so that it shall be adjudged to be a monopoly or combination in restraint of trade, the court rendering such judgment shall decree its dissolution and shall to that end appoint receivers to wind up its affairs and shall cause all of its assets to be sold in such manner and to such persons as will, in the opinion of the court, restore competition as fully and completely as it was before said corporation or combination began to be formed. The court shall reserve in its decree jurisdiction over said assets so sold for a sufficient time to satisfy the court that full and free competition is restored and assured.

It is expressly designated as part and parcel of the anti-trust laws, so that if by some inadvertence or lack of understanding, not being omniscient, the officers of a corporation should technically violate one of the many obscure prohibitions of the act, and a judgment against the corporation should result, the court of equity must immediately reach out its strong arm through a receiver and take possession of all its property assets and business. The stockholders, who may have been as innocent of wrongdoing as the unborn, wake up to find the entire value of their shares confiscated and the company in which they had invested, though solvent and prosperous, being administered like the estate of a decedent or a bankrupt. Is this part of that creed entitled "The new constitution of peace" embodied in the President's message of last January? Let me quote from it a few lines:

Constructive legislation is always the embodiment of convincing experience and of the mature public opinion which finally springs out of that experience. What we are purposing to do, therefore, is happily not to hamper or interfere with business, as enlightened business men prefer to do it, or in any sense to put it under the ban. * * * And fortunately no measures of sweeping or novel change are necessary; * * * what we have to do can be done in a new spirit, in thoughtful moderation, and without revolution of any untoward kind.

If it could be shown that there was a widespread or even any considerable demand for this legislation, still it would well become us, in view of its drastic character, to pause and consider until senseless clamorers and mad and restless innovators who have prompted it had reduced their temperatures. But, in sober truth, it has been concocted and sprung so unexpectedly, so suddenly, and demand or reason for it is so utterly wanting, that the action of the majority can only be accounted for upon the theory of supposed political advantage. If that theory be correct, then, however mistaken the Democratic opinion as to the political effect, no one will doubt the desperate nature of the emergency.

I will close with the words used on the other occasion referred to by me:

Notwithstanding the respectable characters of those now in charge of the country's affairs, I warn them to pause before committing wrongs that can never be remedied, before they destroy the little of business prosperity which has survived their work thus far, and to forbear to break up the solid foundations upon which all prosperity may hereafter rest; to halt, to stay their ravages, to give time for investigation, and a kindlier reception than they have heretofore given to the voice of reason and justice. [Applause.]

Delay Means Waste.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 14, 1914.

Mr. MOORE. Mr. Speaker, delay in the passage of the rivers and harbors bill is dangerous. To stop work upon worthy projects because of opposition to new ones does not justify the filibustering tactics that are sometimes resorted to to kill important measures. The rivers and harbors bill ought to be one of the regular appropriation bills. It is not a bill involving only the outgo of public funds. To a large extent it is an instrument for deriving income. It involves public work of a beneficent order, keeping the ports clear to our customhouses, and opening up our inland waterways for the interchange of commerce. Where projects have been undertaken, unless proven unworthy, they should be continued to avoid waste. A stream must be kept open just as a highway must be kept in repair. Both necessarily incur the cost of

maintenance. On a river like the Delaware, which produces an annual customs revenue of about $20,000,000, the maintenance cost is approximately $300,000. Critics say that cost is too great, but where under the sun is such a return obtained on such an investment?

Through the delay in the passage of the present rivers and harbors bill the dredges that have been maintaining the channel of the Delaware have stopped work for lack of appropriations. Nothing but waste can ensue. Upon the Hudson River an enormous piece of dam construction has been stopped in midstream because the appropriation period has expired, and the bill which should have passed last spring to continue the work is still pending. It is evident that the disorganization of the force working upon the dam will result in loss and extra expense to the Government, and the work so suddenly stopped must suffer damage.

But the tides and the shoals which make coast navigation dangerous and suggest the importance of developing our intracoastal waterways must also be reckoned with. If regulating works are not created or properly maintained, commerce suffers and human life is added to the toll. For years the people of southern New Jersey who have something to buy and something to sell and the people of New York have been seeking to do business by sea. The principal barrier has been at Atlantic City, where the inlet crosses a dangerous bar. Vessels have succeeded in carrying commerce back and forth, but the depth at the bar has made the passage difficult. Some time ago the Government agreed to construct a dredge to keep the bar clear. Commerce at once took courage, and vessels renewed the passage, with every prospect of an increase in the interchange of commodities between the States.

Commerce does not always wait for Government improvements. If it did, in some instances it would wait a long while. But the demands of the people for cheap freight rates and for the expeditious handling of their goods induced well-intentioned citizens to anticipate the Government promise of opening the bar at Atlantic City. The penalty for this display of public spirit has been very great. The bones of some of the vessels that yielded to it are now sinking in the shifting sands of the New Jersey coast. They are still waiting for the Government to act upon its implied promise.

On Sunday last the last of the steamships that expected the Government to act went upon the shoals. The Government dredge is ready, but until Congress permits the rivers and harbors bill to break with the filibuster that now delays it there will be no money for putting the dredge in operation. Gentlemen may complain of some projects in the rivers and harbors bill which they do not approve, but there seems to be no excuse for dilly-dallying with these worthy eastern projects which involve so great a commerce and so heavy a drain upon human life. In the hope that it may aid in bringing about the early passage of a relief measure, I insert the story of the mishap to the steamer *Atlantic City* because it had the temerity to undertake to do business without waiting for the verdict of this exceptionally prolonged session of Congress:

This appeal from the shoals to the heart of Congress is from the Philadelphia Public Ledger of this morning:

STEAMSHIP ON BAR OFF ATLANTIC CITY WITH 31 PASSENGERS—COAST GUARDS FROM NEARBY STATIONS STAND READY TO BEGIN RESCUE WORK IF DANGER THREATENS.

ATLANTIC CITY, *September 13.*

Rising and falling upon a heavy sea, the steamship *Atlantic City*, of the Atlantic City Steamship Line, inbound from New York, with 31 passengers on board, is pounding the shoals in the inlet. The big liner, owned by Warren Webster, of Camden, and built about two years ago, at a cost of $100,000, lies almost directly off the head of Pacific avenue and about a mile seaward of the excited crowds watching her from the inlet beach and board walk. Early this afternoon the *Atlantic City*, her stern driven deeply in the sand shoal, was lying within a short distance of the buried wreck of the liner *Brazoria*, of the bankrupt Atlantic City Navigation Co., which struck the shoals under similar circumstances several years ago, broke in two, and became a complete wreck.

Officials at the local terminal of the Atlantic City Line at 2 o'clock this afternoon, after talking by wireless with Capt. Townsend, veteran commander of the stranded liner, declared the craft is in no danger whatever. Company officials believed the *Atlantic City* would be floated upon high water, in spite of unfavorable conditions, with a 30-mile gale blowing from the northeast.

Keeper Lambert Parker, of the Government coast guard station, succeeded in fighting his way through the heavy sea to the stranded liner shortly after the *Atlantic City* first struck, and signaled that she was in difficulties. Later the unsinkable power cruiser of the Federal Life-Saving Service also raced down the inlet to where the *Atlantic City* was tossing and laid by, prepared to render any help that may be required in the event of a decision to take off the passengers.

Coast guards at Chelsea have been ordered to hold themselves in readiness, in case they are needed, and the guards from the North and South Brigantine stations, on the north side of the inlet, are also under call. The situation recalls the sensational saving several years ago of some 70 passengers and crew from the Clyde steamer *Cherokee* by Capt. Mark Casto and his gallant fishermen, who forced their way through in a fishing sloop to the stranded liner when Government guards were powerless in one of the worst storms of recent years. Line officials this afternoon said the *Atlantic City* had successfully passed the outer line of shoals and was proceeding smoothly, when she nosed an unexpected shoal in the channel, shifted somewhat by the heavy winds of the past 96 hours.

The ship backed to avoid the bar, and was driven hard upon another sand hummock.

The *Atlantic City* is the sole survivor of the fleet of the Atlantic City Transportation Co., which lost three ships in an attempt to establish a water service between the city of New York and Philadelphia, and went into the hands of a receiver. Mr. Webster, of Camden, the heaviest stockholder, bought in the *Atlantic City* to protect himself, and, in spite of heavy losses, put the ship in commission again early in the summer under a pledge of support from the chamber of commerce.

Contrary to expectations, in the face of handicaps—and one of the greatest of which was the irregularity of schedule, due to impossibility of entering or leaving the inlet except upon high water, because of the shallow channel—the venture promised to become profitable. On Sunday last the *Atlantic City* carried more than 200 persons here. The stranded craft has a large consignment of freight in its hold.

Government Railroad Development in Kaibab National Forest.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 14, 1914.

Mr. BRYAN. Mr. Speaker, under authorization to extend my remarks in the RECORD on the conservation bills now pending before Congress I desire to refer to the development of the Kaibab National Forest in northern Arizona. On the 2d day of last March I received the following letter from the Commercial Club of Salt Lake City:

COMMERCIAL CLUB,
SALT LAKE CITY, UTAH, *March 2, 1914.*

Hon. JAMES W. BRYAN,
United States House of Representatives, Washington, D. C.

DEAR SIR: I wish to call your attention to the attached newspaper clippings containing comment on a plan this club has under way for the construction of branch railroads into undeveloped regions of Western States.

In brief, the plan is to amend present State and national laws and urge the enactment of new ones, if necessary, which will permit of Federal land grants and State and county bond issues as bonuses to companies which will undertake the construction of roads into countries which would develop in time to a state that would make the railroad profitable.

A committee from this club is now compiling data on three branch roads of this character in Utah and will prepare briefs on changes necessary in State and National laws to make possible the bonuses mentioned. Commercial organizations in the States of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming are being asked to take similar action.

May I have your opinion on the feasibility of the plan and suggestions for the furtherance of it?

Yours, very truly,
WILL G. FARRELL, *Secretary.*

One of the clippings referred to was from the Herald-Republican, of Salt Lake City, as follows:

ASKS NATIONAL AND STATE HELP FOR RAILROADS—COMMERCIAL CLUB ALSO DECIDES TO ASK MUNICIPALITIES TO VOTE BOND ISSUE.

"Needed Railroad Extensions" in Utah was the subject of a discussion before the board of governors of the commercial club yesterday afternoon, and a plan suggested by President W. F. Jensen to secure Government aid in constructing branch lines to the already existing roads was indorsed by the board. Mr. Jensen in laying his plan before the board of governors pointed out that the first transcontinental railroads were constructed only through the assistance given by the Federal Government, which made land grants to the several companies, thus enabling them to operate at a loss until such time as the country which they traversed was productive of sufficient business to warrant their operation.

In outlining his plan yesterday Mr. Jensen called attention to the fact that most of the railroads operating in Utah and many other Western States are largely for through traffic and in many cases pass through the least productive portions of these States. The development of the State, he said, would be brought about largely through the construction of branch lines to the already existing roads.

In keeping with the plan suggested by Mr. Jensen the club will begin at once an active campaign to collect data on the districts where railroads are needed and seek the cooperation of other commercial bodies in the State in the work. In placing the arguments before the people to secure their assistance it will be shown that many sections of the State now wholly or partly undeveloped are held back in the building up and developing of their resources through lack of railroad facilities. It is planned to take this matter up with the Federal and State officials and endeavor to have enacted such measures as will be necessary to permit the National and State Governments to set aside such land as is needed to reimburse railroads for the loss sustained in the first few years operation in these sparsely settled districts.

The board of governors was unanimous in the indorsement of Mr. Jensen's plan and he was authorized to appoint a committee of 10 to take the preliminary steps in bringing the proposed railroad extension before the people. This committee will consist of W. F. Jensen, chairman; W. C. Orem, C. W. Nibley, W. W. Armstrong, Gov. William Spry, Simon Bamberger, James H. Moyle, M. H. Walker, T. G. Webber, and Glen Miller.

RICH LAND IS IDLE.

It is known that much of the richest land in the State is idle and undeveloped on account of lack of railroad facilities, the long distances from railroad connections making it impossible to interest people in the districts. It is planned to construct a line into the extreme southern portion of the State, which has thousands of acres of valuable agricultural land wholly undeveloped. This section of the State also holds within its boundaries the most wonderful scenery in the American Continent, but it is practically unknown because of the difficulty in reaching the district. The great Uinta Basin has but hundreds of people, whereas it would have thousands, it is said, if there were adequate railroad facilities.

There is also in southern Utah thousands of feet of ripe timber awaiting the lumberman, but which can not now be taken out as there is no railroad available. The Federal Forest Service recently issued a prospectus of the Kaibab National Forest offering to dispose of nearly a billion feet of timber. There is sufficient timber in this tract alone, according to the Forest Service, to pay for the construction of a railroad on the proceeds of the hauling of timber and leaving a nice profit besides. This timber would have to find a market outlet through Salt Lake, as it is impossible to cross the Grand Canyon of the Colorado. It is estimated that it will require at least five years to take this timber out.

STUMBLING BLOCKS IN WAY.

But on account of the certain restrictions placed by the Government Forest Service no company has yet cared to take up the proposition. An effort will be made to secure Government assistance in this and to have eliminated some of the features of the Forest Service contracts, which, it is said, are stumbling blocks to persons who might otherwise take up the Government's proposition.

Another branch which is contemplated is into the St. George country and to the southeast to Monticello, which is now about a nine days' trip from Salt Lake. In addition to the land concession which will be asked for, it is proposed that municipalities vote bond issues for concessions. The plan will not be restricted and confined to Utah, but a campaign will be carried into all the Western States which are similarly affected, as this would be the only way in which national assistance could be secured.

The committee will begin its work at once.

The other clipping was the following editorial from the Salt Lake Tribune:

GETTING NEW RAILWAYS.

President W. F. Jensen, of the Commercial Club, is to be commended for his efforts to secure branch railroads in Utah and other Western States. The club's board of governors has appointed a committee of 10 to seek Federal and State aid.

As President Jensen has pointed out, the trunk lines were constructed for transcontinental traffic and run through some of the poorest and most sparsely settled regions of the West. Regions rich in resources are held back by the fact that they have meager transportation facilities. Future development depends, therefore, upon the building of lines that will connect with the great railroad arteries. By the very fact that the regions into which these branches will be extended are undeveloped, the lines can not be placed on a paying basis at the start, and yet within a few years after such roads are built they will be highly profitable.

Mr. Jensen has formulated a plan whereby the branch roads can be constructed by Government and State assistance, just as the principal western links in the transcontinental lines were constructed. Evidently it is the plan to secure lands from the Government and the States which shall supply revenue to make up the difference between the value of the roads to investors and the much higher initial cost of the roads. For example, if a road costing $10,000,000 can pay interest on only $5,000,000, it will be necessary to secure assistance to the extent of $5,000,000. This assistance is to be supplied by Government and State land grants and by bond issues on the part of counties or municipalities. The land need not be worth very much per acre at the beginning, because its value will increase as a result of the construction of the railways. The investors, however, would figure that such land would be worth enough in a few years, say 5 or 10 years, to compensate them for any loss incurred in building and operating the roads during such periods.

In order to obtain Government assistance it is necessary that Utah should associate itself in this movement with other States of the West, because the Government can not make land grants for the promotion of railroads within one State. Many of the States are as badly in need of these branch lines as is Utah, and doubtless will join enthusiastically in the movement inaugurated here.

The Government now has a standing offer of aid in its proposition to sell 1,000,000,000 feet of timber in the Kaibab Forest. While many are of the opinion that the Government's terms are not sufficiently liberal, yet a railroad has been built on similar terms in California, where the only possible freight was the timber itself.

Of the 2,000,000,000 feet of timber owned by the Government in this forest, about half of it, or 1,000,000,000 feet, is ready for the market, and for purposes of economic administration and proper development of the forests this ripe timber should be cut and used. It is going to waste as it is. It is so far removed from transportation, however, that it is next to impossible for the Government to market it.

Of course, the plan of giving this away in land and timber subsidies to private concerns does not appeal to the intelligence of the people of this day. Since receipt of these communications I have been studying the Kaibab National Forest. I have obtained the following data from the Forest Service:

"LOCATION OF FOREST.

"The Kaibab National Forest embraces over 1,000,000 acres in Coconino County, Ariz., just north of the Grand Canyon of the Colorado River, which forms the south boundary of the forest. The main timbered portion of the forest is confined to the Kaibab Plateau, or Buckskin Mountain, which is a high mesa ranging between 7,500 and 9,000 feet elevation. The topography is level and rolling. This region, lying in the northwestern corner of the State, is effectually cut off from the remainder of the State by the Grand Canyon of the Colorado River, one of the grandest scenic wonders of the world.

"Geographically, the Kaibab Forest contributes to the northward in Utah and directly to Salt Lake City. All development of the region has been and will continue to be from the northward. The most practicable route to the forest is from Marysvale, Utah, the present terminus of the Sanpete branch of the Denver & Rio Grande Railway. From this point the route follows the Sevier River to Panguitch and Hatchtown and then drops over a low divide onto the headwaters of the Rio Virgin River, and thence to Kanab either by Kanab Creek or Johnson Creek. From Kanab to the Kaibab Plateau is approximately 30 miles across a level stretch of sagebrush land. From Marysvale to Panguitch is 53 miles; from Panguitch to Kanab, via Johnson Creek, is 76 miles. This is the route followed during the past summer by the Salt Lake Tribune automobile party, which established an automobile route between Salt Lake City and the Grand Canyon of the Colorado River. According to the route followed by this party, the distance from Marysvale to Bright Angel Point is approximately 200 miles. This distance, however, would be considerably reduced by a railroad.

"ESTIMATED STAND AND SPECIES.

"The Kaibab Forest is estimated to contain approximately 2,000,000,000 feet of merchantable timber. This estimate is based on an intensive field cruise made by the Forest Service. Only trees over 12 inches in diameter 4½ feet from the ground were included in the estimate, which is known to be conservative. Checks made on the original cruise show the estimate to be 15 to 25 per cent low. Over 80 per cent of the timber is western yellow pine; the other species are Douglas fir, blue spruce, Englemann spruce, and white fir.

"The 1,000,000,000 feet of timber which the Forest Service has placed on sale embraces that naturally most accessible. Of this amount, it is estimated approximately 800,000,000 feet b. m. is western yellow pine, 70,000,000 feet b. m. is Douglas fir, 30,000,000 feet b. m. is blue spruce and Engelmann spruce, and 100,000,000 feet b. m. is white fir. In the yellow-pine type the number of trees per acre and the average diameter of the trees at a point 4½ feet from the ground will run about as follows:

Species.	Average number of trees per acre.	Average diameter of trees in inches.
Yellow pine	23.5	20 to 24
Douglas fir	.6	16 to 18
White fir	1.3	16 to 20
Spruce	.5	18 to 20

"In the mixed type, as follows:

Species.	Average number of trees per acre.	Average diameter of trees in inches.
Yellow pine	9.4	18 to 24
Douglas fir	3.3	18 to 22
White fir	5.4	16 to 22
Spruce	4.3	16 to 20

"The common maximum diameter of the yellow pine is about 42 inches, although occasional trees with a diameter breast high of 60 inches occur. The other species run up to 40 inches in diameter. In the yellow-pine type the average stand per acre is about 7,000 feet b. m. and in the mixed type about 6,000 feet b. m. per acre.

"LOGGING CONDITIONS.

"In view of the fact that the timbered portion of the forest embraces a rolling plateau, logging conditions are ideal. Logging roads can be constructed almost anywhere at very small cost. The rolling nature of the plateau will be an assistance to logging, and there will be practically no rough mountain logging. There are numerous open parks in the forest, offering excellent camp sites, and there are sufficient springs available for camp and logging purposes.

"Owing to the favorable topography of the region actual logging costs will be low. Forest Service lumbermen estimate that the average costs will be about as follows:

	Per 1,000 feet.
Cutting and felling	$0.75
Brush disposal	.15
Felling snags	.02
Skidding	.75

	Per 1,000 feet.
Hauling	$1.50
Road construction	.03
Camp construction	.01
Spotting and loading cars	.50
Unloading at mill	.12
Administration	.10
Freight to mill	2.00
Interest on working capital	.18
Depreciation and interest on logging equipment	.22
Total	6.34

"Climatic conditions are also favorable to logging on the Kaibab Plateau. It is a region of long dry summers, rarely interrupted by storms sufficient to stop operations in the woods. The summer logging season begins about the 1st of May and continues until December. In some years the season will extend well into January. During the summer season there are few rains and the roads remain hard and dry and always in good condition. During many winters hauling logs on sleds is entirely practicable, although this method of logging can not always be relied upon, since winters occur when the snowfall is too light.

"There are no experienced lumberjacks in the Kaibab region, although across the Grand Canyon to the south extensive lumbering operations are carried on in a region similar in topography and timber, and probably some labor could be secured here. A large company operating on the Kaibab would better import experienced lumberjacks, even though a great deal of local labor is available. Teams, hay, grain, meats, and vegetables necessary in logging and milling could be obtained locally.

"The forest is well equipped with telephone lines. The Forest Service has constructed a line from Kanab to Ryan, Jacobs Lake, Big Park, Quaking Asp, and Bright Angel Point, thus giving adequate communication with all parts of the forest and with the outside country.

"ACCESSIBILITY.

"The timber on the Kaibab Forest can be made accessible for marketing only by the construction of a railroad which will serve as a transportation outlet for the manufactured lumber. It will remain inaccessible until such a railroad is built. The construction of a railroad and the exploitation of the timber have therefore been considered interdependent and the business point of view taken that the practicability of the project is determined by the return which may be expected upon the total investment required in railroad construction and in lumbering operations. In working out this problem the construction of a railroad not only to handle the timber, but to serve also as a common carrier to the southern Utah country has been figured upon. The idea has been to make available an amount of timber, which, together with other local traffic which the region now offers, will assure a profitable return on the entire investment necessary.

"LOCAL DEVELOPMENT.

"A railroad connecting the Grand Canyon of the Colorado River and southern Utah with Salt Lake City has many local inducements aside from timber to justify its consideration. Such a road will tap a region of 15,000,000 acres exceedingly rich in natural resources, but entirely lacking railroad transportation. Over 4,000,000 acres of this region have been appropriated and 365,352 acres just recently entered under the enlarged homestead act. The principal industries and natural resources of the region are sheep and cattle raising, farming, coal, copper, iron, timber, oil, extensive agricultural lands, and alunite. One of the largest coal fields in the State is found in Iron, Washington, Kane, and Garfield Counties. It would be directly tapped by a railroad to the Kaibab Forest.

"Compared to the total area of the region, the amount of agricultural land actually under cultivation is not great, although there has been a big increase in the last few years, due to a number of reclamation projects (State and private) at the head of the Sevier River, near Panguitch, Orderville, Kanab, Alton, and on Johnson Creek. A railroad into this region would result, it seems certain, in the speedy development of several million acres of land admirably suited to farming and fruit raising. It should further develop immediately much activity in mining, particularly of coal, copper, and iron, which can not now be worked profitably owing to lack of transportation facilities.

"Another feature of the region that will furnish a railroad much traffic is the Grand Canyon of the Colorado River, which will draw thousands of tourists each year. The scenic beauty of the Grand Canyon is admittedly unsurpassed, while the approach to the canyon through the Kaibab Forest, which is called the most beautiful natural forest in the world, offers unexcelled opportunities for one of the most wonderful tourist resorts in the country. With a direct railroad route between Salt Lake and the Grand Canyon the assured tourist traffic would be a large item of revenue.

"RAILROAD CONSTRUCTION.

"There are several practical railroad routes to the Grand Canyon from the north. The one used as a basis by the Forest Service in determining the feasibility of marketing the Kaibab timber is from Marysvale, the present terminus of the Denver & Rio Grande Railway, via Junction, Panguitch, Hatchtown, Ranch, Johnson Creek, and Kanab. The total distance figured upon from Marysvale to Bright Angel Point is 200 miles, with 25 miles addition for logging spurs. This route involves no difficult engineering problems, and for much of the distance construction costs will be exceedingly low. It is estimated that the total cost of the road proposed will approximate $2,720,000. This estimate is low as applied to a modern equipped standard-gauge road. The estimate, however, is based on constructing a road which will be capable of handling the timber and available local traffic efficiently, with the idea of improving it as the traffic and carrying capacity increases. Many of the best paying roads in the country have been built in this manner.

"ESTIMATED RETURNS.

"In estimating the returns to be expected the combined investments necessary for railroad construction and logging operations of 40,000,000 feet per annum have been taken. The traffic derived from logs and lumber can be computed quite accurately, but that to be obtained from other sources is estimated on the basis of the present development and producing capacity of the region.

Total initial investment.

Railroad construction and equipment	$2,716,484
Mill construction, logging equipment, and working capital	603,000
Total	3,319,484

Estimated annual return.

LOCAL TRAFFIC.

	Tons.
1. Hay, grain, fruit, and other farm produce	10,000
2. Sheep, horses, cattle, wool, and hides	25,000
3. Inbound general merchandise	20,000
Total	55,000

"The average freight rate figured on in handling the above tonnage is $2.50 per ton. Therefore—

Items 1, 2, and 3, 55,000 tons, at $2.50 per ton	$137,500
Passenger and tourist traffic	150,000
Mail and express	20,000
Telephone and telegraph receipts	5,000
Total gross earning per above	312,500
Operating expenses on above traffic 60 per cent	187,500
Total net earnings on above traffic	125,000
Net profit on logs and lumber:	
32,400,000 feet, at $6.67 per thousand	216,108
7,600,000 feet, at $6.32 per thousand	48,032
Total earnings above operating cost	389,140
Deduct interest on railroad investment (6 per cent on $2,716,484)	162,157
Total net earnings	226,983

"The above earnings represent an annual return of 12⅔ per cent on the total investment of $3,319,000. This percentage includes depreciation on the railroad. The railroad will, however, increase in value from year to year as the country is developed. Maintenance is included under operating expenses. Interest, depreciation, and maintenance on all lumbering investments have been charged off against stumpage.

"STUMPAGE APPRAISALS.

"In appraising the Kaibab timber an effort has been made to fix stumpage rates at a figure which will assure the operator a fair return upon his total investment in lumbering and railroad construction, taking into consideration of course the returns which may be expected from other sources. The timbered area was divided into five compartments, and the average cost of the logs at the mill from each of the compartments determined. The average cost of milling and transporting lumber from the mill to Marysvale was then estimated as closely as possible, and the total conversion cost per thousand feet at Marysvale deducted from the average wholesale selling price which will be received at that point. These estimates were made by Forest

Service lumbermen after a careful study of logging, milling, and transportation problems on the ground. The summarized estimates are given below:

LOGGING.

	Logs per 1,000 feet.	
	Yellow pine.	Other species.
Average cost of logging	$3.94	$3.94
Transportation by rail to mill	2.00	2.00
Interest on working capital	.18	.18
Depreciation and interest	.22	.22

MILLING.

Average cost of milling	$5.20	$3.66
Interest on working capital	.09	.06
Transportation to Marysvale	.75	.75
Mill depreciation	.10	.10
Interest on mill investment	.15	.15
Milling overrun	.62	.47
Total conversion costs	13.25	11.53
Average selling price at Marysvale	21.92	19.25
Difference cost and selling price	8.67	7.72
Stumpage value	2.00	1.40
Operator's profit	6.67	6.32

"The profit per 1,000 feet as shown above is equivalent to a total annual net return from the lumbering operations of $264.140 above all interest charges on milling and logging investments and working capital. The above profit is actually earned, however, by the combined lumbering and railroad investment. The charges for hauling logs from woods to mill and lumber from mill to Marysvale is placed at the actual operating cost. Of the above profit, therefore, the railroad should be credited, on the basis of an equitable freight rate, with $1.84 per 1,000 profit on the log haul and $0.61 per 1,000 profit on the lumber haul, or a total annual profit on handling logs and lumber of $100,140. The net profit on the lumbering operation would then be $4.10 per 1,000 feet, or $164,000 annually. As applied to the entire investment, the total profits indicate a return of 12⅔ per cent.

"MILL SITES.

"The scarcity of water on the Kaibab Plateau makes questionable the feasibility of locating a large mill on the forest. While the supply of water on the forest is sufficient for logging purposes, enough water for a large mill would have to be developed. The proposed plan of operations as figured upon, however, is based on the location of a mill at McDonald's ranch, at the headwaters of a branch of the Rio Virgin River. At this point there would be plenty of water available for a log pond and all other mill needs. The one disadvantage to this site is the long log haul involved. This would be approximately 90 miles from the timber to the mill. Several other sites off the forest are available, and the location of a mill to handle this timber is, of course, a matter in which the purchaser can use his own judgment. An excellent mill site could doubtless be obtained in the vicinity of the Hatchtown Reservoir, but this site would involve a still longer log haul. Doubtless a satisfactory mill site might also be obtained on Kanab Creek, although practically all of the water in this creek is appropriated.

"LUMBER MARKETS.

"The timber from the Kaibab Forest will contribute directly to the large and rapidly increasing lumber markets of Utah, western Colorado, and Wyoming. This market can easily consume all of the annual cut of the lumber manufactured from the forest, although an operator would desire to ship east a large per cent of the upper grades, for which fancy prices can be obtained. At the present time eastern Oregon operators are shipping upper grades of western yellow pine as far east as New York and Boston.

"The annual consumption of timber in Utah during 1912 was approximately 205,000,000 feet board measure. This estimate is based on an extensive investigation made by the Forest Service during the spring of 1913. Of the total consumption only about 10,000,000 feet are produced locally by small mills cutting almost exclusively for ranch and farm trade. There are no large mills in Utah and the small mills which manufacture rough lumber only can not compete in the main consuming cities with the well-manufactured and closely graded lumber imported from the large mills in Oregon and on the coast. The opportunity for a large mill in Utah is therefore unexcelled since it would have a large market close at hand and a great advantage in freight rates over present competing mills.

"Salt Lake City is the logical distributing point for a large timber operation on the Kaibab Forest. The city is situated in the center of the most fertile and densely populated portion of the region and is well equipped with railroads radiating in all directions. At the rate of present development the future possibilities of the Utah market seem unlimited. The population increased approximately 40 per cent during the past 10 years, and in the past few years there has been a wonderful development in the way of settlement, reclamation of arid lands, and the generation of electric power. The present rate of increase may be depended upon for several decades, as only a small per cent of the available land and natural resources of the State have been developed.

"On the basis of the grades which can be obtained from the Kaibab timber, it was estimated that the average wholesale price which yellow pine will bring on the Salt Lake market is approximately $23.40 per 1,000 feet, log scale. This average price is based on a grade production of 10 per cent better than No. 1 common, 10 per cent No. 1 common, 25 per cent No. 2 common, and 55 per cent No. 3 common. This estimate of grades is very conservative, considering the class of timber involved. The average wholesale selling price at Marysvale, used in the stumpage appraisal, is determined by discounting the average wholesale selling price at Salt Lake by the freight rate from Marysvale to Salt Lake City."

It is said that adequate transportation facilities would increase the value of the Government's timber $4,000,000. If this forest were owned by private parties they would build the road and they would make tremendous fortunes out of the proposition. In response to a request for information on this subject I received from Mr. Graves, Chief Forester, on April 24 and June 18 the following:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, April 24, 1914.

Hon. J. W. BRYAN,
House of Representatives.

MY DEAR MR. BRYAN: Your letter of March 27 has just been called to my attention, and I regret exceedingly that an earlier reply has not been sent you. Through inadvertence your letter had been misplaced.

The Forest Service is now advertising 1,000,000,000 feet of timber, consisting largely of western yellow pine, on the Kaibab National Forest, Ariz. Bids for this timber will be received up to June 15, 1914. In appraising the value of the stumpage it was necessary to consider the construction of transportation facilities to established routes and the total approximate cost of placing the lumber to be manufactured upon the market. The most practicable means of transportation was judged to be by the construction of a railroad south from Marysvale, Utah, the present terminus of the Denver & Rio Grande Railroad. Other routes are available, and the particular route chosen by an operator is, of course, of no concern to the Forest Service. While a survey of the route from Marysvale south to the Kaibab National Forest was not made it was estimated roughly by the logging engineers of the Forest Service that 200 miles of road would be required at an approximate cost of $2,720,000. The prospectus prepared for this sale contains the more important data concerning the character of the country, the timber, and the opportunities for railroad traffic. I am therefore inclosing a copy of it for your information, together with a map of the region.

This is a typical instance of the need for transportation facilities to make many tracts of national-forest timber accessible to market. As you are aware, fully 75 per cent of timber on the national forests is inaccessible from established transportation, and extensive railroad construction is the first necessity to bring about the utilization and sale of national-forest timber on a scale commensurate with the extent of these resources and the annual return which they are capable of producing. Obviously, if it is the desire of Congress to develop these resources immediately and secure in the near future the maximum revenue which they are capable of producing, under conservative methods of management, the construction of railroads which will afford an outlet to market is simply a matter of business necessity.

From the standpoint of commercial returns to the Government, logical business arguments may be advanced for railroad construction under such conditions, assuming always that it is to be the public policy to develop these areas immediately rather than wait for more gradual development from private initiative. As indicated on page 7 of the attached prospectus, it was necessary in appraising the Kaibab timber to allow aggregate profits to the operator for railroad transportation of logs and lumber of $2.45 per thousand board feet. This is aside from the cost of operating the road and from any depreciation or sinking fund charges to recover the initial investment. If the Government itself built the railroad, the greater part of this amount could be added to the sale value of the timber. The Kaibab National Forest contains, all told, some 2,000,000,000 feet of stumpage. Unquestionably the construction of a railroad would increase its average value at least $2 per thousand feet. The total increase would thus approximate $4,000,000, or considerably more than the estimated cost of the railroad. This amount might, of course, be credited separately to railroad earnings instead of to increased value of the timber.

Aside, however, from opening up the national forest, such railroads would greatly benefit many adjacent sections, which are now shut off from markets, and stimulate the development and use of much unreserved public land which now is comparatively idle. The Kaibab railroad, for example, would traverse a rich agricultural, grazing, and mineral district in southern Utah and northern Arizona, whose development would be greatly hastened by Government construction of the road.

It should, of course, be borne in mind that such railroads as this will sooner or later be built by private capital. That is the basis upon which the timber-sale policy of the Forest Service now rests. In the appraisal of all inaccessible tracts of timber, as in the case in question, full allowance is made for the cost of constructing the railroads required and for a fair profit on the investment in transportation facilities as well as in the strictly lumbering improvements and equipment. In other words, we are now offering such inaccessible bodies of timber as that on the Kaibab for sale at terms which should attract conservative investors and induce the construction of the necessary railroads by private capital. Under the sale contracts approved during the last two years, between 150 and 200 miles of railroad will be built in various parts of the West to tap national-forest timber at the cost of the operators, which investment with adequate profits thereon must, of course, be provided for in the appraisal of the public stumpage.

There may be some question as to how far the Government ought to anticipate the construction of such needed transportation facilities by private initiative and private capital through embarking upon a policy of public railroads. As indicated above, it is, in my judgment, primarily a question of time as to how rapidly Congress desires to develop the resources in the national forests and increase their revenues. In the Kaibab instance, for example, it is entirely probable that within 10 or 15 years at the outside, if not sooner, a privately built road will tap this territory. The same is true of many other similar situations.

Another question which occurs to me is whether railroads alone should be considered in a policy of large expenditures for the improvement and development of the national forests. From the standpoint of making their resources available for the entire country, as through putting their timber into the general lumber markets and of increasing their revenues, railroad construction should obviously come first. From the standpoint of increasing local usefulness of the national forests, other improvements, particularly wagon roads, should in many cases be given first consideration. Among such local improvements I would also consider the construction of small public sawmills at strategic points where the Forest Service might furnish lumber at cost to settlers in remote districts.

Before embarking upon a general policy of railroad construction it would seem to me desirable to consider all of these needs and frame a comprehensive plan of Federal development and improvement of these areas which would meet both demands—(1) development of resources for the benefit of the entire country and increased receipts, and (2) local development in the primary interest of settlers and adjacent communities.

Very sincerely, yours,

H. S. GRAVES, *Forester.*

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, June 18, 1914.

HON. JAMES W. BRYAN,
House of Representatives.

MY DEAR MR. BRYAN: I have been greatly interested in the letter of March 2 addressed to yourself from the secretary of the Commercial Club of Salt Lake City, and the clippings from the Herald-Republican and Salt Lake Tribune, which were recently referred to the Forest Service by you. These papers are being returned with this letter.

I sympathize fully with the desire of local communities to secure railroad extensions in the many inaccessible portions of the West where agriculture and all other lines of industrial development are badly handicapped by lack of transportation. This is a very vital and very real need in every new region. As far as the State and county or municipal governments feel it desirable to assist such railroad construction by bonuses through local bond issues, no question can be raised to such a course. Distinctly local benefits are anticipated or insured by such development; and it is simply a business question as to whether the State, county, or municipality will profit sufficiently by a new railroad to contribute toward its construction. A significant illustration of this sort of encouragement is the action taken by the city of Denver in voting bonds for the construction of the Moffat Tunnel through the Continental Divide west of that city. In this instance, however, the bonds do not form a subscription to the cost of the enterprise, but are to be repaid by the railroad company, the city, in effect, virtually loaning its credit to the enterprise. Local assistance in such forms is clearly a case of quid pro quo, a definite outlay from which equally definite and direct local advantages are anticipated.

I feel that the situation is distinctly different in the case of Federal land grants for the aid of such enterprises. In them the property of the entire country—of the people in Vermont and Florida as well as in Utah—is disposed of to aid in an enterprise whose benefit will be primarily local. It does not seem to me that the grant of public property in return for such definitely localized benefits is justifiable.

Furthermore, as you are doubtless aware, such land grants have in the past greatly aided the development of monopolies of timber and other natural resources. This is because the Government not only grants the railroad property of a certain present value, but also of a very much greater speculative or future value. The enormous grants to the Northern Pacific Railway Co. and the Southern and Central Pacific Railway Cos., a considerable part of which have subsequently passed into the ownership of very large timber-holding corporations, has done as much to bring about the present concentration in the ownership of standing timber in the West as any other single act of the Federal Government. Regardless of the wisdom of disposing of public property for local benefit, therefore, I feel that it would be very unwise to continue in any form the old policy of land grants, because of their direct encouragement of private speculation and private concentration of public resources, whose enhancing future value in many cases has enormously exceeded anything contemplated at the time the grant was made. Aside from the actual values involved, furthermore, the monopolies in danger of resulting from such concentration of public resources in private hands have a very far-reaching effect.

Rather than dispose of its public resources in this manner, it would be preferable, in my judgment, for the Federal Government either to make a direct monetary subscription to the construction of railroads under such conditions, to loan money to the railroad company by taking up its bonds or otherwise, or to build the road itself.

Very sincerely, yours,

H. S. GRAVES, *Forester.*

I have made some effort to ascertain the resources of other Government lands in the region involved and have received the following from Mr. Blanchard, of the Reclamation Service:

DEPARTMENT OF THE INTERIOR,
UNITED STATES RECLAMATION SERVICE,
Washington, D. C., June 9, 1914.

HON. J. W. BRYAN,
House of Representatives.

DEAR MR. BRYAN: I made a special effort to secure all possible information concerning that little-known region of southern Utah in which it is proposed to initiate construction of a Government railroad to connect with the present terminus of the Denver & Rio Grande Railroad and the Kaibab National Forest in Arizona.

I am returning with this the data supplied you by the Forest Service, together with additional material from the United States Geological Survey. I wrote letters to the State authorities in Utah, but was not able to secure information of any value in this connection. There are about 1,200 acres of land irrigated in the region immediately tributary to the proposed line. Adjacent to this section and undoubtedly offering an opportunity for branch lines is the valley of the Virgin River, which contains a much larger area of good land, a portion of which is now in cultivation. There are numerous little settlements along each of the streams in this region. The irrigation works at present are comparatively simple, but as no studies have been made of the run-off, it is not possible to determine with any degree of accuracy the possibilities for more extensive irrigation development through storage of flood waters.

The fact, however, that this railroad could be built from the proceeds of the sales of timber which would be received in excess of what may now be counted upon without a railroad, offers to my mind a very strong argument for the Government's undertaking this job. The success of our first national venture in railroad building on the Boise project, which you mentioned in your recent speech, should furnish additional argument for the Government's continuing this sort of work.

I hope my delay in getting these papers to you will not prevent you from presenting your argument before the close of this session.

Very truly, yours,

C. J. BLANCHARD, *Statistician.*

My plan for the improvement of this valuable property and the development of the lands in that region owned by the Government and by private parties is to build the railroad at Government expense, exactly as we are about to do in Alaska. There is not a reason applicable to Alaska that does not apply in this case. I have accordingly introduced a bill, which I hope will be passed. The people of the State of Utah and of Arizona should take a hand in this, and I feel quite sure that by faithful and hearty cooperation we can accomplish the desired result and pass the bill, as follows:

A bill (H. R. ——) to authorize the President of the United States to locate, construct, and operate a railroad from Marysvale, Utah, to the Kaibab National Forest, Ariz.

Be it enacted, etc., That the President of the United States is hereby empowered, authorized, and directed to adopt and use a name by which to designate the railroad or railroads and properties to be located, owned, acquired, or operated under the authority of this act; to employ such officers, agents, or agencies, in his discretion, as may be necessary to enable him to carry out the purposes of this act, such officers, agents, or agencies to be appointed or designated by him or under his direction; to authorize and require such officers, agents, or agencies to perform any or all of the duties imposed upon him by the terms of this act; to detail and require any officer or officers in the Engineer Corps in the Army or Navy or any official in the civil list of the United States to perform service under this act without additional pay, but upon allowance of actual subsistence and traveling expenses; to locate and designate a route or routes for a line or lines of standard-gauge railroad in the States of Arizona and Utah, to be so located as to connect the Kaibab National Forest, in Arizona, with the present terminus of the Denver & Rio Grande Railway at Marysvale, Utah, so as best to aid in the development of the timber, agricultural and mineral or other resources of the Kaibab National Forest and the settlement of the public lands of the Government which may be tributary to the said railroad when constructed therein, and so as to provide transportation of lumber, logs, and mineral and agricultural products for governmental and public uses; to construct and build a standard-gauge railroad or railroads, with the necessary branch lines, feeders, sidings, switches, and spurs, along such route or routes as he may so locate and designate between the said points named; to purchase or otherwise acquire all real and personal property necessary to carry out the purposes of this act; to exercise the power of eminent domain in acquiring property for such use, which use is hereby declared to be a public use, by condemnation in the courts of competent jurisdiction in accordance with the laws now or hereafter in force; to acquire rights of way, terminal grounds, and all other rights; to purchase or otherwise acquire all necessary equipment for the construction and operation of such railroad or railroads; to build or otherwise acquire bridges, docks, wharves, terminal facilities, and all structures needed for the equipment and operation of such railroad or railroads; to fix, change, or modify rates for the transportation of passengers and property, which rates shall be equal and uniform, but no free transportation or passes shall be permitted, except that the provisions of the interstate-commerce laws relating to the transportation of employees and their families shall be in force as to the lines constructed under this act; to receive compensation for the transportation of passengers and property, and to perform generally all the usual duties of a common carrier by railroads; to make and establish rules and regulations for the control and operation of said railroad or railroads; in his discretion, to lease the said railroad or railroads, or any portion thereof, including telegraph and telephone lines, after completion, under such terms as he may deem proper, but no lease shall be for a longer period than 20 years; or, in the event of failure to lease, to operate the same until the further action of Congress: *Provided*, That if said railroad or railroads, including telegraph and telephone lines, are leased under the authority herein given, then and in that event they shall be operated under the jurisdiction and control of the provisions of the interstate commerce laws; to purchase, condemn, or otherwise acquire, upon such terms as he may deem proper, any other line or lines of railroad which may be necessary to complete the construction of the line or lines of railroad designated or located by

him: *Provided*, That the price to be paid in case of purchase shall in no case exceed the actual physical value of the railroad; to make contracts or agreements with any railroad owner for joint transportation of passengers or property over the road or roads herein provided for and such railroad, and to make such other contracts as may be necessary to carry out any of the purposes of this act.

The authority herein granted shall include the power to construct, maintain, and operate telegraph and telephone lines so far as they may be necessary or convenient in the construction and operation of the railroad or railroads as herein authorized, and they shall perform generally all the usual duties of telegraph and telephone lines for hire.

That it is the intent and purpose of Congress through this act to authorize and empower the President of the United States, and he is hereby fully authorized and empowered, through such officers, agents, or agencies as he may appoint or employ, to do all necessary acts and things in addition to those specially authorized in this act to enable him to accomplish the purposes and objects of this act.

The Presidenet is hereby authorized to withdraw, locate, and dispose of, under such rules and regulations as he may prescribe, such area or areas of the public domain along the line or lines of such proposed railroad or railroads for town-site purposes as he may from time to time designate.

Terminal and station grounds and rights of way through the lands of the United States are hereby granted for the construction of railroads, telegraph and telephone lines authorized by this act.

SEC. 2. That the cost of the work authorized by this act shall not exceed $3,500,000, and in executing the authority granted by this act the President shall not expend nor obligate the United States to expend more than the said sum; and there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $500,000 to be used for carrying out the provisions of this act, to continue available until expended.

SEC. 3. That the officers, agents, or agencies placed in charge of the work by the President shall make to the President annually, and at such other periods as may be required by the President or by either House of Congress, full and complete reports of all their acts and doings and of all moneys received and expended in the construction of said work and in the operation of said work or works and in the performance of their duties in connection therewith. The annual reports herein provided for shall be by the President transmitted to Congress.

War Taxes of $105,000,000 in Time of Peace—The Price We Pay for Democratic War on American Industry, for Democratic Extravagance, for Democratic Incompetency.

EXTENSION OF REMARKS

OF

HON. C. BASCOM SLEMP,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. SLEMP. Mr. Speaker, the bill before the House proposes to tax the people of the United States $105,000,000 to bolster up the failing revenues of the Government. After a trial of 19 months of Democracy the American people find that they must pay additional taxes to an amount equivalent to $1.15 for every man, woman, and child in the United States to meet the expenses of the Government.

The Democratic leaders call it a "war-revenue" bill, hoping to appeal to the patriotism of the country and thus avoid criticism.

This designation is absurd, unless they mean the war on business that has been carried on since they have been in power. In that sense, and in no other, can this bill be called a "war-revenue" bill.

We are not at war with any nation in the world, and no additional expense, so far as military establishments are concerned, will be needed.

This additional $105,000,000 will be needed, if at all, for the ordinary expenses of the Government, and not for war expenses.

Some of our actual war expenses, for example, our pensions, were less last year by $11,000,000 than the previous year, so it would seem that we should raise less rather than more money for "war revenue."

Likewise the expenditures on the Panama Canal were less by $20,000,000 than the year before.

It is said that this tax bill should be called a "war-revenue" bill because there is a war in Europe.

There is a war in Europe, but the United States is not connected with it, and will not be except as an excuse for taxation.

The Democratic leaders tell us that this European war has so demoralized business that foreign imports have fallen off and that the customs revenues for that reason will fall off about $10,000,000 per month.

There was a falling off in revenues for August, 1914, the first month of the war, of about $11,000,000, as compared with August, 1913. The Democrats claim that the European war caused this loss. How do they account for a falling off of about $5,000,000 customs revenues in July before the war began? How do they explain a falling off in February of about $10,000,000 customs revenues, months before this war was dreamed of?

But, independently of the decreased revenues before the war, let us examine the situation after the war began. There have been nearly two months of war—August and September. The demoralization of ocean traffic was greatest during August, yet imports for that month amounted to $129,767,890, as against $137,651,553 in August, 1913, or a difference of less than $8,000,000. The figures for September are not available, but for the port of New York the importations for the first two weeks of the present month compare favorably with the first two weeks in July, before the war began. The importations at the present time are practically normal.

It can not therefore be truthfully stated that new taxes are to be levied because importations have fallen off. Importations actually fell off 6 per cent for the month of August only, while customs revenues have fallen off over 35 per cent for that month. The Democratic claim that they must raise $105,000,000 because importations have fallen off 6 per cent for this one month is too ridiculous to discuss, nor have they a logical reason to assume that importations in the future will be much below the Democratic normal. The above facts completely destroy the arguments presented by the Democratic leaders as justifying this revenue bill. Mr. UNDERWOOD claimed in defending the bill that it was based on the idea that nearly all importations to the United States from the countries at war would cease.

These importations not only have not ceased, but are almost normal, as the following table shows.

Imports from the countries involved in the European war during August, 1913, compared with last month, were:

	1913	1914
Belgium	$3,450,950	$2,329,145
France	13,091,521	6,902,633
Germany	15,626,176	9,400,043
Russia	1,725,123	760,231
United Kingdom	20,718,597	17,872,270

The true reason is that their revenue bill is a failure, as all so-called tariff-for-revenue bills have been when tried. They are compelled to raise more revenue because they are spending more money than they are receiving. They try to use the European war as a reason, but they are not convincing, because the reason assigned is only an excuse.

The haste with which the Democratic Party seized upon this European war to impose a tax of $105,000,000, and the grimly urgent methods the Democrats are employing to pass this bill before the war can possibly be ended, would create suspicion in any honest mind as to the integrity of their assertions.

The Underwood bill expected to raise $249,000,000 from a tariff tax for this year. The Payne bill raised $319,000,000 during the last year of its operation, or a difference of $70,000,000 in favor of the Payne bill. The Democrats expected to lose this $70,000,000 and make it up by raising $65,000,000 from a tax on individual incomes and the remainder on corporation incomes, but they will be disappointed in this. During 10 months in 1913 they only raised $28,000,000 from individual incomes. Business in 1914 is worse than in 1913, so that instead of raising $65,000,000 from incomes this year they will probably not get more than $30,000,000 from this source. Likewise the revenues from the tax on corporations will fall off; so that they will fall by from $30,000,000 to $40,000,000 in making up by taxes on incomes the $70,000,000 they lost on their revenue bill and which they gave the foreigner.

It is to make up this loss, caused by reducing tariff rates, and further to cover the excessive expenditures of this Congress, amounting to more than $100,000,000 more than a Republican Congress ever expended, that this tax of $105,000,000 is being levied. There is no other way to look at it. The Democrats would like to charge this to the European war, but the facts do not justify it.

There is another feature of this case. The Republican Party when it went out of power left in the Treasury of the United States a net balance of $149,335,711.78, of which there is left to-day $118,000,000. Why not use some of this money, rather than tax the people, or why not restore a protective tariff, and make the foreigner pay, instead of taking the money out of the pockets of our own people?

Most of this $118,000,000 is placed among the banks, but the President says that it is better to take the money from the people than to take our surplus out of the banks. The people in the country are harder pressed now—it is more difficult to get money or to make money, or to sell one's products—than at any time in the past 20 years. Yet in times of such universal distress the Democratic Party takes the position that the peo-

ple, hard run as they are, can pay additional taxes easier than the banks can return the money the Government has deposited with them. Public criticism at the same time is directed at these same banks for hoarding the money they have, far beyond their legal reserves, and not loaning it to the business people of the country.

The money could be drawn from the banks a little at a time, not all at once. The Government would pay its obligations, and thus the same money would find its way right back among the people. The European war might stop by Christmas—who can say it will not—and we certainly have an ample surplus, even without "war revenue" taxes or taxes from any other source, to tide over the Government until January 1, 1915, and many months beyond. With reduction in expenditures we would need no new taxation at all. Ordinary common sense would have dictated such a course, yet the Democratic Party, the "friend of the people," prefers taxing the people to using the Government's own money deposited in the banks or reducing expendi-

The Democratic tariff bill is not only a failure from a revenue standpoint, but it is a failure from a business standpoint. It has transferred our foreign trade from a favorable to an unfavorable national balance. In other words, it has made us poorer nationally. During the last year of the Republican tariff, ending June 30, 1913, we sold abroad more than we bought abroad goods to the value of $652,875,915, and we had this wonderful balance of foreign trade in our favor for many, many years, and as a Nation we were happy and prosperous, the envy of all the nations of the world.

After the new Democratic tariff law got fairly under way and months before the European war was dreamed of the balance of trade began to run against us. During April, May, June, and July, 1914, the balance of trade was against us. In those four months we bought abroad more than we sold abroad over $20,000,000. We pay this difference in gold to the foreigner.

During the same four months in 1913 we sold abroad more than we bought abroad $168,490,733. Then the difference in gold was paid by the foreigner to us. This was under a Republican tariff.

Which system is the best, the one that loses us $70,000,000 in revenue per annum, changes the balance of trade in our favor of $168,000,000 to one against us of more than $20,000,000 in four months, increases foreign imports about $160,000,000 in eight months, taking our gold to enrich the foreigner, or the one that makes the foreigner pay to enter the American market and that brings to our country each year an average balance in gold of $650,000,000 to enrich our people?

Under which system are our people happier, more contented, and more prosperous? There is only one answer to this question, and this will be indicated by a Republican House of Representatives here after November.

In connection with this discussion I may add that the theory of Democracy that the Republican tariff was the cause of high prices is as certainly disproven by the hard facts of everyday trading as it is possible to disprove any theory. We have a Democratic tariff now, and prices are not lower, but higher. There is not an article affecting the common people placed on the free list or the duty on which has been lowered that can be bought any cheaper to-day than when the duty was on. The Democrats reduced the duty on sugar 25 per cent on March 1. The consumer has bought his sugar at no lower price, but, as a matter of fact, has paid more for it. Boots and shoes were placed on the free list, and boots and shoes have gone up in price. Wheat was placed on the free list, but flour is not cheaper, and in fact harder to buy. Wool was placed on the free list, but flannel shirts are no cheaper. It is not necessary to enumerate additional articles showing this situation. Every housewife in the country knows the conditions well.

The reduction of tariff duties without lowering prices to the American people also demonstrates that the consumer has not been paying the tariff duty on articles upon which there is competition in this country. If there is any principle ever advocated by any political party that has been thoroughly disproved and discredited, it is the Democratic argument that if a tariff duty be placed on an article produced in this country the consumer pays that tariff duty as a tax. The Democrats have howled and raged and stormed all over this country that the consumer was being taxed to death by the tariff duties. We hear nothing of this now. Instead they talk of European wars, of the Mexican muddle, of Philippine independence, of anything to keep away from their delinquencies.

One by one the theories under which the Democratic Party was intrusted with power are discredited by the experiences of the American people. What is the sum of this whole matter? War taxes of $105,000,000 in time of peace is the price we pay for Democratic war on American industry; for Democratic extravagance; for Democratic incompetency.

Shall the Pendulum Swing Back?

EXTENSION OF REMARKS
OF
HON. ARTHUR R. RUPLEY.
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 14, 1914.

Mr. RUPLEY. Mr. Speaker, the Sixty-third Congress is drawing to a close. In a representative capacity we have a commission, not an office. We must submit our briefs to the people. Election is near at hand; our commissions will be renewed or canceled as the result of our representative system. We must render an account of our stewardship.

As I read history, no period is brought to view where the people, realizing their responsibilities, played so important a part as in the election of 1912. The old-time idolatrous devotion to the Republican and the Democratic Parties was not so prevalent. The voter was thinking, and in his thinking period he cast his ballot. This was a healthful condition of the public mind—a full realization of the responsibilities of citizenship—and the voter was guided by party platforms, their promises and covenants.

To continue this condition and maintain an increasing intelligent citizenship, it is imperative that these covenants, promises, and pledges become real live enactments.

As Representatives, elected by the people, we become a party to a contract with the people. They not only will and desire, but demand by their votes the enactment into law of the pledges contained in the Democratic platform, and, I may also say, in the Progressive platform. The Democratic voters and the voters for the Progressive principles constitute the vast majority of all the people of this great Republic.

The first demand of all the platforms—Democratic, Republican, and Progressive—was an immediate downward revision of the existing high, and in many cases prohibitive, tariff rates. To the Democrats was intrusted the solution of this great economic problem, this tremendous responsibility.

To frame a new tariff bill which would result in revision downward and have no deterrent effect upon the great industrial world was a gigantic task. If a tariff bill were fundamentally correct, scientifically drawn, it could not be tested out in a brief period of twelve months. A great restless people, interested in profits and wages, had great expectations of a tariff bill that would meet every condition—automatically change a sliding, slipping business into one of immediate and ever-increasing prosperity—a harvest without sowing—results from remedies before the healing time—was the severe test applied by the reactionary Republicans, in whose hands largely rested the great business interests of the country. In nursing the patient, however, they deliberately violated the doctor's orders and exposed it to all sorts of danger—criminally reckless of their responsibilities and obligations. The people's representatives and not theirs was the directing force, and it was their fervent hope and prayer that the patient would not survive. Born of a desire for power, no government should succeed but one of their making. They never intended that the Democratic tariff measure should succeed—their one thought was to be returned to power—power for reactionaries at the price of their country's ruin. This was not too large a ransom for them to pay.

Representatives of all parties—Democrats, Republicans, and Progressives—voted for the tariff bill, in answer to the will of the people. Most of them believed in the principles of a real protective tariff for infant industries and those needing protection, and that monopolies and trusts that were unfair to labor or conducted business in violation of Federal statutes were not entitled to protection. That labor and capital should share in the profits derived from protection and in that sharing labor was not to suffer more than capital, nor capital more than labor. In the repudiation of the Payne-Aldrich tariff bill, it was clearly established that high tariff rates favoring monopolies and granting special privileges would not be tolerated by the American people.

All tariff is for revenue, either limited to the necessities of government, or highly protective, producing great revenue and wealth. In the present world condition either plan would produce little revenue—not even sufficient for the necessities of the government. At a time like this should we not place patriotic principles above self, and our country above our party?

The income tax, a part of the tariff law, is the fairest kind of taxation. Under this plan those with large incomes are taxed, and those without incomes are not taxed. No one having income and profit will object to a tax of this kind.

This tax, fought for so long a period, goes upon the statute books and meets conditions, taking its place as though it were part of the fundamental law, and no protest is heard.

The banking and currency law, voicing the sentiment of the people, opposed by many banking institutions before its passage, complimented after its passage by many who had previously opposed it—a law that will prevent panics and will insure a stable financial condition, a real emergency bill at this time, is upon the statute books.

An arbitration act providing for conciliation and arbitration in controversies between capital and labor, which has already been successfully employed in preventing great strikes that would have tied up the entire railway business of the Nation, has also been enacted into law.

The enlargement of the scope of the parcel post, which has reduced the cost of transportation and become a lasting and convenient instrument of benefit to the consumer and producer, has given the people their own express company.

The Clayton antitrust bill, the trade-commission bill, and the railway securities bill (extending the Interstate Commerce Commission's jurisdiction over the issuance of railways securities) were demanded by the people from the administration and their representatives. Let us hope that these bills will make the trusts and railroads apply the Golden Rule and "do unto others as they would have others do unto them," by obeying court decrees, abandoning unfair cutthroat competition, ceasing discriminating between purchasers of their goods, disgorging control of competitors acquired under the "holding company" system, and surrendering the enormous power wielded through interlocking directorates.

All these great administrative measures were passed without strong partisan vote, Democrats, Republicans, and Progressives alike uniting in supporting them.

At this time when all the nations of the earth are warring against one another, and when in the course of events vast numbers of Europeans must attempt to enter this country, a restrictive immigration measure should be and could be very wisely placed upon the statute books. A measure restricting immigration has already passed the House. Why is it held up in the Senate? Measures which passed the House after the passage of the immigration bill in that body have taken precedence in the Senate. The people's Representatives nearly passed an immigration bill in the last administration over the veto of a Republican President. The people's Representatives in the lower branch, at this session of Congress, passed the Burnett immigration bill, with a fair educational test, by a large majority. The immigrant should at least know his own language.

The great Democratic program of constructive legislation will be without a keystone if the promises made by the Representatives to the people are not carried out in the upper branch of Congress. If this immigration measure fails, who will be responsible for such failure? Want of time will be no excuse for this omission. The American people have asked for a restrictive immigration bill; their vote was cast for such bill; their Representatives are pledged to its passage; the people of this country will not tolerate such excuse when the passage of this bill was possible.

The one big blot upon the magnificent record of achievement of this administration should be effaced by the passage of an immigration bill which was promised by the Democratic Party. This question looms up very large at this time—larger than at any other time in the history of our country—because of the conditions existing abroad. Small wonder that European immigrants will swarm to the United States after having lost homes, friends, relatives—everything which bound them to the Old Country. Small wonder, indeed, that they should turn their steps toward the only nation, peace-loving, spelling peace on every hand—this Isle of Safety—this Neutral Zone—the United States of America!

Our Democratic friends say "No President has ever made such a record." This will ring much truer if a restrictive immigration measure is promptly passed and signed by the President.

A nation of one hundred million people now has before it the solution of a new tariff law and all these great constructive measures, and every patriotic American should contribute his humble part in a stupendous effort to assist in the adjustment of these problems. Let me offer up a special plea at this time, when the whole world is at war and when not a single war speck blots our peaceful existence in the Western Hemisphere, that we owe our patriotic devotion to the Administration, to the President of the United States, the world-renowned leader of peace, and to our Representatives in Congress. Our welfare is in their hands, and at this time an untried tariff bill and other measures striking at real evils within the country, when the strongest and mightiest tariff wall is around the country, should not make us Americans cowards, unwilling to grant the time for the solution of these great economic and industrial problems and an honest trial of the legislation for human betterment. We have more protection than was ever dreamed of by the American people. None or little imports from Great Britain, Russia, France, Germany, Austria, Servia, Belgium, or Italy; but the pendulum must not swing back to the measures and platforms repudiated by nearly twelve million thinking voters.

Mexico, perpetually revolutionary, disturbed our peace. Our own people and the European nations cried for armed intervention. A big figure in the world's arena stood nearly alone for a firm policy and one of "watchful waiting"—a policy which has prevented war, much dreaded, and which has made this country the foremost peace nation on the globe. Would we wish it to be said that this great continental war started with the United States of America engaging in conflict with a sister Republic, Mexico, and finally spreading to Germany, England, France, Austria, Russia, Belgium, Servia, Montenegro, and Japan? That the young Republic of the Western Hemisphere moved by a restless desire for war against a weaker Republic, communicated this war germ to the Eastern Hemisphere, resulting in the greatest war in the history of the world and the greatest step backward in the history of civilization? Or would you have the United States of America as it is to-day, through its ministers abroad, although our embassies are surrounded by swords, guns, cannon, shrieks, and groans of the dying upon the battlefields, the guardian angel of all the peoples of the world at war—the one trusted power—the one power on which the eyes of the world are focused to carry out the obligations brought on by this frightful carnage? The American flag does not appear upon many ships, but that flag to-day appears upon the breasts of the German in Russia, the Russian in Germany, the German in France, and the Frenchman in Germany, the German in Great Britain, and the Englishman in Germany, and the German in the Japanese Empire, and the Japanese in the German Empire—to all of whom it affords safety and protection. Is not this glory sufficient for our flag?

Banking and Currency.

EXTENSION OF REMARKS
OF
HON. KENNETH D. McKELLAR,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 29, 1914,

Mr. McKELLAR. Mr. Speaker, on last Tuesday, during the great cotton conference called by the Secretary of the Treasury, the Secretary, Mr. McAdoo, delivered a speech which I think should have wide circulation in this country, especially in the cotton States, and therefore I ask unanimous consent that the same be placed in the RECORD as a part of my remarks.

It will be remembered that a little earlier than this, last summer, a question was raised as to whether or not there was sufficient money in the country for the purpose of moving the crops, it being claimed that because of currency agitation that there would not be sufficient money. It was at this time that Mr. McAdoo rose to the occasion, distributed money in national banks throughout the farming sections of the country, and no trouble was experienced in getting crop-moving money, and the trouble was settled.

The present situation, of course, especially with the cotton producers and dealers, is far more serious. Many and good plans have been suggested for aiding the cotton situation; but the remarks of the Secretary of the Treasury, below stated, though they were wholly extemporaneous, deal with the subject in a most practical, encouraging, and heplful way. They show that he is determined to lend every legitimate, safe, and proper aid which the Government can lawfully render under present laws to our cotton industry, and that this aid will be of immense benefit in this emergency no one can doubt.

The cotton problem is not local, but it is national in its aspects, and I think the Secretary of the Treasury is entitled to the highest praise for the help that he is lending.

"REMARKS OF SECRETARY M'ADOO AT THE COTTON CONFERENCE HELD ON AUGUST 25, 1914.

"Secretary McADOO. I want to deal with this problem. This conference was called really for the purpose of trying to devise some means of meeting the situation. With all due respect to Congressman SISSON, we did not come here to discuss the question of State bank note issues. I am perfectly willing to have

it discussed, if you gentlemen think that this is of more importance than the real issue. It is not, however, necessary for a single State bank to issue a single dollar of currency to deal with the situation; and, furthermore, let me say to you that the integrity of the financial structure of this country to-day depends on the national banks. [Applause.] They are the only ones that have come into the Federal reserve system and stood like rocks in this situation, and they are the only ones that have got the supervision that makes the issuance of national bank currency safe in this country, so that every dollar which passes from one end of this country to the other may be accepted at par and without the slightest doubt or hesitation upon the part of the man who takes it that he will get dollar for dollar for every piece of paper of that character that comes into his hands.

"I am not old enough to know what happened prior to the Civil War, but I do know this from history—and we can not ignore history—that before the national-bank act was passed every man to whom a circulating note was offered in payment for anything had to get the Secret Service or a detective agency or a commercial agency, or something of that sort, in motion to trace up that issue and ascertain whether or not it was worth anything; and if you are going back to the days of wildcat State issues of currency, you will destroy the whole financial fabric of this country. I make this statement, gentlemen, because I think it is important that it should be understood now.

"Congressman SISSON. There is no law that prevents that State bank from issuing currency now, is there?

"Secretary MCADOO. Yes, sir.

"Congressman SISSON. The 10 per cent tax?

"Secretary MCADOO. I think that is enough.

"Congressman SISSON. They have made it unconstitutional to pass a law preventing a State bank from issuing currency.

"Secretary MCADOO. You asked me if there was anything to prevent it.

"Congressman SISSON. But it is unconstitutional to pass a law directly. You have done indirectly what you could not do directly.

"Secretary MCADOO. I do not know who did it, but I think it was a wise thing for somebody to have done. [Applause.]

"Now, gentlemen, let us get down to business. Enough power exists in the Secretary of the Treasury to-day to issue more currency than you can ever use to finance the cotton crop and all the other crops in this country. If you will pardon me for a moment I think it is important to clarify the atmosphere. You can not issue State bank currency anyway, so what is the use of talking about it? Let us get down to a practical basis and try to solve these problems. There is enough currency authorized by law to-day to wreck the United States of America, and the danger in this situation, gentlemen, is that by ill-considered views and ill-considered actions we may put out so much inflationary paper money that we will ruin the country. [Applause.]

"A very wide discretion is lodged in the Secretary of the Treasury about the issue of the national-bank currency. It imposes upon the Secretary of the Treasury a degree of responsibility which I myself wish I did not have, but which I am bound to exercise with all the intelligence and capacity God has given me, and I hope He has given me enough to enable me to deal with this problem with intelligence and capacity. [Applause.]

"But you gentlemen must remember that this issue of currency is not Government money. The Government has not got money that it is going to hand out to anybody. The only money in the Treasury of the United States to-day is the gold fund, the surplus over and above its liabilities, amounting to about $130,000,000, and that is none too much to enable this Government to carry on its business and to take such reasonable measure of protection for the general interests of the country as the use of any surplus part of that fund may enable it to do. But the issue of currency that you are speaking of is currency issued to the national banks of this country upon live assets, and even that currency can not be issued with safety unless those banks put behind it a fair measure of gold reserve; because, after all, in order to get a safe basis of credit and a safe basis for the conduct of the business of the country, you must have a metal base behind this currency proposed to be issued, and therefore the law imposes the duty on the Secretary of the Treasury of requiring that a gold redemption fund, not less than 5 per cent, shall be put behind this identical currency, and that at any time it becomes necessary, in his judgment, to require an increase of that redemption fund he shall exact it, and that is exactly what he is going to do. So long as he has power to deal with the situation he intends to see that all these currency issues are safe, because, I tell you gentlemen, you can not bring upon this country a greater disaster than an inflation of the currency to a point that is going to wreck the whole fabric of credit. [Applause.]

"Congressman SISSON. Will you permit one interruption? Do you believe, then, that under the present law, if the cotton security is offered, that the banks under the present law are able to take care of the situation?

"Secretary MCADOO. Why, they can get all the currency that is necessary to take care of this situation. I stated it here yesterday, and I repeat it now.

"A MEMBER. Let me ask you just one question, please. Tell us how to do it and let us adjourn. [Laughter.]

"Secretary MCADOO. I will tell you how to do it, so far as getting the currency is concerned, but I can not tell you how to defy every law of nature and every law of business in order to do it. What you must do, gentlemen, is to consider this: That nobody can arbitrarily fix prices. The National Government can not do it; let us get away from that; let us try to be practical. The States can not fix prices for one commodity, or for all commodities, and get away with it. The history of civilization shows that nations have been strewn with wrecks of that character. I need only call your attention to the condition of France in the French Revolution, when similar things were attempted, and resulted in the prostration of industry, credit, and everything in the land.

"Mr. NESBITT. If you will keep your head, Mr. Secretary, while all around you are losing theirs and blaming the situation on you, you will save the country and prove yourself the man we believe you are.

"A MEMBER. We indorse that statement.

"Secretary MCADOO. If you attempt to valorize—in the first place, it could not be done, because nobody can pass such a law; it is a perfectly wild and ridiculous expedient and should not be resorted to in any circumstances. When you seek to do that, what have we then? I received a telegram this morning from a man representing the canning industry, asking me to do something of the same sort, and saying that if any valorization was going around they wanted to share in it. Of course they do, and ought to have it. If we are going to go into that, we shall have to valorize everything. You will have to valorize canned salmon, wheat, corn; you will have to valorize every single thing produced in this country, because, as I tell you, gentlemen, the shock of this great cataclysm in Europe has affected for the moment every line of industry. Of course, somebody is going to get hurt. You can not help that. It is our business not to see that nobody shall be hurt, but it is our business to keep in touch with the situation, and, if possible, to prevent anybody from being hurt any more than is absolutely necessary, and that is all you can expect to have accomplished.

"I want to say in connection with this emergency currency or this national-bank currency, which the Secretary of the Treasury is authorized to issue, that the conditions are simply these: I have encouraged throughout this country the organization of what we call national currency associations. Those are associations of the national banks of this country. Those national banks constitute a homogeneous strong financial bulwark in this situation. Why? Because they have the power of the National Government behind them and are compelled to live up to certain sound laws of finance and administration. They are under governmental inspection and examination. They have a uniform system of examination so that a national bank in one State is examined exactly in the same way that a national bank is examined in another State. We have the reports from them from all parts of the country, and we know their condition. That is the reason they are, as I said before, a homogeneous whole and a strong bulwark in this situation. Those banks, upon organizing these associations, have the right, upon application to the Secretary of the Treasury, to get 125 per cent of their unimpaired capital and surplus, provided a bank has a surplus of 20 per cent—it can not have less than that—in national-bank currency, to be secured how? To be secured by 30 per cent of commercial paper and 70 per cent of securities of a kind acceptable to the Secretary of the Treasury.

"I stated here yesterday that it was my purpose to accept from the banks of those currency associations notes and obligations secured by cotton-warehouse receipts, properly certificated, and issued by responsible warehousemen or warehouse companies. I do not say that those warehouses have got to be built of brick, stone, steel, or anything else, or that they must be bonded. All I ask is that those warehouses shall be of such a character as to protect the cotton itself from deterioration or destruction, with adequate insurance against fire, and backed by responsible agencies, so that when their warehouse receipts are issued we know that they represent something actually in storage there, something that can be had on presentation of receipts. I said we would accept those as security under this act. What does that mean? It means that the national banks

of this country can borrow to the extent of 70 per cent of their unimpaired capital and surplus on notes secured by warehouse receipts for staple products—not alone cotton—that I think it is safe to lend on.

"Now, is not this the simplification of the situation? The Government has no agencies, and it ought not to attempt to do this business. It is not the business of the Government to do this sort of thing, to make loans, to trace out the location and security of every bale of cotton behind one of these notes that is made the basis for this currency. The banks are the proper agencies. They are highly organized; they are in every part of the country, and so long as they are put in possession of the means of financing these things it is their business to finance them. And I know that they will be glad to finance them if they can get the resources, and all that these banks have got to do—all these associations have got to do—is to make application for currency under that act and comply with its provisions. I believe that if they will do that, acting always with prudence—acting with a very high degree of prudence and common, ordinary business judgment—that all the money that this country needs or ought to have for the financing and carrying of this cotton crop until it can be marketed and sold is largely in hand.

"What have you got to do? You have got to get your warehouses in shape. You made a good start in that direction yesterday. They need be, in my judgment, only of the simple character I have described. And, as has been referred to heretofore, the national banks, if they get plenty of circulation, are going to let the State banks participate in it. Why? Because even if they did not want to do so, they could not help themselves, because every man who knows the most elementary thing in economics and finance knows that when you put a dollar in circulation you can not control its movements. If you turn money over to the national banks it will find its way to the State banks inevitably, because when that bank issues currency it pays it out to somebody—pays it out to you—and you take it over and deposit it in the State bank, and the State bank participates, of course, in that money which is put in circulation. Why, the State banks participate to such an extent that the national-bank notes now issued are held by them as a part of their reserves, and it is the amount and volume of money in circulation that has an effect upon this situation, and it does not necessarily have any relation to the particular agency of issue. As a matter of fact, we could have only one single bank in this country issuing the currency, but if it issued enough currency to go around it would get into circulation and everybody would get a part of it. It is not necessary to have everybody issuing currency. The national banking system of this country, properly inspected and under governmental supervision, should be the controlling agency for the issue of this currency, in order that we may know that every dollar that is in circulation has been supervised by the Government and that it will pass current wherever it appears.

"I had not intended, gentlemen, to make these remarks at the moment, yet it seems important to do so, in order to clear the atmosphere so we may get down to the real practical questions before us.

"A MEMBER. I have just one more question. We are all with you and indorse your statements, and indorse them as correct. But now, how can the State banks get the benefit of the currency issued unless they become members of the association? Would you explain that to us, sir, please?

"Secretary MCADOO. I thought I had already answered your question pretty completely. If the national banks take out circulation the State banks inevitably get the benefit of it, because you can not put out any money which they themselves do not participate in the use of.

"A MEMBER. We understand that.

"Secretary MCADOO. The State bank does not have to get the circulation direct.

"A MEMBER. That is the object of my question.

"Secretary MCADOO. They can not get it directly, but can get it indirectly. This is what is happening in the Treasury Department every day. State banks are actually depositing their securities with the national banks, and the national banks are getting the issue against those securities and turning it over to the State banks. It is perfectly simple to get it. There is no difficulty about that. All you have to do is to have proper security.

"A MEMBER. Right on this point I want to say that I propose to telegraph on to have a warehouse ready. I leave for New York to make arrangements for my national correspondent to do this business for the State banks.

"Secretary MCADOO. You can do it through the national bank in your own community, if necessary."

Secretary McAdoo later added the following as a part of his remarks:

"Among the eligible securities to be used as a basis for the issue of currency, I have decided to accept from national banks, through their respective national currency associations, notes secured by warehouse receipts for cotton or tobacco, and having not more than four months to run, at 75 per cent of their face value. The banks and the assets of all banks belonging to the currency association will be jointly and severally liable to the United States for the redemption of such additional circulation, and a lien will extend to and cover the assets of all banks belonging to the association and to the securities deposited by the banks with the association, pursuant to the provisions of law, but each bank composing such association will be liable only in proportion that its capital and surplus bear to the aggregate capital and surplus of all such banks.

"This plan ought to enable the farmers to pick and market the cotton crop, if the bankers, merchants, and cotton manufacturers will cooperate with each other and with the farmers, and will avail of the relief offered by the Treasury within reasonable limits. Such cooperation is earnestly urged upon all these interests. The farmer can not expect as high a price for cotton this year because of the European war, yet he should not be forced to sacrifice his crop. The banker and the merchant should not exact excessive rates of interest, and the manufacturers should replenish their stocks as much as possible and pay reasonable prices for the product. If this is done, and it can be done if everyone displays a helpful spirit, a normal condition can be restored, and there ought to be no serious difficulty in taking care of the cotton problem.

"This is a time when the entire country expects that purely selfish interests shall be subordinated to the common good; that undue advantage shall not be taken of the necessities of each other. I am happy to say that this spirit seemed to animate those who attended the so-called cotton conference held at my request in Washington on August 24 and 25.

"Since the law leaves it entirely in the discretion of the Secretary of the Treasury to issue or not to issue the currency to which I have referred, I shall not hesitate to refuse it if I am convinced that it will be used merely for speculative purposes instead of for the operation of harvesting and carrying the crop until a reasonable market can be found and for the needs of legitimate business.

"It is not my purpose to prescribe the character of warehouses in which cotton and tobacco may be stored. The banks will be relied upon to see that warehouse receipts issued by responsible warehousemen or warehouse companies alone are accepted, and that the cotton and tobacco stored in such warehouses is covered by adequate fire insurance and is protected against injury by the elements.

"In order to obtain such currency the following things should be observed by banks applying therefor:

"1. Not less than 10 national banks in any given territory, each having an unimpaired capital and surplus of not less than 20 per cent, desiring such currency shall form a national currency association, with an aggregate capital and surplus of not less than $5,000,000, as required by the act. Full particulars and blank forms for this purpose may be had upon application to the Comptroller of the Currency, Washington, D. C.

"2. Any national currency association formed in accordance with law will receive the approval of the Secretary of the Treasury. Already 37 such associations have been organized in the various States.

"3. Under the law the Secretary of the Treasury may accept as security for currency—

"(a) Bonds of any State or of any city, town, county, or other legally constituted municipality or district in the United States which has been in existence for a period of 10 years and which for a period of 10 years previous to such deposit as security has not defaulted in the payment of any part of either principal or interest of any funded debt authorized to be contracted by it and whose net funded indebtedness does not exceed 10 per cent of the valuation of its taxable property to be ascertained by the last preceding valuation of property for the assessment of taxes.

"(b) Any securities, including commercial paper, approved by the Secretary of the Treasury, held by a national bank and made available through a national currency association under the direction and control of the Secretary of the Treasury at not exceeding 75 per cent of the cash value of such securities or commercial paper.

"(c) No national bank shall be permitted to issue circulating notes based on commercial paper alone in excess of 30 per cent of its unimpaired capital and surplus.

"4. The total amount of currency issuable to any bank, including its circulating notes issued against United States bonds, shall not be more than 125 per cent of its unimpaired capital and surplus.

"5. Each bank or currency association receiving currency must maintain in the Treasury at Washington a redemption fund in gold of at least 5 per cent. The Secretary of the Treasury may at any time require such additional deposits in gold as in his judgment may be sufficient for the redemption of such notes.

"I am convinced that there is adequate power under existing law to issue through the national banks all the currency to meet any reasonable demand that may develop in any part of the country, and that it is not necessary to extend the note-issuing privilege to State banks.

"The Secretary of the Treasury already has the power to issue one billion dollars of additional national bank currency if it should be required, but I can not imagine a condition when any such need will arise."

Rural Credits.

EXTENSION OF REMARKS
OF
HON. CHARLES H. DILLON,
OF SOUTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 20, 1914.

Mr. DILLON. Mr. Speaker, the European countries have made great progress in the development of rural-credit systems. Germany commenced developing a rural-credit system as early as 1832. The bond issue is based upon the mortgages of many individuals and guaranteed by the State.

France started the system in 1852. In 1899 district agricultural banks were established with Government funds.

Austria started rural credits as early as 1869 with a number of provincial banks. These banks issue bonds which are guaranteed by the Province and are operated with but little initial capital. Loans are made at low rates on amortization annuity.

Hungary gives substantial aid to the farmer, carrying on its work through credit cooperative societies. Mortgage bonds are issued and guaranteed by the State governments.

In Switzerland the banks are furnished with capital by a State bond issue. These banks deal directly with the farmer, mortgages running as long as 59 years at low rate of interest.

Denmark loans directly to the farmers at 3 per cent interest up to 90 per cent of the value of the property.

New Zealand issues bonds at 3 to 3½ per cent and loans to the farmers. The Government expense of handling the loans is fifteen one-hundredths of 1 per cent, the mortgages running 36½ years. It is said the Government policy reduced rates of interest from 8 per cent to 4 per cent on farm loans.

Norway loans up to 60 per cent of the value, mortgages running 40 years at 4½ per cent. Bond issues are obligations of the Government.

Italy has three main banks with no shareholders. The State gets the profits. Loans are made to the farmers at 5½ per cent and carry interest and amortization.

In Australia loans are made direct to the farmers. The State obtains money by bond issues. Loans are with amortization and run as long as 36½ years.

For Ireland an appropriation was made for aiding the farmers in buying homes and assisting them in building cottages and granting long time for payment.

Russia, through its land-mortgage banks, purchased large estates from landlords and cut them up into small farms. The banks took mortgages running 55½ years, allowing annual payments, including amortization and costs. The Government obtained the money by bond issue.

A Government agricultural bank is now in operation in the Philippine Islands. It is being operated with good results and has reduced interest rates.

In Nova Scotia farm lands are bought, divided into small tracts, buildings erected, and the farmer is given long time to make payments. The Government borrows the money to make the purchases.

The European commission states that the loans in Europe vary from 30 to 60 years; that the charge for administration varies from fifteen one-hundredths of 1 per cent to thirty-five one-hundredths of 1 per cent; and that the borrower has the right to discharge his obligation at any interest period after a fixed time; that in every instance where Government capital has been granted to establish mortgage credit of any nation the result has been favorable to the agricultural interests.

The rural credit system in Europe has justified its existence. Success has everywhere followed the movement through its evolution, and history records but few failures in its advancement.

States, counties, cities, villages, and townships, ever since the formation of our Government, have issued bonds for public improvements, the security being the property within such political subdivision issuing the bonds. Behind the municipal corporation debtor is the taxing power through which agency the bond issue is liquidated. This principal has been extended to drainage districts, public roads, sewer and paving districts.

The laws giving cheap credit to the municipal corporations have never been applied to the advantage of those engaged in agricultural pursuits. It now remains to apply these old-time principles to a combination of borrowers, whose assets form the base of a credit system. The farmers execute their individual mortgages, and these individual mortgages are combined into one financial transaction upon which long-time bonds are issued and sold.

The foreign countries have for years been aiding the farmer in his productive work. They give him instruction in scientific methods of farming, they shield him by tariff against destructive competition, they aid him in cooperative methods of selling and buying, and they provide him with long-time loans at a low rate of interest.

Let us appropriate and use this knowledge and experience for our people. The United States has wonderfully aided the farmer in educational methods. It has until recently protected him against foreign competition, and has built up great manufacturing industries, giving him a home market for his products. It has, however, failed to give him any just credit system. He has been compelled to wage his own fight against those who controlled his credit and his products, the usurer and the speculator.

The cost of living should be reduced, not by importation of food supplies but by increasing our food supplies, by giving the farmer greater productive power and better facilities, by increasing his earning capacity, by helping him to get credit for his operations, by protecting him against the foreign producer, and by assisting him in getting a fair profit for his labor.

The old banking law gave service only to those engaged in commerce and industry. The good real estate mortgage was not bankable credit. The Federal reserve act is wholly in the interest of commerce and does not supply the farmer with credit for his productive development nor with a credit for holding his products. Those engaged in commerce and industry obtain credit; for money at 4 per cent or 5 per cent interest while the farmer must obtain his credit through the money lender, costing him for loans, commission, and expense 8 per cent interest.

High interest rates, the need of credit, small earnings, want of cooperation in the marketing of his products, competition with the foreigner, increasing long hours of toil, and discouragement hold out but little inducement for the boys and girls to remain on the farm. The back-to-the-farm movement will never be realized until farming becomes a profitable business and until agriculture is placed upon an equality with other industries.

At the beginning of our Government 90 per cent of our people were engaged in farming. Now only about one-third are so engaged. Twenty-seven and three-tenths per cent of the value of the farms are now under mortgage. In 1900 the average farm mortgage was $1,224. In 1910 it was $1,700.

The farm owners and farm tenants are struggling under a debt of nearly $6,000,000,000, with an interest burden of $510,000,000 per annum. It is estimated that the farmer does not receive more than 2 per cent on his investment above a fair price for his labor.

What kind of a rural credit system are we to have—one controlled by the money lenders or one in the interest of the borrowers?

President Wilson on the convening of Congress in regular session urged "that special provision be made for facilitating the credits needed by the farmers of the country." He further said, "The farmers, of course, ask and should be given no special privilege, such as extending to them the credit of the Government itself."

The Secretary of Agriculture also opposes Government aid. We are told that governmental aid would be helping private enterprise, granting special privilege, establishing a paternalism; that our farmers do not want special privilege and ought not to have it.

The force of this argument might be admitted if the farmers were to be the sole beneficiaries. Legislation which benefits the whole people can not be said to be paternalism nor is it

class legislation. It is a broader question, going beyond classes; one that vitally affects the interest of all of our people.

Some policy must be inaugurated that will take a part of the people now congesting the large cities and locate them upon the farms, that the benefit of their labor may flow to all classes of our people. The congested condition of our cities is a menace to our national life. If continued it means decay in our civilization.

The feeding of the people is a great governmental policy. More farmers are needed, not for the benefit of those now engaged in that industry but for the benefit of all of those who consume the products of the farm. By assisting the farmers we assist everybody. It is said that France has provided Government loans to the farmers at 2 per cent per annum, and when the farmer stays upon the farm until he is 65 years old he is given a pension for the rest of his life.

The Postal Savings System, established in 1910, had on June 30, 1913, funds amounting to $33,818,870. Its resources were invested in Government bonds to the amount of $117,960 The balance of the money above the 5 per cent reserve and what is needed for current expenses is loaned to the banks at 2¼ per cent interest. If it is a governmental policy to loan to the banks why not extend the principle, and make loans direct to the farmer upon his good real estate security?

It would not be class legislation or paternalism as much as the custom of turning over to the banks millions of dollars at 2 per cent and 2¼ per cent interest and allowing them to loan the money thus obtained at a high rate of interest.

In one instance it helps only a special class, while in the other it would help all of the people. Government loans direct to the farmer would not interfere with the Federal reserve banking system as that system will control the commercial loans, while the Government and State should make loans to the farmer on his good real estate mortgage or lend their credit in the form of a guaranty of bond issue based on many individual mortgages, and thus free the system from the money trust, encourage agriculture, and bestow upon all of our citizens a lasting benefit.

The Ceremonies Attending the Unveiling of the Statue to Commodore John Barry in Washington, D. C., Saturday Afternoon, May 16, 1914.

EXTENSION OF REMARKS

OF

HON. JOHN J. EAGAN,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 16, 1914.

Mr. EAGAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of Hon. JAMES A. HAMILL, of the twelfth district of New Jersey.

The address is as follows:

SPEECH OF CONGRESSMAN JAMES A. HAMILL, OF THE TWELFTH DISTRICT OF NEW JERSEY, AT THE CEREMONIES ATTENDING THE UNVEILING OF THE STATUE TO COMMODORE JOHN BARRY, IN WASHINGTON, D. C., SATURDAY AFTERNOON, MAY 16, 1914.

The chapter of our country's history which pictures the period of the Revolution will ever contain for us the richest sources of patriotic inspiration. The story of that time "that tried men's souls," with its struggles, self-sacrifice, and trials, teaches us to comprehend more vividly the heaven-born principles and ideals on which this Government was founded and enables us to estimate more truly the precious value that attaches to our common inheritance of American citizenship.

But history is not an impersonal matter. It is woven out of the achievements and failures, out of the triumphs and defeats, of those whom it describes, and it can not be properly understood unless we penetrate the motives and purposes of the characters who live in it. Biography therefore has well been termed "the key to history."

And so we now draw aside the curtain that conceals the past and illustrates the lofty and unselfish patriotism that characterized the Revolutionary era by contemplating the life and services of one of the most glorious in the galaxy of American immortals. We dedicate this beautiful May afternoon the affectionate offering of a grateful Nation's homage to his memory and here in the Capital City unveil this splendid monument, so that his fame may flourish as long as the land he lived and fought for endures, and that posterity, gazing upon it, may profit by a lively remembrance of the sterling worth and sincere loyalty of America's illustrious sea king—Commodore John Barry.

What name on the long and shining roll of our heroes is more fitted to thrill our pulses or worthier of our unbounded admiration? What deeds have lent brighter luster than his to American arms upon the sea? What services were more generous or unremitting than those rendered by Barry? "I serve the country for nothing," was his remark, and that service was rendered in ample and ungrudging degree. He threw himself into the Revolutionary struggle at the commencement, and he continued in it with unabated energy and ardor until its close. He commanded the first vessel that put to sea under authority of the Continental Congress; he was first to unfurl from the masthead the American flag upon the oceans—the same flag that Washington hoisted at Cambridge in January, 1776; he captured and carried to his country as prize the first armed vessel of war that ever struck her colors to an American ship; he commanded the *Alliance*, the fleetest and stateliest vessel of the Continental Navy; with his own ship alone he almost invariably in naval conflict contended against two vessels of the enemy, and generally succeeded in capturing both as prizes, while it required two hostile vessels to inflict upon him the single naval defeat he ever experienced; he superintended the construction of the ships which formed the beginning of our present Navy. He received personally from the hand of Washington commission No. 1, creating him ranking officer and head of the United States Navy. He served all through the mighty conflict, not only upon the sea but upon the land as well, and his tired hands rested from toil and his great heart ceased to throb for his country only when it was stilled in death. This prince of American patriots was in truth no ordinary mortal.

In County Wexford, Ireland, John Barry first saw the light in 1745. No strange portents marked his advent into the world. No stars fell from the firmament, and he was born not to high but to humble station; the event of his birth was not heralded as something of great importance. It created scarcely a ripple of attention in the quiet rural Townland of Ballysampson. It was merely another soul come to live and struggle in a land which, though rich in resources, had been legislated into poverty, and where the iron heel of oppression was employed in a futile endeavor to crush out a national spirit which for centuries had fought a heroic but unavailing battle for freedom. But the spirit that entered the world under these unnoticed circumstances was destined one day to challenge the supremacy of his country's conqueror and to wrest from her the proud title of mistress of the seas. Such is the origin of most men of achievement.

Barry left Ireland in early boyhood. He went first to the island of Jamaica, and from there came to Philadelphia when about 15 years of age.

We find him at the age of 21 commanding the merchant ship *Black Prince*, which arrived at Bristol, England, in 1775 after a voyage from Philadelphia. In the month of June of that year he was in London. Here he first learned of the revolt of the American Colonists. The shot fired by the embattled farmers, which was heard around the world, reechoed in the capital of the English nation. Lexington had been fought and the people of America were preparing for the momentous struggle which lost to England the brightest jewel in her crown and created this Nation, which ever since has been, and we pray ever will be, the land of hope and opportunity to earth's oppressed people everywhere.

Barry was at that time rapidly climbing the ladder of prosperity. Fortune had smiled upon him, and his prospects for amassing wealth and rising into importance were of the brightest.

The voice of selfishness would have prompted him to offer his allegiance to Great Britain. The outlook for victory to the colonies was gloomy in the extreme, and the probability as it then appeared was that loss of property, if not life, would result from an espousal of the patriot cause. For a seafaring man the risk was hazardous in the last degree, because practically every merchant ship was under the British flag. But the heart of Barry was not amenable to considerations of this character. He heard the call of his country and hastened across the Atlantic to respond to it. Arriving at Philadelphia on October 13, he immediately tendered his services to the Continental Congress, which were so eagerly accepted that on the very day they were offered he was appointed to duty, with the commission of captain, the highest naval rank at that time conferred.

Congress had resolved to equip and man two armed cruisers, and to the larger of these, the *Lexington*, so named in honor of the first battle of the Revolution, Capt. Barry was assigned. This was the first naval force created by the Congress, and

Barry was intrusted to command it. Still this first feeble effort to create an American Navy was not accomplished without extreme difficulty. The plan encountered stubborn opposition. There were some who regarded the whole affair as the height of folly and futility. That a few armed American vessels could cope with or even challenge the unconquered naval power of England was an idea which appeared so preposterous and visionary that the project was looked upon by many thoughtful men as a foolhardy venture. "It is the maddest idea in the world," declared Samuel Chase, of Maryland.

But the daring and successful exploits of Barry proudly and promptly justified the venture. Through the Delaware River, then choked with ice and rendered perilous by the presence of the enemy's war ships, he succeeded in bringing the *Lexington* out into the open sea. This was the first time the flag of the United States had been unfurled on the waters, and the event has ever since been memorable in our history.

Cruising for a week along the coast of Virginia without capturing any prizes the *Lexington* finally, on April 7, 1776, fell in with the British war ship *Edward*. Barry riddled her in a terrible manner, and after she had surrendered carried his captive to Philadelphia. This was the first vessel of war ever captured by the American Navy. The joy in patriot circles was great, for the capture was of immense advantage to the colonists. It effectually silenced the carping voices of the critics, and demonstrated that our infant Navy, though small in numbers, could successfully contend on the sea against her powerful enemy. "We begin," said John Adams the day after Barry brought in his prize, "to make some little figure in the navy way."

Barry was rewarded for this exploit by being given command of the ship *Effingham*, then under construction. But at this time affairs in the patriot Army were in a deplorable condition. Washington had retreated across New Jersey, hotly followed by Cornwallis. His Army was dispirited and rapidly disappearing. "In 10 days," exclaimed he, despairingly, "this Army will have ceased to exist"; and he called upon Congress to reinforce it. Treason was rife everywhere, and many who formerly had been stalwart in their fidelity were rapidly returning to British allegiance. But the stout heart of Barry did not grow faint, nor did his energies flag in support of the cause in which he had enlisted. When not engaged on the sea he busied himself on the land. We find him leading a company of volunteers for the assistance of Washington's Army and aiding in the transport of troops across the Delaware to the brilliant Battle of Trenton. When the British captured Philadelphia he industriously engaged in harassing the enemy in the lower Delaware and destroying their supply ships. One exploit of his at the time was so daring and well conceived that it forms a most noteworthy achievement of his life.

On the evening of March 7, 1778, he, with 27 men, in four rowboats, slipped down the Delaware and in the early dawn espied a large armed schooner, mounting 10 guns. Those on board the warship paid little attention to a mere handful of men in four rowboats. But before they were aware of the fact, Barry and his men had come alongside and jumped on the deck of their vessel. The frightened Britons rushed panic stricken down the hatches, which were promptly fastened down. The schooner with the two transports which accompanied her were taken into port, and when the sailors were released from the hold of the vessel it was found that Barry with 27 men had captured 1 major, 3 lieutenants, and 130 armed soldiers, sailors, and marines. One writer, speaking of the feat, has declared that "for boldness of design and dexterity of execution it was not surpassed during the war." The capture had a far-reaching effect. It terrified the British Army in Philadelphia, for it subjected them to constant fear that their supplies might at any time be cut off by an enemy which, though weak in naval equipment, could with so little means accomplish such great results. More than that, it cheered the heart of Washington at Valley Forge and renewed the spirit of the Continental troops. Washington, writing to Barry after this capture, said, "may a suitable reward always attend your bravery," and to this let us add, may that bravery always be recalled with gratitude and pride by this people, whose independence was won by the aid of Barry's incomparable courage and genius.

Let us refer briefly to a naval fight which Barry lost, but against odds so overwhelming and after a defense so gallant that his conduct on the occasion has served to enhance his fame.

He was assigned to command the *Raleigh* and on September 28, 1778, was ordered to go in quest of the British frigate *Persius*, which he was directed to "take, sink, burn, or destroy," together with any other of the enemy's vessels he might fall in with. He sailed from the port of Boston, and when out several days was attacked by two British frigates, one of which was larger than the *Raleigh*, while both combined carried more than double the number of guns. The battle raged from 5 in the afternoon until midnight. Barry continually frustrated the attempt of the larger ship to prevent him from making the shore. Finally, when he saw victory was impossible and that defeat was impending, he decided, if he could do so, to run the ship ashore. This feat was successfully achieved, and he and his 85 men landed safely and escaped. He set fire to the ship and would have succeeded in burning it had it not been for the negligence or treachery of a midshipman, who extinguished the flames and permitted the ship to be captured. The Secretary of the Navy board, in informing Congress of Barry's loss in this unequal battle, in which one ship contended with desperate valor against two, declared that "perhaps no ship was better defended." Cooper in his History of the Navy has written, "Capt. Barry gained credit for his gallantry on this occasion," while the Pennsylvania Post, at the time voicing public opinion, stated that "his good conduct and bravery are universally allowed."

After this fight Barry was without a regular war ship, and he took command of a privateer, harassing the enemy's commerce and inflicting such havoc that the merchants of England began to clamor for the cessation of war.

In the fall of 1780 the Continental Congress had fitted out a ship named the *Alliance*, so called in compliment of alliance with France. A swifter and grander ship never rode the waves; it was equal to any vessel in the navies of France or England, and was a perfect specimen of the naval architecture of the time. It was placed under the command of Barry, in accordance with the fixed custom of always recognizing him as senior officer and awarding him the best commands. In battle the *Alliance* was always victorious. This appointment of Barry was of immense significance. It came about the time the treason of Arnold was discovered and Washington in despair had asked "whom can we trust now." Barry's assignment to the best vessel in the service was the reassuring answer to Washington's broken-hearted inquiry.

The *Alliance* sailed to France carrying Col. Laurens, the American commissioner sent to the French court to negotiate for assistance. It sailed back again to America carrying the 6,000,000 French livres which enabled Washington to pay his troops, transport his victorious Army to Yorktown, and strike the blow which terminated British supremacy in America.

But on returning home the *Alliance* encountered two war vessels—the *Atlanta* and the *Trepassy*. So badly damaged was the ship of Barry in this fight that it was said in all the sea never "was anything less fit to float than Barry's vessel except the enemy's ships which he had reduced to a worse condition." During this battle Barry was wounded in the shoulder and carried below. While his wound was being dressed his lieutenant came down and asked leave to strike the colors. The indomitable spirit of Barry broke out, and he passionately refused permission, saying that if the ship could not be fought without him he would be carried on deck and do so himself. But before he reached the deck his enemies had struck their colors.

After this victory Barry captured nine prizes. Four of these vessels were sent to France, where they were sold for the sum of two and one-half million dollars, being the largest prize money realized in the Revolution.

The British forces having surrendered in Virginia, the *Alliance* again sailed to France, bringing home the distinguished Lafayette. The Congress considered the safe delivery of Lafayette a matter of the highest importance. Knowing, therefore, the facility with which Barry attached himself to the enemy's ships and usually brought two, at least, home with him in company, he was particularly instructed to take no prizes and to keep in mind as his sole object to make quiet and safe passage to some port in France. Barry was ever obedient to duty, though it was said of him that as he more than once avoided the tempting opportunity to capture British vessels encountered in his course he often wished, in thought, that Lafayette were in France.

On November 30, 1782, preliminary articles of peace had been signed, and on December 5 King George had prohibited the further prosecution of the war. But the last shot at sea was fired by Barry in the month of March following. He had left Habana in company with another ship carrying public moneys to America. They were overhauled by three British war vessels, and in order to save his companion ship, which was slower than the *Alliance*, and to afford her opportunity to escape, Barry for almost an hour held his pursuers at bay in a most spirited engagement. Therefore we see that Barry had fought the first and the last sea fight of the Revolution, and by his conduct during the war glorified the American Navy.

When our present Navy was created in 1794 the relative order of rank was established by the War Department, and Capt. Barry was, on February 22, 1797, assigned to the com-

mand of the frigate *United States* and awarded commission No. 1. He received this commission personally from the hand of Washington. Thus did the Father of his Country, recognizing the indisputable right of Barry to the highest place, constitute him father of the American Navy, a distinction which no one can justly deny him.

I have rapidly sketched the leading events of Barry's life; but to tell as it should be told the golden story of his career would require the scope of volumes.

Barry, though gentle in character, was also firm and resolute. He possessed the unconquerable spirit of the warrior race from which he sprung, and illustrated the adaptability of that race to military pursuits. Short-sighted oppression had driven him to America, just as it exiled many others who lived after him whom America fondly numbers among her best and bravest. Oppression always exiles the best, but his banishment was an incalculable gain to the land in whose behalf he unsheathed his spotless sword and in whose bosom his ashes now happily rest.

In all lands the unselfish heroism of those who risked their lives and fortunes for their country's liberty has been the kindly inspiration of patriotic fervor. This is especially true of the hero whose memory we venerate to-day. In the greatness of the cause for which he fought, in the purity of the patriotism which inspired his heart, in the dauntlessness of the valor which nerved his arm, and in the magnitude and value of the results he assisted in winning he takes rank among the worthiest and best of America's elect.

Let us cherish therefore most closely his memory and venerate his deeds of daring.

First in our American pantheon stands the majestic figure of George Washington, and close beside him John Barry, on whose strong arm he was wont to lean with confidence in his hours of bitter anguish and trial—one the idolized Father of his Country, the other the venerated father of our Navy. Washington's written wish to Barry was that a suitable recompense might always attend his bravery. If the bronze lips of this eloquent and imposing statue could speak audibly to us to-day this gallant defender of the Nation's banner would tell us that the recompense he would deem most acceptable would be for us to ever maintain and cherish the power, prosperity, and grandeur of the Nation to which he contributed services so imperishable and precious.

Agriculture Appropriation Bill.

SPEECH

OF

HON. MICHAEL K. REILLY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 5, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. REILLY of Wisconsin. Mr. Chairman, the Agriculture appropriation bill now under consideration is the most important to the people of all the appropriation bills that come before Congress for consideration.

Agriculture is our largest and leading industry. More than one-third of our people are engaged in the great work of tilling the soil, and of our total wealth, estimated at one hundred and thirty billions of dollars, forty billions are said to be invested in agriculture, twenty billions in manufacturing, and about fifteen billions in railroads.

In 1912 the agricultural products of our country were valued at more than nine billions of dollars.

It is estimated that since 1882 the miners of Alaska have dug from the earth gold to the value of three hundred and fifty millions of dollars. The farmers of Wisconsin, a State which I have the honor in part to represent, have a gold mine in their cows that yields more than eighty millions of dollars in a single year, and the marked difference between the Alaskan gold mines and the Wisconsin cow mines is that the Alaskan gold mines are being exhausted while the Wisconsin cow mines are increasing each year their golden output.

We have great natural resources in this country, valuable forests, the most extensive coal mines in the world, and the richest deposits of silver, gold, iron, and copper found anywhere; but when our forests are cut down and our mines have yielded up their treasures, our timber and mineral resources will have become exhausted. Not so with our agricultural resources. Under proper treatment the agricultural resources of our country should and will increase their annual production of wealth.

The Agricultural Committee, of which I am a member, representing on the same one of the great agricultural States of this Union, has given painstaking care to the study and consideration of the various items constituting this bill.

While the bill carries appropriations of approximately twenty-five millions of dollars, not to exceed ten millions of this sum are appropriated strictly for agricultural purposes.

In its origin the Agricultural Department of the United States Government was created for the purpose of gathering together and disseminating among the farmers of this country information on subjects relating to agriculture, but each session of Congress has seen the growth of this department by the creation of new bureaus and the enlarging of the fields of activity of bureaus already established until to-day the United States Agricultural Department is organized into 16 groups as follows: The Bureau of Animal Industry; the Bureau of Plant Industry; the Bureau of Forestry; the Bureau of Chemistry; the Bureau of Soils; the Bureau of Entomology; the Bureau of Biological Survey; the Divisions of Accounts and Disbursements; the Division of Publications; the Bureau of Statistics; the Office of Experiment Stations; the Office of Public Roads; and the Office of Markets.

To the Bureau of Chemistry has been assigned the important work of looking after the enforcement of our pure food and drug act.

The Weather Bureau and the Forestry Bureau, two branches of the work of the Agricultural Department that are not directly concerned with agriculture, require large appropriations for their support. These two bureaus in this bill will get over $7,000,000.

It can not be charged that the Agricultural Committee is guilty of extravagance in bringing in a bill that appropriates less than $10,000,000 for the sustaining of Governmental work pertaining to strictly agricultural purposes. Neither can it be charged that the bill as a whole is in anyway extravagant when it is considered that the total appropriations carried go to support the activities of a department of the Government that touches the daily lives of all our people—a department that has for its aim the development of the food supply of the Nation.

Congress, it would seem, has never lavished appropriations upon the Agricultural Department—that is, compared with the enormous sums spent in other lines. Since 1880 there has been appropriated only $162,000,000 for agriculture, while during the same time the appropriations for the Army have exceeded $1,700,000,000, and for the Navy, $1,800,000,000.

That farming has now come to be recognized as a science will be seen from a study of the activities of the different bureaus of the Agricultural Department. There was a time when it was deemed unnecessary for a farmer to be educated, or to have any special knowledge regarding agriculture. In those days it was thought that in order to be a farmer a man needed only land, equipment, and muscle; but those times are past, and we are now living in an age when it is generally recognized that the successful farmer is the man who is able to combine mind with muscle in the work of tilling the soil.

This bill among other things provides for the investigation of plant diseases, the ravages of which cost the farmers of our country hundreds of millions of dollars every year; for the study of diseases of animals, because of which the farmers lose annually more than two hundred millions of dollars, and for investigating and providing a remedy for exterminating the insect life that destroys the farmers' crops entailing a loss of seven hundred millions of dollars annually.

Much has already been done by this department in the way of controlling plant diseases, animal diseases, and in the destruction of insect life that destroys the farmers' crops.

The department has given special attention to the hog cholera problem, and has perfected a remedy that is accomplishing a great deal in controlling this disease, one of the greatest menaces to the meat supply of our country. Texas fever and cattle ticks are gradually being eliminated from the southern sections of our country, resulting also in a great saving to the farmers.

Thus it will be seen that the different bureaus of the Department of Agriculture are working along lines of vital importance to the farmers, trying to solve the problems of animal and plant diseases, of insect life, in order that much that is now produced by the farmers may be saved, not for the benefit of the farmers alone, but for the benefit of all the consumers of agricultural products.

In recent years considerable attention has been given by the Agricultural Department, and this bill contains appropriations for the continuing of this line of work to the seed problem. Investigations have proven that the farmers suffer a great loss by planting and sowing imperfect or inferior grades of seeds. The idea being that without any extra effort on the part of

the farmer, except the effort necessary to acquire the knowledge to distinguish between good seeds and poor seeds and how to procure good seeds, results are obtained that largely increase the farm profits.

Another great problem vital to the success of farming is the problem of transportation, the problem of reducing the cost of carrying the product from the farm to the consumer, and devising the best and most expeditious methods for making that transfer.

In this field the Agricultural Department has been carrying on investigations, and the work is to be continued under appropriations contained in this bill.

More than $350,000 are appropriated to continue the work of the Bureau of Soil Survey. This work is carried on in cooperation with the various State agricultural institutions, and is of undoubted value to the farmers, inasmuch as it supplies him with definite knowledge as to what crops his soil can best produce, and what element or elements are lacking in order that other crops may be produced.

Two hundred thousand dollars is appropriated for the study of the problem of marketing. How to secure an economical marketing of farm products is the one great agricultural problem that confronts the producer and the consumer. To-day there is an enormous waste that occurs from the time the product leaves the farm until it finally reaches the consumer, estimated at more than 50 per cent of the cost of the product to the consumer. This line of work is very valuable, and it is to be hoped that the experiments and investigations being carried on by the Agricultural Department will result in the devising of methods of distribution that will eliminate to a large extent this great loss.

Almost $2,000,000 of the amount appropriated in this bill goes to support the various experiment stations maintained by the Agricultural Department all over the country, and almost $200,000 are appropriated for the Division of Publications.

The Division of Publications is the mouthpiece, so to speak, of all the lines of activities of the entire Agricultural Department. Millions of bulletins are issued annually and distributed all over the country. These bulletins are valuable to the farmers, containing suggestions as to the most approved and successful methods of agriculture, and they also contain valuable information for all persons who are interested in the question of home economics.

For some time the Department of Agriculture has been engaged in the work of organizing throughout the country what are known as boys' clubs. Thousands of farmer boys have been organized into corn clubs, pig clubs, and potato clubs, and even the girls of the farm have been organized into tomato clubs and poultry clubs.

The results obtained from these organizations have been most gratifying. First of all, the young people on our farms through these clubs have become interested in farming, not as a branch of work that anybody can take up and make a success of, but as a business that needs study and investigation in order to be conducted successfully.

Particularly have the boys' corn clubs yielded gratifying results in the way of interesting the boys in farming, and in securing increased yields of corn per acre. Many of these young farmers have been able to surprise not only their fathers, but also the experts of the Agricultural Department, in the results they have obtained from the planting of carefully selected seeds and in caring for the crop after it is planted.

I believe that these clubs of farmer boys and girls now being organized by the Agricultural Department are going to be most useful in wedding, so to speak, the younger generation to agriculture careers.

The boy who early acquires the knowledge of seed selection, of the best methods of planting, and of the best system of taking care of a growing crop is much more likely to make a contented and successful farmer than the boy who is without such knowledge and such training.

For the first hundred years of our national life our predominating industry was agriculture, and our people were largely engaged in that industry. To-day all is changed; we are no longer an agricultural people. Industrial and commercial United States, and not agricultural United States, are the predominating influences in our life to-day.

Even as late as 1880 we were an agricultural people; that is, the larger part of our population was engaged in agriculture. The census of that date gives 70 per cent of our people as living on the farm, but the census of 1910, however, tells us that only 50 per cent of our people are engaged in agriculture. It is doubtful if there are to-day more than 40 per cent of our people actually living on the farm.

Thus it would appear that for some reason or other our people are flocking to the city, thereby increasing at an alarming rate the number of consumers without any adequate increase in the number of producers.

In ancient times, and also in more recent centuries, agriculture was deemed an honorable calling. Workers in the mechanical and industrial arts were looked down upon, while the agriculturists were considered to be engaged in the only occupation worthy of a gentleman. Also in the early history of our own country farming was considered to be an honorable occupation.

Ever since the Rebellion the field of interest in American life has not been held by agriculture. Manufacturing and commerce and the professional lines have claimed the attention of the young Americans. Legislatures, National and State, have done everything possible to make city life more attractive, to make manufacturing and commerce more profitable, while very little has been done by these same agencies to make agricultural life more inviting and remunerative, and as a result agricultural development has not kept pace with the development in manufacturing, commerce, and other lines of general industry.

Manufacturing has been much more profitable than agriculture during the past 50 years. A large part of the agricultural wealth in this country to-day has not resulted from the profits of the industry but is the result rather of the increased value of land, the unearned increment, as the followers of Henry George states it.

While the manufacturer's plant has been deteriorating 10 per cent or so per year, the farmer's plant has been increasing several per cent a year, and if it were not for the fact that agricultural land has gone up in value many times over the original cost, the farmers would have but little to show for their years of toil.

Our farmers have worked early and toiled late, denying themselves the luxuries, and many of them the necessities, of life in order that the mortgage might be paid and their children educated. They have suffered from unfavorable weather conditions; the results of their season's labor have often been destroyed by the pests of the fields; they have been the victims of the bulls and bears of our boards of trade, still they have gone on uncomplainingly in their daily work of furnishing the food and clothing for a great nation in a most wonderful and profitable period of industrial development.

This shifting of population from the country to the city that has gone on in this country, and is going on to-day, is not due to the fact that our agricultural demands are being oversupplied or that our millions of acres of fertile plains and rolling prairies are occupied and tilled.

This movement from the farm to the city has been due primarily to a belief on the part of those who dwell in the country that country life is not as pleasant, as remunerative, or as honorable a life as in the city.

The country boy has been attracted to the city because he believes that he can get a living easier in the city than on the farm, and probably also because he has learned that there is more money in selling to the consumer the products his father raises on the farm than there is in raising the products.

It would seem that our farmer boys have fallen victims to the modern idea that has possessed our country, the idea that the principal aim in life is to make money; not enough money to live on, but untold heaps of money.

No wonder the farmer boys of the past quarter of a century, with the money idea in the air, have looked longingly to the marts of trade and commerce as the places where they could make themselves rich in a short time. No wonder they have turned their backs on the old homesteads of toil and self-denial, and gone forth to our large cities to cast their lot with the army of struggling humanity seeking wealth in America's new industrial life.

If the present tendency to gather in our cities continues the American people are going to be seriously affected by the problem of the high cost of living. We have that problem to-day, but what is the problem to-day in comparison to what it will be in a quarter of a century from now, when probably not to exceed 20 per cent of our people will be engaged in producing the food and clothing that 80 per cent will be engaged in consuming.

We now consume 91 per cent of our wheat and 92 per cent of our corn crops. In 1906 we exported 500,000 head of cattle, and in 1912 only 106,000 head. In 1906 we imported 29,000 head of cattle, and in 1912 318,000 head. In 1907 our cattle numbered 51,000,000 head, and in 1913 they numbered only 36,000,000 head.

We are a meat-eating and bread-eating people; our two principal staple foods are bread and meat. Our people consume more meat per capita than any other people in the world except the people of the Australian Commonwealth. The per capita consumption of meat in the United States is 185$\frac{8}{10}$ pounds per year, while in the Australian Commonwealth the per capita yearly consumption of meat is 262$\frac{8}{10}$ pounds.

In the past we have been able to send hundreds of millions of dollars worth of meat, wheat, and corn to the markets of the world, but these days are over, and unless a decided change takes place in the bettering of our agriculture industry, we will become dependent upon other countries for our food supply.

While it is true that the American farmer produces more than the European farmer, it is also true that the American farmer uses more land in order to make his production. We have not yet begun to produce what we ought to produce in this country on our farms, and what we will have to produce in the future in order to feed our people.

Germany with an area not much larger than the State of Texas produces seven times as many potatoes as all our country. The agricultural land of Europe that has been cropped and recropped for centuries produces more per acre than our almost virgin soil, much of it having been farmed but for a few decades. Our farmers can learn much from the European farmers, particularly from the farmers of Germany. The German agriculturist is far in advance of his associates in the work of tilling the soil. The marketing problem that is such a serious one with us has been solved in Germany to quite a satisfactory extent—at least to the extent of preventing food trusts and combinations of the character that we are afflicted with in this country.

I was born on a farm, and spent my early days as a farmer boy, and if I were to be born again, and had the right to select my place of birth, I would locate it amid the hills of my native town.

In my judgment, a boy country born and country reared is most fortunate; fortunate because he has a chance to grow and develop into manhood as nature intended that he should grow and develop; because he has the opportuntiy to lay the foundation for a sturdy physique, a prime requisite in this day and age, to escape the dissipating influences of a city life, and to learn to labor and to appreciate and honor industry.

While my life since boyhood days has been along other lines than agriculture, I have not lost my interest in the welfare of the tillers of the soil.

My study of the history of nations has lead me to believe that a country is strong only as its agricultural population is efficient, prosperous, and contented. Rome was great and powerful at home and abroad until her agricultural classes became slaves. Our strength as a Nation in the future will not depend upon battleships and armies, upon manufacturing and commerce, but rather upon our ability to furnish the toiling masses in our great industrial centers with food and clothing.

The truth is, every man, woman, and child in the land who belongs to the nonagricultural class are deeply interested in the success of the farmer. At the end of every telephone line, at the end of every road or highway that leads from the city or village to the country, is an anxious consumer, wondering if the harvest time of the farmer will bring plenty or want.

We hear a great deal to-day about the "back-to-the-farm" movement. Some of the best minds of our country are engaged in attempting to solve the problem of how to make more numerous and efficient our agricultural workers, and it is a peculiar fact that the most active workers in this movement are not farmers, or representatives of farmers, but rather the representatives and spokesmen of dwellers in our cities.

The Members of this House who come from the great industrial centers, where the ordinary dweller has not ground enough on which to grow a bean, are anxious and willing to record their votes in favor of the appropriations carried in this bill, because they realize how vitally their constituents are interested in the success of the work of the Agricultural Department in its endeavors to build up in this country a more efficient and happy agricultural class.

This "back-to-the-farm" movement may be all right, and I hope it will accomplish much good, but what we need to-day is not so much a "back-to-the-farm" movement as a "stay-on-the-farm" movement. The times demand a movement that will stem somewhat the tide of humanity now flowing from the country to the city, a movement that will result in retaining in agricultural pursuits a great many of the farmer boys and girls that are now drifting to our large cities, and it is to further this stay-on-the-farm movement that the appropriations in this bill are made.

The Agricultural Department, tkrough its various agencies, will continue its work of bringing about better conditions in rural life so that the rising generations of farmers' sons and daughters will not find it necessary to go to our cities in order to enjoy life, and to secure adequate returns for industry.

The rural mail, the daily newspaper, the telephone, the automobile, good roads, better schools, and better social conditions are some of the forces at work to-day in transforming rural life. There are no reasons why there should not be as much happiness and contentment in our agricultural homes as in our city homes, why the boys and girls of the farm should not have the same opportunities for securing an education that the city boys and girls have, and why agriculture should not be just as profitable for the amount of money invested and efforts put forth as any other industry.

To make it possible for the country boy and girl to have equal opportunities with the city boy and girl; to make farming more remunerative; in other words, to put the great agricultural industry of the country on the same plane as other industries is the laudible work of the Department of Agriculture.

Of course, it is not to be expected or desired that all farmer boys will follow the life work of their fathers. There are many boys on the farm to-day who have undoubted talent for other lines of work than agriculture—boys who will make able lawyers, skilled surgeons, famous educators, brilliant ministers of the Gospel, successful business men, or great captains of industry. These boys will not stay on the farm and can not be kept there, and it is best for the world tha they be allowed to enter the fields for which they have special talent.

The professional, business, and public life of our Nation has in the past made heavy drafts upon the farmer boys. Many of the distinguished names that embellish our professional and industrial history, and many names on the honored roll of our country's statesmen are of men once farmer boys who came up to do part of their country's great work from the hills and valleys of agricultural America.

In this country we have no royalty, thank God; but if we have any uncrowned kings, they are our independent farmers, who rule at their own firesides—our independent farmers who are satisfied with and appreciate their work, who are able to mix brawn and brain in their toil, who understand the composition of the soil they till, who know something of food values, and of plant and animal life, who realize that they are important factors in the economy of the world, and are engaged in the most independent and honorable occupation that can occupy or invite the efforts of man.

War Revenue Bill.

EXTENSION OF REMARKS
OF
HON. LUTHER W. MOTT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914.

Mr. MOTT. Mr. Speaker, this bill to impose an additional $105,000,000 of taxes on the people, after the great burdens already put on them by the party now in control of the Government, is the most inexcusable measure that we have yet been called upon to consider. The war in Europe is given as an excuse for the imposition of this great burden of taxation, though we all know that it is not the result of that war, but of the war which the Democratic Party has conducted against the interests of the people and for the benefit, presumably, of one section of this country. The appropriations of this Congress greatly exceed those of any other Congress in the history of the Nation. Then the revenues of the Government have been enormously reduced by the so-called "revenue" tariff act that has been passed. The Democratic Party in the campaign of 1912 was loud in its denunciation of the party then in power for alleged profligate extravagance. Congress was charged with wasting public money, and the public was promised that if the Democrats came into control of the Government expenditures would be greatly reduced. By a division in the Republican ranks the Democrats were enabled to get control of the Government; and what is the result?

WHAT THE PARTY IN POWER HAS DONE.

All the efforts of the party in power were concentrated on the passage of a bill to reduce the tariff and place on the free list many manufactured products produced in this country. The tariff bill then in force had helped to extend our trade, increase our exports, and profit the country in other ways. Everybody wanting work could get it under that law. But Democratic tradition, coming down from slavery days, when the country was ruled by the South, was in favor of free trade. Hence, they passed a law as near to free trade as they could get it, under the circumstances, with a promise to bring about the abolition of the tariff altogether as soon as possible. The inevitable result was promptly shown by the great increase in imports and the decline in exports. There was a balance of

trade against the United States of $250,000,000 for the first seven months of that tariff law, which was before anything was thought of a war in Europe, although in the last fiscal year of the protective-tariff law the balance of trade in favor of the United States was $652,875,915. That will give some idea of the tremendous loss the country has sustained as a result of this tariff legislation, to say nothing of numerous other disturbing measures.

The exports for eight months under the new tariff ending with July this year, which was before the war in Europe had any particular effect, were $143,411,154 less than for the corresponding months last year under the protective tariff; but the imports for the same time were $151,874,825 more. In other words, the loss in that time to the workmen and producers in the United States aggregated nearly $300,000,000 on the foreign trade alone, to say nothing of the enormous loss at home caused by the vast army of idle workmen and by depression generally. That is the way the Democrats expanded trade and increased prosperity, as they promised they would do when they got control of the Government.

THE WAR A MERE PRETEXT.

When the Republicans gave up the control of the Government to the Democrats they left a balance of the general fund in the Treasury of nearly $150,000,000. The Democrats reduced that balance as low as $74,151,000. But in the meantime they had imposed an income tax in addition to the corporation tax which the Republicans put on the statute books. Thus an enormous sum is already raised from direct taxation. Now, we are called on to add $105,000,000 more because of the war in Europe. We are not engaged in that war and there is no excuse for this taxation at this time. The balance in the Treasury on August 31 was $121,500,000. That is nearly $30,000,000 less than the amount the Republicans left, notwithstanding the great amount received from the income tax. But it is the result of placing on the free list a great many manufactured as well as agricultural products, and at the same time reducing the tariff below the protective point on numerous other things. Thus the inexcusable tariff law and the extraordinary increase in appropriations, with the disastrous effect on business generally of the legislation enacted by the party in control of the Government, have brought about a situation where more revenue may be needed. For this purpose the pending bill has been introduced with the pretext that it is made necessary by the war in Europe.

The decrease in the revenue in July was $4,818,189. That was not caused by the war. The decrease in August was $11,503,689. Deducting the amount of the loss in July, not caused by the war in the least, from the total loss in August, shows a decline of $6,700,000. The situation so far as the war is concerned, is constantly improving. The demand for our products grows greater as the war proceeds.

If the loss sustained in August, as a result of the war, should keep up for a year, which is altogether improbable, it might reach $80,400,000—that is not much greater than the reduction made in the general-fund balance last May, and there was no call for war taxes at that time. The Government now has $75,000,000 deposited in national banks on call. Is it any worse to withdraw the public money from the banks as it may be needed than to tax the people who must draw their money from the banks? It would not be necessary to withdraw the Government's money except as occasion required. It would be immediately disbursed, and then return to circulation. Congress is to meet again in December, even if it adjourns, which, in the present outlook does not seem probable, and there would only be two months, and probably much less, after this bill could go on the statute book until Congress would reassemble, even if it does not remain here all the time.

AN INEXCUSABLE BURDEN.

What possible excuse can there be for the imposition of this enormous additional tax of $105,000,000 at this time, under the pretext that it is made necessary by the war? The country is not in a condition to stand such a great additional burden without suffering. Democratic extravagance and unwise legislation have already imposed vast burdens on the people. The party seems to have no consideration for the people when sectional interests are concerned. The river and harbor bill is an illustration of that fact. That bill as reported to the Senate, involved an expenditure of nearly as much money as would be collected from this alleged war-revenue bill. The Democratic Party fought tooth and nail for weeks to get that enormous appropriation bill through the Senate, but patriotic Republicans valiantly contested against the unnecessary expenditures in that bill, and finally it has been reduced in that body to $20,000,000.

The revenues of the railroads of the country fell off $44,700,000 during the last fiscal year. That is the best index to the business situation that can be had from any single source. All that enormous loss is wholly due to the Democratic Party and its shameless legislation. The default on railroad securities up to the 1st of August amounted to $583,000,000. There is a like condition in other lines of business. Charitable and kindred organizations are now preparing for the most distressing winter they have had in many years. The Government is the only one not cutting expenses. It is piling up expenditures at a rate hitherto unknown and then imposing direct taxes to make up the amount. Securities of insurance companies and savings banks have shrunk in value in 18 months, under this administration, to the extent of $500,000,000. Congress is largely responsible for that result.

Senator BANKHEAD, an old Member of Congress and a leading member of the Democratic Party, speaking of this alleged emergency revenue bill, said, "No man can tell how long it will be before another emergency will require an additional levy." Thus we may expect before long more taxes on some other pretext. Mr. BANKHEAD, in speaking of the river and harbor bill, said, "Why should we insist on taxing the Treasury with $30,000,000 more than we can possibly expend?" We may well ask in regard to this pending measure why should the people be taxed $105,000,000 when not a cent of it will be expended necessarily this year and Congress will be in session to act whenever it may be necessary to do so, as it probably will be necessary in time under the control of the present party in power?

GOVERNMENT OWNERSHIP OF RAILROADS, ETC., UNWISE.

The Democrats have had the benefit of $3,800,000 from the surplus fund in the Postal Service during the fiscal year of 1913, which should have been credited to that year. They also have had the benefit of the sale of two war vessels for $12,000,000 to Greece. With these advantages and reasonable expenditures there would have been no need of any additional revenue beyond that already collected by the income tax and in other ways. The President is authorized, under the war-revenue act of 1898, to issue certificates of indebtedness, when necessary to meet public expenditures, to the amount of $100,000,000. That shows how utterly ridiculous is this war pretext for imposing $105,000,000 more of taxes. They have passed a law, or, rather, propose to do so, having received the approval of the party in power and the President, to issue 3 per cent bonds for $30,000,000 for the Government to buy ships and engage in foreign trade. This ridiculous proposition for the Government to engage in the shipping business is only one of many such extraordinary measures that have been brought forward by the party in power. The Government ownership of railroads and telegraph and telephone lines, the manufacture of armor plate, the construction of more shipyards to build war vessels, the construction of a railroad in Alaska are some of the other measures proposed or approved by that party. A bill has been introduced for the Government to take over the tobacco and cigar industry, the same as is the case now in France and in some other European countries. In fact there hardly seems to be any end to the extent to which Democrats would involve the Government in competition with private enterprise. The Governemnt has not undertaken anything in that way without vastly increasing the expenditure for the purpose. The printing which the Government does costs about twice as much as it would if done by contract.

The Postmaster General has proposed to save something like $20,000,000 a year by contracting for the Rural Free Delivery Service, the same as was done with the Star Route Service. Every warship that has been built in a Government yard, if the interest on the money invested in the yard and the salaries of all officials were taken into consideration, cost a great deal more than when done by contract. Millions of dollars more are paid to railroads for the Postal Service than would be expended for the same purpose by private corporations. The Government can not do its work as cheaply as individuals and private corporations, but there are some things which it is necessary for the Government to do. The attempt of the Democrats to involve the Government to a vast extent in business not necessarily belonging to it is very unwise, and doubly so when that party is all the time trying to nullify the civil-service law and even to repeal it.

THE REVENUE PROVISIONS EXTRAORDINARY.

The provisions of this revenue bill are extraordinary. Whisky, a product, to a large extent, of Kentucky and other Southern States, is exempted from the provisions of the bill. Why? There is no answer in reason. The State of Kentucky has some very pronounced free traders in this Congress, but their whisky has not been hurt in any respect by taxation under the present party control of the Government. Foreign spirits pay a duty of $2.60 a proof gallon. The internal-revenue tax in the United

States is $1.10. Thus this great Kentucky product is protected by the tariff to the extent of $1.50 a proof gallon. There is no product in this country that could better afford to be taxed than this domestic whisky. The State of Virginia, by a very large majority, has just voted to stop the sale in that State of intoxicating beverages. Many other States have voted in like manner. The prohibition sentiment is largely increasing in the South because of the desire to keep liquor away from the colored man. What, then, is the powerful influence of the distillers and whisky dealers that exempts this article from further taxation and which gave it such large protection in the existing law?

Wines are taxed, though they are used for many other purposes than for beverages, particularly in drugs and medicines. The tax imposed by this bill on California wines, for instance, in which State $160,000,000 is said to be invested in their production, is equal to the market value of the wine. No possible excuse can be given for this high tax on wine while whisky is exempted. The additional tax of $2 on every $1,000 of capital and surplus of banks is equivalent to an income tax of 4 per cent, assuming that net earnings of banks average 5 per cent. The United States in 1913 produced 140,000,000 gallons of distilled liquors, of which 97,000,000 gallons were whisky, gin, and rum, and there were imported large additional quantities of such stuff. Nothing else offers so well for taxation as whisky, and so forth. The tax on gasoline is also inexcusable. It is used by automobiles, which seems to be the excuse for the tax, but automobiles are largely used now for farming and business purposes. But gasoline is used to run many different kinds of engines and other motors. The tax on life insurance policies and on fire insurance, and so forth, and on mortgages, telegraph and telephone messages, express and freight, promissory notes, and all things of that kind are taxes that fall upon the people, chiefly on the poor. They are the ones who incur mortgages and who necessarily take out life and fire insurance policies and give promissory notes, and it is a shame to impose more taxes on them to make up for extravagant appropriations by the party in power, which has also imposed on the people of this country vast millions of dollars in the way of taxes that were heretofore collected from manufacturers and others in foreign lands.

BUSINESS CONDITIONS IN NEW YORK STATE.

Letters from leading manufacturers and business men in my district, which I present herewith, show that business was adversely affected long before the war in Europe began by the Democratic tariff law and the so-called "reform" legislation in general. While I do not think that business there, as a rule, was hurt as badly as in some other sections, yet the injury has been great and continuous. Unfortunately, as will be seen, the manufacturers look for worse conditions instead of better under this administration. They believe that some improvement may follow a Republican sweep at the coming elections. That would at least partially end the work of destruction by putting this House in control of a party that does not believe in reckless experiments largely for the benefit of the old Southern States. In that respect a halt would be called, awaiting the time when the Republicans could come into complete control of the Government again and undo some of the destructive work already accomplished.

HOW THE FARMERS HAVE BEEN HURT.

There is a large agricultural interest in my district. There, as elsewhere, they reaped a fair harvest this year, which would ordinarily have brought prosperity to practically all of the people. But that result was negatived by the destructive tariff legislation, which aimed a cruel blow at the northern farmers. They are subject to the unfair competition of Canadian farmers across the lake, and of those of other lands, who do not pay anything like as high wages or contribute to the support of our Government, and who are at the same time protected at home from foreign competition.

Farm products have been imported under the new tariff to an alarming extent, even when produced abundantly in this country. Foreign producers in many cases have, in addition to cheap labor, advantages in transportation rates, and thus have been able to ship, for instance, Argentine corn as far west as Chicago. We exported $24,445,693 worth of corn in eight months last year under the protective tariff, and only $4,740,454 in the corresponding time this year with the new tariff in operation. With the Panama Canal now open for traffic, we shall, in time, have a flood of oriental products on the Atlantic coast in addition to those which now come from Canada, Mexico, Europe, and elsewhere. Do we want to reduce American workmen to the level of Chinese, Japanese, Hindu, and other such workmen? How can that be avoided if we admit the competing products of those countries free of duty or at rates which are not protective?

WHAT THE MANUFACTURERS SAY.

The paper industry is a large one in my district. How that fares can be seen from the letters, including one from the secretary and treasurer of three old mills now in the hands of a receiver. That is a business that has been demoralized over all of the country by the Democratic tariff law. But that law greatly accelerated business in Canada, where many new mills have been erected. Paper of the kind that is admitted free into the United States is excluded from Canada by high protective duties. It is the same way with farm products and many other things put on the free list by the Democrats. Even an industry not directly affected by the tariff change is hurt indirectly by the forced restriction or entire closing of mills in other industrial lines. Thus a firm of coal dealers in Watertown, in my district, tell how their business is adversely affected by the great injury to the paper manufacturers.

The half-baked legislation rushed through Congress to supplement the Sherman antitrust law is another source of loud complaint. It causes uncertainty which will take years of court decisions to straighten out.

THE FAR-REACHING EFFECT OF THE TARIFF CHANGES.

The head of a yarn company tells how the removal of protection from the finer grades of cotton goods made in the North, thus forcing manufacturers into the lines of cheaper goods largely made in the South with child labor, has hurt his business. The proprietor of a large machine works in Oswego was in Europe this year, before the war began, investigating conditions there. He tells about the wonderful growth of manufacturing in Germany as a result of Bismarck's wise course in adopting a protective tariff, such as had accomplished great wonders in the United States. How small factories have grown rapidly into large enterprises in Germany is well known. There is no great party in that country all of the time threatening its industries and prosperity, such as the Democratic Party does in the United States. In fact, there is not another great nation in the world beset in that manner, as they have no such teachings from the slavery days to contend with. The German manufacturer is now shut out from competing by the war, but when that ends he may be expected to renew the contest with redoubled energy.

THE WAGE CONTRAST.

The great difference in wages in Europe and in this country is a cause of remark by the Oswego investigator. That is a subject on which there is no ground for a difference of opinion. The British Government sent agents to the United States and to other countries to determine the facts. Of course, the comparison was not altogether fair, as only the rate of wages fixed by trade-unions in England, about one-sixth of the total workers, was taken into consideration. In this country rates were obtained from various sources. Even then the British Government conceded that the average rates are about two and one-third times higher in the United States than in England, while they are four or five times higher than the wages in some continental countries, and there is hardly room for comparison with the pitiable sums paid in China, India, Japan, and other Asiatic countries. But under the Democratic tariff law American workmen are compelled to compete with the foreigners receiving such wages. That is why imports increased so rapidly while exports declined after the Democratic tariff law took effect, and accounted for the army of idle workmen and the closed and partly closed shops.

The Oswego manufacturer who made this investigation in Europe says that if wages were reduced in this country nearer to the level prevailing in other countries we could hope for a larger share of the foreign trade. That is true enough; but the people of this country will never consent to any such a reduction in wages. We want our workmen to be well paid, and capable of maintaining their families in comfort, and of giving them an education and other advantages. For that reason the workmen should not only be protected but relieved from the burden of helping to maintain a vast army of insane, feeble-minded, and other derelicts brought to the United States from foreign countries. Of the many millions of dollars expended by New York State annually to maintain the insane in its asylums one-half the sum is for insane persons that have come from other lands, and the same is trure of other derelicts. They should be more rigidly excluded and our people relieved of such an unjust burden.

THE WORDS OF AN EXPERIENCED MANUFACTURER.

One of the letters I have not printed gives the experience of a man long in the manufacturing business in my district. He tells of the injurious effect of the Democratic tariff law in curtailing the output of his factory, forcing the discharge of workmen, and injuring him generally, and he tells of the like effect in other lines of trade throughout the country. That

man's business in my district is not an exception. He said, before the European war began: "Every factory here has laid off men since the 1st of last January, and things are not improving." He tells of like conditions in Syracuse, Utica, Auburn, Fulton, and other places, and expresses the belief that "we have not seen the worst of it." That is the truth. A Republican victory at the coming elections will aid in restoring confidence, as it will demonstrate that the voters no longer intend to keep the free-trade minority in power by dividing the opposition.

NO REDUCTION IN THE COST OF LIVING.

The Democratic Party made the reduced cost of living the chief ground for asking for the votes of the people. They promised in their platform and in the speeches of their candidates, including the President, to bring that about. Why the destruction of the protective tariff on so many things, the dismissal of millions of workers, this almost continuous session of Congress with its disturbing threats and legislation and increased expenditures, if the cost of living were not to be reduced? There is no gain from any other point of view.

It was like many other promises made in the platform of that party, only to be repudiated after they obtained office. There has been no reduction in the cost of living. That is conceded in official reports. The first six months of this tariff we paid $5,000,000 a month more on the average for foods imported, and exported 50 per cent less, while the cost of living increased instead of diminished. The war in Europe has some effect now, but the new tariff was thoroughly tested before that war began. The disastrous result, as shown in a decreased revenue, higher prices, business depression, workmen unemployed, and so forth, was indisputable.

The importers have made a great deal more money under the new tariff. They undersold the American producer just sufficient to drive him out of the market, and then put up the price. Take chloral hydrate, for illustration. It was put on the free list and the American factory driven out of the business. When we became dependent on the foreign supply, before the war, the price was put up 50 per cent. In many lines of chemicals similar results have followed from the Democratic tariff law. We have built up in this country a large chemical industry as the result of protection, and were adding to the total in the way of fine chemicals when the Democrats passed their free-trade law, striking a tremendous blow at the industry. Germany, by Government favor and trust organizations, aided by low wages, became the greatest producer of chemicals in the world, taking away much of Great Britain's and France's trade in those lines. The Democrats proposed to increase our dependence on Germany and other nations, and did so by their tariff law. Now, war comes and cuts off dyes and other necessary articles, completely demonstrating the folly of their course. We should be independent instead of dependent, and can only be so under a protective tariff.

Wool was put on the free list and the Government lost $15,000,000 in revenue, while the price went up. But at shearing time it was 10 cents a pound lower than a year ago. When the wool growers had sold at that loss the importers put up the price. Consumers get no benefit from this loss to flockmasters. Sugar factories in Michigan were paying under contract 50 cents a ton less for beets before the war began—a loss of $5 an acre to the farmers—but the price of sugar to consumers was increased, and now is vastly more without benefit to the farmer. The Government has lost a large revenue on sugar, but the full loss has not been met yet, as the total abolition of the duty has been deferred for some months. But the way the trust and its associate refiners put up prices before the European war began tells the story of the great wrong done by the Democratic free traders.

THE WORKING BALANCE DECREASED.

The Republicans left a working balance in the Treasury of $150,000,000, which the Democrats reduced more than one-half, and have added enormously to taxation, with still more coming. The sale of securities in June was the smallest in 20 years, or since the time of Cleveland and the previous Democratic tariff. Very many large corporations passed dividends and others reduced their payments. Long before the European war began Senator LIPPITT, of Rhode Island, told of the American Woolen Co. turning a profit of $3,000,000 a year into a loss of $800,000, while at that time they were employing only from 50 to 60 per cent of their regular force of employees, but woolen imports greatly increased though consumers could buy woolen clothing no cheaper. This company operates a splendid mill at Fulton, in my district.

Eggs and pig iron come from China; steel rails from India; corn and meats from South America; tin plate in greatly increased quantities and other manufactured products from Europe; paper, hoop iron, and steel, and so forth, from Canada; and numerous other products which could as well, except for wages and transportation costs, be produced at home come from various parts of the world, while American workmen who should be employed in making those things are in idleness.

What is the explanation? President Wilson says that it is "psychological" or imaginative. But that does not give employment to the workmen, feed their families, open the closed mills, or do anything else except offer exercise for the President's imaginative faculties. That did not satisfy the creditors to the extent of some $40,000,000 of the Claflin establishment in New York, started 71 years ago. The head of that great importing establishment was naturally a free trader who did not like to find fault with the policy of his party. But the corporation had a number of retail houses scattered over the country carrying large stocks. The new tariff caused a very considerable depreciation, while the depression in trade affected the receipts, with the result that the house in New York was called upon to make good the losses. Failure followed. It was useless to try and disguise the cause. Had the new tariff law not gone on the statute books, that failure would not have taken place. It was the largest failure of the kind in the history of the country, but only one of many due to the monstrous sectional free-trade tariff law.

ONLY PART OF THE DESTRUCTIVE WORK YET ACCOMPLISHED.

It must not be forgotten that the Democratic work of tariff destruction has only begun. President Wilson has repeatedly declared his belief in sweeping away, in the words of Speaker CLARK, "every vestige of a protective tariff." That is the belief of a majority of the Democratic Party, particularly those of the South. They look out for peanuts, whisky, tobacco, rice, and other southern products, but want duties swept away on all northern products. They have only begun that work, to use their own language. If enabled to retain control of both Houses of Congress by the division in the Republican ranks, they intend to carry out their aim in that respect. Instead of compelling the foreigner who sells his goods in this country to help pay the expenses of our Government, the Democrats propose to impose that burden almost exclusively on our own people and let the foreigner reap his rich harvest without any contribution. The income tax explains one way of accomplishing that purpose. If that tax were extended so as to include workmen, as in free-trade England, and as it probably will be here if the Democrats remain in control, it could be enormously increased. It has proven a disappointment so far, and now another $105,000,000 is to be collected from the people under the pretext of the war in Europe.

RIVER AND HARBOR BILL AS AN ILLUSTRATION.

Notwithstanding the deficit in the revenue, the river and harbor bill, as reported to the Senate, which illustrates appropriations this year, involved expenditures in order to complete its projects of about $95,000,000, much the largest bill of the kind ever passed. I believe in wise appropriations for such a purpose, but they are constructing a canal along the Ohio River to cost $64,000,000. Only about 10 per cent of the river traffic uses the part of the canal already constructed. The Ohio River lost 43 per cent of its traffic between 1905 and 1912, but the lake traffic greatly increased. Some $144,000,000 have been expended on the Mississippi River, and nearly $50,000,000 more are involved in the improvements named in the pending bill. In New York we expend without aid from Washington over $100,000,000 on a barge canal to connect the Lakes with the ocean. Much of the Government money expended on the Mississippi River has been absolutely wasted. The reckless appropriations illustrates the way money is being "saved" by the Democrats in accordance with their platform declaration demanding "a return to that simplicity and economy which befits democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people." That river and harbor bill was finally cut by the Senate because forced to do so by Republican opposition.

OFFICES GREATLY INCREASED.

Not only are expenditures much greater, but the number of offices was never so rapidly increased in time of peace. The chairman of the Committee on Appropriations boasts that they cut the estimates submitted by the administration about $40,000,000, but there is no assurance that it was wisely done, while in the river and harbor and other matters the advice of the administration was never asked. Even at this session the Treasury Department asked for an increase of 219 places outside of those provided for in the collection of the income tax, while other departments also asked for increases.

Some old soldiers have been dismissed in the Post Office and in other departments to make places for Democrats, and Con-

federate veterans are now given the same military honors in burial in Arlington that are given to Union veterans, strange as that is. Many civil-service employees have been demoted because they are not Democrats. The Senate provided for another Assistant Secretary of State—to keep an account of the Secretary's lecture engagements, as one Member suggested—and also for another Assistant Secretary of the Treasury. That is the way offices have been reduced. The Secretary of the Treasury asked for $1,000,000 for use in collecting the income tax, but he was given $1,500,000. Why? Possibly because those places were excluded from the civil-service law and $500,000 can be used for political ends in appointing Democratic politicians to places where they can travel over the country, expenses paid, and do campaign work.

MULTIPLYING THE PLACES.

The Secretary of Commerce asked for $100,000 in order to appoint a commercial attaché in each foreign country, with a secretary, to "extend trade." Of course he got what he asked for and also an increased amount for commercial agents. In both cases these places are excluded from the civil-service law, and the Secretary fixes the pay and allows expenses. Commercial attachés are given places where social duties will be prominent, and they must be persona grata to the Government to which they are accredited, but their aid in extending trade will be nil. The commercial agents and the consuls are much better situated to do such work. But that is a mere illustration of how new places have been created instead of "reducing offices," as demanded by the Democratic platform.

These new places have been excluded from the civil-service regulations, and not only that but many other places, such as deputy internal-revenue collectors, and so forth, have been removed from under the civil-service law, a beneficent statute which Senator KERN, of Indiana, and other Democrats have given notice of their intention to try and get repealed at the next session of Congress. The Government clerks, excluding a few in the highest grades, have not had their salaries increased since back in the fifties. How they can live, as a rule, on their present salaries is a matter of wonder. Congressmen and others have had their salaries raised more than once, but many Democrats want to make the underpaid clerks subject to political considerations in obtaining appointments and holding their places. It is strange that any sane and patriotic man should favor such a policy. But we have seen brewers and other such men appointed to diplomatic offices because of their contributions to Democratic campaign funds, while men who have worked their way up by long years of faithful service have been removed. That is the civil-service reform record of the party in power.

ENORMOUS GOLD EXPORTS—RAILROADS LOSE.

Foreigners distrust us under this new Democratic law, and they were selling our securities, as well as taking less of our merchandise, and selling us their products for cash long before the European war began. Hence the unprecedented outflow of gold, amounting to an increase of 140 per cent in six months. In 1904 when we were paying France for the Panama Canal we sent $68,500,000 to Europe in a short time, but this year we exported $84,000,000 in the corresponding time without getting anything to our advantage in return.

During the first half of June the movement of freight cars on the Pennsylvania Railroad decreased 17 per cent. That was double the loss for the five months from January to June, and it shows that if we are suffering from "psychology" the disease was growing worse instead of better. Gross earnings of the Pennsylvania system for the first five months this year decreased $12,920,469. The seven most important railroads in the Central Freight Association territory reported a decrease in 10 months of $19,588,000 in the net earnings with which to meet interest and other obligatory charges. They had a 11.40 per cent decrease in gross earnings for May and 14.30 per cent decrease for two weeks in June. Idle cars increased 140 per cent. Commercial failures showed a 71 per cent increase this year over 1912, under Republican control. The Baldwin Locomotive Works usually employed 19,000 men in 1912, in the corresponding time this year they were using less than one-half that number.

Mr. Hays, chairman of the State Republican convention of Indiana, in accounting for the decrease in the Progressive and Democratic vote at the primaries in that State, said:

> The industrial conditions in this State are distressing. This was first felt by our great steel industries, and has extended over the State to the recent shut-down of the great Showers Furniture Factory, one of the largest in the country. There are a thousand empty coal cars in sidings in one county in Indiana.

Like reports come from other States, and this was before the European war began.

LEGITIMATE DEMAND FOR MONEY RESTRICTED.

The New York banks were overflowing with money before the war began; call money on stock exchange collateral was a drug in the market because of the lack of demand; but investment funds for new enterprises could not easily be obtained, as the banks did not know what might happen and they want their funds ready for use.

We were told here last December that "when the currency act passed, everything would blossom as a rose," but as my colleague, Mr. PAYNE, remarked, it is the blossoming of thistles instead of roses. That act went into effect long ago, but like the tariff law, the good things promised turned to ashes. Now, the trust amendments are held up as the regenerating feature, but we know well enough that only bitter fruit will come from that ill-digested legislation.

Congress has been kept in session and business agitated without any reason. Months were worse than wasted in repudiating the emphatically expressed wishes of the voters in favor of the exemption from tolls on the Panama Canal of coastwise vessels. We were given to understand that complications in our relations with Great Britain demanded such action. Now, former Ambassador Bryce, and Earl Grey, the British foreign secretary, both declare that no communication on the subject had passed between Great Britain and the United States since Woodrow Wilson was inaugurated. All of that time wasted and great injury done to our commerce for no reason except to allow the President to show his boss control over Congress. Nearly every other nation subsidizes its vessels. We do not. Foreign countries pay the tolls of their vessels in the Suez Canal and some of them have already made arrangements to do so at Panama. Our vessels can not compete under such gross discrimination.

But not satisfied with that, the President has entered into an agreement with Colombia to pay her $25,000,000 and allow her vessels the free use of the canal, which is denied to our vessels, and at the same time apologize to her because we were able to construct the canal without paying Colombia a large sum in practical blackmail. And this shameful agreement was made in order to discredit a Republican administration. It seems almost incredible.

THE SOUTH HURT ALSO.

While the southern Democrats representing a comparatively small minority of the country control nearly every important committee in Congress, as well as the Presidency, and have dominated all legislation, they have not been able to escape the effects of their own short-sighted folly. A southern business man, Mr. L. F. Edmunds, in a letter from his mills in Georgia, written before the European war, said:

> In this section, around Athens, Ga., there are nine cotton mills. One of these is running full time, the balance all running four days in the week, and have been for some time. Business this year with us has been the worst yet; whether this is due to the tariff law, we can not say. We have not been able to sell our product this year, and so had to cut down running. Could not get near cost for yarn, and so we quit making it.

The president of the Armstrong Cotton Mills Co., at Gastonia, N. C., which is equipped with the most modern machinery, said that they were operating only one-half of their machinery, and that at a loss, for some time.

The secretary-treasurer of a mill corporation at Mount Holly, N. C., said that they were running on short time on old orders, and that prices offered were below the cost of production, and that "it seems that very soon we will of necessity have to close down."

The Jewell Cotton Mills (Inc.), at Thomasville, N. C., said in June that—

> The cotton mills are curtailing quite a lot, and some of them have closed down indefinitely.

Several other mills in that section made like reports. Mr. Reinhardt, president of the Elm Grove Cotton Mills, at Lincolnton, N. C., stated that 1,000,000 spindles were not running more than two-thirds time.

Many of the sugar plantations and mills in Louisiana are in bankruptcy and others have ceased to operate, although sugar has not yet gone on the free list, though the duty has been reduced. The Daily Trade Record, in an article about the result at Fall River, Mass., said:

> Idle machinery throughout the mills has been estimated this week at approximately 85 per cent.

Hence the South, as well as the North, suffers, though not to the same extent, because manufacturing is comparatively light in the southern section. The war can not be used as an excuse for this condition of affairs, which existed before the war began.

WHY AMERICANS CAN NOT COMPETE.

Steel rails were shipped to this country before the war from Bombay, where 159 Europeans and 7,000 natives are employed in the industry, and the 159 Europeans get nearly the same amount in wages that is paid to the 7,000 natives. Mr. Charles P. Perrin, an American, is connected with the mills and is good authority on the subject. Pig iron from the furnaces is carried by women who receive 8 cents a day. Common laborers receive 8 cents a day. Similar wages are paid in China, which is shipping to the Pacific coast. The Democrats put pig iron and many other things on the free list, and Americans are asked to compete with such labor.

Janeaway & Co., the oldest wall-paper concern in the United States, with extensive mills at New Brunswick, N. J., announced their intention to retire from the industry because of the Democratic tariff.

Senator GALLINGER told of a Nashua (N. H.) shoe manufactory which lost a Baltimore customer who bought $200,000 worth annually because he could purchase lower of an English house. Two woolen mills in Lebanon, N. H., which had been running one-third capacity, closed down entirely.

Numerous cases of a like nature might be recited if it were necessary to show the superlative folly of the Democratic attack on our protective tariff.

HARM DONE IN OTHER WAYS—MR. HEARST'S WARNING.

I have already referred to the Panama Canal legislation, but the same kind of work goes on in other directions. What greater folly could be shown than in our dealings with Mexico? We went to great expense and loss of life in capturing Vera Cruz to prevent a German vessel from unloading arms, and then we permitted it to unload at a not distant port, holding Vera Cruz at the large cost of several millions of dollars without any purpose. The administration conceded to Colombia greater rights in the Panama Canal than we have ourselves, under our present Government contention.

The new Federal Reserve Board, under the currency act, was all made up of Democrats, and one of the men came to the United States in 1902, and a director in the International Harvester Trust, one of the greatest trusts in the country, was nominated though not confirmed. Bills have been introduced with the President's sanction to give the Philippine Islands practical independence, with the assurance of full independence in the early future, though former President Taft and others familiar with the islands assert that they are totally unfitted for independence, of which there can be no doubt.

Mr. William R. Hearst is an eminent Democrat with a large following. He says:

> It will be the duty of loyal American citizens to consider only the welfare of our people and our country and to remove a party which is a menace to national prosperity and progress. * * * There is no limit to the injury that the Democratic Party might inflict upon this country if it were returned to power with any sort of indorsement of its dangerous and disloyal acts. The country must be rescued from such possible injury, and the injury already inflicted must be repaired as far as it is possible to do so.

This country sends $500,000,000 annually to Europe to pay interest on bonds, dividends on stocks, shipping bills, and so forth. When we had a balance of trade in our favor of $652,875,915, as we did under the protective tariff law in 1913, there was no difficulty in meeting that $500,000,000 of European demands. But with a balance of trade against us, as is now the case, it is going to be a difficult task to prevent bankruptcy, and if the existing tariff law remains in force bankruptcy will stare us in the face, as it does now a vast number of merchants and corporations. Within six weeks, up to September 20, nearly 40 corporations ceased paying their accustomed dividends. With a huge tax bill imposed on them, in addition to what they already have to pay, what will become of the business men of the United States? The Wall Street Journal has printed letters from Maine, Massachusetts, Utah, Nebraska, Colorado, Missouri, Chicago, and other States and cities, from leading business men, as to the effect on business of the war in Europe. These letters practically all agree that, except where manufacturers have been deprived of raw material, the war has not seriously interfered with business.

HOW IMPORTS INCREASED IN JULY—CANADA'S DUTIES.

Hosiery imports in July increasd 45 per cent, as compared with July, 1913. Other knit goods increased 2,120 per cent. Autos and parts increased 495 per cent; seeds, 158 per cent; manufactures of silk, 228 per cent; wool, class 1, 731 per cent; class 2, 503 per cent; class 3, 53 per cent; cloths, 124 per cent; carpets, 58 per cent; dress goods, 201 per cent; wearing apparel, 92 per cent; other manufactures of wool, 133 per cent; cutlery, 88 per cent; lace, 92 per cent; linen yarn, 60 per cent; leather and tanned skins, 98 per cent; paper and manufactures of, 54 per cent. That was the rate of increase in one month before the war had taken effect. That is the trouble with the country and not the war.

Canada has just put into effect a number of changes in her tariff which, like previous changes, have an adverse effect on the United States, notwithstanding that the Democratic tariff law admits so many Canadian products free of duty, while similar products are dutiable in that country and low rates of duty are imposed on the remainder of Canada's products. The United States has to pay what is called the general tariff rates in Canada, which are much higher than those imposed on many other countries, and an average of a third higher than those paid by British products.

Following the example of some of her European neighbors in repudiating treaties, Turkey has taken a step in the same direction, and she proposes to increase duties 100 per cent on foreign textiles, shoes, alcohol, etc. That is the tendency the world over; the lowering of rates and admission of foreign products free is confined to legislation in the United States under the Democratic Party. Alongside that goes an enormous increase in expenditures. These will amount to at least $100,000,000 more for the current fiscal year than was ever appropriated before in the history of the country. That readily accounts for the alleged necessity of this emergency revenue bill, with a prospect of another one before long. Senator KENYON, who was formerly a Government officer, says:

> You can hardly go along the streets of Washington without being run over by a Government automobile in which is riding the wife of some Government official or somebody else at Government expense, to make calls—

And so forth.

That is an example of the way the Government is now being run to save expenses which were imaginative features of the Democratic canvass in 1912.

Senator RANSDELL, speaking no farther back than September 14, and he is a Democrat who has long been a Member of Congress, said:

> All kinds of food products are high, higher than usual. The cost of living in this country has constantly increased. The wages of our people have not increased. Most of our laboring men are obliged to support their families on exactly the same wages as formerly, though the prices of food are higher. They are going to suffer, more or less

WHAT MANUFACTURERS SAY.

The following letters from representative manufacturers in my district, all written before the European war began, will give a fair idea of the way in which business has been injured and workmen thrown out of employment by the new Democratic tariff law:

[Mark S. Wilder, receiver for the Remington-Martin Co., Raymondville Paper Co., Norwood Paper Co.—"The Remington Group." Mills at Norfolk, N. Y., Raymondville, N. Y., Norwood, N. Y. C. R. Remington, president; F. M. Hugo, secretary and treasurer.]

WATERTOWN, N. Y.

Hon. LUTHER W. MOTT,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: The above letterhead, "Mark S. Wilder, receiver for the Remington-Martin Co., Raymondville Paper Co., and Norwood Paper Co.," is a complete answer to your question as to the effect of the Underwood tariff law on the paper industry in northern New York.

The Underwood tariff bill has resulted in the demoralization of the news-print business, not only in northern New York but throughout the United States. The news-print paper market of the United States has been handed over to the Canadian producers without any consideration to the American manufacturer. The daily importation of news-print paper from Canada into this country has increased almost five fold in the past three years—from 300 tons to 1,350 tons. The result is the building up of the news-print business in Canada at the expense of the American manufacturer. The daily production of news print in Canada is being increased by the construction of large paper mills which will increase the daily production by 600 tons and will increase the daily importation from Canada to 1,950 tons. The effect of this increased importation has been the decrease in the price of print paper in this country of $3 per ton during the past two years.

The American manufacturer is unable to produce print paper as cheaply as his Canadian rival, because pulp wood costs at least $4 per cord more delivered at the average American mill than at the average Canadian mill, and it takes about a cord and a quarter of wood to make a ton of paper. The tariff board, after an exhaustive examination of the whole news-print business in the United States and Canada, reported to the President about four years ago that the cost of manufacture of a ton of news print in this country was $5.25 more than in Canada, but in spite of this fact the tariff has been taken off entirely from news-print paper. The news-print manufacturers of this country have been compelled to compete against this handicap, with the inevitable results—loss of profits and loss of employment for thousands of employees, bankruptcy, and receivership. There are in northern New York to-day four paper mills in bankruptcy and several others in the hands of their creditors, and the end is not yet.

The above conclusions prove conclusively the truth of the statements made by the news-print manufacturers to the Ways and Means Committee of Congress and the Finance Committee of the Senate, that the news-print manufacturer of this country needed the protection of at

lease $5.25 per ton to enable him to compete with the Canadian producer.

Yours, very truly,

FRANCIS M. HUGO.

[Newton Falls Paper Co.; Frank L. Moore, president and general manager; F. T. Helmer, treasurer. Incorporated 1894.]

WATERTOWN, N. Y.

Hon. LUTHER W. MOTT,
Washington, D. C.

MY DEAR CONGRESSMAN: Replying to yours of the 13th, I will say that the general effect on our business is very disastrous.

The duty on papers, not otherwise specified, under the Payne-Aldrich bill was 35 per cent. This was changed to 25 per cent for the same classification; but the most serious effect is the fact that news was put on the free list, and many of the older machines manufacturing news paper have been forced to get onto other grades, which brings them into the class "not otherwise specified."

Of course this makes an overproduction of papers which have been included in that class. As you will undoubtedly hear, Norway, Sweden, Germany, etc., have been landing news paper at any seaport on the Atlantic coast for 2 cents per pound. If there was a duty, this would be stopped.

This is largely responsible for forcing machines off of news onto such grades of paper as are included in this classification, and this is the most disastrous effect of the Underwood bill upon us, and I can assure you that it is so bad that many mills are not running full time. This, with the widespread curtailment in consumption, is proving a very serious menace for the future prosperity of this industry in the United States.

Yours, truly,

F. L. MOORE, *President.*

[The Carthage Tissue Paper Mills, manufacturers of tissue, Carthage, N. Y.; W. O. Ball, president and treasurer; A. R. Ball, manager of manufacturing; W. D. Ball, vice president.]

Hon. LUTHER W. MOTT,
House of Representatives, Washington, D. C.

DEAR SIR:

* * * * * * *

Our business has been affected indirectly very seriously by the closing or running part time by those to whom we sell our product. I believe these mills to whom we sell our product have closed or run part time directly on account of the tariff and the general slackening of business, which latter condition I also believe is due to the tariff.

I do not think we shall see any very prosperous times in this country until we have a change in the administration and a change in the tariff. I inclose you a clipping of this morning from the Syracuse Post-Standard, which shows which way the tide is setting.

Yours, truly,

CARTHAGE TISSUE PAPER MILLS,
W. O. BALL, *President.*

The following is the clipping referred to:

LACE MILL CLOSES DOORS FOR INDEFINITE PERIOD—INTERNATIONAL CO.'S PLANT AT GOUVERNEUR AFFECTED BY GENERAL SLACKENING IN BUSINESS.

GOUVERNEUR, N. Y.—The plant of the International Lace Co. has been closed indefinitely. While machines are idle an inventory of the stock will be taken.

The lace industry has been dull throughout the country. Large plants in Philadelphia, Pa., and other eastern cities, which are in connection with the local plant, have either been closed for a number of weeks or are about to discontinue operations indefinitely.

The reduction of the tariff is claimed by the lace companies to be the cause of the recent decline in this branch of business.

[Oswego Falls Pulp & Paper Co., Fulton, N. Y. H. L. Paddock, president; F. G. Weeks, vice president; C. W. Tooke, secretary and treasurer. Sales agents for Skaneateles Paper Co., Skaneateles, N. Y.]

Hon. LUTHER W. MOTT,
House of Representatives, Washington, D. C.

DEAR SIR: The effect of the Underwood tariff bill is easily told in a few words. In the year 1912 our average selling price per ton, news paper, was $41.15. For the month of May, 1914, the average selling price was $37.83. These figures represent the net selling price f. o. b. our mill after all freights, commissions, and discounts have been deducted. This fall in the price of news paper is due to the dumping of the Scandinavian and Canadian news product into our market duty free. So long as Canadian mills are favored by exemption from taxation and by discriminatory railroad rates which give them equal access to the market of American mills, it is easy to see that the American mill, which has to import its pulp wood, is at a disadvantage, and unless some change in tariff legislation is made to protect it against this unfair competition the American mills will have to give up making news in the near future.

Of course you understand that notwithstanding the Underwood tariff law the cost of living of our employees has not decreased, so that no readjustment of wages is practicable, while at the same time local taxes, insurance, and many other items entering into the cost of paper have materially increased.

Trusting that this information may be of some value to you, we remain,

Yours, truly,

OSWEGO FALLS PULP & PAPER CO.,
C. W. TOOKE, *Secretary.*

[The Victoria Paper Mills Co. Paper and bag manufacturers. E. R. Redhead, president; F. W. Snyder, treasurer; C. R. Bennett, secretary.]

FULTON, N. Y.

Hon. LUTHER W. MOTT,
United States House of Representatives,
Washington, D. C.

DEAR MR. MOTT: The principal trouble with us at present is on account of the general depression in business which has curtailed the consumption of paper in a large number of ways. We have not been for some time running much above 75 per cent of capacity.

The discussion of the antitrust bills in Congress at present is a serious handicap to business, and until these bills are either put into law in some definite shape or else defeated the business of the country will not know what to do. In other words, it will be a decided gain to the business of the country to have Congress finish its work and adjourn, as we shall then be pretty sure that there will be no legislation for several months affecting business.

Sincerely, yours,

E. R. REDHEAD.

[The Watertown National Bank, Watertown, N. Y.; G. W. Knowlton, president; A. F. Wardwell, vice president; W. W. Rice, cashier.]

Hon. LUTHER W. MOTT,
Washington, D. C.

MY DEAR SIR: In this locality the large manufacturing interest is the making of paper from wood. It has absorbed millions of capital and employs thousands of men and not a few women. The free trade in paper which came in under the so-called reciprocity bill, but for which we got nothing in return, cut the ground out from under the manufacturers of newspaper and cheap manilas (wrapping).

It would be out of the question for anyone to start a manufacturing enterprise now in this country looking forward to making paper from wood, because it would be impossible to meet successfully the competition from Canada. Very few mills on this side of the line are so equipped as to be able to meet the low prices the Canadian manufacturer can make because of his cheap wood and abundant water power.

Free trade in other lines of paper simply means we on this side have to contend with the lower wages of Europe. Their mechanical appliances are as advanced and complete as are ours so we have no advantage, and we are at the disadvantage of much higher wages.

A large machine shop comparatively new and fully equipped for building paper-mill machinery have almost no business now and have discharged many men and are regretting that they did not give up here and transfer their plant to Canada. These are the things that make this community feel very sore over present conditions, and we can see no relief in the future, because it looks to us as though the business has gone to Canada and will not return. What I have said applies to a very large portion of northern New York.

Yours, truly,

G. W. KNOWLTON.

Kamargo Mills, founded 1808.

WATERTOWN COAL DEALERS SUFFER ALSO.

[Marcy, Buck & Riley, anthracite and bituminous coal, Watertown, N. Y.]

Hon. LUTHER W. MOTT,
Washington, D. C.

MY DEAR CONGRESSMAN: Our coal business is very closely identified with the chief industry of this section—the manufacture of paper. The paper business has been very seriously affected by tariff legislation.

Complaining about business conditions seems to be at the present time the popular subject of conversation. Business men in all lines are acting as conservatively as possible, and the curtailment of purchases and expenses seems to be the order of the day.

Very truly, yours,

R. J. BUCK, *President.*

What a man of large business experience says:

[Thomas P. Kingsford, Oswego, N. Y.]

Hon. L. W. MOTT,
House of Representatives, Washington, D. C.

DEAR MR. MOTT: While I can not give you definite information from personal experience as to the effects of the Underwood tariff law, yet I feel from conversations I have had with other persons that it has enabled the foreign exporters to raise the prices of their goods proportionately in many cases. Regarding your inquiry as to the effect pending legislation is having, I can not do any more than to reiterate what you already know, and that is the expressed hostility of the administration and of a large number of the Members of Congress to "big business" has developed a feeling of uncertainty in all lines, so that the business public, as well as industries, are very timid about increasing present plants or exploiting new industries until more is known of the outcome and settlement of laws relating to all corporations and business. This is most unsatisfactory, and I fear that unless something is done to inspire confidence and to allow business interests a breathing spell to recover from all the changes brought about by the Underwood tariff and other legislation that it will take a long time to restore confidence and business prosperity.

When the railroads are prosperous and buy supplies the whole country feels the benefit and is generally prosperous; if the reverse is the case, as it is now, depression and lack of business results.

Personally I am in rather a pessimistic frame of mind regarding the general business outlook, and see in the future a still further reduction in business activity and increase of unemployed labor unless our legislators at Washington use some common sense and allow a feeling of confidence and legislative support to business, instead of an attitude of hostility.

I inclose a letter received yesterday from the president of the National Founders' Association, an organization composed principally of iron founders throughout the United States, which gives the views of this organization and many manufacturers regarding the labor legislation as embraced in the Clayton bill.

Yours, very truly,

T. P. KINGSFORD.

[The National Founders' Association. Main office, 29 South La Salle Street, Chicago. William H. Barr, president, Buffalo; Otto H. Falk, vice president, Milwaukee; A. E. McClintock, Com., Chicago; J. M. Taylor, secretary, Chicago.]

CHICAGO, ILL.

Mr. T. P. KINGSFORD,
Kingsford Foundry & Machine Works, Oswego, N. Y.

DEAR SIR: The effect of the present attitude of the administration at Washington upon business is lamentable. The artificial conditions created by Congress and the fear of threatened radical action by it is such that business is timorous, and as a consequence the whole community suffers. Thousands of idle men can be found on the streets whose idleness is the direct effect of the unpardonable lack of foresight that has dominated the administration during the past 12 months.

The appointment of Mr. Wilson as Secretary of Labor and his speech at Seattle, wherein he practically declared that he would ignore the rights of independent workmen and use his energies toward the advancement of the claims of organized labor; the make-up of the Industrial Commission in many of its aspects; and the so-called antitrust legislation which has just passed the House indicate a purpose on the part of Congress to hound business for the purpose of attaining a temporary popularity, with the ultimate object of helping Members of Congress at the polls in the next November canvass.

An opportunity is afforded at this time to business men of the country such as has not heretofore been presented to prove that they are not in sympathy with legislation of this character. The impelling consideration to Members of Congress at the present time is not a patriotic desire to accomplish the best in the interests of the people, but to do those things which will cater to class, so that a temporary personal benefit may be obtained.

It should be emphasized that under the Clayton bill opportunity will not be afforded to punish an organization of dynamiters, such as that connected with the structural iron workers.

Congressmen who have seen fit to pass this measure should be attacked in their own districts aggressively.

Further, every possible effort that is legitimate should immediately be put forth to convey to the Senate of the United States the menace and injustice of the Clayton bill.

Yours, very truly, WILLIAM H. BARR, *President.*

How an Oswego spinning mill is hurt:

[Standard Spinning Co., department of Frisbie & Stansfield Knitting Co., manufacturers of combed and carded cotton yarns.]

Hon. LUTHER W. MOTT,
House of Representatives, Washington, D. C.

MY DEAR SIR: Last year the demands on our spindles were much in excess of our capacity, and the difficulty was to supply the yarn fast enough to keep our customers satisfied, and at prices that showed good margins of profit. Last year we had much difficulty in getting a sufficient supply of experienced help. This year experienced help is a-plenty and on the waiting list, but it is a tough scramble to get business enough to keep the mill going—and competition is keen, almost to the verge of recklessness—for the few orders that are obtainable.

That the tariff tinkering has been generally harmful there is no gainsaying; and the worst of it is the anticipation that in reality the worst is yet to come. Money is certainly easy and plenty, and with the promise of abundant crops the country would certainly be bracing up to a revival of prosperity if it were not for the general feeling that business is going to get it "in the neck" from Washington harder than ever before national affairs are again on a safe and sane basis.

The manufacturers of the finer grades of goods, on which protection has been most cut down, have been compelled to crowd over onto other lines, and so on down; so that in reality we are all suffering from this tariff revision as well as from the general lack of confidence, which seems to be mainly engendered by apprehension of what the effects are to be of this fatuous persistence in political tinkering with legitimate business.

Yours, very truly, JAMES G. MERRIMAN.

A manufacturer's experience in Europe:

[Oswego Machine Works, Niel Gray, jr., proprietor.]

Hon. LUTHER W. MOTT, *Washington, D. C.*

DEAR SIR: Acknowledging your letter asking how the Underwood tariff law has affected my business, I would say that it is too early yet to determine the full effect on the Oswego Machine Works' business, which, as you know, makes heavy cutting machinery for use in paper mills and by printers, lithographers, box makers, textile works, etc. The ultimate effect of a policy of tariff reduction leads into so large a discussion that I won't attempt it. I will simply tell you what I have seen with my own eyes recently in my two months' trip to England and Germany, from which I have just returned, and where I went to learn something about their manufactures and the factories and wage rates and the living conditions of the people who work in the various shops.

I found the condition so interesting—in fact, too interesting—that I do not know just where to put this new problem in relation with the other problems that are pressing hard and fast now with the legislation governing labor and industrial matters in this country. We have always thought that the United States was preeminently the land of romantic business development, but I saw plants started in Germany with the founder and one helper alone in one case, 15 or 20 years ago, and now running 900 men; other similar plants of 300, of 1,500, or 3,000, etc., and all of most rapid growth on account of the industrial policy there, which is to help, and not to hinder, manufacturing industries, and which adopts new laws governing the living conditions of workers or their employment only after the most careful investigation of the effect of similar laws passed in other countries, and then only when modified so as to best suit the local condition. Such foolish, quick legislation as the Clayton antitrust bill, for instance, I think would be unheard of in Germany's program.

If it is desired to develop American industries, every possible aid must be given to them, if they are to hold their own against the shops of other nations. I am frank to say I do not see how we are going to do it, however, under existing law. Changes are necessarily so slow that the present world-wide trend toward equalization of wage rates will not come to a stable equilibrium until a good many years after you and I are dead.

I talked with machinists, for instance, employed in English shops, who told me their highest weekly wage rate was from 40 shillings to 55 shillings for work which here we pay nearly double for. And in endeavoring to locate new markets for Oswego products I always came face to face with a difference in price that in many cases was prohibitive. If there should be a leveling down of all duties, so that the wage rates in the United States could be reduced nearer to those of other nations, then we might hope for a larger share of the export business, but that would not naturally suit the workman.

The present ability of Americans to secure business abroad is due more to originality of design, together with excellence of manufacture, than anything else; but the constant and persistent copying of these designs abroad by foreign manufacturers, and then the more economical construction of them on account of the lower wage rate, makes the proposition continually more difficult.

The fact is that even before the duty was reduced to 15 per cent on bookbinders' and printers' machinery, German firms could lay down on vessels in New York Harbor, and pay duty and freight, and sell for about the same price that American machine shops could deliver practically the same machinery in New York City. Now the foreign advantage is much greater.

Yours, truly, NIEL GRAY, Jr.

How the candy business suffers:

[Oswego Candy Works, Oswego, N. Y.]

Hon. L. W. MOTT,
Washington, D. C.

MY DEAR CONGRESSMAN: I do not think the reduction of the tariff on sugar has made any difference one way or the other with our business. But we have never experienced the dull times that we are experiencing just at present. Collections are very hard, and we have had more failures this year than we had all during the past year—1913—and business is almost at a standstill.

Yours, respectfully, D. D. LONG.

Housing of Working People in Foreign Countries.

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 22, 1914,

On the House resolution 604, as follows:

Resolved, That the Secretary of Labor be, and he is hereby, requested to transmit to the House of Representatives any information now available in the possession of the Bureau of Labor Statistics concerning public aid for home owning and housing of working people in foreign countries.

Mr. BUCHANAN of Illinois. Mr. Speaker, the material called for by this resolution is necessary for the proper consideration of at least three bills already introduced at this session of Congress. These bills are in the hands of three committees. One of these, introduced by myself (H. R. 8472), is referred to the Committee on Post Offices and Post Roads. It would authorize the use of the postal savings fund to aid workingmen to own their homes; another bill, introduced by Mr. J. I. NOLAN, of California, and referred to the Committee on Banking and Currency (H. R. 13871), would authorize a special issue of Treasury notes to aid in the building of workingmen's homes. Still another bill, the Borland bill, which has been considered for some time by the District Committee, authorizes the District of Columbia to aid in building sanitary houses for rent to the poor of this District. For the proper consideration of these bills, whether in committee or on the floor of this House, it is exceedingly important that we know what other countries have done in the way of legislation and what degree of success has followed the enactment of various kinds of laws having the increase of home owning for their ultimate purpose. The attention given to plans for public aid to home owning since Belgium began the movement by its law of 1889 is shown by the international housing and home-owning congresses which have been held in Europe since that date. Ten such international congresses have been held, and I know of no better indication of the public interest in the subject in European countries and of the activity of organized effort to deal with this serious problem. The first international housing and home-owning congress was held in Paris in 1889, almost immediately after Belgium had passed its law to encourage workingmen-home ownership. The second congress was held in Antwerp in 1894; the third in Bordeaux in 1895; the fourth in Brussels in 1897; fifth in Paris, 1900; sixth in Dusseldorf in 1902; seventh in Liege, 1905; eighth in London, 1907; ninth in Vienna, 1910; the tenth in The Hague in 1913. As a result of the investigations made through these congresses most European countries have enacted legislation providing for government aid in one form or another for the better housing and better tenureship of the working people.

The countries that have enacted such laws are Austria; Australia, including New Zealand and the various Australian States; Belgium, which was the first country to enact legislation in aid of home ownership among workingmen; Denmark; Germany; Great Britain; Italy; Luxemburg; Netherlands; Norway; Roumania; and several other countries in lesser degree.

The information called for by this resolution will cover ample digests of all the laws enacted by each of these countries relating to the subject, and a careful study of the results of operations under these laws. The safety of investment of public funds in private home-owning enterprises is amply discussed in this material. Many countries have invested their most

sacred funds in long-time loans on workmen's homes. The old-age pension funds, the sickness insurance funds, and trust funds of this character have been invested in financial aid to home owning. In one country alone such funds have been invested to the amount of $115,000,000. These funds must return the interest provided for by law, and they do it through these home-buying loans; but more than the interest returned, the country secures a home-owning people, and in the large cities a healthier, stronger, more efficient people. In Liverpool the death rate was reduced in a given area more than half by the removal of slum tenement houses and the rehousing of the people under sanitary and home-owning conditions. I know it is a common thing for men to say, "Oh, that is all right for the old and congested cities of Europe, but in America there is no necessity for the investment of public funds in aid of home owning." I want to say to the Members of this House that in the cities at least of this country the homes owned free of encumbrance are comparatively few, and that more good can be done right now by this use of public trust funds, such as the postal savings deposits, than most of us have believed. I want to tell you that of the 1,020,827 homes in New York, 884,616, or 88 per cent, are rented; that of 117,740 claimed to be owned, 81,007 are encumbered; and that only 34,951, or 3½ per cent of the whole, are owned free of debt. In Chicago but 55,025, or 12 per cent, of the total homes are owned free from encumbrance. I will insert here in the RECORD a table (Table 1) showing the home-owning situation in 50 cities of the United States. Of the 4,424,326 homes in these 50 cities, 3,196,941, or 74.1 per cent, are rented; 547,723, or 12.8 per cent, are held through an encumbered ownership; and only 558,206, or 13.1 per cent, are really owned.

In one ward—the eighteenth—in Chicago there are 4,905 homes, of which only 105 are owned free of encumbrance. In the eighth assembly district, in the Borough of Manhattan, there are but 6 homes owned free of debt by the occupants, while 11,962 are rented. I will insert in the RECORD Table 2, showing the facts of ownership by wards for a few cities selected at haphazard from all parts of the country to show that the evils of nonownership are not confined to any one part of the country, and Table 3, showing percentages of ownership in the same selected cities in 1890, 1900, and 1910. I think these tables will convince any Member of this House that we have a housing and a home-ownership problem in this country. The tables presented are compiled and condensed from the Census Bureau; the cities selected are New York, Chicago, Philadelphia, St. Louis, San Francisco, Atlanta, Ga., Birmingham, and New Orleans. If any Member desires to know the facts for other cities, he can get them from the census reports.

If relief is to be had for those struggling to secure homes, it must come soon. The rapid rise in land prices in our cities tends to make home ownership for the poor more and more impossible. To cite the well-known case of the Chicago one-quarter-acre lot which sold in 1830 for $20; in 1840 for $1,500; in 1850 it was worth $17,500; in 1860, $28,000; in 1870, $120,000; in 1880, $130,000; in 1890, $900,000; and in 1894, $1,250,000. This is perhaps the most startling example of how land prices get home owning out of reach; but the same tendency is everywhere, and will be so long as the unearned increment that comes from condensing population is permitted to be capitalized by individuals.

I merely call your attention to these figures to show that a condition exists in this country as well as in Europe which will eventually call out of committee such bills as have been introduced in this session. That such information as is called for by this resolution, and which is now in the Department of Labor, will be needed to finally draft and pass a bill that will successfully meet this problem is apparent. It is information this House needs.

The question will be asked, Why does not the bureau preparing this report publish it?

In accordance with the directions contained in the act of Congress approved May 1, 1913, an act making appropriation for certain expenses incident to the first session of the Sixty-third Congress, and for other purposes (Public, No. 1), there was transferred from the Department of Commerce to the Department of Labor the sum of $84,000 as its allotment for printing and binding for the fiscal year 1914. The act making appropriation to supply urgent deficiencies in the appropriations for the fiscal year 1914, approved April 6, 1914, appropriated $30,000 for printing and binding for the Department of Labor, thus making a grand total of $114,000 as the printing and binding allotment of the department for the fiscal year 1914.

Requisitions for printing and binding covering the full amount were made on the Public Printer, who, on July 1, presented bills for $106,746.64, leaving a balance to the credit of the department of $7,253.36, which balance must according to law be covered back into the Treasury and becomes a liability against the appropriation for 1915.

The full amount of the appropriation was not expended for the reason that the deficiency bill did not become a law until April 6, 1914, too short a time before the expiration of the fiscal year to permit of the completion of this department's orders. The Government Printing Office was overwhelmed with work at this time and was therefore unable to perform more than the amount stated before the close of the fiscal year.

Of the total appropriation above mentioned the sum of $54,500 was allotted to the Bureau of Labor Statistics. Against this sum the Government Printing Office presented bills totaling $46,962.78. At the close of the above-mentioned fiscal year there was remaining in the Printing Office uncompleted and unbilled work of the Bureau of Labor Statistics to the extent of $21,567.97, which sum, of course, becomes a liability against the bureau's allotment for the fiscal year 1915.

It will cost something like $700 or $800 to print this report, which will consist of some 200 printed pages. In other words, 10 per cent of the money appropriated on the floor of the House as deficiency in the printing fund, but which finally went back to the Treasury because of the rush of work in the Printing Office, will print this report. Had the Bureau of Labor Statistics been able to use all of its printing fund it would not be necessary to call for this material through a House resolution. As it is, that bureau, after paying for the uncompleted printing on last year's work, has but $23,000 with which to print all the reports the bureau may complete within the present fiscal year.

As stated in the beginning of my remarks, this material supplies information necessary to the proper consideration of three bills now before committees of this Congress; it supplies information needed for Members and for the public. I believe the resolution should be adopted.

Distribution of homes according to proprietorship and encumbrance, in cities having, in 1910, 100,000 inhabitants or more.

The Shortest Road to Universal Peace.

EXTENSION OF REMARKS
OF
HON. ROBERT CROSSER,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 15, 1914.

Mr. CROSSER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a Labor Day message by Congressman WARREN WORTH BAILEY.

The message is as follows:

"THE SHORTEST ROAD TO UNIVERSAL PEACE IS THROUGH DIRECT TAXATION."

(A Labor Day message by Congressman WARREN WORTH BAILEY.)

I am asked in the present industrial situation incident to foreign wars what message I think pertinent to give the laboring man appropriate to Labor Day.

And this is the message which seems to me most pertinent:

The shortest road to universal peace lies through direct taxation.

The wars now raging in Europe and deluging that continent in priceless blood were made possible only by indirect taxation. Had the nations of Europe been obliged by direct methods to take from their citizens and subjects the stupendous treasure which "preparedness" called for, the insane rivalry in armament on land and on sea would have been checked in its very incipiency. Without the big ships and the big guns, without the forts and the arsenals, without the soldiers and the marines, what nation would have thought of war?

There has lately been much talk of a "war tax" here in our own country.

* * * * * * *

It has seemed to me, however, that if more revenues are required to cover the deficit which a falling off in customs receipts is expected to occasion the better policy would be to resort to direct methods; and with this in view, I have prepared a bill providing for a Federal tax on land values, without respect to improvements, this tax to be apportioned among the States on the basis of population. As land values are in fact people's values, their relation to population is definite and universal.

Land values are the measure of the benefits of government. That is to say, the value attaching to land by reason of the growth of population and the development of the arts is the equivalent of the advantages of society—of cooperation. As war does not and can not tend to the growth of population and the development of the arts, as it does not and can not promote

cooperation, it can not and does not produce land values, and so if government were limited for its revenues to land values, it would never have resources to meet the cost of war. Before it could make preparations for war, or attempt to prosecute it, government would be compelled to resort to drafts upon labor in the form of taxes on the products of industry, on self-denial and thrift, on decency and comfort.

A tax on land values would be the greatest peacemaker and peace preserver the world has known. Its adoption would mark the longest step toward universal federation yet taken. To put it into effect in any one country would be to force all other countries to adopt it as a matter of economic self-defense. And so its peacemaking, its civilizing, its humanizing influences would spread, not by force, not even by the slow processes of education, but through the gentle yet irresistible compulsion of competition, for no country which stood out against the land-value tax could hope to keep pace with the countries where opportunity were made free by it, where under its beneficence labor reaped the full reward of its exertion and where capital without penalization might expand indefinitely and without hurt to anyone.

There are other direct taxes besides the land-value tax. But there is no other with such moral or such economic sanctions. The income tax is direct and it can not be shifted, but after all it is a tax on conscience; it falls most heavily upon the honest man, most lightly on him who winks at perjury. The inheritance tax is direct. But if private property may not rightly be seized from the man who produced it by his labor while living, by what process of reasoning shall we justify its seizure after he is dead? Or if we may seize a part of it simply because the man who produced it is no longer here to defend his right to it, why not, seize it all?

The land-value tax differs fundamentally from both the income tax and the inheritance tax. These are levied against private property. They take something from the individual which belongs to him and appropriate it to the public. The public does this by the sheer exercise of power. It has no moral right to private property. But we have seen that land values are due to the growth of population and the development of the arts; not to individual effort or industry, but to the cooperation of the community. These values are therefore community values. They belong of right to the whole body of the people whose cooperation has produced them. And clearly the community has a right to these values; in justice to itself and to those it must otherwise rob it ought to take them in lieu of the taxes it now levies on individual property.

In the brief space allowed me for this message for Labor Day it is impossible for me to say all I would like to say in support of the contention laid down above, that the land-value tax would make for peace as it surely would make for human advancement, for a higher standard of comfort, for wider enlightenment, for a larger life amid a nobler civilization. But let me hope that enough has been said to arrest the attention of those who read and to start an inquiry which must convince any candid mind that this is no "pipe dream," and that I speak within the mark when I repeat that the shortest road to peace lies through direct taxation.

Abuse of the Franking Privilege.

EXTENSION OF REMARKS

OF

HON. JAMES W. BRYAN,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 9, 1914.

Mr. BRYAN. Mr. Speaker, a great deal has been said about abuse of the franking privilege. It is true that the franking privilege has been greatly abused, and Members of Congress, for purposes entirely unwarranted, have used that privilege, which is of so much value to the public in the dissemination of information. The demand for publicity of this very sort has become a campaign watchword in city, State, and Nation. In attacking the abuse of this essential privilege, things have been said which have entirely misled the public about some of the features involved. A Member of Congress delivers a speech on the floor of the House which advances his idea on some particular subject of national importance. It is of value to his constituents to know his position on that subject, both from a standpoint of general information and in order to ascertain whether his views meet with their approval.

If there were no abuse of this privilege, the public could well afford to pay the printing bill in order to obtain the publicity which is given in many cases. But to minimize abuses the law provides that a Member must pay the cost of printing these speeches. There is a general impression in many of the congressional districts that the Government prints these speeches for the Member free of cost to him. This is not true, and the public ought to know that the Congressman keeps the Government clear of all cost in such cases, except that there is no postage charge on the pamphlets. I have not sent a printed speech to my State under frank except where I paid the full cost of same. And it costs as much to have these printed at the Government Printing Office as at a private plant.

A Member of this House whose service is such as to secure for him the favor of the big newspapers of Seattle and Tacoma, Wash., for instance, may send advance proofs of one of his speeches out and have a hundred thousand copies of his speech distributed free of all cost to him. If I take the opposite view and answer that speech, the big newspapers are not going to publish my view, which opposes their policy, and some of them may report it in an unfair way. The only recourse I have is to publish my speech and send it out in a Government envelope. I was elected here from the State at large, and I represent in part every inhabitant of the State. I must pay every cent of cost to the Government except postage and all cost of securing names and addressing throughout the State. In the other case the Government collected from the newspaper such a low rate of postage as to make it almost free. The progressive who objects to such a use of the franking privilege by a Member is shortsighted, indeed, and is being made a cat's-paw of by the monkeys of special interests.

The abuse of the franking privilege of which I complain comes where the special interests or particular organizations use it to disseminate doctrines or propoganda in their own behalf all over the country. It is never an abuse for a Member to print his own speech and send it to the people of his own State that they may know how he is representing them. We need more of that kind of publicity, and it would be a great loss to the public for all the Members of Congress to be left subject to the big newspapers as to their communications with their constituents, especially while the newspapers themselves very correctly enjoy a privilege as to postage which so nearly approaches the franking privilege of a Congressman. The newspaper, for an inconsequential amount of postage, circulates paid advertisements as well as news matter. I am glad the newspapers have this right. The privilege of publicity is a very useful and important one to the public.

It is likewise of great value to the public to have bulletin lists, so that they may have general information as to what publications may be had and that there may be a fair distribution of them. Members of Congress have a right which no one would question to send out these bulletin lists in a franked envelope. They are inclosed in the envelope, ready for mailing, without expense to the Member. But it has been found almost essential to inclose with the bulletin list a brief letter of instructions, informing the party addressed how to proceed in order to get such bulletins as may be desired. This is more important than would be presumed at first thought. Many people are not in the habit of writing letters, and those who need these bulletins the most are the ones whose time is consumed in the arduous duties of the farm, of the factory, or the home, and who find it quite difficult and sometimes embarrassing to sit down and write a letter to a Congressman. This letter of instructions must be simple and plain, and every facility ought to be granted for its distribution as widely as the bulletins are distributed. The man or woman who is not a good letter writer ought to have as good a chance at these bulletins as those better educated or more ready as letter writers.

Members are compelled to get out this letter of instructions, mimeograph and fold it, and insert it at considerable personal expense, which makes it a substantial burden where the mailing list reaches a large number of people. If this letter could be printed as a part of a pamphlet at the expense of the Congressman, it would not increase the Government expense and would in many cases answer the same purpose. It could then be inserted along with the bulletin list and other public documents at a great saving. Members could follow that plan in connection with the mailing out of their bulletin lists and might use such a letter on the envelope or in connection with a speech entirely at the Member's own expense, and thereby save great trouble and reduce the expense to the Government by reducing the size and bulk of the mail and at the same time reach more people and, I believe, render a greater service to the Government

and make a saving of expense and trouble all around. A letter such as I refer to would be about as follows:

DEAR CONSTITUENT: I am inclosing herewith a list of Farmers' Bulletins. I have quite a number of these and will fill orders, free of charge, so long as my supply lasts. They are termed "Farmers' Bulletins," but I find many of them contain very interesting information for those living in the city as well as in the country. I suggest that you indicate by number any of these bulletins that you may desire (not to exceed four, unless special interest requires) on the dotted lines below and return the envelope to me. I want the identical envelope returned, so there will be no mistake about your address. I shall be glad to have you write a letter asking for any special information you may desire.

Faithfully, yours,

_____.

_____
_____ Bulletin numbers desired.
_____
_____

I should have no hesitancy in using such a letter printed by the Government Printing Office at my expense. I am sure such a course would be a substantial economy to the Government and to the Member.

Basis of Representation in Republican National Conventions.

EXTENSION OF REMARKS
OF
HON. JAMES R. MANN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 15, 1914.

Mr. MANN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address to the Republican State conventions of the United States relative to the change in the basis of representation in the future national conventions of the Republican Party.

BASIS OF REPRESENTATION IN REPUBLICAN NATIONAL CONVENTIONS.

AN ADDRESS TO THE REPUBLICAN STATE CONVENTIONS OF THE UNITED STATES RELATIVE TO THE CHANGE IN THE BASIS OF REPRESENTATION IN THE FUTURE NATIONAL CONVENTIONS OF THE REPUBLICAN PARTY.

To the Republican conventions in the several States:

The national committee of the Republican Party met in Washington in December last to revise the rules governing the calling, election of delegates to and organization of future national conventions of the party.

In response to the growing belief in the minds of the voters that the election of delegates to national conventions in direct primaries is the most effective means of recording and expressing the will of the voters, the committee, under the powers granted it by the national convention, adopted a resolution providing—

That in any State which shall require by law, prior to the election of delegates from such State, the election of such delegates to national conventions of political parties by direct primaries, the delegates from that State shall be elected in conformity with such law.

It is necessary that the party as a national organization recognize the right of the voters in any State to determine for themselves the question of whether a part of the delegates from a State shall be elected from congressional districts or all from the State at large.

Several States have already enacted laws requiring the election of all delegates to national conventions of political parties from the State at large rather than part from congressional districts and part from the State at large.

In order to eliminate conflicts in the future between the rules of the party and the laws of such States, and of other States that may hereafter enact similar laws, the committee adopted this resolution:

That all delegates from any State may be chosen from the State at large, or part from the State at large and part from congressional districts, in conformity with the laws of the State in which the election occurs.

If the law of a State requires the delegates to a national convention to be elected in a direct primary election the law designates some officer of the State to issue certificates of election to delegates so chosen. The national committee should recognize certificates so issued and place the names of the holders thereof upon the temporary roll of the convention.

The committee passed a resolution which in definite terms provides for the recognition by the committee of such certificates, and directs that the names of the delegates presenting such certificates be placed upon the temporary roll of the convention.

The resolution adopted is in these words:

That delegates presenting certificates of election from the canvassing board or officer created or designated by State law to canvass the returns and issue certificates of election to delegates to national conventions of political parties in a primary election shall be placed upon the temporary roll by the national committee.

Some States already have enacted laws providing for the election of delegates to national conventions of political parties in direct primary elections, and other States will have enacted similar laws prior to the convention to be convened in 1916 to nominate candidates for President and Vice President.

The action of the national committee as set forth in these resolutions not only guarantees the recognition, in the call to be issued for the next national convention, of the right of any State to provide for the election of delegates in direct primaries, and of the right of any State to elect all delegates from the State at large, or part from the State at large and part from congressional districts, but also eliminates the consideration of many contests by the national committee which in the past have produced discord and dissension.

While the national committee was granted by national conventions of the party, the authority to make these changes in the rules governing the choosing of delegates and the organization of the convention, the committee did not believe that it possessed the power to alter the basis of representation in future conventions without submitting its action for ratification to a national convention, or to conventions convened in the several States.

This question of changing the basis of representation in national conventions has at various times in the past been presented to conventions convened for the purpose of nominating candidates for President and Vice President. The existing method of basing the number of delegates to a national convention on the population of a State, without regard to the vote cast for the nominees of the party, has been in use from the foundation of the party until now. The weakness in the method has long been recognized. But no change has been made because the contest for the nomination for the great office of President has overshadowed in national conventions all other questions and prevented the unprejudiced consideration of this important question.

Some members of the committee and numerous Republican voters believed that it would be wise to convene a special national convention for the purpose of considering and adopting a new basis of representation in future conventions. Undoubtedly a special convention uninfluenced, as it would be, by the passions ordinarily aroused by a contest for the Presidency, and undisturbed, as it would be, by the complications always present in a nominating convention, would have produced a solution just to the Republican voters of all the States if the delegates chosen to such a convention were representative of the rank and file of the party.

Other members of the committee and numerous other Republican voters maintained that inasmuch as there were no methods provided by the existing laws of the various States for the election of delegates to a special national convention in direct primary elections, a convention held at this time might not represent the sentiments and desires of a majority of the party.

The national committee resolved to consider the question, formulate its conclusions, and submit the result of its deliberations for ratification to State conventions assembled in the several States.

The committee believed that should conventions of delegated representatives of the party, convened in the number of States entitled to cast a majority of the votes in a national convention, ratify the action taken by the national committee in this respect, its action could be assumed to fairly express the sentiment of the great majority of the party, for obviously such State conventions when taken together would consist of more representatives of the party than would be assembled in a national convention.

The plan adopted and recommended for ratification provides that the Republican voters in each State shall hereafter be represented in a national convention of the party by four delegates at large; two delegates for each Representative at large in Congress; one delegate from each congressional district, and an additional delegate from each congressional district in which the vote of 1908 for any Republican elector or for the Republican nominee for Congress in 1914 shall not have been less than 7,500.

The plan proposed further provides that the Republican voters in any State may elect all delegates from the State at large, or part from the State at large and part from congressional districts, and that in the case of any State electing all

Representatives in Congress from the State at large, such State shall be entitled to the same number of delegates as though the State were divided into separate congressional districts.

Alaska and the District of Columbia under the plan presented will each be entitled to two voting delegates, while Hawaii, Porto Rico, and the Philippine Islands will each be entitled to two delegates without the right to vote.

The result of this change in the basis of representation, in case the plan be ratified by the action of the requisite number of State conventions, and if the vote for presidential electors in 1908 is used, will be as disclosed by the statement appended, that the number of delegates from the Southern States will be decreased 76, the delegates from Tennessee will be decreased 3, from the State of New York 2, and the number of voting delegates from the Territories and territorial possessions 8.

Should 7,500 or more votes be cast for the Republican nominee for Congress in 1914 in any congressional district not entitled to two delegates on the basis of the vote cast for presidential electors in 1908, such district would be entitled to send two delegates to the convention of 1916.

Some members of the party may believe that a greater reduction in the southern representation would have been advisable. Without going into a discussion of the merits of this question, it will be apparent that a great step will have been taken toward assuring a convention in 1916 that will voice the principles and wishes of the great mass of the party voters when the voting strength of those States in which the number of delegates should be reduced has actually been reduced by such a large proportion.

It is evident that the Republican voters in all the States desire the present basis of representation changed and the basis proposed by the national committee made effective for the convention to be held in 1916.

The convention to be convened in that year will, of course, have complete jurisdiction of the entire question, and if the majority of that convention desires to establish a new basis of representation for future conventions, it will be entirely within its province so to do.

The resolution relating to the change in the basis of representation adopted by the committee provides that the change will become effective only in the event that conventions held in pursuance of the laws of the separate States or called by the Republican State committees of the separate States, in the number of States entitled to cast a majority of the votes in the present Electoral College, which is equivalent to the number of States entitled to cast, on the present basis of representation, a majority of the votes in a national convention of the party, shall ratify the action of the committee before January 1, 1915.

The resolution as adopted and proposed by the national committee, a copy of which is appended, can therefore be ratified by any State convention convened under the laws of the State for the purpose of nominating candidates for State offices, or for the purpose of adopting a party platform, or by any convention called by the Republican State committee and held within the time designated.

The committee appointed to present the proposed plan to the State conventions believes that it is desirable from every point of view that the action of the national committee be ratified and made effective. All who are opposed to the fundamental principles of the Democratic Party should join in the election of delegates to the national convention to be convened in 1916. The basis proposed for the election of delegates assures the States having the greatest number of Republican voters the larger proportion of voting strength in the supreme council of the party, and by the changes made in the rules the way is open for the separate States to enact laws for the election of delegates in primary elections and for the majority of the voters participating in the primaries to elect delegates who will voice the sentiment of the majority.

CHARLES B. WARREN, *of Michigan.*
WM. E. BORAH, *of Idaho.*
HENRY D. HATFIELD, *of West Virginia.*

RESOLUTION.

Confident that the action of this committee, representing as it does the practically unanimous sentiment of the Republican voters of the various States, will be ratified and made effective.

Be it resolved, That this committee shall issue the call for delegates to the national convention to be held in the year 1916 to nominate candidates for President and Vice President, in accordance with the following basis of representation:

Each State shall be entitled in such convention to four delegates at large;

Two additional delegates at large for each Representative at large in Congress elected from any State entitled to one or more additional Representatives in Congress under the apportionment made in accordance with the last census, but in which State no new congressional district has been provided by law;

One delegates from each congressional district;

An additional delegate for each congressional district in which the vote for any Republican elector in 1908, or for the Republican nominee for Congress in 1914, shall have been not less than 7,500;

Provided, however, That the total number of delegates to which any State is entitled shall be chosen from the State at large, if the law of the State in which the election occurs so prescribes; and

Provided further, That in the case of any State electing all Representatives in Congress from the State at large, such State shall be entitled to as many delegates, elected at large, as though the State were divided into separate congressional districts.

For each delegate chosen, an alternate, to act in the absence of the delegate, shall be chosen in the manner prescribed in the call for the convention: *Provided, however*, That if the law of any State prescribes the method of choosing alternates, they shall be chosen in accordance with the provisions of the law of the State in which the election occurs.

Alaska and the District of Columbia shall each be entitled to two delegates; Hawaii, Porto Rico, and the Philippine Islands shall each be entitled to two delegates without the right to a vote, and all delegates and alternates from the Territories and Territorial possessions shall be chosen in the manner prescribed in the call for the convention.

The above basis of representation, however, shall not be made the basis of the call for the national convention to be held in the year 1916 unless prior to January 1, 1915, Republican State conventions held under the laws of the States, or called by the Republican State committees of the States in such number of States as are entitled to cast a majority of the votes in the present Electoral College, shall ratify the action of this committee in respect to determining the basis of representation.

STATEMENT OF CHANGES IN THE NUMBER OF DELEGATES BASED ON THE VOTE OF 1908.

Alabama will lose	8
Arkansas	3
Florida	4
Georgia	11
Louisiana	8
Mississippi	8
North Carolina	3
South Carolina	7
Texas	16
Virginia	8
Hawaii	4
Porto Rico	2
Philippine Islands	2
Total	84
Tennessee will lose	3
New York	2
Total reduction	89

Moon Postal and Civil-Service Bill.

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 8, 1914.

On the bill (H. R. 17042) to amend the postal and civil-service laws, and for other purposes.

Mr. BURNETT. Mr. Speaker, I am delighted to know that on the Post Office Committee the rural carriers have always found a faithful and unflagging friend in my distinguished colleague from Alabama [Mr. BLACKMON].

For years I have contended for fair pay and fair play for these faithful servants of the Government and of the men who, amid sunshine and rain, have been Uncle Sam's school-teachers, dispensing light and knowledge to those in the rural districts who are fortunate enough to live along their routes.

When the Postmaster General sought to place a construction which was never intended on the law recently passed by Congress, my good friend, the young giant from the fourth Alabama district, Mr. BLACKMON, a valuable member of the Post Office

Committee, arose in his might and led a fight in which I am proud to follow him.

Only a few months ago this Congress passed a bill which everyone believed fixed the salary of rural carriers on all standard routes at $1,200 a year. Many similar bills have been passed since I have been a Member of Congress giving an increase of salary to these faithful and hard-worked employees of the Government, and no Postmaster General has heretofore given it the construction placed on it by the present incumbent of that high office. I have no desire to unduly criticize my good friend, the present Postmaster General. He came into this House as a Member of Congress from Texas at the same time that I took my seat as a Member from Alabama, and during his long service here I always regarded him as one of the ablest and most earnest defenders of the rights of the people. However, in his desire to economize the expenditures of his department he has, in my opinion, fallen into an egregious error in assuming the right to construe the act which we passed to increase the salaries of rural carriers as giving him the power to gauge those salaries by the weight of and the number of pieces handled by the carriers. Why has he never placed this construction on the law fixing the pay of the city carriers? I have no desire to cut down the salaries of that splendid body of men—the city carriers—but gentlemen let us have fair play when we go to regulating the pay of any faithful employee of the Government. The city carrier goes out to deliver mails to the city patrons wtih a pouch furnished him by the Government, and with no expense for horses, for vehicle, or for anything else. The rural carrier has to incur the expense of his team, his vehicle, the feed of the team, and the upkeep of both the team and the vehicle.

Upon whom does this unjust ruling of the Postmaster General fall most heavily? Upon the man who really does the hardest work. The carrier in the thickly settled communities will be given the increase because he carries the heaviest mail and the greatest number of pieces. But he operates on the best pike roads, where in a few hours he can trot over his route, while the man who pulls his team through the mud and over the mountains must content himself with the same meager salary which he has received for years. A just Congress, composed of just men, never intended any such unjust discrimination.

There is no branch of the Government that is doing more for the education of the masses than the rural carrier. Nearly 43,000 of these schoolmasters go forth every morning into the rural districts bearing their burdens of light and knowledge and are met by the happy-hearted children of the farmers on their routes.

A short while ago one of the rural carriers on a little mountain route in my district told me that he delivered 142 daily papers on his route every day. A few years ago there were not a dozen weekly papers taken in that area, because of the lack of mail facilities.

It was charged by many that the last Postmaster General under the Republican administration tried to retard the extension of this great system of education, and some believed that it was his purpose to do this because the people were reading and learning of the iniquities of that party of special interests. A Democratic Congress has increased the pay of these faithful heralds of education, and let it not be said that a Democratic Postmaster General in his misguided zeal for economy shall be permitted to thwart this beneficent purpose of Congress in passing this righteous law.

The increased cost of living has fallen as heavily upon these boys in the country as upon the city carrier, and let us by our vote this day prove that this laborer is worthy of his hire.

Mr. Speaker, I am from a rural district, where muddy roads must be traversed and steep mountains must be climbed, and instead of driving these men who have borne the heat and burden of the day out of this noble work I want to encourage them and bid them Godspeed on their toilsome way.

They are my friends, and many a time, as I have gone over my district, have I met them, bespattered with mud, their horses struggling to drag the precious burdens that are to carry joy and knowledge to those whom I have the honor to represent. They are men of intelligence and of tact or they could not remain in Government service. They have their homes and their families, and their sympathies run out to the struggling workers and their families as they meet them on their way.

They are not here with paid lobbies, as are the great carrying interests of the land. They know their Congressmen, and they trust them to see to it that their rights are subserved. Will we do it? Let every Democrat, at least, answer "yea." [Applause.]

Chesapeake & Delaware Canal Facts.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 16, 1914.

Mr. MOORE. Mr. Speaker, in recent publications, including the CONGRESSIONAL RECORD, there has been so much misinformation concerning worthy projects incorporated in the rivers and harbors bill that is now being delayed in another body that in the interest of fairness and truth it seems advisable to make a statement. For seven years the Atlantic Deeper Waterways Association, a voluntary organization of business men along the Atlantic coast, has been agitating against the neglect by Congress of certain important eastern waterways that have been overlooked in the general scheme of waterway development contemplated by river and harbor appropriations. The aggressiveness of this association has resulted in criticism, although to a certain extent it has merely sought equality in appropriations with projects of less commercial importance and of no especial use for raising revenue.

To illustrate briefly, the association has insisted that whereas large sums of money have been appropriated by Congress to meet the transportation needs of other sections of the country, it has been unfair and unjust that in the most densely populated States of the Union, where commerce is handicapped by inadequate railroad facilities, the business men of the country, giver free water transportation elsewhere, should be forced to do business under heavy toll charges on antiquated and inadequate canals between great cities like New York and Philadelphia, Philadelphia and Baltimore, Baltimore and Norfolk, and Norfolk on to below Cape Hatteras.

It has been deemed equally unjust that shipping must constantly take to the open sea around Point Judith and Cape Cod when an 8-mile cut through Cape Cod would save the outside passage and put Boston into direct communication with inland cities along the coast. Perhaps it is no argument in reply to the critics of an inland-waterway system, to those who are asking $63,000,000 for locks and dams upon the Ohio or to carry Idaho to the Pacific coast by way of the Columbia River, or to make Iowa a port through the Mississippi, that the Chesapeake & Delaware Canal, which cuts off 325 miles of outside navigation by a 13-mile cut through the Delaware and Maryland Peninsula, is a relic of 1825 and is still doing business in a limited way and at high freight rates for shippers along the Atlantic seaboard. It may be no argument to those who do not inform themselves of the facts that the canal between New York Harbor and the Delaware River and points south was handed down to us by our forefathers of 1834 and is now the sole property of a railroad company, which has no special desire to improve the property or to encourage business men to use it. However, the facts with regard to these vital links in the Atlantic intracoastal waterway are exactly as stated, and any Congressman or Senator who wishes to examine the property or to make inquiry of trades bodies or business men who are up against these unfair transportation conditions will have no trouble in verifying them. Indeed, it would seem to be the duty of any editor or magazine writer or statesman who acquires his information from these sources to make a personal examination of the routes referred to and satisfy himself as to the difficulties under which a long-suffering people have labored against adverse conditions.

It may be no special argument to gentlemen who criticize such worthy projects to say that money thus spent to encourage business is money well spent, which brings back a splendid return upon the investment; but it is nevertheless true that the ports of New York, Boston, Philadelphia, and Baltimore, which have not heretofore been treated very generously by the Government, are the instruments through which more than 80 per cent of the customs revenue of this country are collected. With improved means of communication and connecting streams so treated as to encourage commerce to greater activity, there would undoubtedly be returns to the Government justifying its investment, apart from doing that justice which has long been due these willing burden bearers of the Government.

I have already indicated elsewhere in the RECORD the damage that is being done upon important streams like the Hudson and Delaware because of the delay in the passage of the rivers and

harbors bill. That delay is prejudicial and wasteful as to work actually under way which has stopped for lack of appropriations. It fails of justification in the matter of projects that are wholly worthy and have been held up for years only because the influence of committees has been more potential as to other projects less pressing and more fortunate in the champions supporting them.

I wish also to put some facts in the RECORD with special reference to the project of the Chesapeake & Delaware Canal. It is an old story—so old, in fact, and so often told that it is amazing how little is actually known about it when it comes into conflict with appropriations for other sections or threatens to become a reality as an everlasting boon to the shippers and consumers who have so long and so patiently paid the freight. It was an old story when representatives of every Atlantic seaboard State assembled in 1907 to form a permanent association to appeal to Congress to provide relief. Each year since then these representatives of the business interests in the territory sheltering 30,000,000 of people have continued to meet, and step by step their progress has been reported. First they asked Congress for a survey. While that had been undertaken previously, it was again granted. The trusted agents of the Government were put upon the work. Their findings were incorporated in the records; everything that Congress requires in matters of this kind was done, and done over again. No session of Congress since 1907, at least, has failed to receive adequate data upon the Atlantic coastal project as a whole or upon the Chesapeake & Delaware Canal project in particular.

No one ever asked to have the entire project completed at once; no one familiar with our methods of appropriation or with the difficulties in obtaining recognition for a project would expect anything of the kind. A definite, rational plan was presented, the very kind of a plan that statesmen who are regarded as experts on waterways have insisted upon as requisite. The Chesapeake and Delaware section of the coastal plan being meritorious and long delayed, was urged upon Congress this session. It was but one step, and one step only, in a definite, rational plan which Congress itself had sanctioned. It was no sudden "pork-barrel" effort, such as the enemies of cheaper transportation delight to exploit, but it was a solid, substantial, carefully worked out, thoroughly investigated, and officially approved project, intended to develop our country's resources and to increase its revenues and the welfare of its citizens.

But in Congress, as in other mundane affairs, the old stager forgets and the newcomer does not know. A gentleman reading the Podunk Bugle, in ignorance of the fact that Podunk has been liberally treated in former appropriation bills, discovers that "it costs money" to take over the Chesapeake & Delaware Canal, and he makes a great to-do about it in the magazines where every page is a thrill and the outside cover is constantly changing color.

Fortunately, however, the critics of the Chesapeake & Delaware Canal project, whether they be old stagers or newcomers, are barking up the wrong tree. There is nothing for the yellow journal in this enterprise. It has been approved by the House of Representatives and, I believe, by a majority of the fair-minded Members of the Senate. It is not such a project as can be criticized as of the "pork-barrel" variety. It needs only to be investigated to be properly understood.

It is almost idle to refer sensational gentlemen or the magazine detectives to the dozens of volumes and reports that have been written and officially sanctioned upon this subject; they want the headlines, not the facts. They want the news for the day and the sensation it creates. The millions of people who are paying excessive freight rates, the thousands of shippers whose merchandise is clogged and delayed, the hundreds of lives that have been sacrificed in needless risks at sea, even the necessities of the Government for purposes of protection in times of war, are nothing to those who yearly seek the notoriety which these modern denunciations of legitimate projects afford.

Some good may be done by picking flaws in a river and harbor bill that has passed the scrutiny of the Members of the House. Such bills have been passed before despite criticism even of those who are now inclined to criticize. But no good can be accomplished by the deliberate destruction of worthy projects, which, if work upon them be stopped, as has already happened in numerous instances, will result in waste, damage, and loss, which the people must pay, even though in the matter of these antiquated eastern waterways they have already paid heavily. "The end may justify the means," but it will not do so with respect to such projects as the opening up for free transportation of the waterway bisecting the Delaware-Maryland Peninsula.

I wish, Mr. Speaker, to extend these remarks by inserting an article prepared by the secretary of the Atlantic Deeper Waterways Association for publication in the forthcoming bulletin. This statement, by Mr. Schoff, is a very clear analysis of some of the principal objections that have been raised to the retention of the Chesapeake & Delaware Canal in the rivers and harbors bill, and I trust it will have equal consideration by readers of the CONGRESSIONAL RECORD with the statements therein that have called it forth:

"CRITICISM OF THE ATLANTIC WATERWAY.

"The river and harbor bill has been made the target for some very wild shooting. Legitimate opposition based on a correct statement of facts and figures calls for facts and figures in defense; but when an attack takes the form of quotations from reports 10 to 30 years old on entirely unrelated projects and on citations of figures double or treble the amount of those at present reported, and, furthermore, when assertions are made which by their very wording indicate strongly that the speaker has no personal knowledge of the project criticized and has never personally visited or examined the waterways under discussion, it is not so easy to make fitting reply. Such, we very much regret to state, has been the nature of the attacks on the river and harbor bill by Senators BURTON, of Ohio, and KENYON, of Iowa, in so far as they refer to the Atlantic intracoastal project; and it may be of interest, both to the Senators mentioned and to business interests generally in the seaboard district, to take up in detail some of the statements made by them in the Senate debate. We quote from the CONGRESSIONAL RECORD for September 3:

"Mr. BURTON. As subsidiary to the ocean, it is proposed to construct inland waterways that are protected from the storm.

"In a sense, this insinuation begs the whole question. The Senator must know of the progressive disappearance of coastwise shipping from the ocean routes and of the decrease in coastwise port tonnage at many points thereby resulting. The whole intracoastal project has arisen, not primarily to provide safe passage for ocean-going vessels, but to provide a means of water communication north and south through the great industrial seaboard district for an entirely different type of navigation—that handled in barges, which cost very much less to construct, operate, and insure, and which are able, therefore, to carry freight in large quantities where the more expensively built ocean-going vessel is so generally succumbing to adverse conditions. We need not go into any long array of statistics to remind the Senator of this unfortunate condition. If he will examine the figures for coastwise losses by wreck, he will find an alarming shrinkage year by year which is not balanced by any new construction. Capital no longer ventures into the beautiful white-winged schooners, and unfortunately business firms seeking to charter vessels for freight cargoes are being very painfully reminded of the entirely inadequate supply of such craft. The intracoastal project is therefore not a subsidiary, but a plan necessitated by changing conditions of navigation the nature of which requires a comprehensive view of the whole situation and makes a parsimonious local policy inadvisable.

"Mr. BURTON. What is the sensible thing to do in this situation? To go ahead and construct all these waterways, build them hit or miss wherever there is influence enough behind them, or wait and give the best of those which have already been selected a trial?

"Here again the Senator quite misunderstands the problem. There is no hit or miss about it. The whole project has been reported on by all the engineering boards having jurisdiction, and there is a definite recommendation in favor of a 12-foot waterway from Long Island Sound to Beaufort Inlet, N. C., and of a 7-foot waterway from Beaufort Inlet, N. C., to the St. Johns River, Fla. The 12-foot northern section connects through the Hudson River with the State barge canal system of New York, thence with the Great Lakes and Canada, and it connects, furthermore, through Long Island Sound with the ports of southern New England, and through the Cape Cod Canal, now open to traffic, with the port of Boston. There is no hit or miss about it. There is no question of local influence about the several links. Each one has a relation to the general plan, and the value of each one is vastly extended if the whole plan be realized. Let us ask the Senator whether he would advise, in building a railway system, that a link between Cleveland and Toledo be completed and opened to traffic to prove its value before deciding whether the line should be extended in either direction to Buffalo and Chicago? What possible value in relation to a national transportation problem could that short link have, and how could it prove its value in long-haul traffic? The Great Lakes are brought to the seaboard by the New York canal system. They will be brought to all the coastal bays and chains through the intracoastal waterway. The several parts are interdependent. The Cape Cod Canal will show a larger

traffic if that traffic can be brought through the Delaware and the Chesapeake and the Albemarle and Pamlico Sounds than if it is confined to the local traffic between Boston and Providence. Argument of this kind is unfair and misleading.

"Mr. BURTON. First, the Boston and Narragansett Bay section will cost from $17,000,000 for a canal 18 feet deep to $40,000,000 for a canal 25 feet deep.

"The Senator is respectfully reminded that the Board of Engineers have not submitted any final report on this section nor the Rhode Island section adjoining it. He takes exception to the estimated cost of $12,000,000, and those figures submitted are preliminary and are out of all proportion to the general cost now estimated, for the reason that they are not based on the standard depth now adopted of 12 feet, so that these figures which he adds up to the total cost of the project, $40,000,000 plus $12,000,000, have nothing whatever to do with it, and to include them is unfair and unjust.

"Mr. BURTON. The next item to which I desire to call attention is one for the New York Bay and Delaware River section. The estimated cost of an 18-foot waterway between Bordentown and Trenton is $45,000,000.

"Two thoughts occur with regard to this extraordinary statement: First, that Bordentown and Trenton, which are 4 miles apart, are both at the lower end of the proposed waterway, the actual route being between Raritan Bay and Delaware River, so that the Senator had very insufficiently considered the project which he so freely criticizes; second, that the figures for an 18-foot waterway are not those recommended by the engineers, their final report being for a 12-foot waterway at less than half the cost. We respectfully suggest that the Senator consult the latest report on this project (H. Doc. 196, 63d Cong., 3d sess., p. 7). His information will be brought up to date, and he will then be constrained to make a further reduction of $25,000,000 from his total estimated cost of the intracoastal waterway. Parenthetically we might suggest that many such deductions must be made to bring the current criticism of the river and harbor bill within sane and justifiable limits.

"Mr. BURTON. The next one is the Delaware River and Chesapeake Bay section, where the estimate for a 12-foot canal is $8,000,000. Then there is the Norfolk to Beaufort Inlet section, where there is an estimate for a channel 12 feet in depth at an estimated cost of $4,901,580, with $500,000 expended for the Albemarle & Chesapeake Canal. Now, you will note that there are here for inland waterways, reaching as far as North Carolina, estimates to the amount of $120,000,000.

"With the Senator's permission, we can note no such thing; and if again he will follow our suggestion that the latest and final reports on this matter be quoted, he will find that the total cost of that section now recommended by the Army engineers figures up to $33,400,000. We repeat, $33,400,000. Hardly more than one-quarter of the Senator's fearful total for one section of the waterway he so sweepingly condemns, and less than one-fourth of the amount which the State of New York alone is now spending on the Great Lakes connection which this coastwise project proposes to extend and develop for the advantage of the whole seaboard district. It is well to consider these questions in their relative proportion.

"Mr. BURTON. It is proposed to provide a waterway (through the sounds of North Carolina), to cost $5,400,000, with a channel 12 feet deep, where already waterways are in existence of 10 and 9 feet depth.

"Again, if the Senator will consult the engineers' report in connection with a map of the North Carolina sounds, he will note that the short artificial waterways connecting Hampton Roads with the North Carolina sounds, and which shippers will assure him do not provide the present depth he asserts, are only a small section of the project contemplated, and that through the various connecting sounds of North Carolina there are shoal spots to be dredged out and a line of communication opened up exceeding by many times the length of the short section to which he refers. The engineers' report on this section he will find in House Document 391, Sixty-second Congress, second session, pages 100 to 131.

"Mr. BURTON. There are no through sailing boats that could go in a 12-foot channel. The whole tendency in our transportation is to increase the size of the units. That is one reason why it (the intracoastal waterway project) is not of a general or national importance.

"Here, we regret to say, the Senator clearly misunderstands the whole problem, which is that units of the size constituted for ocean delivery are steadily disappearing, and that the problem of handling bulk traffic is that of getting it into more cheaply operated units of barge character, to which the waterway system is especially adapted. Let us repeat that this is exactly the unit contemplated in the New York State Barge Canal system, and that this is again the unit which has recently been shown to be commercially practicable on the Mississippi River. The Senator is therefore shooting quite wide of the mark in complaining that the inside route is not adapted for the fast disappearing deep-sea vessels. No one ever supposed that it was.

"MR. BURTON: I wish in the next instance to call attention to the Chesapeake & Delaware Canal. There is a certain amount of traffic through this canal, amounting to perhaps 600,000 or 700,000 tons a year. The bill came from the House with an appropriation of $1,300,000. There were both bonds and stock of this company. The bonds have been quoted at 49 cents on the dollar, which would make $1,300,000 an ample price for its purchase, but an amendment has been reported by which the amount is increased to $2,250,000, and there are elaborate provisions for the condemnation of the property of this private company.

"Here are, indeed, some very peculiar grounds for objecting to a very important improvement. It is quite true that a few of the Chesapeake & Delaware Canal bonds were sold at auction, back in 1904, at a price around $49, and that at such a quotation the outstanding bond issue, $2,602,950, would be worth around $1,300,000. If, however, the Senator had taken the trouble to inquire he would have found that the very report which cited these quotations intimated that they were not representative and could not fairly be taken as a basis of valuation. (S. Doc. 215, 59th Cong., 2d sess., p. 19.) If, furthermore, he had read the latest report on the subject (Senate hearings; resolution 304, pp. 142–145), he would have noted that current quotations are materially higher, and that the bonds are paying 5 per cent on a valuation approximately that reported by the Senate committee, $2,250,000.

"As to the condition of the canal and the interest of this association in securing its acquisition and improvement by the Government, it may be stated: First, the owners of the property have not signified any desire to dispose of it, and have indicated their willingness to continue collecting the interest on their bonds out of current income; second, the owners of the property are unable out of current income to put it in the condition required by interstate commerce seeking to pass through it; third, the imposition of tolls on a waterway connecting great courses of water traffic such as Chesapeake and Delaware Bays is a monopolistic privilege and an unreasonable hindrance to commerce under present conditions, which should be abated; fourth, the waterway should be modernized, widened, and deepened and put in permanently good condition, and this when done would create not only a valuable interstate communication, but would be of decided advantage to the Government as a passage for Federal craft of many types; fifth, as regards any price or set value this association has no interest. It does not represent any of the security holders of the canal company, whom it only knows through the Senate committee's published list. It does, however, represent trade bodies of the entire seaboard district from New England to Florida, who have repeatedly for many years joined in the passage of resolutions emphatically calling upon Congress for the exact action now materialized in the pending bill. There is no doubt that a large and substantial commerce awaits the opening of this waterway, and it might fairly be stated that the commerce of the East has been patient long enough while streams in Senator BURTON'S territory and elsewhere have received improvement out of proportion to the commerce they carry, and that the East is now justly entitled to claim and demand fair recognition.

"The figure of $1,300,000 reported in the House bill for the purchase of this waterway was not a practicable figure. Everyone knows that the property could not be purchased for that amount either amicably or through condemnation proceedings, and that the waterway is fairly worth much more. The Senate committee's amendment was based on careful examination of the question after repeated hearings, and we believe was a fair approximation of the value of the property. Does Senator BURTON suppose that because one railroad bond once sold below par any legal requirement is thereby created that it must forever thereafter sell at its minimum quotation? In any case, the sales quoted, as he would have found on consulting the report on the matter, were for small amounts only, and were never representative of the value of the property.

"As to the traffic of the Chesapeake & Delaware Canal, had the Senator referred to the Senate committee's hearings (resolution 304) he would have found that it has been steadily increasing, even under present adverse conditions of toll, rising from 591,000 tons in 1907 to 908,000 tons in 1913 (p. 35), which in itself may suggest not only that the property is not deteriorating in value, but one other important fact, which any Chesapeake Bay shipper might have told him, namely, that the opening of the North Carolina sounds to free traffic with Chesapeake Bay has materially increased the through shipments to Delaware River points, so that unless the Government opens the northern connection it will merely have added to the profits of the bondholders of the Chesapeake & Delaware Canal Co., who may be quite satisfied to sit tight and take what a liberal Government gives them. We believe it to be the better policy at this time for the Government to finish the job, open up the en-

tire chain, and do away once for all with the anachronism of a private toll canal connecting large bodies of water for an active and increasing commerce.

"Mr. KENYON. There is much testimony in the hearings showing that the canal is in bad condition and that it will require a large sum of money to put it in good shape.

"The fact is that the present condition of the canal is of no consequence to the final waterway contemplated by the Government engineers. This will be a sea-level connection of larger dimensions than the present ditch, and it is not a question of repairing works that have gone out of condition but of tearing them out altogether.

"Mr. KENYON. There was some report from Capt. Turtle to Lieut. Col. Craighill, I think, as to about 7,000 feet of that canal being quicksand.

"For the benefit of the Senator, let it be stated that a suggestion of this kind, based on entirely unchecked observation, was included in a report made in 1882. It was based merely on the flow of a certain small quantity of white sand through the boring pipe. (See S. Doc. No. 215, 59th Cong., 2d sess., p. 69.) This subject was very carefully tested by the United States Engineer Corps and reported on in the present survey (H. Doc. No. 391, 62d Cong., 2d sess., pp. 92, 93) as follows:

"No conclusive evidence of the presence of quicksand at any point in the deep cut has been found. * * * It is believed that the apparent flowing of the sand is not real * * * when the pump used in boring was replaced by a larger and more powerful one the supposed inflowing of the sand was no longer noted, the explanation being that the sand particles were carried to the surface more rapidly and that there were fewer particles held in suspension to settle back when pumping ceased. * * * It is believed that it is in no sense a quicksand and that it will not flow under pressure, but doubtless it will wash away readily when its surface is exposed to the action of flowing water.

"As the proposed improvement of the Chesapeake & Delaware Canal calls for suction dredging operations, the existence of sand here suggested would, if anything, tend to reduce the cost and increase the speed of such dredging work.

"The Senator is respectfully advised that this quicksand matter has been magnified beyond all possible importance by certain interests which would like to sell to the Government at a very high price a canal right of way over an alternative route on which every engineering board that has considered the question has brought in an adverse report.

"Mr. KENYON. This project, as it seems to me—I may be wrong about it—is simply the unloading on the Government of a worthless proposition.

"The Senator is respectfully advised that if he will consult the reports on this project, and more especially if he will take occasion to visit the waterway and familiarize himself with the present cramped conditions of commerce through it, and if he will consult any of the business interests now hampered by it, we have no hesitation in predicting that he will himself admit that he may not only be but is 'wrong about it.'
